#### PUBLISHER'S NOTE

The Irish University Press Series of British Parliamentary Papers is a facsimile reproduction. The original documents in this volume have been reproduced by photo-lithography and are unabridged even to the extent of faithfully retaining the printer's imprint.

The contents of this volume have been printed in their entirety by Robert Hogg, Printer to the Irish University Press, Shannon, Ireland.

As a result of the arrangement of the documents in subject sets and of the bringing together in a single book of a number of papers, some volumes in the Irish University Press Series may include the imprints of more than one printer.

COPY of an Act passed by the LEGISLATURE of the PROVINCE of CANADA, in the Fifth Year of the Reign of Her Majesty Queen VICTORIA, intituled, "An Act for the Disposal of Public Lands."—(Presented pursuant to Act 3 & 4 Victoria, cap. 35, sect. 42.)

---

(No. 96.)

### AN ACT FOR THE DISPOSAL OF PUBLIC LANDS.

WHEREAS it is expedient to provide by a law, applicable to all parts of this Province, for the disposal of Public Lands therein; Be it therefore enacted, by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the Province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada," and it is hereby enacted by the authority of the same, That the Act of the Parliament of the late Province of Upper Canada passed in the second year of the reign of Her Majesty, and intituled, "An Act to extend and continue for a limited Period the Provisions of an Act passed in the First Year of Her Majesty's Reign, intituled, 'An Act to provide for the Disposal of the Public Lands in this Province,'" and the Act thereby continued be and the same are hereby repealed.

And be it enacted, that, except as hereinafter provided, no free grant of Public Land shall be made to any person or persons whomsoever.

And be it enacted, that all claims to free grants of land arising out of or under the authority of any Order in Council, or other regulation of the Government now in force, shall be adjudged upon and determined by the Governor of this Province, by and with the advice of the Executive Council.

And be it enacted, that all claims for land under any Order in Council, or other regulation of the Government now in force, heretofore allowed by competent authority, or which shall hereafter be allowed by the Governor in Council, shall be commuted for land-scrip or orders for nominal sums of money to be issued by the Commissioner of Crown Lands, and such scrip shall be received as money upon all sales of lands of the Crown in this Province, the proceeds of the sales of which lands are not or shall not be set apart for any specific purpose.

And be it enacted, that upon payment of the fees chargeable upon any such grant of land, in cases where the grant is subject to such fees, and free of any expense where the grant is free of fees, the Commissioner of Crown Lands, in lieu of locating the claimant, shall issue to him or her scrip or orders for nominal amounts in money equal to the amount of his or her grant, calculating the value of such grant in that part of Canada formerly called Upper Canada, at the price of Four shillings currency per acre, and that the said scrip shall be issued in amounts not greater than Five pounds in any one note, and that such notes shall be assignable by delivery.

And be it enacted, that the militia scrip or orders for nominal amounts in money heretofore issued in that part of this Province formerly called Lower Canada, under the authority of the Proclamation of the Governor-General of that Province, bearing date the Eleventh day of December in the year of our Lord One thousand eight hundred and Thirty-eight, shall be assignable by delivery, and shall be received in payment upon all sales of Public Land in this Province, the proceeds of which are not or shall not then be appropriated for any specific purpose, and shall be received at and for the nominal rate at which the same were issued.

And be it enacted, that the Commissioner of Crown Lands shall take receipts for any such scrip which may be issued, and shall issue the said scrip to the claimant, or his or her  
legal

legal representative, in full discharge of the claim; and such scrip may be paid by delivery upon any sale of the Public Land aforesaid; and that the receipts to be given for payments upon sales of the said Public Land shall specify the amount received in money, or in the scrip aforesaid respectively.

And be it enacted, that the said scrip shall be received for deferred payments or instalments upon sales of Public Lands heretofore made, as well as upon sales to be made under the authority of this Act.

And be it enacted, that all rights and claims to land assigned under the authority of the Acts hereby repealed, shall be exchanged for the scrip aforesaid by the Commissioner of Crown Lands, upon application of the assignee, or his or her authorized agent, and such scrip shall thereafter be assignable by delivery.

And be it enacted, that no assignment of any right or claim to land assigned under the authority of the said above repealed Acts, which shall have been made by any married woman conjointly with her husband, shall be considered void or voidable by reason of the coverture of such married woman.

And be it enacted, that from and after the passing of this Act, all unlocated rights or claims to Public Land shall be held and considered to be personal goods and chattels, and not liable to be governed or adjudged upon by the laws relating to real or landed property.

Provided always, and be it enacted, that nothing in this Act contained shall be held to alter the law as respects rights to land located, or to make the same personal property, or to alter the descent or disposition thereof, or the adjudication of claims thereto arising from assignment, devise, bequest or other disposition thereof, or the rights of the owners thereof, in any respect whatsoever, or to make good any claims thereto, forfeited or held to be forfeited by reason of non-performance of the conditions upon which the same have been assigned or located.

And be it enacted, that no new claims to land founded upon any regulation or order of the Government shall be allowed or entertained unless made before the First day of January which will be in the year of our Lord One thousand eight hundred and Forty-three, except where the parties originally interested and claiming shall be under the age of Twenty-one years on the said day.

And be it enacted, that the price of such Public Lands shall from time to time be fixed and ascertained by authority of the Governor of this Province, by and with the advice of the Executive Council thereof.

And be it enacted, that it shall and may be lawful for the Governor of this Province in Council, to appoint in each municipal district a resident agent for the sale of Public Lands, who shall be authorized and empowered, under the direction of the Commissioner of Crown Lands, to make sale of Public Lands within the district for which he acts, at such prices as shall have been under the authority of this Act duly fixed and ascertained.

And be it enacted, that every such district agent shall keep regular accounts of sales of land within his division, and make the said sales appear in the plans or maps in his office.

And be it enacted, that it shall not be lawful for any district agent appointed under the authority of this Act, directly or indirectly to purchase any land which such district agent shall be appointed to sell as aforesaid; and if such district agent shall offend in the premises, he shall forfeit his said office.

And be it enacted, that the purchase-money upon the sale of such Public Land, or the scrip paid in therefor, shall, in the first instance, be paid to the district agent, who shall transmit the same to the Commissioner of Crown Lands, whenever the amount in the hands of such agent shall exceed Fifty pounds currency, deducting therefrom his per-centage, as herein-after provided; and, in default of such remittance, he shall be liable to be charged at the rate of Fifteen pounds per cent., as a penalty, per annum, for the time he shall retain any such sum in his hands, after the amount shall become remittable, as aforesaid; and the district agents, upon the receipt of any purchase-mones, or scrip, shall give the purchaser or purchasers a receipt for the same, specifying therein the number of the lot, or the land purchased, or otherwise sufficiently describing the same; and such receipt shall bear date on the day on which it is actually signed, and shall authorize the purchaser to take immediate possession of the lot so sold, and to maintain actions and suits in law or equity against any wrongful possessor or trespasser on such land, as fully and effectually as if the patent deed had issued on the day of the date of such receipt.

And be it enacted, that so soon as the purchase-money of any particular lot or quantity of land shall have been paid up in the manner aforesaid, the purchaser or purchasers shall thereupon become entitled to receive letters-patent for the same, free of further expense, and subject only to such reservations as are usually made in letters-patent of the same description;

description; and such letters-patent shall be transmitted by the Commissioner of Crown Lands to the agent for the district in which the lands are situate, within the space of Thirty days after the purchase-money shall have been paid, and the payment duly notified to the Commissioner of Crown Lands, unless, by reason of any unforeseen event or unavoidable necessity, the same cannot be so transmitted; and it shall be the duty of the district agent, upon the receipt of such letters-patent, to deliver the same to the owner or owners thereof, upon demand, without charge.

And be it enacted, that the Commissioner of Crown Lands for the time being, and also every district agent, shall, before entering upon the duties of his office, give good and sufficient security, to the satisfaction of the Governor of this Province in Council, for the faithful discharge of his duty, and for the due payment of all monies which shall in the course thereof come into his hands; that is to say—for the payment of such monies or scrip as shall come into the hands of any district agent aforesaid to the Commissioner of Crown Lands, and for the payment of such monies as shall come into the hands of the Commissioner of Crown Lands, or the balance remaining unexpended in his hands, to the Receiver-General of this Province.

And be it enacted, that the district agents shall receive such a per-centage upon the amounts received by them, as well as such payments for inspection of lands and other extraordinary duties performed under the direction of the Commissioner of Crown Lands, as the Governor of this Province in Council shall direct and appoint.

And be it enacted, that it shall be the duty of the Commissioner of Crown Lands to pay over, once in three months, to the Receiver-General of this Province, all sums remaining in his hands arising from the sale of the Public Lands aforesaid, retaining a sum sufficient to meet the contingent expenses of the department, but not exceeding Five hundred pounds.

And be it enacted, that the accounts of the Commissioner of Crown Lands shall be rendered to the Government of this Province for half-yearly periods; and that copies of the said accounts, containing the particulars of the receipts and expenditure of the office, with lists of all sales made up to the period of accounting ending next before the commencement of each Session of the Provincial Parliament, shall be laid before both Houses within ten days next after the commencement of each Session of the Legislature.

And be it enacted, that it shall be the duty of the Commissioner of Crown Lands, at least Thirty days before any sale shall be made under the authority of this Act, to cause printed lists of the lands open for sale to be exhibited in the office of Crown Lands, and in the offices of the respective agents in whose districts the lands shall respectively be for sale, specifying the prices of such lands and the terms of payment; and copies of such printed lists shall be published in the official Gazette, and in one public newspaper in the district, in which the lands are respectively situate; and such lists shall be revised once in each year, under the direction of the Commissioner of Crown Lands.

And be it enacted, that it shall and may be lawful for the Governor of this Province in Council, without any such publication, to direct sales of Public Land to be made at a fair valuation to any lessee or occupant; or to any individual who, from the peculiar situation of the property applied for, would be liable to injury by the disposal of the land to any other person or persons than such lessees or occupants or other individuals interested as aforesaid.

And be it enacted, that, notwithstanding any thing in this Act contained, it shall and may be lawful for the Governor of this Province, with the advice of the Executive Council, to appropriate as free grants any Public Lands in this Province to actual settlers upon or in the vicinity of any public roads in any new settlements which shall or may be opened through the lands of the Crown, under such regulations respecting such settlements as shall from time to time be made and declared by the Governor of this Province in Council: Provided always, that such grants shall not be made to any person or persons who shall have heretofore received any grant of land from the Crown; and provided also, that the extent of any grant so to be made shall not exceed Fifty acres; nor shall any such grant be made to any other than natural-born or naturalized-male subjects of Her Majesty of the full age of Twenty-one years.

And be it enacted, that it shall and may be lawful for the Governor of this Province, by and with the advice of the Executive Council, to set apart and appropriate such of the said Public Lands as shall be deemed expedient to be so set apart and appropriated for the site of market-places, gaols, court-houses, places of public worship, burying-grounds, schools, and for other like public purposes; and at any time before the issue of letters-patent therefor, to revoke such appropriation and setting apart as may seem expedient, and to make free grants for the purposes aforesaid, the trusts and uses for which the grants shall be made being expressed in the letters-patent granting the lands therein specified: Provided always, that no such grant for any such purpose shall be for a greater quantity of land than Ten acres for every one of the purposes aforesaid, in any one instance in which, or for any one occasion for which, land shall be granted as aforesaid.

And be it enacted, that in all cases in which grants or letters-patent for land shall have issued for the same land inconsistent with each other through error or mistake, and in all cases of sales or appropriations of land inconsistent with each other for the same land, and in all cases wherein by reason of false survey the land supposed to be conceded shall be found wanting in the whole or in part, it shall and may be lawful for the Governor of this Province in Council to decree and order a new grant equal in extent or equivalent to the land lost, according to the discretion of the said Governor in Council: Provided always, that no such claim on account of any error in survey shall be entertained or granted unless the land found wanting shall be equal to One-fifth of the whole quantity described to be contained in the particular lot or parcel of land granted or conceded; and provided also, that no such claim for indemnity shall be entertained after the space of Five years from the issue of the letters-patent granting or conceding such lot or parcel of land, or shall extend to cover the value of any improvements made by the grantees in error or mistake under any such grant.

And be it enacted, that it shall and may be lawful for the Court of Chancery in that part of this Province formerly called Upper Canada, and for the Court of King's Bench in that part of this Province formerly called Lower Canada, upon action, bill or plaint to be exhibited in either of the said Courts respecting grants of land situate in the said parts of this Province respectively, and upon hearing of the parties interested, or upon default of the said parties, after such notice of proceeding as the said Courts shall respectively order, in all cases wherein patents for land have or shall have issued through fraud or in error or mistake, to decree the same to be void; and upon the registry of such decree in the office of the Provincial Registrar of this Province, such patents shall be deemed void and of none effect to all intents and purposes whatsoever, and that the practice and proceeding in court in such cases shall be regulated by orders to be from time to time made and issued by the said Courts respectively.

And be it enacted, that it shall be the duty of Her Majesty's Commissioner for the sale of Crown Lands for the time being to keep a book for the entry, at the option of the parties interested, of the particulars of any assignments made as well by the original nominee or locatee, as also by any subsequent assignee or assignees of any such claim on lands heretofore located in respect thereof, such assignment or assignments being first produced or exhibited to the Commissioner aforesaid, together with an affidavit of the due execution thereof sworn before any justice of the peace, who is hereby fully authorized to administer the oath in this behalf, and such affidavit shall truly express the time of the execution of such assignment or assignments; and thereupon it shall be the duty of the said Commissioner to cause the material parts of every such assignment to be entered or registered in such book of entry or registry, and to indorse on every such assignment a certificate of such entry or registration; and every such assignment so entered or registered shall be valid against any one of a previous date or execution, but not then entered or registered, except in cases of express notice; and in all cases of such assignments being duly registered, it shall and may be lawful that the patent issue in the name of such assignee or assignees: Provided always, that in case the subscribing witness or witnesses to any such assignment shall be deceased, or shall have left the Province, it shall and may be lawful for the said Commissioner to register any such assignment upon the production of an affidavit or affidavits proving the death or absence of such witness or witnesses, and proving also the handwriting of such witness or witnesses.

And be it enacted, that any person or persons wilfully swearing falsely to the execution of any such assignment, or to the handwriting, or to the death or absence of any such witness or witnesses, shall be liable to the pains and penalties of wilful and corrupt perjury.

And whereas by reason of the receipt of land-rights in lieu of money in payment upon sales of clergy reserves in that part of the Province lately called Upper Canada, a certain sum of money is due and owing to the fund arising from the proceeds of clergy reserves, which under the said Act hereby repealed was to be repaid out of the proceeds of the lands of the Crown; Be it therefore enacted, that it shall and may be lawful for the Governor of this Province to direct and order the Commissioner of Crown Lands to pay over all proceeds of sales of Crown Lands over and above the expenses attending the sale thereof, in like manner as proceeds of sales of clergy reserves, until the debt or sum due and owing to the clergy reserve fund shall be fully discharged.

Passed by the Legislative Assembly, Wednesday, 25th August 1841.

*W. B. Lindsay,*  
Clerk Assembly.

— No. 1. —

(No. 10.)

COPY of a DESPATCH from the Right Honourable Sir *Charles Bagot*, G.C.B. to Lord *Stanley*; dated Government House, Kingston, 20 January 1842.

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

My Lord,

IN the month of September last an application was addressed to this Government by the acting Governor of Michigan, for the surrender of one Nelson Hackett, a slave who had escaped from Arkansas, after having committed a robbery in that state. This application was at the time refused; first, because it was not made by the government of the state in which the offence had been committed; and, secondly, because it was not based on proceedings commenced before some competent criminal jurisdiction.

Shortly before I reached Canada a second requisition was addressed to Sir Richard Jackson, in which both these objections were obviated, the requisition proceeding on an indictment found by the grand jury of the county in which the offence had been committed, and being made by the Governor of Arkansas. I accordingly referred the papers connected with it to my executive council, in conformity with the provincial statute 3 Will. 4, c. 7, and I enclose for your Lordship's information a copy of their Report, as well as of the papers on which it is founded.

After fully considering the subject, I concurred in the recommendation of the council. There was no doubt of the guilt of this individual, the stolen property having been found on him on his arrival in the province; nor could it be said that this property had been taken solely to assist him in escaping from slavery, and not with a felonious intent. I felt therefore that to refuse to surrender him would be to establish as a principle that no slave escaping to this province should be given up, whatever offence, short perhaps of murder, he might have committed; a principle which would have been repugnant to the common sense of justice of the civilised world, would have involved us in disputes of the most inconvenient nature with the neighbouring states, and would have converted this province into an asylum for the worst characters, provided only they had been slaves before arriving here. I therefore ordered Nelson Hackett to be delivered up to the authorities of Arkansas, to be dealt with according to law.

I have, &c.  
(signed) *Charles Bagot.*

*Report.*  
*3 January 1842.*

## 2 DESPATCH FROM GOVERNOR GENERAL OF CANADA

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

---

Western District, to wit.—The information and complaint of Alfred Wallace, of Washington county, in the state of Arkansas, in the United States of America, merchant, taken upon oath this 8th day of September in the year of our Lord 1841, before Robert Mercer and Samuel Gardiner, esquires, two of Her Majesty's justices of the peace for the said district.

The said informant, upon his oath, saith, that on the 18th day of July last, in the year of our Lord 1841, Nelson Hackett, of Washington county aforesaid, a coloured man, did feloniously steal, take, and carry away one roan mare, aged , branded with figure 2 on her left foreshoulder, and also one blue beaver over-coat, the body and collar of which were lined and faced with black silk velvet, and also a quantity of Mexican silver, and gold of the coin of the United States, of the value of 100*l.*, the property of the said informant, Alfred Wallace, and with which property the aforesaid Nelson Hackett absconded; and this deponent further saith, that after having traced him through the United States to Windsor, in the Western district of Canada, he has good reason to believe that the said Nelson Hackett is now residing in Chatham, in the western district.

Taken and sworn at Windsor, in the district aforesaid, the 6th day of December 1841.

(signed) *Alfred Wallace.*  
*Robert Mercer, J.P., W.D.*  
*Samuel Gardiner, J.P., W.D.*

---

*James Wright Gordon, Acting Governor in and over the State of Michigan, to his Excellency the Right Hon. Charles Baron Lord Sydenham, Governor-General of British North America.*

It appears by the annexed papers, duly authenticated according to the laws of our state, that one Nelson, a negro, sometimes called Nelson Hackett, late of the county of Washington, in the state of Arkansas, is guilty of the crime of larceny, committed in the month of July A. D. 1841, in the county of Washington, state of Arkansas aforesaid; and it having been represented to me that the said Nelson has fled from the justice of the said state of Arkansas, and taken refuge within the province of Canada; and further, that the said Nelson has been arrested and is now confined in the prison at Sandwich, in the said province of Canada :

Now, therefore, pursuant to a usage heretofore existing and acknowledged, I have to request that the said Nelson be delivered to Daniel Thompson, sheriff of Wayne county, who is hereby duly authorized and empowered to receive him and carry him to the state of Michigan, there to be dealt with according to law.

In testimony whereof I have hereunto set my hand, and caused to be affixed the great seal of the state of Michigan.

Done at the city of Detroit this 18th day of September, in the year of our Lord 1841.

By the Acting Governor.

(signed) *J. Wright Gordon.*  
*William L. Driggs,*  
Acting Secretary of State.

---

State of Michigan, county of Wayne.—*Alfred Wallace*, being duly sworn, deposes and says, that, returning to his home in the county of Washington, state of Arkansas, after an absence, on or about the 24th day of July A.D. 1841, he learned that the dwelling-house of O. Evans, in the same county and state, had been entered and a gold watch and chain stolen therefrom, on or about the night of the 16th July; that a roan mare branded with the figure 2 on the fore left shoulder had been stolen from his own plantation, together with a fine blue beaver over-coat lined and faced with black velvet, both belonging to him; and that also about the same time, in the same neighbourhood, a fine quilted saddle had

## RELATIVE TO THE SURRENDER OF NELSON HACKETT. 3

had been stolen from W. L. Willson, he, deponent, also learning that at about the same period of these thefts, a negro by the name of Nelson, sometimes called Nelson Hackett, was missing from his plantation, became suspicious that he was the thief, and started in pursuit of him and the property: that on the 6th of September instant he arrived at Chatham, Upper Canada, where he found the said negro Nelson, and in his possession the mare, watch, and chain, saddle and over-coat above described: that with the assistance of deputy sheriff Lipman, of the western district of Upper Canada, he arrested the said Nelson, and that he was taken before James Reid and Thomas M. M'Crea, esqrs., justices of the peace at Chatham, and by them committed to prison.

State of Michigan, county of Wayne.—*George G. Gregg*, being duly sworn, deposes and says, that he is a citizen of the county of Washington, in the state of Arkansas; that on or about the 16th day of July A.D. 1841, at a late hour of the night, the dwelling-house of O. Evans, in said county and state, was entered, and a gold watch and chain valued at 148 dollars, belonging to Augustus J. Ward stolen therefrom; and that on the night of the 17th July A.D. 1841, the plantation of A. Wallace, same county and state, was entered, and a roan mare, branded with the figure 2 upon her left fore shoulder, valued at 100 dollars, stolen therefrom: that a fine quilted saddle belonging to W. L. Willson was stolen about the same time, in the same neighbourhood, and a fine new blue beaver over-coat, lined and faced with black velvet, belonging to A. Wallace: that a negro named Nelson, sometimes called Nelson Hackett, was missing about the same time. Deponent further says, that on the 21st day of July he started in pursuit of the said Nelson on the presumption that he was the thief: that he arrived in Sandwich, Upper Canada, on the 13th day of September instant, where he found that the said Nelson had been apprehended and committed to prison; that through the grates of the Sandwich gaol he had identified him; that he has been shown the watch and chain, the saddle and the over-coat above described, and the magistrate committing the said Nelson, and identified the same as being the one stolen as above related; and that he had also seen and identified the said roan mare, the articles and the mare being found, as stated to him by the magistrate, in possession of the said Nelson.

To his Excellency the Right Honourable *Charles Baron Sydenham*, of *Sydenham*, in the County of *Kent*, &c. &c. &c. Governor-General of *British North America*.

May it please your Excellency,

THE petition of Alfred Wallace, of the state of Arkansas, in the United States, merchant, who humbly prayeth that Nelson Hackett, a negro, who, on the 18th July last, stole from your petitioner a roan mare, and an over-coat, and a quantity of American gold and Mexican silver coin, to the value of 100 *l.* and upwards, and who your petitioner followed into Canada, and there found the mare and over-coat, his property, with the prisoner, and who the authorities in Canada committed to Sandwich Gaol, may be given up to the authorities in the United States, to be there dealt with according to law; and your petitioner, as in duty bound, will ever pray.

Sandwich, Canada,  
21 September 1841.

(signed)                    *Afred Wallace.*

## RELATIVE TO THE SURRENDER OF NELSON HACKETT. 5

Attorney-General's Office (West), Kingston,  
29 September 1841.

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

Sir,

IN reply to your letter of this date, enclosing an application from the acting governor of the state of Michigan, for the delivery of a slave named Nelson Hackett, charged with robbery in the United States, and requiring me to report whether there is any objection to a compliance with this application, I have the honour to state, that on perusing the papers accompanying the application I perceive that the alleged felony is stated to have been committed in the state of Arkansas, while the application is made by the acting governor of the state of Michigan.

The provincial statute of Upper Canada, 3 Will. 4, c. 7, authorises the governor in his discretion, with the advice of the executive council, on requisition made by the government of any country, or its ministers or officers authorised to make the same, within the jurisdiction of which country the crime thereafter mentioned shall be charged to have been committed, to deliver up to justice any person charged, &c.

In my opinion the application should come from the government of the United States, or at least from the state of Arkansas, within the jurisdiction of which the crime is charged to have been committed.

Were this objection removed, I should still feel it open to great doubt, whether the application of the foreign government ought not to be based upon proceedings commenced before some competent criminal jurisdiction in the state or country where the alleged felony is stated to have been perpetrated.

I have, &c.

(signed) *W. H. Draper.*

To T. W. C. Murdoch, Esq.  
Chief Secretary, &c. &c. &c.

Sir,

The Park Farm, Sandwich, 23 December 1841.

HEREWITH I have the honour of forwarding to you the demand from the governor of Arkansas to the administrator of this province, of Nelson Hackett, about whom the recent correspondence with your office took place. On receiving from you an order for his being delivered up to Mr. Davenport, I will see that it is properly attended to.

I remain, &c.

(signed) *John Prince.*

The Hon. S. B. Harrison, M. P. P., P. S. W.  
&c. &c. &c.

To the Right Honourable Sir *Richard Jackson*, Governor-General of  
*British North America, Kingston, Canada;*

Greeting.

WHEREAS it has been made known to me that a certain Nelson Hackett, who has been charged with the crime of grand larceny, and against whom an indictment has been found for said felony by the grand jury of our county of Washington, has fled from justice, and beyond the limits of the state of Arkansas, and is now in the province of Canada, and within the jurisdiction of the government over which your Excellency presides; now, therefore, I, Archibald Yell, Governor of said state of Arkansas, do hereby request and respectfully demand of your Excellency that you will cause the said Nelson Hackett to be surrendered and delivered up, to the end that he may be removed and brought to said state of Arkansas, where jurisdiction may be had of said crime, and justice awarded in the premises. And I hereby authorise and empower Lewis Davenport, of Wayne county, in the state of Michigan, to receive from the proper authorities of the province of Canada, and take into his custody the said Nelson Hackett, and remove and transport him as aforesaid to the said state of Arkansas.

In testimony whereof I have hereunto set my hand, and caused the great seal of the state to be affixed, at Little Rock, on the 30th day of November A.D. 1841.

(L. S.)

## 6 DESPATCH FROM GOVERNOR GENERAL OF CANADA

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

---

State of *Arkansas*, County of *Washington*.—In the Circuit Court of said County, at the November term thereof, 1841.

THE grand jurors for the state of Arkansas, duly selected, summoned, returned, tried, empanelled, sworn, and charged to inquire in and for the body of the county of Washington aforesaid, upon their oath present that Nelson Hackett, a negro slave, the property of Alfred Wallace, late of said county, on the 2d day of July in the year of our Lord 1841, at the county aforesaid, one saddle of the value of 20 dollars, of the goods and chattels of one Washington L. Wilson, then and there being found, feloniously did steal, take, and carry away, contrary to the force of the statute in such case made and provided, and against the peace and dignity of the state of Arkansas.

(signed) *A. M. Wilson*,  
Pro. Att. for the 4th Jud. Circuit, Arkansas.

---

State of *Arkansas*, County of *Washington* (s. s.), United States of *America*.

I, Benjamin H. Pierson, Clerk of the Circuit Court, and *ex officio* Recorder within and for the county of Washington aforesaid, hereby certify that the foregoing is a true copy of an indictment against Nelson Hackett, a slave, as therein described, preferred by the grand jury in and for the said county, on the day of the date thereof. In testimony whereof, I, as Clerk and *ex officio* Recorder as aforesaid, have hereunto set my hand and affixed the seal of said court, at office, this 26th day of November A.D. 1841.

(L. S.) (signed) *B. H. Pierson*,  
Clerk and Ex officio Recorder.

---

State of *Arkansas*, County of *Washington*.

I, Joseph M. Hoge, Judge of the Circuit Court, within and for the fourth judicial circuit of said state of Arkansas, do certify that Benjamin H. Pierson, whose signature and seal of office appears to the foregoing certificate, is, and was at the time of signing the same, clerk of the circuit for said county of Washington; that full faith and credit are due to all his official acts as such, and that the same is given in due form of law.

Given under my hand at Fayetteville this the 26th day of November 1841.

(signed) *J. M. Hoge*,  
Judge of the Circuit Court.

## RELATIVE TO THE SURRENDER OF NELSON HACKETT. 7

State of *Arkansas*, County of *Washington* (s. s.), United States of *America*.

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

I, Benjamin H. Pierson, Clerk of the Circuit Court, and *ex officio* Recorder within and for the county of Washington aforesaid, hereby certify that the foregoing is a true copy of a bill of indictment preferred against Nelson Hackett by the grand jury named in said indictment.

In testimony whereof I, as clerk and *ex officio* recorder as aforesaid, have hereunto set my hand and affixed the seal of my office at office, this 26th day of November, A. D. 1841.

(L. S.) (signed) *B. H. Pierson*,  
Clerk and Ex officio Recorder.

State of *Arkansas*, County of *Washington*.

I, Joseph M. Hoge, Judge of the Circuit Court, for and within the fourth judicial circuit of said state of Arkansas, do certify that B. H. Pierson, whose signature and seal of office appears to the foregoing certificate, is and was, at the time of signing the same, clerk of the circuit for the said county of Washington; that full faith and credit are due to all his acts as such, and that the same is given in due form of law.

Given under my hand at Fayetteville this 26th day of November 1841.

(signed) *J. M. Hoge*,  
Judge of Circuit Court, &c.

To the Right Honourable Sir *Richard Jackson*, Governor-General of *British North America*.

YOUR petitioner would respectfully represent to your Honour that Nelson Hackett now stands indicted in said circuit court of Washington county, state of Arkansas, for grand larceny, is now in British North America, and within the jurisdiction of your Honour. Your petitioner would respectfully request that the said Nelson Hackett be given up upon the requisition of the Governor of the state of Arkansas, to the end that he may be brought to answer the said indictment for grand larceny. As in duty bound, your petitioner will ever pray.

Washington County, Arkansas, (signed) *Washington L. Wilson*.  
26 November 1841.

To the Right Honourable Lord *Sydenham*, Governor-General of the Province of *British North America*, &c. &c. &c.

The Petition of *Nelson Hackett*, a Man of Colour, now confined in the  
Gaol of the Western District;

Humbly sheweth,

THAT your petitioner, who was a slave in Arkansas, in the United States of America, made his escape from that place to the province of Canada, where he had learned that the humanity of the British law made him a free man as soon as he touched the shores of the country; that after his arrival at Chatham, the person to whom he had belonged arrived at that place, and for the purpose of being enabled to take your petitioner back to Arkansas with him, charged your petitioner with having stolen goods in your petitioner's possession, when, in fact and truth, the property belonged to your petitioner. When your petitioner was taken before the magistrates to be examined, from the blows that had the night before been inflicted on his head, he was in such a state as to be unconscious of what he said, he having been severely beaten over the head with the butt of a whip and a large stick. That to produce a feeling against your petitioner, his master charged him with having committed a rape, but did not attempt to make any proof thereof. Wherefore he prays your Excellency will be pleased to consider his case, and not authorize your petitioner to be given up, as should he be

## 8 DESPATCH FROM GOVERNOR GENERAL OF CANADA

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

taken back to Arkansas, he will be tortured in a manner that to hang him at once would be mercy. Hoping that your Excellency will take pity on him, and not accede to the demands of his master without the most clear evidence of his guilt, which he is well assured can only be obtained by false swearing.

And in duty bound will ever pray.

Sandwich Gaol, 18 September 1841.

(signed) his  
*Nelson x Hackett.*  
mark.

To his Excellency Lieutenant-General Sir *R. D. Jackson*, K.C.B. Administrator of the Government of the Province of *Canada*, &c. &c. &c.

Report of a Committee of the Executive Council.

Present:—The Hon. Mr. Sullivan, in the Chair; Mr. Daly, Mr. Harrison, Mr. Draper, Mr. Day, and Mr. Killaly.

Signed, C. B.

May it please your Excellency,

THE Committee of Council have, according to the commands of his Excellency Sir Richard Jackson, considered the case of Nelson Hackett, a fugitive felon from the state of Arkansas, and have agreed upon the following Minute.

Read a requisition from his Excellency the Governor of the state of Arkansas, setting forth, that it had been made known to him that Nelson Hackett, a negro slave, against whom an indictment had been found for grand larceny by the grand jury of the county of Washington, in the said state, is now in the Province of Canada, and requesting that the said Nelson Hackett be surrendered and delivered up, to the end that he may be removed and taken to the said state of Arkansas, where jurisdiction may be had of the said crime and justice awarded in the premises, and empowering one Lewis Davenport to receive the said Nelson Hackett, and to remove and transport him to the said state of Arkansas.

Read also certified copies of two several bills of indictment found by the grand jury of the said county of Washington; one charging the said Nelson Hackett with larceny of a watch, the other charging the said Nelson Hackett with larceny of a saddle.

Read also several depositions taken in the said state of Arkansas, and in Canada, and the examination of the said Nelson Hackett, taken at Chatham, in the western district of this province, before two of Her Majesty's justices of the peace.

And the Committee of Council are respectfully of opinion, that there is sufficient evidence of the criminality of the said Nelson Hackett in the matters so charged against him to warrant the apprehension and commitment for trial of the said Nelson Hackett, had the offence wherewith he is charged been committed in this province, and they therefore recommend that the said Nelson Hackett be ordered to be delivered up and surrendered to Lewis Davenport above named, to the end that he be taken and transported to the said state of Arkansas, there to be dealt with according to law, pursuant to an Act of the Parliament of the Province of Upper Canada, passed in the third year of the reign of King William the Fourth, intituled "An Act to provide for the apprehending of Fugitive Offenders from Foreign Countries, and delivering them up to Justice."

All which is respectfully submitted.

By order.

(signed) *R. B. Sullivan,*  
Chairman.

Executive Council Office, Kingston,  
8 January 1842.

This Report reserved for the consideration of his Excellency the Governor-general.

By command of the Administrator.

(signed) *Wm. H. Lee.*

## RELATIVE TO THE SURRENDER OF NELSON HACKETT. 9

Sir,

Government House, Kingston, 19 January 1842.

The Right Hon.  
Sir C. Bagot to  
Lord Stanley.  
20 Jan. 1842.

I HAVE the honour to inform your Excellency, that immediately on the assumption of the government of this province I took into consideration the demand made by your Excellency on Lieutenant-general Sir R. D. Jackson for the surrender to the authorities of the state of Arkansas of one Nelson Hackett, who has been charged with the crime of grand larceny, and against whom an indictment has been found by the grand jury of the county of Washington, in that state. Having, in connexion with my Executive Council, examined the charges against this individual, and the proofs by which they are supported, I have satisfied myself that there is sufficient evidence to warrant his commitment and trial, had the offence with which he is charged been committed in this province. I have therefore determined to comply with your Excellency's requisition, and have accordingly issued the necessary instructions for the surrender of Nelson Hackett to the custody of Lewis Davenport, the person appointed by your Excellency to receive him, with a view to his being conveyed to Arkansas, there to be dealt with according to law.

I have, &amp;c.

His Excellency A. Yell,  
Governor of Arkansas.

(signed) *Charles Bagot.*

— No. 2. —

## UPPER CANADA. ACT 3d WILL. 4, c. 7.

AN ACT to provide for the Apprehending of Fugitive Offenders from Foreign Countries, and delivering them up to Justice.—Passed 13th February 1833.

Fugitive Offenders'  
Act.

WHEREAS it is expedient to provide by law for the apprehending and delivering up of felons and other malefactors who, having committed crimes in foreign countries, have sought, or may hereafter seek an asylum in this province: be it therefore enacted by the King's most excellent Majesty, by and with the advice and consent of the Legislative Council and Assembly of the Province of Upper Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of Great Britain, intituled, "An Act to repeal certain parts of an Act passed in the Fourteenth year of His Majesty's reign, intituled, 'An Act for making more effectual provision for the Government of the Province of Quebec, in North America, and to make further provision for the Government of the said Province,'" and by the authority of the same, that the Governor, Lieutenant-governor, or person administering the government of this province, shall have power and he is hereby authorised, at his discretion, and by and with the advice of the Executive Council, on requisition being made by the government of any country, or its ministers or officers authorised to make the same, within the jurisdiction of which country the crimes hereinafter mentioned shall be charged to have been committed, to deliver up to justice any person who may have fled to this province, or who shall seek refuge therein, being charged with murder, forgery, larceny, or other crime, committed without the jurisdiction of this province, which crimes if committed within this province would, by the laws thereof, be punishable by death, corporal punishment, by pillory or whipping, or by confinement at hard labour, to the end that such person may be transported out of this province to the place where such crime shall have been charged to have been committed: provided always, that this shall only be done upon such evidence of criminality as, according to the laws of this province, would, in the opinion of the Governor, Lieutenant-governor, or person administering the government, and of the Executive Council, warrant the apprehension and commitment for trial of such fugitive from justice, or person so charged, if the offence had been committed within this province.

Preamble.

Government authorised to deliver up to justice persons who may have fled from other countries into this Province, charged with heinous offences.

2. And be it further enacted by the authority aforesaid, that, for preventing the escape of any person so charged, before any order for his apprehension can be obtained from the Governor, Lieutenant-governor, or person administering the government of this province, it shall be lawful for any judge, or for any justice of the peace in this province, acting within his jurisdiction, to issue his warrant

Persons charged with offences committed in foreign countries, may be committed until an application can be made to the Go-

vernment for de-  
livering up such  
offender.

warrant for the apprehension and for the commitment of any such person charged as aforesaid, in order that he may be detained in secure custody until application can be made to the Governor, Lieutenant-governor, or person administering the government, under the provisions of this Act, and until an order can be made thereon; which warrant shall, nevertheless, only be granted upon such evidence, on oath, as shall satisfy such judge or justice that the person accused stands charged with some crime of the description hereinbefore specified, or that there is good ground to suspect him to have been guilty thereof.

This Act not to  
affect the provi-  
sions of 37 Geo. 3,  
c. 15, or to make it  
incumbent on the  
Government to de-  
liver up persons  
charged as afore-  
said, or to prevent  
their discharge on  
a habeas corpus, if  
too long detained  
in custody.

3. And be it further enacted by the authority aforesaid, that nothing in this Act contained shall be construed to affect the provisions of a certain Act of the Parliament of this province, passed in the 37th year of the reign of King George the Third, intituled, "An Act to authorize the Apprehending of Felons and others Escaping from any of His Majesty's Provinces and Governments in North America into this Province," or to make it incumbent upon the Governor and Council of this province to deliver up any person charged, if for any reason they shall deem it inexpedient so to do, or to prevent the discharge of any person upon habeas corpus who, having been committed under this Act, shall be detained in custody beyond the time that may be reasonably required, under the circumstances of the case, for carrying the provisions of this Act into effect.

EXTRACT of a DESPATCH from Governor Sir *John Harvey*, K. C. B., to Lord *John Russell*, dated Government House, Newfoundland, 6 October 1841.

No. 1.

Extract Despatch  
from Sir J. Harvey  
to Lord John Rus-  
sell, 6 Oct. 1841.

IN obedience to your Lordship's commands, I proceed to place before you the views and opinions which I have formed upon the actual condition of this colony, from such observations as I have been afforded the opportunities of making, and such information as I have been enabled to acquire since my arrival in the island.

1. The inhabitants of Newfoundland appear to be unfeignedly loyal and firmly attached to British connexion.

No material degree of political excitement appears at present any where to exist, but, on the contrary, an apparent approximation towards a general disposition to bury past occurrences in oblivion. The trade of the colony is flourishing; its revenues ample and increasing; the fisheries of the present year, both of seals and cod-fish, have been highly successful.

2. The apparent suspension of their representative constitution, so recently conferred upon them, upon the ground of their gross abuse of the elective franchise, has evidently created much apprehension in the public mind, and has, I am willing to believe, produced such a moral effect as would exert a salutary influence in repressing any undue violence in future elections, in the event of Her Majesty's Government deciding on authorizing me to convene another Assembly. That there are persons of both intelligence and experience in this community who may entertain doubts on this subject I think very probable; but I cannot allow myself to believe that any intelligent individual in this island would be found favourable to the extinction, or even to the suspension for any lengthened period, of those benefits which a representative constitution can alone confer upon its inhabitants, and this merely because, during the first few years of the experiment, it has not been found to work with that degree of harmony which is so desirable, but which has not always been exhibited in other colonies, after a much longer trial. To some of the causes to which these discordant proceedings may be imputed I may hereafter advert; at present I will merely observe, that all parties are, I hope and believe, convinced that moderation in their measures and proceedings will best accord with their true interests; and all, every individual of every creed, party and denomination who has approached me, and with whom I have held communication, has expressed an anxious desire that its constitution should be restored to the island, with certain modifications.

In submitting to your Lordship, therefore, a proposition that I should be authorized to convene the General Assembly of Newfoundland, I will at the same time suggest the modifications which appear to me to be desirable, if not absolutely indispensable :—

1. That the qualification of the "members" of the Assembly should be so raised as, if possible, to ensure the election of persons above the class of common labourers: the possession of an income of not less than 100*l.* per annum, or of property of any kind of the value of—say 500*l.*, might, perhaps, effect this object.

2. Such a subdivision of the electoral districts, based upon population, as materially to increase the number of members—say to nearly double the present amount.

3. The elections throughout the island to be simultaneous.

With regard to the qualification of "voters," which is at present conferred by a mere residence in the island for one year, although it certainly may be regarded  
302. as

NEWFOUNDLAND.

as amounting to almost "universal suffrage," yet there are circumstances attaching to the unsettled and migratory character of a certain portion of the population of this island, which may perhaps be regarded as constituting a sufficient cause for not at present interfering with the enlarged privileges granted to them by the Royal Proclamation of July 1832, but which would perhaps rather render it advisable to leave any limitation of these privileges (beyond perhaps extending the qualifying period to two years' residence) to the good sense of the representatives of the people themselves, and to future legislative enactment.

The modifications which I have above suggested are, therefore, the only propositions which I deem it necessary to submit your Lordship at present; but as these, in the event of their receiving your Lordship's concurrence and approbation, can only be effected, I apprehend, by an Act of the Imperial Parliament, there will be sufficient time for me to learn your sentiments on the subject, and to offer such further suggestions as further information or more matured consideration may appear to render advisable.

I respectfully submit, that the members of the Council, as it now exists, should be allowed to retain their legislative character, and that I should be permitted to recommend to Her Majesty such additional members as I may consider fit and proper persons for raising that body, in point of numbers, to the amount which Her Majesty may be pleased to assign to it. The several interests of the colony (and these are not limited to its trade and fisheries) might thus be duly represented in the Legislative Council, and that body would then assume its proper constitutional character, as a separate branch of the Legislature, independent alike of the throne and the people.

I have thus endeavoured to possess your Lordship of the result of my own observations, and of the information derived from other sources, during the brief period of my residence in this island, and in doing this, I have endeavoured to divest that information of all tincture of local prejudice, and while applying to it whatever of practical experience I may have acquired in North American colonial affairs, I have assuredly not sought to bend facts or circumstances to any preconceived theory or previously formed opinions; on the contrary, should further experience induce me to alter any of the views which I have now presented to your Lordship, I shall not hesitate in frankly bringing such changes of opinion, with the grounds upon which they may rest, to your Lordship's early knowledge.

Bespeaking your utmost indulgence for this early exposition of my impressions in relation to this ancient, loyal and valuable appendage of the British Crown, and soliciting as early an intimation as may consist with your Lordship's convenience, as to how far the principles upon which my suggestions are based have your Lordship's concurrence, or otherwise,

I have, &c.  
(signed) *J. Harvey.*

*P. S.* Although I have forborne to place this report in the series of numbered despatches, in consequence of its being of a somewhat confidential nature, yet I should be happy to receive your Lordship's permission so to record it, should you see no objection.

(signed) *J. H.*

EXTRACT of a DESPATCH from Lord *Stanley* to Governor Sir *John Harvey*, K.C.B., dated Downing-street, 19 November 1841.

No. 2.

Extract Despatch  
from Lord Stanley  
to Sir J. Harvey,  
19 Nov. 1841.

I HAVE had under my consideration your confidential despatch of the 6th of October, addressed to my predecessor, which, in compliance with your expressed wish, I have directed to be recorded in this department among the numbered despatches.

It affords me great satisfaction to learn that, so far as you had been able to form an opinion, the inhabitants of Newfoundland generally appeared unfeignedly loyal and firmly attached to British connexion; that political excitement was subsiding, and the internal prosperity of the colony, in reference to its trade and revenue, steadily upon the increase. In such circumstances, I regret that recent events should have imposed upon Her Majesty's late servants the necessity of directing the suspension of the representative and legislative privileges conferred upon the island in 1832; at the same time that I understand it to be your  
own

own opinion, as it seems to be that of most persons conversant with the state of affairs in Newfoundland, that it would be a hazardous experiment to call together a new House of Assembly without some modification of the existing constitution. Such modifications, if undertaken at all, can only be so by an Act of the Imperial Parliament; and my present purpose is, to invite your attention to the changes which you may be disposed to recommend, to some of which you advert in the despatch to which I am now replying. The alterations to which you seem disposed to direct the consideration of Her Majesty's Government are,—1. A qualification for members of the Assembly. 2. A subdivision of the electoral districts, with an increase of the number of members. 3. Simultaneous elections. 4. A slight modification in the qualification of electors. 5. A separation of the Legislative and Executive Councils.

So far as my attention has yet been called to the difficulties connected with the administration of the affairs of Newfoundland, they appear to me to arise mainly from three causes:—1st. The interference of the Roman Catholic priesthood with election matters, which has led to feelings of religious animosity previously unknown in the colony, and to scenes of a scandalous character, shocking to religious and well-disposed Roman Catholics. 2d. The undefined and exaggerated notions which the two Houses, and especially the House of Assembly, entertain of their peculiar rights and privileges; and 3dly. The conflicting interests of two great parties in the island, the resident and the mercantile portion of the community.

\* With respect to the first of these causes, I much doubt the efficacy of any legislative remedy consistent with the maintenance of those free institutions, the withdrawal of which, unless under circumstances of more urgent necessity than at present exist, I am not prepared to advise. Something may, perhaps, be done towards mitigating the evil by an increase of the qualification of the electors, so as to afford a more really independent constituency; but I am aware that this attempt is surrounded by great difficulties, arising out of the minute subdivision of property, the scattered character of the population (except in the great towns), and the absence of any considerable middle class between the opulent, or, at least, prosperous merchant, and the lowest class of occupiers. It is clear that these difficulties would be rather enhanced than diminished, if your suggestion be acted on, of increasing the numbers and narrowing the limits of the present electoral divisions. I must own I do not precisely understand the object with which this suggestion is made; but it is one upon which I should be glad to be favoured more at large with your views as to the object to be attained, and the details of the arrangement by which you think that it can be effected. From the migratory character of a great part of the population, I do not doubt that requiring two years' residence would increase the respectability of the constituent body; but you will oblige me by furnishing any details which you are able to procure, as to the extent of change which this regulation would produce, and also as to the effect upon the constituency which would result from raising the household franchise in towns to 5*l.*, or even 10*l.* Unless I am misinformed, it would be very difficult to establish an uniform franchise, with any considerable increase on the present amount, as in the country districts a very trifling increase would operate a very large disfranchisement, while the high rate of house-rent in St. John's would there leave the constituency, even at 10*l.*, not materially altered, unless some alteration were made with regard to the state of the law as to separate occupiers under one roof. The subject is one involving so much of detail, that I should be glad to receive from you such calculations as you may be able to give of the effects which would be produced, in different localities, by different alterations of the franchise, giving the present proportions of the constituency to the population, with the proportions which would subsist under the different modifications. You will also have the goodness to send me your scheme for a new division of the electoral districts, with the grounds on which you recommend it. A qualification for members of the Assembly, I think, is right in principle, and would probably have the effect of inducing a superior class of men to offer their services, and thus raise the tone and character of the Assembly.

There is, however, another change, of a more important character, to which you do not advert, and to which I am aware that many plausible objections may be urged, but from which, could it be introduced without creating great dissatisfaction, I conceive that much advantage would result,—I mean, the abandonment of the fancied analogy to the Imperial Parliament, and the union,

NEWFOUNDLAND.  
—

in one chamber, of the representatives of the people, and the nominees of the Crown. I am strongly of opinion, that half the difficulty of governing small colonies arises out of the feuds and jealousies engendered by contests about the privileges of the two Houses, and the necessity in which the Crown finds itself of establishing a certain counterpoise to the democratic spirit in a separate Council, rather than in the body of a single legislative Assembly. I should be glad that you should consider, with reference to past events, the practicability of introducing such an alteration into the constitution of Newfoundland, and the effect of amalgamating the Council and Assembly, the members of the former being to the latter in a proportion of about two to three.

Whether with one chamber or with two, the Government will always have to contend with the difficulties arising out of the conflicting interests of two great classes of the community (independently of religious distinctions), the commercial and the resident class ; and although it may be true that, taken broadly, these interests must act and re-act upon each other, yet each will have separate objects to pursue, and separate views to promote, either by expenditure of public money or by imposition of public taxes. The former of these classes, up to a recent period, monopolized the power, as they possessed the whole capital of the island, which it was their avowed object to consider merely in the light of a fishing station. In pursuance of this policy, internal improvements were discouraged, and the island itself was looked upon as subservient to the interest of trade alone. The gradual increase of population has led to the formation of a rival interest, which has now obtained a large share of political power, which it desires, not unnaturally, to direct towards the furtherance of its own objects.

If the power of this resident interest predominate, as with a low qualification I apprehend it may in the House of Assembly, its objects will naturally be the expenditure of large sums of public money on the improvement of internal communications, and the increase of local advantages to be obtained by taxation upon the British merchant and British trade.

I am far from saying, that the object within reasonable bounds is not a legitimate and praiseworthy one ; but it is one which may easily be carried to an extreme, at least, as prejudicial as the opposite policy which has guided the mercantile class. The balance between these interests requires to be held with a steady hand by the executive.

I apprehend that the union of the two Houses would enable the Governor to hold this balance with comparative ease ; but I am certain that with this, among other objects, it will be necessary, in any modification of the constitution, to reserve to the Crown, as in England, and as recently in Canada, the exclusive right of originating all grants of public money. In the interval which must elapse before the Legislature can be again called together (more especially if you are decidedly of opinion that a summer sessions is impracticable), I shall hope to receive from you full information as to the state of the public revenue and expenditure, and of the objects to which you conceive that the former may be most advantageously applied. Your despatch, now before me, gives a more favourable report than I was prepared to receive of the capabilities of the island in point of soil and climate, which I shall rejoice to find that you are able to confirm upon further investigation. I shall receive with interest the further communications which you lead me to expect on these subjects ; and you may rely upon my cordial co-operation, and that of Her Majesty's Government, in any measures which may seem to hold out a reasonable prospect of developing and increasing the resources of the remote, but not unimportant portion of Her Majesty's dominions which is intrusted to your charge. Into these topics, on the present occasion, I shall decline to enter, my object having been to address myself to the subject of the political changes which it may be necessary to introduce into the constitution of the colony, and in which I shall hope to receive, at your earliest convenience, such further and more detailed reports as longer experience and mature consideration may enable you to furnish.

I had almost omitted to say that if the colony will supply materials, I should approve of your proposed separation of the executive and legislative functions, and of the mode which you suggest for the constitution of the executive Council.

NEWFOUNDLAND.

—No. 3.—

EXTRACT of a DESPATCH from Governor Sir *John Harvey*, K.C.B., to Lord *Stanley*, dated Government House, Newfoundland, 21 December 1841.

WITH reference to one of the concluding paragraphs of my confidential despatch of the 6th October, I have now the honour to invite your Lordship's attention to the following observations:—

Having since the date of that despatch seen some reason to apprehend that to find at present in this colony a sufficient number of persons of suitable respectability, intelligence and attainments, from which to construct a machinery of government and legislation so extensive as two Councils and an increased Assembly, may not be easy, if it be even practicable, I have turned my attention to the devising of some means of escape from this dilemma, without depriving the people of their elective franchise; in doing this, the suggestion contained in Lord Goderich's despatch, No. 15, of 27th July 1832, has naturally presented itself to my mind; and after having given it mature consideration, I am inclined to the opinion that a modification, or rather a slight extension of the plan therein suggested of uniting the Council and Assembly in one legislative body, might perhaps, with the addition of a Council of advice for the Governor, properly composed, constitute a form of government not unadapted to the present condition of this colony.

\* \* \* \* \*

I now proceed to Lord Goderich's suggestion, and to the adaptation of it to the actual circumstances of this colony; and in expressing my ideas on this point, I would merely submit that the number of ex-officio members of the General Assembly be somewhat increased, say from three to five. As an experimental measure, and one which might without difficulty or delay be carried into effect, I would propose that the Council thus composed should be united to the same number of representatives of the people to be chosen for the same electoral districts, as sat in the last House of Assembly,—the argument for the extension of the number of that body\* being considerably weakened, in my judgment, if not altogether destroyed by the addition which would be made to the numbers of the General Legislative Assembly by the nine members of the Legislative Council; the Assembly would then consist of twenty-four Members, of which fifteen would be chosen by the people,—a number sufficient to try the experiment, particularly as the Assembly would have power to increase its number by legislative enactment, so as to meet the increase of the population of the island.

EXTRACT of a DESPATCH from Governor Sir *John Harvey*, K.C.B., to Lord *Stanley*, dated Government House, Newfoundland, 23 December 1841.

I do myself the honour to acknowledge the receipt of your Lordship's despatch of the 19th ultimo, marked "Confidential," the contents of which shall receive my early and serious consideration and alteration. In the meantime, your Lordship will peruse, I trust with satisfaction, the modified suggestion which I have been induced to place before you in a confidential despatch, written a short time previous to the receipt of that from your Lordship, which I have now before me, relative to the union of the Council and Assembly, in one legislative body; to that despatch, therefore, written in anticipation of the arrival of the mail packet, whose almost immediate return leaves no time to do more than acknowledge communications I have the honour to refer.

\* To obtain a sufficient quorum, and thus to guard against (what has already occurred) the control of the public purse, and, in some respects, the management of public affairs falling into the hands of a few members of the Assembly at the close of a session.

Extract Despatch  
from Sir J. Harvey  
to Lord Stanley.  
10 Jan. 1842.

EXTRACT of a DESPATCH from Governor Sir *John Harvey*, K.C.B., to Lord *Stanley*, dated Government House, St. John's, Newfoundland, 10 January 1842.

WITH reference to your Lordship's despatch of the 19th November, marked "Confidential," I now proceed to place before your Lordship some further observations and information explanatory of the views which I had the honour to present to you in my confidential report of the 6th October 1841.

*Qualification of Voters.*

I am of opinion that to require any rent qualification whatever, or any property one, beyond perhaps the lowest value of a log hut (say 40s.), and that, in fact, can scarcely be regarded as the property of the squatter, from being erected on ground to which he can have acquired no other title than such as an unauthorized occupancy may be considered conferring upon him, would operate a very extensive disfranchisement in the country districts, without at all improving, or indeed materially changing, the description of voters; and with regard to the towns, the qualifications being already restricted by an Act of the local legislature to one person in each house, viz., him by whom the rent is paid, no further provision would appear to be required upon this subject. At the same time I would observe, that if a rent qualification of, say 5*l.*, in towns, be considered desirable, and could be confined to the towns, I do not think, for the reason which I have just assigned, that it would produce any material diminution in the number of voters, although it certainly would, if extended to the district in which those towns are situated; this effect, however, might be guarded against by an alteration in the electoral divisions.

The class of emigrants which I understand is in the habit of resorting to this island may be described as being of a transitory, unsettled, experimental character, a considerable proportion of it passing onwards into some of the other colonies of British America, or into the United States, after having tried the fisheries as servants or labourers for a single season, and not relishing the pursuit, which is one of considerable hardship, but having through it acquired the means of proceeding onwards. This class, having no settled interest in the colony, should be excluded from the constituency; but after a residence in the island of full two years, by which a pledge is in some measure afforded of a disposition to adopt the island as a future abode, the object of the government and of the legislature should then, I conceive, be to encourage and confirm that disposition, by conferring upon such persons the elective franchise. Again, with reference to a rent or property qualification as regards the inhabitants of the country districts, I am inclined to think that considerable difficulty might be found to exist (even if the government was ready in all cases to confirm the squatters in the occupation of their lots) from the circumstance of their not having been regularly surveyed. Perhaps the quickest and simplest mode of escape from this difficulty might be, to institute a scrutiny into the fact of the continued occupation of their lots for two complete years, and then to allow the establishment of that fact not only to confer upon the occupant a claim to the elective franchise, but also a title to the ground in his actual occupation, and consequently to the improvements which he may have made upon it. Such an arrangement would not be attended with any material difficulties.

From the constituency, both in towns and the country, should certainly be excluded, if practicable, paupers, individuals receiving public charity for themselves or their families, and persons of notorious bad character, or such as may have been convicted of any offence of a deeply criminal character.

With these observations and explanations, I beg to renew my recommendation that the qualifications for voters for members of the popular branch of the legislature in Newfoundland be not for the present raised beyond two years' continued residence in the island. This recommendation refers, of course, only to British subjects.

*Qualification of Members.*

With regard to the qualification of the members of the Assembly, I have found no reason to alter, but many to induce me to adhere to, my former suggestions on  
this

this subject ; I allude to the concurrent opinions of individuals, considered as among the best-informed and most moderate of every creed and party, in favour of the sufficiency of the qualification suggested in my despatch of 6 October; viz., the possession of 500 *l.* clear of all debts, or 100 *l.* per annum.

NEWFOUNDLAND.

*Money Grants.*

Whether derived from that fiction of the constitution by which the Sovereign is supposed to be vested with all the property of the realm, or merely from parliamentary usage, the rights of the Crown to originate all money grants must surely be regarded as still less equivocal in the colonies than even in the parent state, inasmuch as that the former can possess no other revenues than such as are derived from a voluntary surrender by the Crown, on certain conditions, for the benefit of Her Majesty's loyal subjects, either of the Crown estates, or of imposts levied on Her Majesty's subjects in Her Majesty's name, by Her authority, and for Her service. In graciously conferring upon these colonies a form of constitution as nearly analagous to that of the parent state as their actual condition will admit of, Her Majesty has not, I conceive, intended to divest Herself of Her undoubted right to prescribe in what mode the privilege of appropriating the public monies which is thus conferred upon them shall be exercised; and it has accordingly become the established usage, sanctioned by the Crown, that each branch of the General Assembly of each province shall be enabled freely to exercise its separate and independent judgment, not only upon the expediency and amount of every vote of supply in aid of the public service, but on every item of which such vote may consist. This is effected either by the introduction in the Assembly of separate Bills for each separate branch of the public service, or by a series of separate resolutions (ultimately embodied in any appropriation or supply Bill), to all of which the concurrence of the Legislative Council is essential. No private money bills or petitions for relief are ever entertained by the Speaker of the House, or the chairman of any committee of supply, without the permission of The Queen's representative having been previously obtained.

This practice has been cheerfully acquiesced in by the Assemblies of the provinces with which I have been connected, and has, as respects these provinces, been productive of legislative harmony and general satisfaction; and I shall accordingly deem it to consist with my duty to urge upon the Assembly of this island the necessity of assenting to a similar course of proceeding, or of leaving to the local government the originating of all money grants, to be separately discussed and concurred in by both branches of the legislature.

(Confidential.)

EXTRACT of a DESPATCH from Governor Sir *John Harvey*, K.C.B., to Lord *Stanley*, dated Government House, St. John's, Newfoundland, 11 February 1842.

No. 6.

Nos. 1 to 5.

THE documents which I have the honour herewith to transmit have been placed before me by the provincial secretary, since the transmission of my despatches by the "Gazelle," on the 7th instant. They embody the opinions, deliberately and advisedly given, of five highly respectable individuals, in the form of answers to a few queries, which were sent to them by my directions, upon the subject of the modifications which it may be deemed advisable to introduce into the representative constitution of this island; and I invite your Lordship's attention to them with the greater satisfaction from the consideration that, proceeding as they do from parties of diametrically opposite political opinions, they will, nevertheless, I think, be found to be substantially in accordance with the views and suggestions which I have considered it to consist with my duty to submit to your Lordship in former communications.

## Enclosures in No. 6.

Encl. in No. 6.

ABSTRACT of the Contents of the Enclosures of Sir *John Harvey's* Despatch of 11 February 1842.

Opinions as to a rent or property qualification for voters;

\_\_\_\_\_, \_\_\_\_\_, and \_\_\_\_\_, for a household qualification, with a system of rigid registration.

\_\_\_\_\_, rental of 10*l.* in St. John's, and 5*l.* in the out-ports, or a 40*s.* freehold, and in either case two years' residence.

\_\_\_\_\_, 5*l.* rental, 12 months' occupancy of a house, and two years' residence in district.

as to the qualifications for members;

\_\_\_\_\_, freehold of 25*l.*, or rental of 50*l.* per annum, or 400*l.* in property of any description.

\_\_\_\_\_, qualification of Canada (500*l.* real property).

\_\_\_\_\_ does not consider further qualification necessary, but, if any, suggests 1,000*l.* sterling, free of incumbrances.

\_\_\_\_\_, income of 100*l.* per annum, or 2,000*l.* over and above debts.

\_\_\_\_\_, 100*l.* per annum from property or office.

as to the increase of districts and members.

\_\_\_\_\_, no increase of districts, but double the number of members for each district.

\_\_\_\_\_, towns possessing 2,000 inhabitants to return one member, 5,000 and upwards, two members, in addition to the present members.

\_\_\_\_\_ recommends that Conception Bay be divided into four districts, and every district whose population shall exceed 5,000, now returning one member, to return two.

\_\_\_\_\_ recommends 25 members, and sub-division of electoral districts.

\_\_\_\_\_, sub-division of electoral districts and increase of members, but no number named.

## QUESTIONS proposed by his Excellency the Governor.

## VOTERS.

1. WHAT would be the effect, in your opinion, of a rent or a property qualification for voters; what its advantages, and what its objections; and to what extent would it operate disfranchisement in the towns and in the country districts respectively; and if you are favourable to it, at what rate would you fix it?

Calculations as to the probable numbers who would be disfranchised by a qualification of, say 5*l.* to 10*l.* rent in St. John's, and 40*s.* in the country districts, would be acceptable.

2. What are the qualifications for voters which you would suggest, upon the most moderate scale which may accord with your ideas?

3. Do you recommend any increase in the number of electoral districts and of members; and, if so, upon what grounds; and by what means would you propose to effect such increase?

4. What is the minimum amount of qualification which you would recommend for a member of the Assembly?

ANSWERS

## PAPERS RELATING TO NEWFOUNDLAND.

11

ANSWERS to the QUESTIONS proposed by his Excellency the Governor.

NEWFOUNDLAND.

No. 1.

Sir,

St. John's, 29 January 1842.

I HAVE the honour to acknowledge the receipt of your letter of the 24th instant, accompanied by certain heads of inquiries, conveying at the same time his Excellency the Governor's wish that I should answer the questions therein contained.

After giving the subject all the consideration in my power, I beg respectfully to say, first, with regard to voters, that it may be laid down as a general proposition, that a household franchise is most suitable to the peculiar circumstances of the inhabitants of this colony.

Under this circumstance, it is my opinion, that a rent or property qualification, to supersede the present unlimited system of household suffrage, would, in effect, 'disfranchise a large portion of the inhabitants.

In framing a ground-work for a Representative Assembly in Newfoundland, it should always be kept in view that a great portion of the inhabitants are employed in the fisheries, many of whom, in the possession of property in boats, craft and tackle to a considerable amount, occupy such a description of houses as would be difficult to place a value upon in the form of rent or otherwise. Many of these persons move, in the summer or fishing season, to the Labrador and other distant parts of the colony, for the convenience of carrying on the fisheries, leaving their houses vacant until they return in the fall; others reside in small houses adjoining their fishing stages; for these fishermen's houses the occupiers pay no rent.

A rental qualification of 10 *l.* in St. John's, would have the effect of preventing a large portion of the householders from voting, particularly fishermen, who occupy tenements, paying a rent of from 5 *l.* to 8 *l.* per annum, in the back streets of the town. A rent of 5 *l.* and upwards would, in my opinion, comprehend the whole of the householders, with very few exceptions; under a rental of 5 *l.* per annum, few, if any, of the householders of St. John's would be debarred from voting.

It may be said that a rental qualification of 40*s.* in the towns of Harbour Grace, Carbonear, Brigus, Trinity, Bonavista, Burin, Bay Bulls, Placentia, Trepassey, and other outports, would have the effect of disfranchising the principal part of the householders in these places who are exclusively engaged in the fisheries.

The residents in the country districts, both in the neighbourhood of St. John's and in all other outports of the island, who have cleared land and turned their attention to agricultural pursuits, would be entitled to be classed as freeholders of from 40*s.* to 50*l.*, provided their present title, that of occupancy, be confirmed by the Crown.

Persons coming under this description are rapidly increasing, and in a few years will form a decided majority of the householders and freeholders throughout the island.

Under these circumstances, it is that most valuable portion of the inhabitants who are exclusively engaged in the fisheries that would be affected by rent or property qualifications; and it is merely to secure to them their just portion of political rights that I am decidedly averse to any but a simple household franchise. There could be no reasonable objection to the term of occupancy being extended to two years instead of one, the present limit.

To a rental or property qualification for voters may also be objected the difficulty of establishing under it a suitable system of registration; the town would have to be separated from the country districts; there would be various classes of voters; the legal machinery to put the system into operation would be both complex and expensive, and quite unsuited to the present circumstances of the country.

In reply to the second head of inquiries, I cannot, for the reasons already stated, suggest any amount for a rent or property qualification for voters.

In reply to the third head, I have to say, that I would not recommend any increase in the number of electoral districts. I do think the divisions made on the promulgation of the royal charter, and under the proclamation of his Excellency Sir Thomas Cochrane, are the best that can be made. A subdivision almost in any way that could be contemplated, giving certain portions of the various districts the right of electing members, would be open to the objection made against the old small borough system. The objections to the present extent of electoral districts would have been effectually remedied by the Election Bill of last session, had it passed into a law. By that Act polling places were to be established in the most convenient positions; the voting was to be simultaneous; every voter would have an opportunity of exercising his franchise in his own immediate neighbourhood.

Instead of increasing the number of districts, I would recommend an election law in principle similar to the Bill that passed the House of Assembly in the last session.

As respects an increase in the number of representatives, I strongly recommend it. The present number of 15 are not adequate to the discharge of the public business. Under the present system, the Speaker and five other members form a quorum; notwithstanding, they had frequently to adjourn for want of a sufficient number. I could, from my own experience in the House, adduce many other reasons for an increase; the necessity of it is so obvious, and so universally admitted, that I consider it unnecessary to urge further arguments in support of an increase. The mode I would recommend would be, to double the number in each of the electoral districts. Thirty members would, in my opinion, give a fair proportion of representatives to all parts of the island.

On the subject of the fourth and last head of inquiry, the *minimum* amount of qualification for a member of the House of Assembly, if it should be decided that a property qualification be necessary, I must say that it should not exceed a freehold of 25 *l.*, a rental of 50 *l.*, or the possession of chattel property to the amount of 400 *l.*; a qualification somewhat similar to

NEWFOUNDLAND. that adopted in the corporations of the provincial towns in England and Ireland under the new Corporation Acts.

In proposing a property qualification, I am influenced more out of deference to certain respectable and influential classes of the community than from any opinion of my own of the necessity of such a test. If the number of the House of Assembly were increased, and some defined and constitutional control adopted over the initiation of all money votes, I do think that the selection of fit and proper persons to represent the various interests of the colony might safely be left to the householders throughout the island, and without any other limitation than is contained in the present charter.

I hope it may not be considered presumptuous in me to state, in conclusion, my humble opinion, that if the present constitution, so generously and liberally granted by his late Majesty, has not been found to answer the expectations formed at the commencement, the fault does not lie in the constitution.

The framers of it displayed great knowledge of the peculiar state of the colony, and, under all the circumstances, it was well calculated to promote the object contemplated.

The difficulties which it would have to encounter in its working were clearly pointed out in the profound and eloquent despatch of Lord Viscount Goderich, transmitting his Majesty's royal authority to Sir Thomas Cochrane to convene a General Assembly in Newfoundland.

I have, &c.

\* \* \*

#### VOTERS.

No. 2.

1. I CONSIDER, in the present state of Newfoundland, a property qualification impracticable and unjust; it would have the effect to disfranchise the greatest and best part of the population. In a moral and political point of view, I consider household suffrage the best that has yet been discovered. A householder is, for the most part, a husband and a father, having a fixed locality; the peace of his community, the prosperity of his country, must be dear to him. The valuable boon bestowed by King William IV. of happy memory would be looked upon by the people as an unusual, an unmerited and unconstitutional withdrawal of a royal act of grace. The character of a householder ought to be clearly defined, and a rigid registration obtained.

2 & 3. A considerable addition to the number of members to the House of Assembly is necessary for the due performance of the increasing business of the colony; especial care, however, should be taken in the division of the electoral districts, that they do not lapse into close districts. The more diffused an electoral body, the candidate must calculate more for success on his fame and character than upon the force of his purse or the influence of family connexions. The towns ought to be incorporated, and the right to return members to the Assembly conceded to them; to a town possessing a population of 2,000 and upwards, one member; to a town possessing a population of 5,000 and upwards, two members.

4. The qualification as required by law for a member to the Canadian Parliament would be ample for a member to the Assembly of Newfoundland; the character and the independence of the Assembly would be enhanced by a similar law.

\* \* \* \*

I believe that the above regulations would be easily and most constitutionally effected by the local legislature.

\* \*

No. 3.

Sir,

St. John's, 8 February 1842.

I HAVE the honour to send you herewith my answers to the several interrogatories you transmitted to me by order of his Excellency the Governor. The documents appended, and to which my answers have reference, I have to request may not be made use of further than for the information of his Excellency, and that of Her Majesty's Government.

I have, &c.

\* \* \*

To the Hon. James Crowdy, &c. &c. &c.

1. I do not think that a rent or property qualification would be productive of much, if of any, practical advantage. Household suffrage, guarded by an efficient system of registry, together with simultaneous voting under a new division of the electoral districts, such as I recommended in my communication to the Right honourable Her Majesty's Principal Secretary of State for the Colonies, Lord John Russell, in July last, would, in my humble opinion, go far to render any other qualification unnecessary. Were no more than one person allowed to vote for one and the same house, that highly objectionable class of voters, lodgers and paupers, would be excluded. It is only in the principal towns, *e. g.*, Saint John's, Harbour Grace and Trinity, where property to any extent is held under a rental. In nearly all the other settlements the inhabitants occupy premises which have descended to them from their ancestors, or land which they have themselves redeemed from the wilderness, for which they pay no rent to the Crown, and on which they have built for the

the

the convenience of their families, and the purposes of the fishery. I would further remark, that such property is in a great degree valuable only so long as it be thus occupied, and that the annual rent of an ordinary house in St. John's would be almost equivalent to the full value of these freeholds, and in many instances much more. Thus it will be seen, that the rent-payers of St. John's are an equally respectable class of persons with those who term themselves freeholders in the smaller settlements; in fact, that these are the same class of persons.

A 10*l.* rent qualification at St. John's would exclude nearly all the labouring portion of the inhabitants, whilst a 5*l.* qualification would exclude but few.

2. If any rent qualification be adopted, I think 4*l.* sterling, or 5*l.* currency, would be the most satisfactory to the public; and it might be argued by those who are in favour of some such qualification, that it would in its tendency aid any other measure which might have for its object the exclusion of lodgers and paupers from the right of voting. It might also be desirable to adopt another and a distinct qualification for freehold property of the value of 5*l.* per annum in the district of St. John's, and 40*s.* per annum in the other electoral districts.

3. I do recommend an increase in the members, and also in the numbers of the electoral districts, for the reasons given in my communications to Lord John Russell, a copy of which I have the honour to send herewith.

4. I have strong doubts whether a property qualification would have the effect of securing a more respectable body of representatives. If the electors themselves be placed in a respectable and independent position, then there is but little danger to be apprehended from the choice they may make of their representatives. But if any property qualification be adopted, I think the sum of 1,000*l.* sterling, free of all incumbrances, would be the lowest amount at which it could be advantageously fixed.

---

No. 4.

Sir,

St. John's, 4 February 1842.

THE questions which you have proposed to me are involved in so much difficulty (particularly as respect the qualifications of voters) that I am quite at a loss how to reply to them, with satisfaction to myself and utility to the public.

Having been one of those who first advocated a local legislature for Newfoundland, and indeed one of its most strenuous advocates, I am naturally led back to consider the terms on which such a boon was sought from the Parent Government, and I find that the petitioners asked for a legislature similar in all respects to that of Nova Scotia, in 1830, which had been found by experience to have worked well, and which I presume would have been satisfactory to all parties, if similar qualifications had been fixed at the commencement of our local government; but his Majesty's Government decided on making an experiment in Newfoundland widely differing from the constitution petitioned for; and this may have thrown a difficulty in the way of now returning to the model of Nova Scotia, which at the time would have been most acceptable, and would, in my opinion, have prevented in a great measure those heart-burnings and differences which have since distracted this once peaceful community.

I enclose my answers to the questions proposed by his Excellency.

The Hon. James Crowdy, &c. &c. &c.

I am &c.  
(signed) \* \* \* \*

*N. B.* "The qualifications for a vote or representation in Nova Scotia are either a yearly income of 40*s.* derived from real estate within the particular county or town for which the election is held, or a title in fee-simple of a dwelling-house and the ground on which it stands, or 100 acres of land, five of which must be under cultivation. It is requisite that the title be registered six months before the test of the writ, unless it be by descent or devise."—*Haliburton's History of Nova Scotia*, vol. ii., page 321.

1. A moderate rent or property qualification would, in my opinion, effect no change in the present constituency, as voters are now required to be male housekeepers, occupying a dwelling-house, as landlord or tenant, for one year, and few dwellings in Newfoundland would be valued at less than 5*l.* per year.

I think a 40*s.* freehold would be the best qualification, and the registration of the title-deeds would prevent disputes at the hustings; most persons resident in the outports possess such property; but as land in this colony generally sells for about 10 or 12 years' purchase, persons possessing but slender means might qualify themselves if they felt so inclined; voters should have some permanent holding in the colony.

Five pound to 10*l.* rent in St. John's, and 40*s.* in the country districts, would not, in my opinion, disfranchise any householder, as every tenant agrees, or would agree, for a rent to that extent.

2. Forty shilling freeholders, as in Nova Scotia; or if it be deemed requisite to extend the franchise to tenants, then 10*l.* rent in St. John's, and 5*l.* in the outports, with two years' residence in the district; this would not tend to disfranchise persons long resident, or who may be presumed to have sufficient local knowledge to form a correct judgment of the qualifications of candidates, but would merely throw out strangers and raw youngsters recently imported from England or Ireland.

362.

3. I recommend

NEWFOUNDLAND.]

3. I recommend the division of Conception Bay into four districts, in order that every class of Her Majesty's subjects may be fairly represented, which is not the case at present; and also that every other electoral district, whose population by the census of 1836 exceeds 5,000, and which now returns but one member, shall return two members to the General Assembly; and that all the votes be taken in one day, if practicable.

The division of Conception Bay to be as follows :—

- 1st. Bay de Verd to Salmon Cove inclusive.
- 2d. Thence to Spaniard's Bay inclusive.
- 3d. Thence to Cupid's inclusive.
- 4th. Thence to Topsail inclusive.

4. A clear annual income of 100*l.*, or personal property to the amount of 2,000*l.*, over and above the payment of all just debts to which the candidate must qualify by affidavit.

This latter qualification may appear high; but if it should at any time be the intention of Her Majesty's Government to nominate executive councillors from among the members of the Assembly, it must be absolutely requisite that such members should possess some considerable stake in the colony.

No. 5.

Sir,

St. John's, 27 January 1842.

I HAVE the honour to acknowledge the receipt of your note of the 24th instant, which I did not receive until yesterday, enclosing questions relative to voters, and qualification of members for this colony, and now respectfully enclose my answers thereto, which you will be pleased to lay before his Excellency the Governor.

I have, &amp;c.

The Hon. James Crowdy, &amp;c. &amp;c. &amp;c..

\* \* \*

1. I beg respectfully to state that the effect, in my opinion, of a rent or property qualification would be to prevent many persons who have hitherto been received as voters, and have had the occupation of a single room, as under-tenant, from voting at elections, as well as those who have occupied, during the fishing season, huts built for the accommodation of fishermen and shoremen during that period, and the occupation of a room as under-tenant in town, or from residence during the winter in a tilt in the woods, and in fishing-huts for twelve months previous to the time of election.

The advantages that would result from such a regulation or law would be to disfranchise many adventurers arriving from the mother country or the colonies, having no property or stake in this colony, and who have hitherto been allowed to vote from the occupation of a hut of nominal value in the woods, or a room as under-tenant in town.

The rate at which I should fix the qualification for a voter in the country would be 40*s.*, on proof of the voter holding property by grant or occupation previous to the year 1825, when the Imperial Government authorized his Majesty to grant waste lands, and having erected a house thereon, and cleared two acres of land of the same.

The qualification of a voter in this town being limited from 5*l.* to 10*l.* rent would have the effect of depriving many persons who have hitherto been allowed a vote as under-tenants in the dwelling-houses of their landlords, the sum paid by such tenants being from 3*l.* to 4*l.* per annum on an average; there are but few under-tenants in the country districts, and the number of landlords or tenants that would be disqualified in town would be inconsiderable, and but few in the outports or neighbourhood, should the qualification be fixed at 40*s.*

2. I would respectfully suggest that the qualification for a voter should be a residence for two years in the district in which he is to vote, and having occupied a house by himself for twelve months before the time of election, which, in my opinion, would have the effect of shutting out transient visitors; and as respects the rental of property, the payment of 5*l.* a year by a tenant, or the rating upon the dwelling-house of an occupant, owner of the same amount, should be a sufficient qualification; provided sub-tenants and tenants living in the same house with the landlord or tenant be disqualified from voting.

3. I would respectfully recommend an increase of members in the number of electoral districts, for the reason, that at present persons of influence in extensive districts, namely, clergymen, or a merchant supplying largely, may exert that influence in favour of a person of low degree, and entirely destitute of those legal acquirements necessary in a legislator, as was found to be the case in the last return of some members for this colony, which would not be likely to be the case if that district were divided, when the candidates and their qualifications would be better known to the voters generally than they can by possibility be under the present system; also, by increasing the number of electoral districts, and having the polling simultaneous, much of that influence would be lessened, as the votes would be given in the absence of those by whom they would otherwise be controlled.

4. The minimum amount of qualification, which I would respectfully recommend, would be an office of the yearly value of 100*l.* sterling, or property yielding or being valued at the same amount.

Many persons during the last election were allowed to vote in consequence of having lived in a tilt during the winter, in which they had no property (having no grant), and in fishing-huts in Loggy Bay during the summer.

Residence

Residence during the winter months, in a room in town, as sub-tenant, and occupation of a fisherman's hut during the summer, was also held to be a good vote. NEWFOUNDLAND.

The votes of such persons as above described were taken in my presence during the last election.

To enable me to form an opinion of the number of persons that may be disqualified from voting, I have had reference to the state of the poll at the last election for this district, by which it appears, that 239 unregistered votes were taken by the returning officer; and if joint-tenants, occupiers of huts in the woods, and transient persons, be deemed ineligible, I should estimate the reduction of votes, or disqualification of voters, to about 200, or at most 250.

STATE of the POLL at the Election in May 1840, compared with the Registry of Voters deposited in the Government-office, showing the Majority of legally-qualified Voters in favour of Mr. Douglas.

Mr. Douglas.		Mr. O'Brien.	
Registered Votes.	Votes not registered.	Registered Votes.	Votes not registered.
1,379	124	1,148	363
		Registered Voters.	
Mr. Douglas	- - - - -	-	1,379
Mr. O'Brien	- - - - -	-	1,148
Majority for Mr. Douglas		- - -	231
Number of Votes taken		- - - - -	3,014
Ditto - registered		- - - - -	2,775
		Not registered	- - - 239

By the Register for 1841, there are 114 joint tenants.

G. W. HOPE.

---

(No. 22.)

EXTRACT of a DESPATCH from Governor Sir *John Harvey* to Lord *Stanley*,  
dated Government House, St. John's, Newfoundland, June 24th 1842.

WITH regard to the Bill which your Lordship has introduced into Parliament for the improvement (I use the word advisedly) of the constitution of this Island, I trust I may be allowed to express my hope that none of its provisions may undergo any material change in the course of its progress through the Legislature, as I am unable to perceive how they can be rendered more entirely applicable to the existing state of the colony ;—to the disorders which have heretofore attended the practical working of the representative constitution in this Island, they appear to me to offer a thorough remedy, and therefore to hold out the prospect of rendering the future administration of its affairs easy and satisfactory, both as respects the Government and the people. The only point which I would venture to urge upon your Lordship, in reference to this measure, is, the importance to the interests of this colony of my receiving the Bill, and the Instructions to be grounded upon it, at as early a period as may be practicable.

## PRINCE EDWARD ISLAND.

— No. 1. —

(No. 21.)

EXTRACT of a DESPATCH from Lieutenant-governor Sir *Henry Vere Huntley* to Lord *Stanley*, dated Government House, Prince Edward Island, 18 March 1842.

I HAVE the honour to transmit the enclosed, being a joint Address from the two Houses of Legislature here, to Her Majesty the Queen, upon the subject of the admission of corn grown in the colony, duty free, into the ports of Great Britain.

I feel it my duty to forward to your Lordship the report issued this year by the "Central Agricultural Society" of this island; it stands in opposition to the inference to be justly drawn from the expression in the Address respecting a "sufficient market."

PRINCE EDWARD  
ISLAND.

No. 1.

Extract Despatch  
from Lieut.-gov.  
Sir H. V. Huntley  
to Lord Stanley,  
18 March 1842.

Enclosure 1, in No. 1.

To The QUEEN's most Excellent Majesty.

May it please Your Majesty,

WE, Your Majesty's dutiful and loyal subjects, the Legislative Council and Assembly of the island Prince Edward, in Colonial Parliament assembled, beg to approach Your throne with the humble request, that You will cause to be taken into consideration the situation of this island in relation to its agriculture.

Dependent, in common with our fellow subjects in this colony, exclusively on the cultivation of the soil for our maintenance, without a sufficient market for our surplus produce, we can never hope to attain at any thing like prosperity; and we feel, that whilst we import British manufactures to a large amount, that, if the ports of Great Britain were open to the importation of our corn, unrestricted by any duties, that our condition would be so much ameliorated, that the unemployed population of the mother country would find their way to this and the neighbouring colonies, in numbers affording relief to the agricultural and other districts of Great Britain of a value quite commensurate with any loss that by possibility might be sustained by the competition in the home markets of corn the produce of these colonies; and thus a reciprocal advantage might be derived to both Great Britain and this colony.

Relying on Your Majesty's known solicitude for all parts of Your empire, we beg to lay this our prayer at the foot of Your august throne, on the granting of which our prosperity so much depends.

And we shall, as in duty bound, ever pray.

Council Chamber, 18 February 1842.

*John Brecken*, President.

House of Assembly, 18 February 1842.

*Wm Cooper*, Speaker.

Encl. 1, in No. 1.

Enclosure 2, in No. 1.

CENTRAL AGRICULTURAL SOCIETY'S REPORT, Charlotte-town, 5th January 1842.

The Annual General Meeting of the CENTRAL AGRICULTURAL SOCIETY was held at the Wellington Hotel, on Wednesday Evening last, the 5th instant, at Six o'clock; the Honourable *John S. Macdonald*, President of the Society, in the Chair.

THE Secretary stated, that he had been directed by the committee to lay before the meeting the following report of their proceedings during the past year, which, on motion, was then read.

### REPORT.

During the fifteen years this society has been labouring to awaken earnest attention on the part of the colonial farmer to his formerly almost entirely neglected but all-important calling—the cultivation of the earth—various and great, although little noticed, has been the progress of agricultural knowledge, and consequent augmentation of the productions of the soil. But yet, how far are we from the manhood of knowledge—very far from the maximum returns our very fertile and admirably adapted soil may be made capable of producing, to reward the cultivator of information, experience and enlarged industry.

506.

Your

Encl. 2, in No. 1.

PRINCE EDWARD  
ISLAND.

Your committee hope there may be scientific branches attached to this practical branch for promoting agriculture—that the rural population may yet benefit by the lectures of a professor of agricultural chemistry—by access to agricultural libraries, furnished with condensed manuals of all the important divisions of science which affect the well-being of the truly scientific, but difficult and intricate pursuits of the farmer.

Your committee, on reviewing the past, must express their grateful feelings that the representatives of the Sovereign in this island, alive to its chief interest, have uniformly patronised this society, and the objects for which it was instituted. Happily for the farmer, it commenced under the auspices of a gentleman, who, though not a practical man himself, appeared devotedly attached to farming, and might be more susceptible of praise on this score than any other.

The society has lately lost a patron, who, by his importations of stock, his example, and urbane respondings to the various calls made on him by the agricultural interest, has a strong claim on the grateful remembrances and hearty good wishes of the farmer.

But we have to express our congratulations to the society, and our joy that the present representative of our truly good and gracious Queen has unequivocally expressed his sense of the importance of the plough to the prosperity of this beautiful colony. May we not expect much from a gentleman who spent his earliest years in a fertile district, having, on one hand, the famed vale of Berkeley—its deep, rich meadows producing vast crops of hay, and great abundance of the noted double Gloucester cheese, with cider of superior strength and excellence; on the other hand, the now productive Cotswold Hills, whose soil, a poor stone-brash, was deemed, at no very remote period, of little value, but, assisted by the sheep husbandry and sainfoin grass, has become famed for capital returns of corn, and great capability of maintaining and fattening vast flocks of improved sheep, &c.

It has been well observed, that the greater part of remarkable improvements in agriculture have emanated from persons not regularly bred to the calling. When a man displays energy, decision and superior talent in his own profession, it may be expected that, should agriculture become the object of his attention, the science will profit by the application of his matured mind.

In retrospection of the past season, your committee express much thankfulness that, while neighbouring countries and our father-land have suffered a diminution of many of the productions of the earth, our own favoured garden-spot has maintained about an average increase, enabling us to dispose of our surplus blessings to our less favoured neighbours. A dry seed-time was succeeded by seasonable rains in June, which carried out the hay to a fair crop; and although the latter part of the season was also dry, the retentive nature of the sub-soil, and the friable condition of the surface, enabled vegetation to perfect its productions, which were well secured in favourable harvest weather.

In regard to our present position and future prospects, your committee discern abundant cause for congratulation. Whilst great commercial and manufacturing countries—most probably from over-production and over-trading—are greatly convulsed in their credit and monetary concerns, this colony stands exempt from such baneful fluctuations. We hear of the storm that is desolating the commercial world, but are mercifully preserved from its ravages—the steady returns of the soil enabling the settler to meet the demands of the merchant, who is thereby placed in a situation to sustain his credit. Here the poor man can support himself, and make continual advances toward independence; whilst the emigrant, with capital or income, may not only employ himself pleasantly, usefully and profitably, but may possess himself of comforts and luxuries sufficient to render life pleasant in any country.

Our future prospects are cheering, and show, that while the culture of the earth is the most happy, independent, rational, natural employment of man, the productions of the soil are the safest staples he can produce or traffic in.

Inquiries for our produce multiply. Our markets increase.\* One vessel which arrived late in the season, from Boston, carried away 7,280 bushels of oats, which she obtained at the Queen's Wharf, and completed her loading in the unprecedentedly short period of six days, thus showing the great advantages resulting from the use of threshing machines, as that large amount of grain was threshed out during the six days. Your committee view the increase of those labour-saving machines with much satisfaction.

Another vessel is expected at Three Rivers, from Britain, when the navigation opens to take back a cargo of oats, which are said to be in request in the London market for seed! Barley is sought for in the United States, &c. &c. Ship-building, at present, does not now wear a very prosperous aspect, nor lumbering. The decline of these may induce farmers in general to devote more of their time to the improvement of farming.

During the past year many very respectable persons have come among us to enrich us by their intellectual attainments, by investing their capital, or spending their income. We have room for a great many more; and your committee would rejoice to witness the tide of emigration, of emigrants of a superior class, set in more abundantly to the shores of this island.

Two thousand emigrants have arrived at Charlotte-town during the past season; others at different ports.

During the past year a census and statistical account of the whole island was taken, under the provisions of an Act of the Legislature; but as these interesting documents have not been officially published, your committee have no particular observations to offer on the subject.

The

\* This is in opposition to the statement of the Address upon the subject of "sufficient markets and prosperity."

The value of land has greatly risen, making it manifest that the powers of the soil are becoming more known and better appreciated; while the acknowledged salubrity of its climate, cheapness of provisions, improved society, means of education, and facilities for enjoying the privileges of public worship, render Prince Edward Island increasingly desirable to the man or family who may desire a social retirement from the busy world, or seek to repair their health or renew their constitution. Hundreds of British farmers, too, men respectable and desirable, would joyfully come here and invest the remnant of their diminished capitals, were the colony made more publicly known in Britain.

PRINCE EDWARD  
ISLAND.

---

Your committee regret to observe how small a degree of public interest the grain show, the cattle show and the fair appeared generally to excite. It has been remarked that farmers bring their worst stock to the fairs! This may do among ourselves; but if fairs are to be what they were intended, marts for the disposal of our surplus stock to strangers from the other provinces, the end and object cannot be answered by exhibiting the refuse of our cattle, which must give the transient observer a very inadequate and erroneous conception of the average quality of our live stock; but although fairs, at present, are used to display horse jockeying in a large latitude, chiefly in the exchange of animals, by which both parties are taken in, the time cannot be distant when public exhibitions of various rural productions and stock, as well as fairs, must exercise their intended beneficial influence in promoting the general advancement of the great object of our attention.

The improved stock which has been and will be introduced must give farmers more correct notions of the just and desirable proportions of animals, technically called "points," and lead them to breed from the truest forms.

Nothing would tend more to an improved quality of our grain than a regular and steady trade in oats, &c., to Britain. The merchant or purchaser would then be obliged to keep a machine, and winnow every parcel of grain when delivered to him. He should also fix a price for the standard weight of 36 lbs. per bushel, allowing a certain advance for weight above the standard required by law, and deducting for deficiencies.

As labour in all new countries must be higher in comparison with the price of land and its productions, it is matter of desire that there may be yet invented a *more simple power* to drive or propel the different machines the farmer has so great an occasion to make use of, to lessen the cost of labour, save his fodder, and expedite many of his most important operations.

Mr. Gurney may remember our requirements in this case; and it is much to be desired that this gentleman will bring out the necessary apparatus for dyeing, fulling and dressing our home-made cloths, if not power-looms. What a reflection on the public spirit of the colonists, that a population of nearly 50,000 souls, possessing so large a number of sheep, should be obliged to send their cloth to a neighbouring colony to get finished; and, after being kept out of it many months, have to deplore that it might have been equally well prepared by the old family process.

Your committee rejoice that a society has recently been formed in Charlotte-town, under the auspices of his Excellency Sir Henry Vere Huntley, for the express purpose of encouraging the domestic manufactures of the country, especially that of cloth. And your committee are informed, it is the intention of that body to make this society the medium of carrying their objects into effect, by offering liberal premiums for the production of the best article.

Your committee, in this report, may have travelled over ground previously occupied, but they take leave to say that there are many subjects vitally affecting the steady and encouraging progress of agriculture which require to be enforced on the minds of the cultivators of the soil, "with line upon line, and precept upon precept."

The subject of live fences, compost and draining might have been enforced; and your committee would not have deemed themselves out of the path of duty had they glanced at the fisheries.

We hear a complaint of the great abundance of *unemployed* British capital, and must express astonishment that so great and culpable supineness has been shown to the unequalled advantages of Prince Edward Island as a grand fishery station. The productiveness of the soil could support a large amount of persons, who might be engaged in fishing, manufactures and commerce. We have timber to construct vessels, and a beautiful expanse of waters surrounding our happy isle, teeming with riches, which are appropriated by our more enterprising neighbours, who jeer at, while they profit by our unaccountable remissness. The complaint is, that there are no openings for the profitable investment of capital—surely then there has been a great general as well as individual want of patriotism in failing to make known the real advantages of this colony for fishing or other enterprise. Will it be credited in other countries, that an island, well peopled and so situated, should purchase the fish it consumes!!!

At the last general meeting of the society, there was one particular object to which the attention of the committee was directed; viz. to apply to the Colonial Legislature for a grant of money to defray the expense of importing live stock from the mother country. In conformity with those instructions, your committee memorialized the late Lieutenant-governor, setting forth the great benefits that would result to the colony by the importation of such live stock. His Excellency Sir Charles A. Fitzroy was pleased to recommend the prayer of the memorial to the favourable consideration of the House of Assembly; that body accordingly granted 150*l.* for that purpose; viz. 50*l.* to the Prince-town Agricultural Society, and 100*l.* to the central board; subject to the condition contained in the following clause of the Appropriation Bill, passed in the last session.

506.

"And

6 CORRESPONDENCE: PRINCE EDWARD ISLAND.

PRINCE EDWARD  
ISLAND.

“ And a further sum of 50*l.* to William Bearisto, president of the Prince-town Agricultural Society, for the importation of live stock, under the direction of the several agricultural societies in Prince County; and that the same be sold at public auction, to the highest bidder, for the benefit of the said societies, as near the centre of the county as possible.

“ And a further sum of 100*l.* to the Central Agricultural Society, to cover any loss on the importation of such denomination of live stock as may be by a majority of the committee of the said society, in conjunction with two members from the committee of each district society, now established in Queen’s and King’s Counties; which stock when so selected and imported into the colony shall be sold, as near as may be, in two equal portions, to persons resident in each of the said counties; which said purchasers shall be bound to keep such stock in the counties of their respective residences.” With the view of complying with these conditions, your committee held a special meeting on the 18th of last June, which was attended by the representatives of the respective branch societies of King’s and Queen’s Counties, and after some consideration, they resolved upon expending the grant in the importation of sheep and pigs. The secretary of this society then being about to embark for England, undertook to execute the commission, and in the month of October last, nine rams arrived safe in the barque Lady Wood, the tenth having died on the passage out.

The animals were equitably divided by the alternate choice of Mr. Lewellin, on the part of King’s County, and Mr. Henry Longworth, for Queen’s County; the odd one having been tossed for, and won by Queen’s County.

The following is an account of sales :

It is gratifying to notice that, in addition to the stock imported by your committee, the patriotism of private individuals has led to the importation of the following stock :

- A Devonshire cow, by the Hon. James Peake.
- A Leicester tup, and two ewes, by the Hon. Captain Swabey.
- A bull of the pure Durham breed (calved in May 1840), descended from the celebrated “Comet,” one Leicester ram, six ewes, and a tup of the Southdown breed, by Edward C. Haythorne, Esq.

A beautiful

A beautiful cow, one Southdown tup and two ewes, also a Berkshire sow and boar, by John Grubb, Esq. PRINCE EDWARD ISLAND.

A fine Canadian horse, rising six years old, by Mr. John Hyde.

It is matter of regret that the *ad valorem* impost duty should continue to be exacted upon the importation of live stock, introduced or brought by private persons.

Your committee had the pleasing duty of executing the resolution of the last general meeting respecting the plate which was voted to Mr. David M'Gill, of Dumfries, who has been the faithful and active agent of this society for the last 12 years. The plate, consisting of a tea-pot, sugar-basin, milk-ewer and a quart jug, were prepared in London, with the following inscription engraved on the principal pieces :

" Presented by the Central Agricultural Society of Prince Edward Island, British North America, to Mr. David M'Gill, of Dumfries, as a testimony of the high sense they entertain of the valuable services rendered by him to that institution, 6th January 1841."

In the month of June last, the plate was forwarded to Mr. M'Gill, who has duly acknowledged its receipt in a letter dated the 21st July 1841, which has been already published.

On the 12th May, your committee received an importation of 10 tierces of red clover seed, weighing 4,186 lbs. Four casks have been disposed of; the residue is in store. The past season having been very favourable to the growth and saving of red clover, your committee trust, that what has been saved, together with the stock on hand, will be sufficient to meet the demands of the farmer : during the past year, your committee purchased 2,860 lbs., island growth. At the same time, an importation of 200 sets Wilkie's improved mould plough mounting, weighing 139 cwt., was received with an extra quantity of land-sides and sole-plates : experience having taught your committee the necessity of securing, by the importation of every pattern of plough mounting, an extra quantity of side-pieces, and especially soles, to answer the purpose of necessary repairs.

Your committee have considered whether it would not be prudent and advisable to discontinue the grain show for the present year, since no public benefit appears to result from these exhibitions beyond that of affording a market for seed grain.

Your committee would here remark, that the produce of the Ayrshire cattle fully justify the expectations that were formed of them on their arrival in the colony nearly three years ago; and they are of opinion, that they are of that description of cattle which are most suitable to this climate, as they appear to thrive remarkably well.

It is with pleasure and thankfulness your committee have it in their power to announce the receipt of the following liberal donations :

The amiable and highly gifted Countess of Westmorland has forwarded the sum of 10*l.*, together with an interesting and useful work on farming. The great interest taken by her ladyship in the welfare of the inhabitants of this colony, ever since her visit in 1840, has known no abatement; and the society beg to make this public acknowledgment of the high estimation in which the character of her ladyship is held.

Captain Cumberland has contributed the handsome donation of 5*l.*

Honourable Captain Swabey, a sovereign.

And Honourable C. Young, one pound.

Daniel Brenan, Esq. when last in England took some pains to procure some wirecloth for wheat-flour sifters, and placed the same at the disposal of the committee. It has been tried by several millers, but your committee regret to state that, from some unexplained cause, it has not been found to answer the purpose.

Turnips are so invaluable a crop to the farmer, that your committee cannot but hope that every individual will strive to the utmost to realize the greatest quantity his stock of manure will enable him to cultivate. The drill system of husbandry is peculiarly applicable to the culture of this root, particularly the Swede or ruta бага. Sowing sulphur on the land with the seed is by many practical men said to prevent the fly.

Mangel wurtzel, carrots and parsnips, are each and all of them crops of very great value, and much more sure than turnips, and ought therefore to be grown by every farmer. For feeding milk kine, or for fattening stock, they are equally valuable. The drill system and trench ploughing should be adopted for their culture.

Your committee beg to direct the attention of the society to the public-spirited conduct of W. W. Irving, Esq., of Bonshaw, who has introduced a number of skilful mechanics from Scotland, the past season, for the purpose of making the modern agricultural implements, so necessary to the enterprising cultivator of the soil; and your committee venture to express a hope that this attempt to improve this fine colony will be responded to by adequate encouragement.

Your committee consider it very remarkable that, although there are two large brewing establishments in Charlotte-town, no extensive hopperies are to be found in the colony; although it is manifest that that profitable plant thrives here most luxuriantly with only ordinary culture, and, with the same attention that is bestowed upon the culture of the potatoe, would ensure a much more valuable crop to the grower.

The accounts of the secretary and treasurer for the past year have been audited by Messrs. Henry Longworth, A. Duncan, H. Shearman, and Joseph W. Hodgson, and found to be correct.

The receipts for the past year amount to 758*l.* 12*s.*, and the disbursements to 644*l.* 4*s.* 4*d.*, leaving a balance in favour of the society of 114*l.* 7*s.* 8*d.*

PRINCE EDWARD  
ISLAND.

Your committee beg to call the attention of the public in general to the vast importance of agriculture to this colony. It alone is the vital principle of the country. By its encouragement alone can the country "go ahead,"—by it must the rising generation stand or fall. This colony has been called the Granary of North America—is it in ridicule or in earnest?—To look at the small portions of cultivated ground, compared with the vast extent of wilderness and waste land, every spectator must naturally suppose the former. Let every farmer, then, strain to rescue the country from such a reproach, and make it what nature has indeed designed it to be, a country of fertility and happiness, or without exaggeration, in the language of holy writ, "a land flowing with milk and honey." Our winters are long, but they are subservient to many useful purposes, and were the powers of the soil fully developed, their length would hardly be felt, so busy would the stall-feeder be with his oxen, his sheep, his pigs and his poultry. One great want to be noticed throughout the country is the inadequate shelter provided for cattle during the severity of the winter months, in consequence of which fodder is wasted, and manure rendered comparatively worthless, by scattering and exhaling its useful chemical properties. Brother farmers, press onward! many difficulties await you in your progress—combat them, and they will flee before you. Our climate is much drier than that of Britain, and our season more steady. Plants thrive here without shelter, that in England require hotbeds to bring them to perfection. What then is required? Perseverance! Steady perseverance!! Be not satisfied until you surpass the mother country in the growth of every article she is able to produce. Fling mediocrity aside, and be foremost amongst the colonies of this vast empire. Blessed with an unrivalled constitution, fostered by a liberal government, our station among the nations is pre-eminently distinguished. Recollect, an eminent statesman of old has said, "he is the truest benefactor of mankind who causes two blades of grass to grow where only one grew before."

In conclusion, your committee, feeling that their dearest interests are bound up in the same bundle with the prosperity of P. E. Island, earnestly hope that their successors in office may accomplish much for the benefit of the farmer, and that every event may be graciously overruled for the common and particular prosperity of every inhabitant of our country.

The following Resolutions were then proposed and unanimously agreed to:

1. On motion of the Honourable Captain Swabey, seconded by James Yeo, Esq., M. P. P., of Port Hill,

Resolved, That the report now read, be adopted and printed.

2. On motion of Daniel Brenan, Esq., seconded by James D. Haszard, Esq.,

Resolved, That the thanks of this meeting be given to the officers of the society, as well as to the committee, for their diligent attention to the business of the society during the past year.

Mr. Haszard said, in rising to second the motion, Mr. President, I would conceive it would be great remissness if some expression were not given, to show how highly indebted the public at large are to the exertions, the zeal and perseverance of the office-bearers and committee of this society. These gentlemen have all faithfully discharged the trust reposed in them; and more especially the secretary, Mr. Macgowan—he has left no stone unturned, where the interest of the society is concerned—he may be considered the main spring in its operations—at home and abroad he has exerted his talents and time in serving you. It is really pleasing to see the precision and accuracy with which the books, papers and correspondence of this society are conducted. This institution is not an exclusive one; gentlemen and farmers are invited to the discussions, and every means are taken to elicit ideas, and to promote and infuse in the country information on every matter relating to the welfare of the husbandman. It therefore behoves us to strain every nerve to aid this society in the development of the resources of this island. Agriculture is the main source from which we are to derive our support. We have a favourable soil, and let us work it scientifically and effectually, and there is no doubt that we shall rise in the scale, if not to surpass, at least to have our standing with other colonies.

3. On motion of Edward Palmer, Esq., M. P. P., seconded by W. S. Macgowan, Esq., of Souris,

Resolved, That the marked and most respectful thanks of this society are eminently due to the Right honourable the Countess of Westmorland, for the warm interest her ladyship has ever evinced in the prosperity of this colony, and in an especial manner for the present of a valuable and useful work on farming, lately forwarded to the secretary of this society, accompanied by a munificent donation of 10/., and that the secretary be requested to convey to her ladyship a copy of this Resolution.

Mr. Palmer in moving this Resolution stated, that he felt confident it contained that with which every gentleman in his hearing would freely concur. It was well remembered that the noble lady had lately passed a winter in this colony, and the interest she then took, and has ever since manifested, in its general prosperity, has been proved by many laudable and spirited instances of her liberality. Accustomed as her ladyship has been to reside in more genial climates, and amidst the luxuries of life, it was no small sacrifice at her time of life to pass a long winter in comparative exile, in this, to her, remote part of the world; in doing so, she spent in the country hundreds, and perhaps thousands of pounds, in a truly noble and praiseworthy manner; her constant benevolent attentions to the poor are yet gratefully remembered—indeed he doubted whether the extent of her generosity

is even yet known; and her zeal and munificence in the support of religion in the colony is beyond praise. We now find in her present donation to this society, that although distant, she yet maintains a lively interest in the island's prosperity. Did we perceive such exemplary conduct in a few more of the absent proprietors of this island, its effects would soon be sensibly felt in the improvement of the colony. In the Resolution, he must repeat, there was nothing exaggerated, nor any thing, he thought, to which every gentleman present would not cordially respond.

PRINCE EDWARD  
ISLAND.

4. On motion of Lawrence C. Worthy, Esq., seconded by J. W. James, Esq.,

Resolved, That this society are highly gratified to find that a society has recently been formed in Charlotte-town, under the auspices of his Excellency the Lieutenant-governor, having for its object the encouragement of the domestic manufactures of the country, especially that of cloth, and that this society pledges itself to co-operate with that institution in the attainment of so laudable a purpose.

5. On motion of A. Duncan, Esq., seconded by Dr. Jardine, of Morell,

Resolved, That the thanks of this society be given to Captain Cumberland, the Honourable Captain Swabey, and the Honourable Charles Young, for their liberal donations.

The following gentlemen were then chosen officers for the ensuing year :

Honourable John S. Macdonald, President.

Francis Longworth, senior, Esq., Vice President.

John Hyde,	}	Committee.
William Douse,		
Charles Stewart,		
Henry Longworth,		
Charles Haszard,		
Alex. Laird,		
George Beer, senior,		
Henry Shearman,		
John M'Neill, Cavendish,		

*Peter Macgowan*, Secretary and Treasurer.

The chairman having left the chair, the Honourable Captain Swabey was called thereto, when a vote of thanks was passed to the Honourable the President, for his conduct in the chair.

COPY of a DESPATCH from Lord *Stanley* to Lieutenant-governor  
Sir *Henry Vere Huntley*.

Sir,

Downing-street, 27 May 1842.

I HAVE received your despatch (No. 21) of the 18th March, enclosing an Address to the Queen from the Legislature of Prince Edward Island, praying that corn, the produce of that island, may be admitted into the United Kingdom duty free.

I have to instruct you to acquaint the Legislative Council and House of Assembly, that I have had the honour to lay their Address before the Queen; but that, as the Bill for the amendment of the Acts regulating the importation of corn into this country had passed into a law before the arrival of your despatch, it has not been in Her Majesty's power to accede to the wishes expressed by the Council and Assembly on behalf of the inhabitants of the colony.

I have, &c.

Despatch from  
Lieut.-governor  
Sir C. A. Fitzroy  
to Lord John  
Russell,  
4 May 1841.

(No. 14.)  
COPY of a DESPATCH from Lieutenant-governor Sir *Charles A. Fitzroy*  
to Lord *John Russell*.

Government House, Prince Edward Island,  
4 May 1841.

My Lord,

I HAVE the honour to transmit a series of Resolutions of the House of Assembly, relating to the present state of this colony, which, by the accompanying Address of that body, I have been requested to forward to Her Majesty's Government. Your Lordship will perceive that, under date of Friday, 5th February, there are two Resolutions, one relating to the Bill for the purchase of the lands, in which the House of Assembly have endeavoured to prove the necessity of again passing this Bill; and the other to the appointment of a committee upon the state of the colony. As I have referred to the subject of the Land Bill in my despatch of the 3d instant (No. 13), I need not trouble your Lordship with any further observation here.

Under date of Friday, 23d April, there are 18 Resolutions; the principal subject embraced in these Resolutions is, the tenure of the lands in this colony; and your Lordship will observe that, finding they have no hopes of succeeding in their endeavours to confiscate the lands by any appeal to the Government, the House of Assembly are trying to awaken the sympathy of the Imperial Parliament, through the influence of Mr. Hume as their agent. Mr. Hume will, in all probability, bring the subject forward in the House of Commons; and, to place before your Lordship such information as will enable you to answer any remark which he may think proper to make, I cannot do better than refer you to my despatch of the 7th May 1839, marked "Confidential," in which the whole of the circumstances connected with the land question are fully detailed.

Under date of April 23, there are three Resolutions upon a communication from the chief justice, showing the necessity for appointing a professional assistant judge of the Supreme Court. I have the honour to enclose a copy of the chief justice's letter, and of the message with which I laid it before the House of Assembly.

With reference to the third of these Resolutions, which expresses a desire that, in the event of the retirement of the chief justice, his successor may not be "a native or a person resident in this island," I deem it due to the bar, the resident members of which are mostly natives of the colony, to express my strong sense of the injustice that would be done to them, collectively and individually, if I were to permit this Resolution to pass without observation.

The bar of this, as well as that of the other colonies, naturally look forward for advancement in their profession as vacancies may occur in their respective courts, and this Resolution infers by implication that no member of the bar of this colony possesses the acquirements necessary to qualify him for the office of chief justice; but I am enabled to state with confidence, that the bar, as constituted in this colony, is equally respectable, both in character and acquirements, with any of the other colonies; and it is necessary and just that I should explain to your Lordship the real motive which has governed the House of Assembly in passing this Resolution.

The peculiar construction of the Assembly, and their views regarding the rights of property, your Lordship is already acquainted with; and because the bar will give no encouragement to these views, but when consulted by any of the tenantry, honestly and conscientiously endeavour to disabuse their minds of the fallacious ideas they have imbibed from political agitators, and to convince them of the ruinous consequences of disputing their landlords' titles, a prejudice has arisen against the bar on the part of the majority of the House of Assembly, and this prejudice has extended to the courts themselves; and I hesitate not to say that, unless a chief justice could be found corrupt enough to warp the existing laws of the realm to suit their purposes, the same objections would be made by them.

The Attorney and Solicitor-general have made themselves more peculiarly obnoxious to the majority of the Assembly by having, in the discharge of their duty, prosecuted to conviction several delinquents who had been instigated by that majority to resist the law when attempted to be enforced between landlord and tenant; and also for having, in their legislative capacity, upheld the views of the

## CORRESPONDENCE : PRINCE EDWARD ISLAND.

11

the Imperial Government in opposition to those of the majority of the House of Assembly.

PRINCE EDWARD  
ISLAND.

I therefore trust that no weight will be given by your Lordship to this part of their representation, to induce you to depart from the course pursued in the neighbouring colonies, when by any contingency a new appointment of chief justice may be rendered necessary.

Under date of Tuesday, April 27, there are six Resolutions; the first of these states the opinion of the House of Assembly, "That it has been the fashion of interested individuals to exaggerate the value of the soil of this island," which statement they affirm to be substantiated by the evidence of certain individuals named in this Resolution. I have not had access to this evidence, but from my knowledge of the parties examined, I am enabled to state that, although they are all tenants, they have each of them, from their perseverance and industry in cultivating their respective farms, acquired a very substantial competency, and that it is not a great many years since they emigrated to this colony, in comparatively indigent circumstances. The report of Captain Holland, in 1765, is quite inapplicable to the present state of the colony. The fifth Resolution complains of the influence which has prevented this colony from obtaining a court of escheat, and refers to a proclamation of Lord Falkland's, of the 15th April last, in a late number of a Nova Scotia newspaper.

27 April 1841,  
6 Resolutions.  
Vide Encl. 1, p. 16.

The question of the establishment of a court of escheat in this colony has been so long set at rest, and recognized to be so by the House of Assembly, until they saw this proclamation, that I will not take up your Lordship's time by any comment upon it.

The Resolutions which I have omitted to refer to, contain reflections upon the connexion and proceedings of the Executive and Legislative Councils. With regard to the complaints of the proceedings of the Legislative Council, I have the honour to transmit the Resolutions of that body in reply thereto, and I should not do them justice if I did not express my conviction that their statements are fully borne out by facts. The overstrained efforts of the House of Assembly to show an undue family connexion in the Executive Council are so manifestly absurd, that they scarcely require serious refutation: of the gentlemen composing that board, the only existing near connexion is that which subsists between Mr. Brecken and Mr. Peake, the latter having married a sister of the former since his nomination to a seat in the Executive Council; and it is utterly impossible, in the limited community of this small colony, to select fit and responsible persons for such offices, who are not in some way connected.

Enclosure, No. 5.

With regard to the proprietary connexion and influence complained of in the Legislative Council, the House of Assembly have proved, on their own showing, that one-half of the members are wholly unconnected with proprietors, and Mr. Dalrymple is merely the receiver of an estate in Chancery appointed by the court; while, to show the little reliance to be placed on the statement designating Messrs. Livett, Macintosh and Holl as strangers, I may mention that Mr. Livett has been nine years in the colony, Mr. Macintosh six, and Mr. Holl five years, and that they are all gentlemen of independent means living in the country.

Appended to these Resolutions is the copy of an Address to the Throne, on the subject of the purchase of the lands stated by the House of Assembly to have been proposed in conference to the Legislative Council, as an amendment to an Address passed by the Council on the same subject, and in which they requested the House of Assembly to join them. As the Council have requested me to forward their Address, to be laid at the foot of the Throne, your Lordship will see the reasons assigned by the Council for refusing to join in that prepared by the House of Assembly.

I also transmit a printed copy of the Petition of the House of Assembly to the House of Commons, which is about to be forwarded to Mr. Hume.

Enclosure, No. 6.

I have, &c.

(signed) *Charles A. Fitzroy,*  
Lieutenant-governor.

PRINCE EDWARD  
ISLAND.

Enclosure 1, in No. 3.

In the House of Assembly, Friday, 5 February 1841.

Encl. 1, in No. 3.

1. WHEREAS this House, in its last session, passed a Bill to enable the Crown to purchase the township lands of this island, and settle the inhabitants: And whereas the Legislative Council have declared its opinion of the said Bill as follows:—"That it is the opinion of this committee, that any equitable arrangement, by voluntary sale on the part of the proprietors by which the Crown can be re-invested with the said lands, so as to enable the Crown to sell the same at a reasonable rate to actual occupiers, would tend greatly to increase the settlement of this colony, and advance its prosperity, and would be considered as a boon calling for the utmost extent of gratitude from its inhabitants: That although this committee thus far recognize the principle of the Bill, they cannot concur in its details; and, in fact, they deem any enactment on the subject not only premature, but inexpedient and unnecessary, until the consent of the Crown and proprietors to the measure contemplated by the said Bill shall be first obtained:" And whereas the Right honourable Lord John Russell, Her Majesty's Principal Secretary of State for the Colonies, by a despatch bearing date the 22d September 1840, has declared, that, "Although this question originates in motives of private interest, shared equally by landlords and tenants, it assumes, in effect, the character of a public question, and as such must be treated. It is Her Majesty's earnest desire to remove every just cause of complaint in all parts of her dominions, and Her Majesty has been accordingly pleased to desire me to enter into communication with the resident proprietors in this country, with a view to learn whether, by any further proposition on their part, means may be found to determine a question which has, for so long a period, agitated the colony:" And whereas the former offers of these proprietary claimants to the tenantry were most unreasonable; and as the whole conduct of the association of these claimants, styling themselves the Proprietary Association, has been most decidedly hostile to the interests of the colony; therefore this committee has no expectation that any proposition which said association may make, in consequence of the communication to be held by the Secretary of State for the Colonies and said association, will be such as the country could accept; but that such negotiation, on their part, will be industriously prolonged, with a view, by delay, to break the opposition to their tyrannical proceedings: Therefore Resolved, That it is the opinion of this committee, that it is expedient to pass a Bill of the same tenor as that passed last year by this House for the settlement of the colony, in the hope that the Imperial Government will either accede to that, or, by some other reasonable measure, decide satisfactorily this question.

2. Resolved, That with a view to prevent the evils which may result from misrepresentation, and to establish, by further evidence, the statements contained in the Addresses and Petitions forwarded by this House, a committee be appointed to take such evidence, with power to send for persons, papers and records.

Friday, April 23, 1841.

1. Resolved, That the people of this colony are highly dissatisfied with the measures pursued towards them by the claimants of townships. That as the conduct of these claimants and their agents has been in almost every instance oppressive, and in many instances both oppressive and fraudulent, there is no prospect of the dissatisfaction being done away with, by refusing, year after year, the popular requests for redress.

2. Resolved, That the House may be dissolved, the representative part of the constitution suspended or abrogated, but these measures will bring neither prosperity nor even peace; because it is not a desire for an extension of political power which mainly agitates the people, but a desire for even-handed justice, and for land on such terms as that, by an union of labour, hardihood and economy, they may live upon it, and leave their dear-bought property to their children; and until this be conceded, every branch of industry must languish; and every impartial man, confessing that the people are deeply wronged, will look for the bitter fruits which spring from oppression long persisted in.

3. Resolved, That this House has derived considerable satisfaction from the despatch of the colonial minister, stating that henceforth the land question "must be considered a public question, and treated accordingly."

4. Resolved, That this House have no expectation that the correspondence which in said despatch the Colonial Secretary purposes to open with the proprietary claimants, will result in any equitable offers being made by said proprietary claimants.

5. Resolved, That this House maintain that the rights of the Crown authorize the escheats of the townships of this island, and that the real interests of the inhabitants would thereby have been greatly promoted, and that the sales of the land would have cleared off part of the arrears of the civil list due by those proprietary claimants to the British Government, amounting to upwards of 120,000 £., and would, at all events, have made ample provision for said civil list, for many years to come.

6. Resolved, That though the colonial minister, in 1802, ordered said escheat to be carried into effect, yet as the Bill prepared in conformity with his instructions, and passed through the Legislature of this colony, was believed to have been concealed or abstracted after the Crown had assented thereto; and as the influence of the proprietary claimants prevailed so far as to throw obstacles in the way of any similar enactment; and as from the year 1830 to 1839, the colonial ministers uniformly refused to sanction escheat; the present

House

House, in its second session, passed a Bill for purchasing such alleged claims, as is explained in the third paragraph of their Petition to the House of Commons, forwarded in 1840.

PRINCE EDWARD  
ISLAND.

7. Resolved, That considering said Bill, and the opinion expressed by the Legislative Council of the same, in their Resolution of 28th April 1840 (folios 89 and 90 of Legislative Council Journals), and that there was no chance of these proprietary claimants making any offer which would come near to what the colony could pay, the House felt themselves called on to pass said Bill a second time.

8. Resolved, That as the question is to be henceforth a public question, it is expedient to give publicity to all the leading important facts of the case, and that therefore a committee be forthwith named, to make a list of such despatches received from ministers, and of such answers thereto by governors, and of such reports and examinations made by the House of Assembly, and of such petitions and addresses by the House of Assembly, the Legislative Council, or the people of the colony, as may seem necessary. That the same shall be printed, and 500 copies thereof forwarded, under the direction of said committee, to Joseph Hume, Esq. as agent for the House of Assembly, and that said committee be directed to request Mr. Hume to cause same to be distributed to such Members of the Imperial Parliament, and other influential individuals, as he may think most likely to advocate the cause of the oppressed cultivators of this island.

9. Whereas the Legislative Council did, on the 28th April 1840, pass five Resolutions, the third of which distinctly charges the majority of the House of Assembly with deluding the people whom they represent, and is in all its bearings highly insulting—(see folio 90 of Journal of Legislative Council)—

Resolved, That the present House of Assembly, in the various procedures wherein they have had to communicate with the Legislative Council, have shown no disrespect to that body, nor will any part of *their* Resolutions bear any interpretation of reflection on the moral character of any individual of that body. The original and unwise granting the soil of the colony to a few, and providing that these should have a seat in the Legislature, has set those in opposition to the mass of the people on that most important subject, of the price of rent to be paid for the wilderness; and at the same time has given these few the power of exercising a similar influence in all the departments of public business; and therefore, though the members of the House of Assembly, as individuals, entertained no ill-will to the members of the Council, yet, as a public body, the House of Assembly was bound to represent the injuries occasioned by this unfortunate constitution. That under the circumstances of the colony, the House of Assembly could do no less than state the peculiar interests existent in the Legislative Council. How far such statement was consistent with the fact, will appear from sundry of these present Resolutions; and they represented this conduct not as a system propagated by those at present in the Council, but as a necessary consequence of said constitutional defect, particularly alluding thereto in the Resolutions and Addresses of the sessions of 1839, and fully describing same in the sixth Resolution of 1840, (folio 146, of Journals of House of Assembly.) But the Legislative Council, in their reply thereto, refer to alleged “notoriety,” represent the majority of the House of Assembly as turbulent demagogues, who had devised a plan for plundering the rich, and who, as the Legislative Council had resisted this, were anxious to divert the popular odium incident on the failure of such scheme from themselves to the Council. How far this is consistent with fact will appear from the subsequent part of this Resolution, and from others of these present Resolutions. But in the mean time it may be remarked, that the making the *present House* the originators of the alleged invasion of the rights of property, is in strange contradiction with the report of the Earl of Durham, particularly that part where he states that “in every other colony there has been such a degree of *laches* on the part of the Government, as in equity to preclude it from any enforcement of the conditions upon which the original grants were made; but in Prince Edward Island, scarcely at any time have five years been suffered to elapse without some appeal to the colonial ministers, praying that the Crown would resume the grants it had made, as a measure not merely justifiable, but as the only measure that could free the province from the evils these excessive grants had inflicted.” How far it is fact that the delusion of the leaders of the present majority of the House of Assembly “has been the cause of the tenantry allowing their rents to fall into arrear,” may be in part illustrated by an Address to the King, wherein it is stated that *this unfortunate disposition of the lands* has produced great evil, and that “the greater number of our settlers are leaseholders, under the large proprietors, and are at this day sinking under the pressure of accumulated rents, which they are unable to pay”—and this is of date April 1829, when not one of the present members of the House of Assembly had a seat in that body; and when two, now members of the Legislative Council, were members of the House of Assembly, viz. the Honourable the Attorney-general, and the Honourable George Dalrymple, who also were both members of the joint committee of the Council and House of Assembly appointed to prepare such Address.

10. Resolved, further, in regard to said Resolution, that it is unfounded, because that the question was agitated before many of the members of this Assembly were born, before others had left Britain, before any one of their whole body had the most distant idea of obtaining a seat therein. Further, that it was advocated by the Honourable George Dalrymple, now a member of the Legislative Council, then a member of the House of Assembly from 1830 to 1835, and the measure of escheat, which goes farther than the Bill rejected by the Legislative Council, was acknowledged by the Honourable the Surveyor-general, and the then Solicitor-general (Lawson), “to be a lawful measure, and one likely to result in great benefits

PRINCE EDWARD  
ISLAND.

---

to the country," and by the Honourable the Attorney-general Robert Hodgson, that it is "competent for the representative of his Majesty in this colony to appoint a commissioner or commissioners of escheats therein." (See the examination of these gentlemen, March 1832, folios 81 and 82 of Journals of House of Assembly.) Lastly, that in 1832, 1833, 1834 and 1835, the majority of the House of Assembly supported escheat as justifiable, and also as necessary for the welfare of the country, and in that matter showed no determination to reserve aught for the holders of these forfeited claims to townships; whereas the present House in its first measure proposed a reservation, and in its second measure offered a price to said claimants.

11. Resolved, That unless the House of Assembly could believe that self-interest, relationship, intimate connexion, tenure of lucrative office (which, according to all former precedent, would have been taken from the holders, if they turned against the proprietary claims), would have no influence on the minds of men, they could not exclude the conviction that a majority, both in the Legislative and Executive Councils, would be and had been operated on by these various feelings and motives to resist the demands of the agriculturists.

12. Resolved, That the present House of Assembly, in their Resolutions as to the construction of the Legislative and Executive Councils, independent of their own experience, were borne out by the Resolutions of former Houses, and in particular by the Resolutions of the House of Assembly of 1834 (see Journals of that year, pages 87 and 88), and that the Honourable George Dalrymple, now of the Legislative Council, and the Honourable Joseph Pope, now of the Executive Council, moved for the Legislative Council being elective.

13. Resolved, That the conduct of the Executive Council on sundry occasions is depicted in the Address of the House of Assembly of 1831, at which time only two individuals of the present House (neither of them voting with the present calumniated majority) were members of that House, in which Address it is stated, that a large proportion of the revenue being under the control of the Governor and Executive Council, has enabled them in some instances to administer the Government without the intervention of the House of Assembly, and in direct opposition to the real interests of the colony. (Journals of 1831, folio 71.)

14. Resolved, That the Legislative Council (vaunting its superior "vested interest," ) might possibly be supposed more worthy of credence than the House of Assembly, and that therefore the House of Assembly might have felt a doubt how far truth should prevail over prejudice; but that they have the good fortune of possessing the testimony of one in whom the Imperial Government reposed the highest confidence, and who, though dead, yet speaketh,—to the report of the Earl of Durham they refer; and when he describes those claims which the Legislative Council call the sacred rights of property, the committee feel confident that the representatives of the House of Assembly will gain credence.

15. Resolved, That as appears from sundry advertisements in London newspapers, a number of these proprietary claimants have formed themselves into a society styling themselves "The Proprietors of Prince Edward Island." That many of their Resolutions and representations thus published appear deceptive; but the committee not having present access to such papers, can refer specifically to such representations only on one subject, viz. on the "commutation of quit rents," and that in the correspondence thereon, their agent states to the colonial minister, that "at the suggestion of Sir John Harvey, and the present Lieutenant-governor, they have yielded to every reasonable demand made upon them in behalf of their tenantry, they have removed every ground of, or pretence for, complaint, and have actually, and of their own accord, offered to sell their lands upon more liberal terms than if they remained under the control of the Government." (See Letter from G. R. Young to Lord Glenelg, 4th April 1838.)

Whereas at that time the faithful representatives of the people were under arrest, and the people were suffering without abatement all the evils of which they had so long complained; and their acceptance of the deceptive offer made would in nowise have relieved them. That in said correspondence the said society express their unwillingness to "*take a position hostile to the officers of the local government*," at the danger of their being forced into a controversy with the "local authorities on the island;" and therefore resolved, that said society, styling themselves the Proprietary Association, have been guilty of gross misrepresentation, and of evidently trying to mislead and perplex the colonial minister in regard to the concerns of this colony, and of attempting to control and even to supersede the Colonial Legislature; and that a few interested individuals resident at a distance from the island, but within reach of Downing-street, should be allowed to continue to put forth such falsehoods, and frame such intrigues, has been highly injurious to the prosperity of the colony, and may be destructive of its peace.

16. Whereas, in numerous instances in this colony, individuals have been located on leaseholds in the wilderness, and that such leaseholds are short of the number of acres stipulated, but that such individuals have never been able by proceedings at law to obtain that deduction from their rent corresponding to such deficiency, nor any deduction, and that from the case of James Douglas and Dingwell, detailed in Appendix to Journals 1840, and from the examination of their counsel, Messrs. Binns and Young, there seems no prospect of their attaining it, and as the same appears from the case of Lunn to be the decision of the court as to land within the fishery reserves, therefore it is important to exhibit to the Imperial Government such hardships, and with this view resolved, that the queries put by the special committee of the House of Assembly in 1839, to the Honourables the Attorney and Solicitor-general be printed, and form part of the Appendix to the Journals of this year, and of the documents to be printed for the Imperial Parliament.

17. Resolved,

17. Resolved, That many individuals who have leased or bought land from the claimants of townships have, in process of time, been deprived of access to any public road by the said proprietary claimants leasing or selling the land around such farms, without any reservation of or allowance for roads, and in consequence of such procedure many individuals suffer the most serious inconvenience. That petitions for relief of those labouring under such inconvenience being laid before the Assembly, and the personal knowledge of many members establishing such complaints as well founded, and there appearing to be no remedy at law as here understood, the House of Assembly passed last session and this session a Bill for the relief of such inconvenience, which was rejected by the Legislative Council on both occasions.

18. Resolved, That the proprietary claimants have failed in many other instances to reserve roads or rights for roads, or to deduct on that account the least portion of rent or price of the actual quantity of wilderness land thus rented or sold, and the different districts requiring roads of access to the harbours and other places where produce is shipped, the House of Assembly have been under the necessity of appropriating money raised, in a great measure from those holding under lease, to purchase for them and the rest of the public rights of way over portions of land, for every foot of which the holders have to pay rent to the proprietary claimants, or have already paid the full price.

---

Saturday, 24th April 1841.

1. WHEREAS the Executive Council of this colony is composed as follows :

Hon. George Wright, father-in-law to the prothonotary, who is brother to the  
 Hon. Robert Hodgson, who is cousin to the  
 Hon. John Brecken, who is brother-in-law to the  
 Hon. T. H. Haviland (colonial secretary, and a proprietary agent), who is brother-in-law to the Hon. Donald M'Donald, and brother-in-law to  
 Hon. James Peake.  
 Hon. Joseph Pope, a Government partisan, a proprietary agent, who is connected in marriage with the Hon. George Wright.  
 Hon. J. S. M'Donald, who is cousin to the Hon. Donald M'Donald, a proprietary claimant, who is brother-in-law to the Hon. John Brecken, Hon. James Peake, and Hon. T. H. Haviland.  
 Hon. Ambrose Lane, who is brother-in-law to the treasurer, who is brother-in-law to the Hon. Robert Hodgson.

Thus showing a family connexion in the Executive Council, however otherwise well qualified for the office in themselves, of eight out of nine Councillors; and how far the House of Assembly were borne out in their Resolution of 25th April 1840.

Resolved, therefore, That conviction is forced upon the mind, that a family compact of such magnitude, however well disposed in advising the Executive, will take care of themselves and their friends in the first place, and the interests of the colony only as a secondary consideration.

2. Resolved, That the Legislative Council is composed as follows :—

Hon. R. Hodgson, solicitor to a proprietary claimant, and cousin to the  
 Hon. John Brecken, who is brother-in-law to the  
 Hon. Donald Macdonald, a proprietary claimant.  
 Hon. Charles Worrell - - - ditto.  
 Hon. J. H. Peters, who is agent of S. Cunard (recently appointed), a proprietary claimant.  
 Hon. George Dalrymple, receiver of rent for a relative, who is a proprietary claimant.  
 Hon. J. Livett, } Comparatively speaking strangers, lately from a rent-paying  
 Hon. W. Macintosh, } country, and but little acquainted with the history of this  
 Hon. J. M. Holl, } colony, and much less with the toil, labour, hardships and privations of the inhabitants. (Recently appointed.)  
 Hon. G. R. Goodman, collector of customs.  
 Hon. P. S. M'Nutt.  
 Hon. Charles Young, lately from Nova Scotia (recently appointed), where he has resided from his infancy.

Showing the connexion and influence of proprietary claimants in the Legislative Council, and how far the House of Assembly were justified in passing their Resolution of 25th April 1840.

---

In the House of Assembly, Friday, 23 April 1841.

1. RESOLVED, That from the report of the special committee, and evidence reported by the same, it appears, that there are in a year, on an average of the last three years, only 53 days on which the chief justice is occupied on the bench, taking into account all the terms of the supreme court in the whole colony, and only an average of four days occupied by him in hearing counsel at chambers, and only, in the whole of these three years, 115 decisions

PRINCE EDWARD  
ISLAND.

---

decisions on record causes, and 92 in other causes—say, on summary causes and appeals: the natural conclusion appears to be, that the amount of time occupied and business transacted ought not to be considered as excessive for one individual of competent legal acquirements, and in the ordinary state of health.

2. Resolved, That taking the facts referred to in the former Resolution into account, it is inexpedient, at present, to make any provision for a salary for an assistant judge.

3. Resolved, That in case, on the evidence taken before the committee, and on the letter of the chief justice, the Imperial Government should, on his withdrawal, appoint another chief justice, it would be for the benefit of the colony that the said appointment should be conferred on some individual not a native of or long resident in this colony, and still less one connected with the claimants of the townships therein.

---

27 April 1841.

1. RESOLVED, That it is the opinion of this committee, that it has been the fashion of interested individuals, of late, to represent the soil of the island as much more valuable than the cultivated portions of the neighbouring colonies; but that this is contrary to fact, and that its capabilities for agriculture were faithfully represented in the Resolution of this House, of the 24th April 1839 (folio 78 of its Journals), and are confirmed by the examinations of Messrs. Bell and Miller, of township No. 35, and Messrs. Arthur and Johnston, of township No. 23, taken before the committee of evidence this session; and still more indubitably by the report of the late Captain Holland, who, as Surveyor-general of British North America, examined and reported on this island in 1765.

2. Resolved, That if the Legislative Council, in their representations of the members composing the majority of the present House of Assembly, had stated that many of said majority were cultivators, under lease, of land which they had cleared from the wilderness—that only six or eight of them lived on freehold farms—that many of them were not possessed of more than a very moderate amount of property—that none of them were ashamed to labour to raise the bread they ate—that many of them were pledged by the country to pursue that line which they have followed—that the urgent entreaties of their neighbours prevailed on some to accept an office honourable to them, but exposing them, if they voted according to their conscience and pledge, to the bad offices of men in power—the House of Assembly must have confessed that all these were facts.

3. Resolved, That as the Legislative Council have repeatedly rejected the Bill for the settlement of the Inhabitants—the Bill for opening Roads—the Bill for relieving Tenants from bearing the entire burden of the Land Assessment—the Bill for the relief of the Loyalists and Disbanded Soldiers—and have, by their amendments to the Fishery Reserve Bill, for this and the two previous Sessions, gone contrary to the evident meaning of Lord Glenelg's despatches—therefore, in regard to a joint Address to the Throne, the House of Assembly are obliged to conclude, that there is great doubt whether said Council will agree to any Address making any close approach to a real redress of grievances; and as the Imperial Government seem to think that every colony exaggerates its own grievances, the Address thus frittered down by the Council, and modified in meaning by the Home Government, would end in something akin to nothing: Therefore, resolved, That the House of Assembly must leave to the Council to state its own views to the Imperial Government, with this understanding, that if, any time before the close of the Session, the Legislative Council shall agree to the amended Address transmitted to them by the House of Assembly, the House of Assembly, laying aside a separate procedure, will heartily concur with the Legislative Council in said Address.

4. Resolved, That the Legislative Council having requested a free conference with the House of Assembly, and the House having agreed to the same, the managers of said conference, on the part of this House, on their return handed in, as the subject of said conference, an Address to the Crown, drawn by the Legislative Council, with blanks left at the proper places, to be filled in with the words "House of Assembly," in case the House should agree to said Address—that the House could not agree thereto, for the reasons stated in the Resolutions which they entered into thereon, but sent up such an Address as they could concur with, through the medium of the same committee who managed the former conference, who handed the said original Address, and the amended Address, to the managers on the part of the Council—that the said amended Address was drawn up in regular form, headed "To the Queen's most Excellent Majesty," and was evidently an Address, and not reasons for not concurring, and was not stated to be reasons for not concurring—that it would seem strange how the Legislative Council could ever have mistaken an Address to be concurred in, for reasons for not concurring—that thereafter, when such astonishing misapprehension was removed, the Legislative Council, through the same medium of conference, endeavoured to impress on the House, that, in amending an Address sent down as this had been, the House of Assembly had violated all rule and precedent, and was bound to accept or reject the document as sent down; and that when by undeniable precedent, the House of Assembly proved their own procedure to be correct, the Legislative Council appear to have made some objections to form (which objections, however, the House of Assembly do not think well founded), and having desired no further conference on the said subject: Therefore, resolved, That the House of Assembly have, in the whole procedure,

cedure, shown every readiness to concur with the Legislative Council in any Address which would be so worded as not to sacrifice the rights of the Crown and the country, by acknowledging the claimants of townships to have unchallengeable titles to the said townships, in defiance of the most unquestionable evidence of the same being liable to forfeiture.

5. Resolved, That, comparing the advertisement, of which the subjoined is a copy, with the reiterated refusals of the measure of escheat to this colony, the conclusion must be, that there is in this island, or in Great Britain, or in both, an influence which prevents this colony from being allowed the same beneficial laws as the neighbouring colonies.

6. Resolved, That his Excellency the Lieutenant-governor be furnished with a copy of the various Resolutions passed by this House during the present session, on the general state of the colony, and in support of the representations made by this House to Her Majesty's Government last session, and other matters connected therewith; also with a copy of the proposed joint Address of the Council and Assembly, on the subject of the purchase of the lands by the Imperial Government, as amended by this House, with an humble Address requesting that he would be pleased to forward the same to Her Majesty's Government.

PRINCE EDWARD  
ISLAND.

#### A PROCLAMATION.

*Falkland.* By his Excellency the Right honourable Lucius Bentinck Viscount Falkland, Knight Grand Cross of the Guelphic Order, and Member of Her Majesty's Most Honourable Privy Council, Lieutenant-governor and Commander-in-Chief in and over Her Majesty's Province of Nova Scotia, and its Dependencies, &c. &c. &c.

WHEREAS the proprietors of extensive tracts of valuable land in various parts of the province have neglected to fulfil the conditions attached to the grants thereof, and the settlement of the country having been, by such neglect, greatly retarded, the House of Assembly have requested that measures may be adopted "to re-invest the Crown with all wilderness lands owned by absentees who have not complied with the terms of the letters patent, under which the said lands are held."

I do, therefore, by and with the advice of Her Majesty's Executive Council, issue this my proclamation, for the purpose of making it publicly known, that I have directed the Commissioners of Crown lands to furnish me with a report of all tracts of land heretofore granted and now liable to forfeiture, whether belonging to residents or absentees, and that I shall cause the necessary legal proceedings to be instituted, at the expiration of eighteen months from the date hereof, for escheating all such tracts of land as shall not be, at that period, improved to the extent required by the terms on which the Crown parted with its right thereto, in order that the same may be regranted to persons who will become *bonâ fide* settlers.

Given under my hand and seal at arms, at Halifax, this 15th day of April, in the year of our Lord 1841, and in the fourth year of Her Majesty's reign.

By his Excellency's Command,

*Rupert D. George.*

GOD SAVE THE QUEEN.

In the House of Assembly, Saturday, 10 April 1841.

RESOLVED, That a further conference be desired with the Legislative Council, on the general state of the colony, and that at the said conference the committee of this House be instructed to communicate, that the House of Assembly suggest that the following Address be presented to Her Majesty, as the joint Address of both Houses:

To The QUEEN's most Excellent Majesty.

Most gracious Sovereign,

We, Your Majesty's dutiful and loyal subjects, the \_\_\_\_\_ and House of Assembly of Prince Edward Island, in Colonial Parliament assembled, beg leave to approach Your Majesty's throne and person, and most humbly to represent,—

That the lands of this colony were originally granted in large tracts of 20,000 acres each to private individuals, the greater part of which is still claimed by the descendants or assignees of such grantees, the majority of the inhabitants on such lands holding as tenants or occupants, and not in fee simple.

That if, by the purchase of these lands from the proprietary claimants, they were again re-invested in the Crown, for the purpose of being sold out in small tracts to the tenantry and occupiers thereof, it would be hailed by the inhabitants of this island as the greatest boon which Your Majesty could bestow upon them, and would, as Your petitioners conceive, be productive of great and permanent benefit to the colony.

PRINCE EDWARD  
ISLAND.

---

Your petitioners are, at the same time, aware, that if the Imperial Government shall determine that the compensation for such claims must be paid immediately, and not by instalments, then this most desirable settlement cannot be attained without the advance, in the first instance, of a much larger, sum of money than the Legislature of this colony can at present command.

That as, during the last eight years, repeated applications for a court of escheat have been rejected by the colonial minister, Your petitioners humbly submit that the mode above referred to, namely, of paying compensation for such claims, is the only other one which to them appears practicable for removing this ground of long-continued dissatisfaction and misery; and whether Your Majesty shall determine that the advances necessary for such arrangement shall be made forthwith by the Imperial Government, or that the claimants shall wait such certain limited time as may appear necessary to enable the colony itself, by instalments, to pay off such claims, whichever of these modes Your Majesty may be graciously pleased to determine, Your petitioners will willingly abide by Your decision; and, though the Legislative Council do not admit that these claims are disputable, and the House of Assembly assert that these claims are all forfeited, yet, to do away with the evils arising from this dispute, both bodies, united as Your petitioners, pledge themselves to pass such legislative enactments as will raise for the discharge of such claims to the land of this colony, and all arrears of rent and obligations for the same, a price which is as high as the cultivators of said land can make good, and higher than the average price of land in the neighbouring colonies, and nearly double the price of that paid by any of the British American land companies, and higher than the average price of such lands in this island, when valued by juries, or when exposed to public sale for non-payment of taxes, as appears from the report by the Earl of Durham.

May it therefore please Your Majesty, taking the premises into consideration, to give such a decision as will free the tenants and occupiers of the lands from the harassed condition in which the majority of them at present are, and the colony from the embarrassment consequent thereon, and will enable the colony, by industry and persevering economy, in the course of years, to arrive at the same condition as the neighbouring provinces.

And as in duty bound the  
Majest'ys Royal Person.

and House of Assembly will ever pray for Your

---

Enclosure 2, in No. 3.

To his Excellency Sir *Charles A. Fitzroy*, K. H., Lieutenant-governor, &c. &c. &c.

Encl. 2, in No. 3.

May it please your Excellency,

WE, the representatives of the people of Prince Edward Island, have in the course of the present session passed various Resolutions on the general state of the colony in support of the representations of the House of Assembly to Her Majesty's Government last session, and have also agreed to join the Legislative Council in an Address to the Queen on the subject of the purchase of the lands of this island by the Imperial Government, as amended by the House of Assembly, copies of which are herewith submitted, and humbly request that your Excellency will be pleased to forward the same to Her Majesty's Government.

House of Assembly, 27 April 1841.

Wm. Cooper, Speaker.

---

Enclosure 3, in No. 3.

Charlotte-town, Prince Edward Island,  
19 March 1841.

Encl. 3, in No. 3.

Sir,

I DEEM it my duty to bring to your Excellency's notice, now that the Legislature is in session, the state of the supreme court in this island, in regard to the daily increasing necessity which in my opinion exists, for the services of a professional assistant judge of that court.

Your Excellency is aware that there are no inferior courts in the island, with the exception of a magistrate's civil jurisdiction, to the extent of 5*l.*, and in very minor criminal cases, and in trifling assaults and batteries, from all which an appeal generally lies, and is frequently carried up to the supreme court. The two assistant judges not being gentlemen of the legal profession, the whole administration of justice in the island (with the above very limited exception) devolves upon myself individually and exclusively.

Those two gentlemen do, indeed, at all times, when called upon, evince the utmost readiness to lend their aid; and Mr. Justice Haviland, who has held that office prior to and during the whole of my residence in the island, renders very valuable assistance; but that gentleman's office of colonial secretary, and his other official avocations, requiring so much of his time and attention, and no salary being provided, I have abstained from ever requiring his services, except upon some slight occasions and during two terms, in one of which, from my extreme illness, he presided in the court, and in the other, whilst I was still an invalid, he regularly attended (I have no doubt much to his inconvenience), and assisted me

with

## CORRESPONDENCE: PRINCE EDWARD ISLAND.

19

with much ability. The members of the bar also show an unwillingness to try their causes before judges whose attention has not been particularly directed to legal studies. In this manner I have for upwards of twelve years conducted the business of the supreme court. The frequent and almost absurd appeals from my own decisions to myself sitting alone, is a matter of consideration rather for those who choose to subject themselves to such an anomaly, than an objection on my part; but it is the increasing duties of the supreme court that induces the urgent necessity for further judicial assistance. During the time of my presiding upon the bench in this island, its population has nearly, if not quite, doubled in numbers. For a great part of that time there were but three terms of the supreme court in the year; they have gradually increased to four terms in the year at Charlotte-town, besides four additional circuit courts in the two counties, and the business of the courts has naturally increased nearly fourfold; yet the judiciary remains in the same state as at the first civil establishment in the island, if we except a somewhat increased jurisdiction in the magistrates. In all the neighbouring provinces there have been in each, from the first (and long before they numbered a population equal to that of this island), a chief justice and three efficient puisne judges, besides inferior courts of judicature; this island is the solitary exception to that system. I beg not to be understood by your Excellency, as on the present occasion, complaining of the undue burthen from time to time thus imposed upon myself, although I feel my constitution is beginning to sink under the weight. I have ever scrupulously abstained from such complaints, endeavouring always to go through my labours to the best of my strength and ability. My only object at present is, that the administration of justice in this island may be made more efficient than it can possibly be under the existing system. I am still unwilling, for the reasons before stated, to call upon the assistant judges to take their turn of duty, as is done in all other colonies; but I fear that either this measure, or an increasing deficiency in the administration of justice, must be the alternative, and more particularly as I understand the Legislature have it now in contemplation to increase the duration of the present terms; thus imposing a yet additional duty, the whole amount of which no one individual could by any possibility satisfactorily and efficiently discharge.

I have thus brought to your Excellency's notice some of the reasons why, in my opinion, the time has arrived when the state of the colony renders absolutely necessary the appointment of at least one assistant judge of the supreme court, being a gentleman of the legal profession.

I have shown your Excellency, that with a trifling exception the whole administration of justice in the island devolves upon the chief justice alone; that I have presided in the supreme court upwards of twelve years, during which time the population has nearly doubled, bringing with it a vast increase of legal business; that the terms of the supreme court, from three in number, have increased to eight in the year, and are, some of them, about to be lengthened in duration; that the system in this island, as compared with that in all other colonies, falls far short of the means of obtaining a full and complete administration of justice. I might go on and show to your Excellency, that for want of inferior jurisdiction, so much of the time of the supreme court is necessarily devoted to trifling matters as to render it impossible to complete all the business in progress; that many law points of great moment and of the greatest intricacy are brought and urged before the supreme court, in the investigation and decision upon which much time would be saved, and business would in general be greatly expedited, if there were another legal mind with whom the chief justice could consult, for want of which I have found it necessary, on several occasions, under great disadvantage, to consult with the chief justice of a neighbouring province; and many other cogent reasons might be offered which are obvious to those versed in legal pursuits. But I trust I have stated sufficient to convince your Excellency that an urgent necessity exists, and will continue daily more and more to increase, for the services of an assistant judge of the supreme court, bred to the study of the law, and to which I cannot for a moment think the Legislature, having the good of the country at heart, would hesitate to give a due and ready attention.

I have, &amp;c.

To his Excellency Sir Charles A. Fitzroy,  
Lieutenant-governor, &c. &c. &c.

(signed) *E. J. Jarvis.*

## Enclosure 4, in No. 3.

THE Lieutenant-governor transmits to the House of Assembly a copy of a letter from the chief justice, representing the necessity which exists for the appointment of a professional assistant-judge of the supreme court, and the Lieutenant-governor hopes that the reasons assigned by the chief justice for such an addition to the judiciary of the colony will receive that mature consideration from the House which the importance of the question entitles them to.

Encl. 4, in No. 3.

(signed) *C. A. Fitzroy, Lieut.-governor.*

Government House, 25 March 1841.

PRINCE EDWARD  
ISLAND.

Enclosure 5, in No. 3.

LEGISLATIVE COUNCIL CHAMBER, Thursday, 29 April 1841.

Encl. 5, in No. 3.

WHEREAS the House of Assembly, in the session of 1840, passed certain Resolutions, reflecting upon the proceedings of the Legislative Council, particularly in the 2d and 3d of the said Resolutions, which are as follow:—

2. Resolved, That it is the opinion of this committee, that on many occasions in past times, and more especially for the last eight years, the majority of the House of Assembly, on different occasions, have represented the injustice done to the agriculturists by the grantees of townships, and that in every instance, except in 1803, their representations have been opposed by a majority of the Council.

3. Resolved, That the change which in 1839 was made in the construction of the Legislative Council has been productive of additional evil; and that, as no prosperity nor peace can be expected in this island till an amelioration on the tenure of land be effected, and no House of Assembly, elected by the unbiassed suffrages of the people, can refrain from endeavouring to effect that most important object; so, whoever looks to the individuals composing the Council must see that, on this important subject, the majority of them have an interest contrary to and subversive of the general interests of the inhabitants of the colony, by their being proprietors, land agents, connexions of such land agents, or persons, in the opinion of this committee, warmly biassed in favour of the proprietors, and that the House of Assembly cannot, in consequence thereof, have any confidence in the Legislative Council, so long as it shall remain so constructed.

And whereas the Legislative Council, in reply to the said Resolutions of the Assembly, stated,—

“That it was a matter of notoriety, gathered from the public prints and other sources, that the said majority of the House of Assembly had attained their present position in that House by deluding the tenantry of this colony into a belief that, if elected as their representatives, they would relieve them from the payment of rents, and obtain for them grants from the Crown, confirming them in their several possessions; and that this system of delusion had been practised by the leaders of the said majority for several years past, whereby the tenantry had been encouraged to withhold the payment of their rents, until, in numerous instances, they had incurred arrears which their utmost exertions never could enable them to discharge; and that the leaders of the said majority, finding that they could not carry out their delusive promises, attempted to relieve themselves from the just odium of their constituents, by representing the Legislative Council and the Executive Government as inimical to the interests of the people, an imputation no less unjust than untrue, the sympathies of both the Legislative Council and the Executive Government having been invariably evinced in favour of the true interests of the people of this colony, at the same time that they had endeavoured to awaken the tenantry to the ruin which would inevitably follow their fatal delusion:

And whereas the House of Assembly, in another series of Resolutions, passed on the 22d and 23d instant, declared, that the said Resolution of the Legislative Council “is in all its bearings highly insulting:”

Resolved, That the Legislative Council disclaim all intention of acting discourteously in any manner towards the House of Assembly by the said Resolution, otherwise than by a desire to defend themselves from the unjust and unfounded charges made against them by the House of Assembly.

Resolved, That the House of Assembly, in the said series of their Resolutions, have entirely failed to impugn the correctness of the facts stated in the said Resolution of the Council, by attempting to shift from themselves to a former House of Assembly the odium of encouraging the tenantry of this colony to withhold the payment of their rents, for that, in no proceedings of any former House of Assembly, can the slightest encouragement be found to induce the tenantry to believe that they could, by any measure, relieve them from the payment of their rents, but that the whole odium and responsibility of such encouragement are solely chargeable upon the leaders of the majority of the present House of Assembly, and that the Address to the King, which is contained in the Journals of the Assembly of 1829, to which the present majority of the House of Assembly refer, to bear them out in such attempt, had no tendency to induce the tenantry to withhold the payment of their rents, the simple object of that Address having been merely to relieve the tenantry from the payment of a large arrear of quit-rent due to the Crown, and at that time threatened to be enforced.

Resolved, That the imputation contained in the 11th of the said series of Resolutions passed by the House of Assembly, charging the Legislative Council to be “operated on by self-interest,” to the prejudice of the interests of the agriculturists of this colony, is grossly untrue, inasmuch as the Legislative Council have on all occasions earnestly advocated those measures which tended to the true interests of the people, and have only rejected those wild and unconstitutional measures which attacked the sacred rights of property, or invaded the prerogative of the Crown; whilst, on the other hand, the Legislative Council have originated many Bills, particularly during the present session, most useful to the community, which have been rejected by the House of Assembly; viz. “A Bill relating to the Limitation of Personal Actions,” rendering the law similar to that prevailing in England, and in the neighbouring colonies; “A Bill to regulate and declare the Qualifications of Jurors,” which by the existing laws are totally undefined; “A Bill to compel Constables to serve,” the necessity of which was suggested in a presentment of a grand jury of King’s County,

County, and recommended to both Houses by message from the Lieutenant-governor; "A Bill to amend the Act passed in the seventh year of the reign of his late Majesty King William the Fourth, intituled, 'An Act to amend the Law relating to the Admission of Barristers, Attornies and Solicitors, and to regulate the Admission of Advocates and Proctors in the Court of Vice-Admiralty and Court of Probate in this Island,'" the object of which Bill was to promote the respectability of the bar, in unison with the Acts and Regulations on that subject in the neighbouring colonies; "A Bill against Forestallers and Re-graters," similar to the laws prevailing in all populous places for the prevention of such abuses, and which is much called for, in consequence of complaints made by the inhabitants of the capital of this colony; "A Bill to establish Criminal Sessions in Queen's County," a measure recommended by the chief justice, which was intended for and would have relieved the Supreme Court of Queen's County from the trial of petty offences, the delay consequent upon which is productive of the greatest injustice and inconvenience to all civil suitors in that court, whose causes are deferred from term to term, to afford time for the trial of those offences.

PRINCE EDWARD  
ISLAND.

---

And in further proof of the desire of the Legislative Council to meet the views of the House of Assembly, the Council, in giving their reasons for rejecting the Bill passed by the House of Assembly, on the subject of the purchase of the lands, in the session of 1840, expressed their readiness to join the House of Assembly in an Address to the Throne, praying Her Majesty to take the measure contemplated by the Bill into her favourable consideration, and to grant the means for effecting the purchase of the said lands, provided the proprietors should be found willing to dispose of the same; and when in this present session the House of Assembly sent up to the Council a similar Bill, the Council, upon again rejecting it, prepared an Address to the Throne, praying Her Majesty to order a negotiation to be entered into with the proprietors, to ascertain the prices at which they would respectively agree to dispose of the whole of their lands in this island, together with the arrears of rent now due thereon, with a view to their being re-invested in the Crown, for the purpose of being re-granted in small tracts to the tenantry and settlers thereon; and in the event of the proprietors being willing to accept a reasonable price for the same, that Her Majesty would be graciously pleased to order that the funds necessary for making such purchase should be in the first instance advanced from the Imperial Revenue, and sent the same down to the House of Assembly, with a request that the Assembly would join them in the said Address; but to the great surprise and disappointment of the Council, the House of Assembly refused their concurrence thereto, because it did not go to the extreme and unconstitutional length of praying that a particular price should be fixed for the lands, and the proprietors thereof arbitrarily compelled to receive it, although they must have been well aware that such an extravagant request could not receive the sanction of the Imperial Government, thereby evincing the insincerity of their professions, and showing, in the plainest manner, a manifest disposition to keep up a system of agitation, for the sole purpose of retaining their own popularity, at the expense of the deluded tenantry.

Resolved, That the construction of the Legislative Council differs materially from that of the year 1834, alluded to in the 12th of the said series of Resolutions passed by the House of Assembly, inasmuch as it is asserted, in the Address of the Assembly of the year 1834 to the King (miscalled a Resolution), that, out of the nine members composing the Council, six of them held situations of emolument at the pleasure of the Crown; whilst of the present Legislative Council, composed of twelve members, three only hold offices under the Crown, and but two of which are offices of emolument; and there are only two proprietors, and two agents of proprietors, in the Legislative Council, one of the latter having been appointed subsequent to the session of 1840.

Resolved, That the complaint against the Legislative Council, for the rejection of the Bill, intituled, "An Act to provide Right of Access to one Public Road to Individuals occupying Land from which there is no such Access," is wholly unfounded, the provisions of that Bill being based on the most absurd and inequitable principles, inasmuch as it went to compel, not only the proprietors, but also the heirs and assigns of proprietors, who at a remote period had disposed of wilderness lands in the rear of farms now under cultivation, at merely nominal prices, to bear the expense of making roads to communicate with such wilderness lands, and which expense, in numerous cases, would far exceed the original sum paid for the land itself.

Resolved, That although the majority of the House of Assembly have thought fit, in their Resolutions passed this session, by absurd deductions of what they term "connexion," said by them to exist between some of the members of the Legislative Council individually named, and by charges of "ignorance" against others, also individually named, as to the true "history of this colony, and of the toil, labours, hardships and privations of its inhabitants," to draw inferences from such supposed "connexion" and "ignorance," false in themselves, and personally offensive to those members of the Council, thus affording a sufficient excuse to the Council, if so inclined, for adopting a similar course; yet the Council do not deem those charges worthy of any very grave refutation, because it is notorious that by far the greater majority of the members of the Assembly are ignorant and illiterate men, having but a trifling stake in the country, and possessed of no influence whatever in society, beyond that based on their advocacy of the question of escheat, by which alone they have been enabled to attain their present position as representatives, and on the keeping alive of which question their continuance as representatives depends; while the fact of the greater portion of them being tenants, and, in many instances, largely in arrear of rent, clearly shows that they are interested, not only in keeping up the excitement,

PRINCE EDWARD  
ISLAND.

---

ment, on which their ephemeral influence depends, but that they have a direct personal interest in the success of any attack on the property of their landlords, and who are therefore in no way scrupulous in creating charges against, and imputing unworthy motives to, the Council, who have endeavoured to control and check their extravagant and unconstitutional proceedings.

And whereas the House of Assembly, in the third of certain other Resolutions passed on the 27th instant, state that the Council have repeatedly rejected several Bills passed by the House of Assembly, among others, one for relieving Tenants from bearing the entire burthen of Land Assessment; and the Bill for the relief of the American Loyalists and Disbanded Soldiers; and have by their amendments to the Fishery Reserves Bill, for this and the two previous sessions, gone contrary to the evident meaning of Lord Glenelg's despatch: And whereas the first-mentioned Bill was sent up from the Assembly but once, and that in the session of 1840; and the provisions of the said Bill went to make void the covenants contained in the leases in this colony, which are generally of long duration, by releasing the tenant from the payment of the present and all future land assessment, which, as the land becomes more valuable, might be assessed at a sum far exceeding the rent reserved by the Landlord; and the Bill for the relief of the American Loyalists and Disbanded Soldiers was rejected by this House in the session of 1840, in consequence of a despatch from the Secretary of State for the Colonies, laid before this House by his Excellency the Lieutenant-governor, and again in the present session on the same grounds, and the course adopted by this House in this respect was further approved by another despatch from the Secretary of State for the Colonies, laid before this House by his Excellency the Lieutenant-governor, a few days subsequently to the rejection of the said Bill in this session; and the Bill for the regulation of the Fishery Reserves of this island, in the sessions of 1839, 1840, and this present session, was amended in this House, and with said amendments sent down to the House of Assembly for their concurrence, but which amendments were in each session by them disagreed to, and the Bill itself thrown out, without previously desiring a conference with this House, to signify their disagreement to such amendments, contrary to parliamentary practice, the regular course being, under such circumstances, to have desired a conference with this House, and therein to have stated that they had disagreed to the said amendments, and then to have returned the Bill to the committee of this House, in order to afford this House an opportunity of considering whether they would adhere to their amendments, or whether they would agree to the Bill in its original form, as sent up by the House of Assembly: Therefore, resolved, that in the rejection of the two first-mentioned Bills, this House exercised a proper and sound discretion; and with regard to the Fishery Reserves Bill, this House was precluded from exercising any discretion whatever by the unparliamentary proceeding adopted by the House of Assembly; and as to that part of the Resolution which expresses a doubt whether the Legislative Council would concur "in any Address making any close approach to any real redress of grievances:"

Resolved, That the Resolution itself clearly shows how impossible it would be to concur in an Address framed in accordance with such Resolution, implying as it does, that the Address and representations of the House of Assembly are exaggerated,—a course of proceeding to which this House can never be parties, it being in their opinion highly derogatory to any legislative body to misstate or exaggerate facts, in making representations to the Imperial Government, which should contain nothing but absolute truth.

---

#### Enclosure 6, in No. 3.

In the House of Assembly, Saturday, April 24, 1841.

Encl. 6, in No. 3. To the Right Honourable and Honourable the Knights, Citizens and Burgesses of Great Britain and Ireland, in Parliament assembled.

The PETITION of the House of Assembly of Prince Edward Island.

Most respectfully sheweth,

THAT last year a Petition from the House of Assembly was presented to your Honourable Body, and it was understood, from the reports of the proceedings in Parliament, that the colonial minister had expressed himself determined, in one way or other, to redress the grievances complained of.

That the Lieutenant-governor of this colony has laid before your Petitioners a despatch, received from the colonial minister, stating, that "although this question originates in motives of private interest, shared equally by landlords and tenants, it assumes, in effect, the character of a public question, and as such must be treated. It is Her Majesty's earnest desire to remove every just cause of complaint in all parts of her dominions; Her Majesty has been, accordingly, pleased to desire me to enter into communication with the resident proprietors in this country, with a view to learn whether, by any further proposition on their part, means may be found to determine a question which has for so long a period agitated the colony."

Your Petitioners crave leave to state, that from the oppressive policy long practised by those who style themselves proprietors (but who are, in reality, only the holders of claims to

to the townships of this island, which claims were long since liable to forfeiture), your Petitioners have no reason to expect that those individuals will voluntarily accept such amount of compensation for these claims as would be in proportion to the value of the land, or in the power of the colony to make good.

The House of Assembly beg to state, that the history of the management pursued, in regard to these claims, is to be found at length in the Journals of the House of Assembly for 1833, 1834 and 1835, as well as in the Resolutions of the present House, and is concisely stated in the report of the late Earl of Durham, and in the evidence thereunto appended—particularly the letter of his Excellency the present Lieutenant-governor of this colony.

And as the measures proposed by this House, for the settlement of the colony, have been rejected by the Legislative Council, and as, from the Resolutions passed this session by the House of Assembly, as well as in the sessions of 1839 and 1840, it will appear that there is no prospect of their agreeing; and from the whole facts of the case, it is evident that the proprietary constitution of the colony, like that of Carolina, Pennsylvania, Maryland, and all other proprietary colonies, cannot either operate beneficially, or amend any of the evils resulting from such constitution—and much less, the principal evil, which is, the thralldom of the cultivators—and therefore we most humbly crave your Honourable Body to amend that principal evil, the source of so many others.

Your Petitioners beg again this time to state, that if the population of this island be put, in respect of the tenure of land, on an equal footing with the other colonies, or on any footing, so that they may live free from perpetual harassment, they believe the country will, for the sake of such boon, effectually secured, at present forego any of the well-founded complaints against the undue influence which the Legislative Council exercises, in regard to all other matters within the colony—though, while such are alleged to be grievous in so many other colonies, they are more especially galling and insulting in this.

Your Petitioners, with the view of putting your Honourable Body in possession of the matter, have caused to be printed certain documents, showing the principal facts of the case, but if any part, which to those in this island may seem fully proved, shall to your Honourable Body appear doubtful, we pray that you will not, on account of such defect, reject our petition, but will give opportunity to supply what may be judged wanting.

And as the representatives of the people of Prince Edward Island, we do most respectfully, and yet with all earnestness, beseech and implore the Honourable the House of Commons so to order the matters submitted, that the people may cultivate the wilderness with a fair prospect of retaining it; that the soil of this island—situated under the same rigorous climate as that of Nova Scotia and New Brunswick, and which during more than five months in the year is covered with snow, and during that same period is, by an icy barrier around the shores, precluded from any possibility of tillage or of export or import—may no longer be so managed as that those who bring into cultivation the wilderness shall be under perpetual bondage to those who use a territory (unadvisedly granted to them, under conditions which they have never fulfilled, and all liable to forfeiture,) solely for their own pecuniary and political aggrandizement.

And, as in duty bound, your Petitioners shall ever pray.

---

— No. 4. —

(Confidential.)

EXTRACT of a DESPATCH from Lieutenant-governor Sir *Charles A. Fitzroy* to Lord *John Russell*, Government House, Prince Edward Island, 5 May 1841.

My despatches of the 3d and 4th instant (Nos. 13 and 14), will have made your Lordship fully aware of the proceedings of the Legislature of this island during the late session, and of the feeling which exists among the majority of the House of Assembly, relative to the land question.

My confidential despatch of the 7th of May 1839, entered into a complete detail of the origin and progress of the disputes between the proprietors and tenants, and of the advantage that had been taken of the general ignorance of the tenantry by certain designing members of the House of Assembly, to influence their minds against the proprietors, and to lead them away by delusive hopes, that by persevering in a system of agitation and resistance to the payment of rents, they would eventually obtain free grants of their farms; I need not, therefore, trouble your Lordship now with any recapitulation on that subject.

But I feel that your Lordship has a right to require that I should express my opinion without reserve upon the state of this question as it at present stands  
506. (particularly

PRINCE EDWARD  
ISLAND.

---

(particularly as the House of Assembly have forwarded a Petition to Mr. Hume, to be presented to the House of Commons), and that I should endeavour to suggest some practicable means of putting a final stop to the excitement which has so long prevailed, to the serious injury of the interests of all classes in this community, and of none more than the deluded tenantry themselves.

Before, however, I give my opinion or propose a remedy for this evil, I feel it necessary to request your Lordship to bear in mind that there exists no parallel or analogy between this colony and any other in British North America, and therefore that the same rules applicable to the general government of those colonies will not in all cases suit this. In the other colonies the people have complained of real or fancied political grievances, which have led to collisions between the executive and the representatives of the people: here the people have no political grievances, and make no complaint of the manner in which the government is administered. The only point in dispute is the terms on which they hold their lands, and the discontent is confined to the tenantry alone; to this body nine-tenths of the constituency belong. The franchise approaches nearly to universal suffrage; while the qualification of a member of the House of Assembly is the possession of either freehold or leasehold property to the amount of only 50*l.* currency—not more than 35*l.* sterling. I may add, that in the other colonies—I allude to Nova Scotia and New Brunswick—the leaders of the Assembly are men of education and property; and all the members, however much they may be divided in opinion upon political subjects affecting the general welfare of their respective colonies, are men who have considerable stakes in them, and are of respectable callings; while here the majority of the Assembly have been chosen from the lowest and most ignorant class, men without property and without education.

\* \* \* \* \*

There is another inducement, also, and a very powerful one, which leads persons of indifferent character and small means to endeavour to secure seats in the Assembly, viz., the pay which they are in the habit of voting themselves at the close of each session, and which is an object of very great consideration with by far the larger portion of the present House of Assembly. I am not aware of any power derived from the constitution of the colony which authorizes the members to vote themselves pay. There is no Act of the Legislature giving them this power, and I believe it is entirely derived from precedent and custom, both of comparatively recent date, as I find by the Journals of the Assembly that no pay was voted from the year 1812 to the year 1825, since which period it is notorious that the House of Assembly has declined materially in respectability. As a proof that their pay is a paramount object with the majority of the present House, I may mention the fact that every item in the Appropriation Bill sent up from the Assembly to the Council in the recent session, and objected to by the latter, (there were several, including one voting 150*l.* to Mr. Hume), was immediately and without hesitation struck out by the Assembly, solely from the fear that if they refused, the Council would throw out the Bill, and that without it they would lose their pay.

\* \* \* \* \*

At the present day it would be useless to inquire whether the proprietors or the tenants were originally most to blame, although there can be no doubt that, as has often occurred in cases of greater importance, the want of timely concessions and redress of real grievances on one side has led to extravagant and unreasonable demands on the other. My duty now is to point out such a course as may, I trust, enable your Lordship to terminate the disputes which have up to this time most unfortunately prevailed.

Your Lordship has given your opinion, that any attempt on the part of the Crown to purchase the lands from the proprietors is impracticable, and you have decided that the terms proposed by Mr. G. R. Young, which were transmitted to me in Lord Glenelg's despatch of the 16th of March 1838, should be the basis on which Her Majesty's Government would recommend that the question at issue between the proprietors and tenants should be arranged. Bearing in mind this recommendation, I feel it my duty to state that, at length, the proprietors in general have complied with these terms. I trust, therefore, that the question may now be set at rest, as far as the Government can effect that object.

COPY of a DESPATCH from Lord *John Russell* to Lieutenant-governor  
Sir *C. A. Fitzroy*.

Sir,

Downing-street, 25 June 1841.

No. 5.

I HAVE to acknowledge the receipt of your despatch, marked "Confidential," of the 5th of last May, in which you explain your views of the manner in which the controversy between the proprietors and tenants in Prince Edward Island may be terminated.

Despatch from  
Lord John Russell  
to Lieut.-governor  
Sir C. A. Fitzroy,  
25 June 1841.

I have to acquaint you in answer, that Her Majesty's Government having reviewed the whole progress of the discussion regarding the tenure of land, have arrived at the following conclusions :—

First, That the original terms of settlement were impracticable, and that any escheat at the present day, on the ground of the failure to fulfil such conditions, would be unjust.

Secondly, That Her Majesty's Government consider it right to state, that the Crown has not at its disposal any funds out of which the lands could be purchased by the Crown, to be afterwards sold or granted to the tenants.

Thirdly, That the terms proposed by Mr. G. R. Young, or terms equivalent to those, seem to have been acceded to by the great majority of proprietors.

Fourthly, That, under these circumstances, the best course which Her Majesty can recommend is, that the Assembly and Council should turn their attention to the improvement of the resources, and the encouragement of the growing wealth, of Prince Edward Island, and leave to the gradual operation of time the settlement of a question, which offers no sound footing for direct legislation.

Lastly, I have to state, that Her Majesty is not disposed to blame any party for the mode in which this discussion has been prosecuted ; but Her Majesty's anxiety for the welfare of the province makes Her desirous to see the termination of a fruitless and irritating contest.

I have, &amp;c.

Sir *C. A. Fitzroy*.

Sir,

Downing-street, 28 June 1841.

No. 6.

I HAVE to acknowledge the receipt of your two despatches, Nos. 13 and 14, of the 3d and 4th of May, the former containing your report upon the proceedings of the last Session of the Legislature of Prince Edward Island, and the latter enclosing a series of Resolutions of the House of Assembly relating to the state of the colony, together with the counter Resolutions of the Legislative Council, and the copy of a Petition from the House of Assembly to the House of Commons, the original of which has been intrusted to Mr. Hume to present.

Despatch from  
Lord John Russell  
to Lieut.-governor  
Sir C. A. Fitzroy,  
28 June 1841.

I have to convey to you the expression of my thanks for the copious explanations with which you have furnished me in respect to the various subjects referred to in the Resolutions of the House of Assembly, and in regard to the Petition to the House of Commons. I do not, however, consider that it is incumbent on me to advert to the different topics comprised in these papers, having, on the principal question relating to the lands sufficiently explained to you in my despatch, No. 57, of the 25th instant, what were the views of Her Majesty's Government ; I confine myself, therefore, on this occasion to the remark, that I have no further proposition to make, and that I regret to see such a fruitless prosecution by the Assembly of measures on which the opinion of Her Majesty's Government has been so frequently and decisively expressed.

I have, &amp;c.

4 May 1841.

My Lord,

I HAVE the honour to transmit an humble Address of the House of Assembly of this island to The Queen, complaining of the high price set on Crown lands, and "praying Her Majesty to order me to use my discretion as to the price and disposal of Crown lands in this colony to actual settlers;" together with an Address to myself, requesting me to recommend the subject matter of it to Her Majesty's Government.

I have referred the Address to Her Majesty to the Surveyor-general, and I take the liberty of enclosing a copy of that officer's report for your Lordship's information; it will be seen from the Surveyor-general's letter that a similar application was made by the House of Assembly in 1836, when Lord Glenelg transmitted those discretionary instructions which have since governed the sales of Crown lands in this colony: these lands, however, are now of very limited extent and value, and in the event of any portion of them being required for actual settlement, your Lordship will probably sanction their disposal at such prices as I, in conjunction with the Surveyor-general, may deem reasonable.

I have, &amp;c.

(signed) C. A. Fitzroy,  
Lieut.-governor.

10 May 1841.

Enclosure 1, in No. 7.

To The QUEEN's most Excellent Majesty.

Encl. 1, in No. 7.

Most Gracious Sovereign,

WE, Your Majesty's faithful Commons, the House of Assembly of Prince Edward Island, humbly beg leave to renew the expressions of those sentiments of attachment and loyalty which they have ever evinced towards Your Majesty's Person and Government, and most humbly to represent,—

That in the year 1831 Your Royal predecessor was pleased to order the small portion of Crown lands left ungranted in this colony, to be disposed of at public sale to the highest bidder; that by means of such sales, persons in the royalty of Prince-town, whose misfortunes, years ago, had compelled them to clear the forest for a subsistence, were, by the order of 1831, obliged to purchase lots which they had thus cleared, or compete at public auction for the very land which their labour had made much more valuable, thus compelling such persons to pay additional sums for their own labour and the improvement of the colony; that the Crown lands in the towns and royalties (now that the greater number of the best lots are sold) are set up at high prices, which, however willing the Government of the colony are to abate, yet it does not appear that they are empowered either to grant any portion of land improved by the colonists prior to the aforesaid order of 1831, at a fixed rate, as they shall judge proper, or to enforce conditions of improvement on parties purchasing at the Government sales, which would work advantageously for the colony.

That an extraordinary high price is set on the portions of Crown lands in the several townships of this colony, without any just cause, as must be evident from the fact, that Crown lands of equal fertility, and in the vicinity of better markets for the sale of agricultural produce in the adjacent counties of Picton, Colchester and Cumberland, in Nova Scotia, are sold at from 2s. to 3s. per acre, whilst 20s. per acre is demanded for Crown lands in this island.

May it therefore please Your Majesty to take these subjects into Your gracious consideration, and to order his Excellency the Lieutenant-governor to use his discretion, as to the price and disposal of the Crown lands of this colony to actual settlers.

House of Assembly, 8 April 1841.

W<sup>m</sup> Cooper, Speaker.

Enclosure

## CORRESPONDENCE : PRINCE EDWARD ISLAND.

27

## Enclosure 2, in No. 7.

PRINCE EDWARD  
ISLAND.

To his Excellency Sir *Charles Augustus Fitzroy*, К.Н., Lieutenant-governor and Commander-in-Chief in and over Her Majesty's Island of Prince Edward, &c. &c. &c.

May it please your Excellency,

THE House of Assembly having had under consideration a Petition of divers inhabitants of Prince-town royalty, on the subject matter of the disposal of the Crown lands in this island, and having adopted an Address to Her Majesty on the subject, the House beg your Excellency to be pleased to forward the same to be laid at the foot of the Throne: at the same time that the House of Assembly beg to renew those expressions of regard and esteem to which your Excellency is so justly entitled, it humbly requests your Excellency's personal approval and recommendation of the subject matter of the Address to Her Majesty.

House of Assembly, 10 April 1841.

W<sup>m</sup> Cooper, Speaker.

Encl. 2, in No. 7.

## Enclosure 3, in No. 7.

Sir,

Surveyor-general's Office, 1 May 1841.

I HAVE the honour to acknowledge the receipt of your communication, calling on me for a report on a Memorial from the House of Assembly to Her Majesty, complaining of the high prices at which Crown lands are set up for sale, and "praying that his Excellency the Lieutenant-governor may be ordered to use his discretion as to the price and disposal of the Crown lands of this colony to actual settlers."

Encl. 3, in No. 7.

I cannot avoid expressing my surprise that the House of Assembly should have decided to address Her Majesty on this occasion, as, by reference to their own Journals of 1837, it will be seen by a despatch from Lord Glenelg, bearing date the 7th April 1836, in answer to a Memorial of the House of Assembly on the same subject, that the prayer of their present Address has already been conceded, and in consequence an abatement was made on an average of 10 per cent. on the prices at that time established.

The upset prices of pasture lots in the royalty of Prince-town, more particularly complained of by the House of Assembly, come, I consider, within the meaning of lands referred to in Lord Goderich's despatch of the 28th January 1833, wherein his Lordship directs that "when lands are situated in towns or in positions convenient for wharfage, or with peculiar advantages as to existing markets, the upset price at any sale of them must of course be higher than the ordinary upset price."

I beg to state, as a proof that the Crown lands are not over-valued, that at all the sales thereof, except the last, the whole of the lands advertised were disposed of, and most of them at a considerable advance upon the upset prices. The last public sale of Crown lands took place at Prince-town, when thirteen lots of eight acres each were advertised; nine of these lots were sold at the upset price; for the remaining four no offer was made; a subsequent offer has been made for these lots, but at a less price, and I do not feel myself justified in advising the Lieutenant-governor to reduce the present upset price, as I am of opinion that these lots are of equal value with those sold, and when it is considered that the purchaser receives the grant free of any charge of office-fees and the usual conditions of quit-rent, the upset price of 27s. sterling per acre cannot be considered extravagant.

No application has lately been made for township lands, and as the small portion remaining in the Crown is of inferior value, I shall advise the Lieutenant-governor to reduce the upset price, should any application be made for it.

With respect to the hardship complained of by the House of Assembly, of settlers having to compete at public auction for the lands they have cleared, this can only occur in cases where the settler has taken possession of Crown lands without authority.

I have, &c.

The Hon. T. H. Haviland,  
Colonial Secretary,  
&c. &c. &c.

(signed) *Geo. Wright*,  
Surveyor-general.

## —No. 8.—

(No. 62.)

COPY of a DESPATCH from Lord *John Russell* to Lieutenant-governor  
Sir *C. A. Fitzroy*.

Sir,

Downing-street, 26 July 1841.

I HAVE received your despatch, No. 16, of the 4th May last, enclosing, with other documents, an Address to The Queen from the House of Assembly of Prince Edward Island, complaining of the high price set on Crown land, and praying that you may be ordered "to use your discretion as to the price and disposal of Crown land in the colony to actual settlers."

506.

You

No. 8.

Despatch from  
Lord John Russell  
to Lieut.-governor  
Sir C. A. Fitzroy,  
26 July 1841.

PRINCE EDWARD  
ISLAND.

You will have the goodness to inform the House, that I have had the honour to lay their Address before The Queen, who was pleased to receive it very graciously, and to command that it should be referred for the consideration of the Commissioners for Colonial Lands and Emigration: those Commissioners have since made their Report on the subject, and I have now to communicate to you, for the information of the House of Assembly, the conclusions which Her Majesty has been pleased to adopt and sanction.

The Commissioners are of opinion that there is no sufficient reason for interfering with the discretionary power of regulating the price of Crown land already vested in the Governor, and that you have acted judiciously in not reducing the price so long as sales continue to be effected. Fully concurring in the caution conveyed in the despatch of Lord Glenelg, of the 7th April 1836, the Commissioners express a hope that you may not, for the present, consider it desirable to lower the established prices of any description of land, notwithstanding the appearance of indisposition on the part of the inhabitants to purchase the waste land, or to pay the price demanded for it. Adverting to the very limited extent of the Crown land, and especially to the growing desire of British capitalists to invest their money in the purchase of colonial lands, the Commissioners think that in a colony so advantageously situated as Prince Edward Island, prices, proved by experience to be not unreasonable, cannot fail to be ultimately realized.

With regard to the terms on which unauthorized occupiers of Crown land should be allowed to acquire titles to their farms, the Commissioners conceive that, as in other colonies, this class of persons should, in Prince Edward Island, have a right, in preference to all other persons, of purchasing the lands occupied by them, and should be required to pay no more for them than what would otherwise have been the minimum price at which they would have been offered to public competition. This rule would offer no undue encouragement to a class of men who are serviceable in advancing the settlement of a colony, while it would secure to them the enjoyment of the fruits of their industry and investment of capital.

Adopting the preceding conclusions of the Commissioners, Her Majesty is pleased to direct that they be made known to the House of Assembly, as comprising the answer which Her Majesty thinks it right to return to their Address.

I am, &c.

(signed) *J. Russell.*

No. 9.

Extract Despatch  
from Lieutenant-  
governor  
Sir H. V. Huntley  
to Lord Stanley,  
22 May 1842.

(No. 33.)

EXTRACT of a DESPATCH from Lieutenant-governor Sir *Henry Vere Huntley* to Lord *Stanley*, dated Government House, Prince Edward Island, 22 May 1842.

HAVING now received from the Speaker the Resolutions agreed to by the House of Assembly just previously to the prorogation upon the 16th of April, I have the honour to transmit them, with any remarks thereon, proposing to examine them in succession.

No. 1.

1st Resolution.

The first Resolution states, that the Assembly can see no reason to depart from any of the Resolutions passed in the House of Assembly between the year 1839 and the present period. On referring to the Resolutions and other papers upon the "state of the colony," emanating from the Assembly during that time, your Lordship will find that the tenantry have been represented as suffering under the greatest distress, utterly unable to meet the rent demands of the landlords, and the prosperity of the colony altogether obstructed in its advance, in consequence of the manner in which the land is held by the proprietors. In opposition to these statements, I beg leave to call your Lordship's notice to my despatch of the 27th of April, and also to the Address to Her Majesty by which it was attended. This Address prays that Her Majesty will be pleased to make an additional grant of 500*l.* towards the building of a lunatic asylum, expressly because, since the original grant in 1840, land in the vicinity of Charlotte-town had nearly doubled its

its value. Here is an admission of a wonderful advance in the ability of the inhabitants to purchase; and, therefore, as, according to the Address, this increase in value has been effected in two years, an extraordinary prosperity, instead of distress, may be unquestionably inferred; for it is not to be supposed that the value of land has nearly doubled itself only in the vicinity of Charlotte-town, and remained stationary elsewhere in the colony. But the House of Assembly might more forcibly have shown the advance in the price of land; and I am happy to have it in my power to corroborate their statement on this point, by informing your Lordship that since my arrival a lot of 12 acres, which not more than 16 months ago was purchased for 114*l.*, has been this year sold for 480*l.*, the whole having been bought by men engaged in the common labour of the town; also a farm of 180 acres, about five miles distant, has been bought for 1,000*l.* by the tenant who had previously farmed it during seven years, he having been nothing more originally than a labouring farmer, and his means arising entirely from his own industry and prudence. In both these instances the terms of the purchase have been completed according to the agreement, which obliged the chief part of the purchase-money to be paid at once.

PRINCE EDWARD  
ISLAND.

These, my Lord, are not solitary cases painfully collected to answer a purpose, but illustrations of customary occurrences in this vicinity, to which those of a more distant locality bear a fair comparison. By this it appears, then, that the poorer classes, whether labourers or tenantry, have, by the adoption of industrious and prudent habits, been able to acquire sufficient sums of money to enable them to make considerable purchases of land; and this ability, arising either from the employment of the one or purchase of the produce of the other by the richer orders, argues prosperity. But the House of Assembly, although stating the alteration in the value of land, cannot see cause to alter their view of the state of the colony taken in 1839, and subsequently.

In the second resolution, the House states the despatch of the Right honourable Lord John Russell, dated the 25th of June 1841, to be in direct contradiction to several prior despatches and expressed opinions; and the House begins by declaring that his Lordship's conclusion as to the impracticability of the original conditions of the grants is in opposition to the statements of the House of Assembly of 1797: which I apprehend it may be, without lessening the value of his Lordship's conclusion. This conclusion is also stated to be opposed to the admission contained in the despatch of Lord Hobart, replying to these statements of 1797. Referring to the said despatch, dated the 6th of August 1802, your Lordship will not find the conclusion of Lord John Russell to stand in opposition to any word of it. The despatch of Lord Hobart describes the course to be adopted with regard to quit-rents, and recommends a Bill upon the subject; and, with regard to the escheat question, directs the practice of other neighbouring colonies to be followed; but in no instance does Lord Hobart even allude to the impracticability of the original conditions, and therefore does not advert to the inequity of escheating, because they were not fulfilled. The conclusion of Lord John Russell is also said to be opposed to the Act of the Legislature of 1803. This Act, 2 Will. 4, c. 19, went to the extent of establishing a Court of Escheat, and was not, as recommended by Lord Hobart, a mere adoption of another system, indicating and embracing the question of escheat.

With regard to this despatch of Lord Hobart, it appears certainly correct that there was a desire to adopt the practice of the neighbouring colonies upon this subject, and it contains directions to report from time to time any steps that may have been taken with reference to lands upon which the conditions of the grant had not been fulfilled; but it does not any where appear that Lord Hobart had been made aware of the impossibility of the grantees complying with the terms of the grant; and I beg to submit that it has never been shown that the grantees of the neighbouring colonies ever remonstrated against an escheat of their grants, and that therefore it is fair to conclude that they could have complied with the conditions, but had not done so. This forms a striking difference between the conduct of the grantee of this colony and the grantee of those in the neighbourhood.

When the escheat fell upon the townships 15 and 55, the Crown exercised its prerogative; but I apprehend the Crown has a full right to decline exercising its prerogative at pleasure, and more especially so when, from more minute examination

PRINCE EDWARD  
ISLAND.

---

nation of the question, it had appeared that the act of escheat would be an inequitable act, because the conditions laid upon the grantee were impracticable; for, although the Government of that day certainly intended to give the lands as they were given, yet it could never have been intended that the grantee should have been harassed by terms which could not be executed, and therefore to escheat upon such terms would be unjust.

Admitting that ten years were given by the despatch of Lord Bathurst, conveying thereby power to the grantees to settle their lands with a class of persons different from those required by the original grants; and that at the expiration of those ten years in 1827, it was still found that the lands had not been settled as required, still, my Lord, I think forbearance was due to the grantee, for the island at that time was chiefly known from the failure of every attempt to settle it; and emigrants, with the attractions of the Cape of Good Hope and Australia before their view, were very unwilling to accept the severe climate of North America: the time was too short to remove the injury inflicted upon the reputation of this island by the previous failure of every endeavour to settle it.

It is not necessary to occupy your Lordship's time by going through the remainder of the documents to which the despatch of Lord John Russell is said to be opposed, but it is proper again to observe, that in no instance does the passage of that despatch, as cited by the House of Assembly, offer contradiction to them; in no document alluded to is it stated that the terms were practicable, and therefore that an escheat would be just; and this statement must be shown to exist before the charge against his Lordship's conclusion can be substantiated.

I would, however, before leaving the second Resolution, beg to call your Lordship's attention to the reasoning of the House of Assembly when they state that Lord John Russell's conclusion as to the injustice of escheating, where the terms were found to be impracticable, is in opposition to "Lord John Russell's own opinion at one time," as a proof of which they quote from another of his Lordship's earlier despatches the following passage upon the question of escheat, which, his Lordship says, "is a public question, and as such must be treated;" it might have occurred to the House that it had in the interval between these despatches been treated as a "public question," and that the "conclusion" of Lord John Russell, contained in the despatch of the 25th June 1841, was the result of the deliberation upon it, although the House of Assembly would seem to think either that a subject once made a public question cannot terminate at all, or only when the decision of the superior agrees with that of the inferior power.

3d Resolution.

The third Resolution begins by stating, "that the House of Assembly have not desired an escheat solely on the grounds of the failure to fulfil the original terms of settlement, but principally on account of the exorbitant rents demanded by the proprietors," &c.; I submit that the House, in giving this explanation of the principal cause of their desire for an escheat, have shown also a desire to establish a court, with powers altogether beyond those of a court of escheat; a court of escheat could only recognize the departure from conditions as cause for escheating; but the House desires that it should also make the exaction, or oppression, of the proprietor towards the tenant a ground upon which an escheat might be pronounced; the House of Assembly desire a general escheat; now, by their own reasoning, wherever "exorbitant rents" were not demanded, an escheat ought not to be desired by the House; but to carry out the meaning of this Resolution, a total revision of the laws upon escheat would be necessary; indeed it would be necessary to make new laws, and then act retrospectively upon them.

However, my Lord, the House have now a new obstacle to overcome, and one which I feel convinced has made them change the ground upon which they have heretofore appealed for an escheat: formerly it was non-fulfilment of conditions; now it is "principally" on account of exaction on the part of the proprietor; their position upon non-fulfilment is no longer tenable, for, by the census, completed and printed in 1841, with the exception of Township No. 10, (the property of David Stewart, esq., residing in England), every other township throughout the island is settled according to the conditions of the grants: this fact seems to set the question at rest.

The

The fourth Resolution states, that the terms proposed by Mr. G. R. Young were rejected by the House of Assembly, as any proposition would have been not going to the full extent of escheat, however much it might have been recommended by Her Majesty's Secretary of State for the Colonies.

PRINCE EDWARD  
ISLAND.

4th Resolution.

In answer to the fifth Resolution, I beg to refer your Lordship to the information conveyed in my observations upon the first Resolution, showing that tenantry, and even labourers, have, by industry and prudence, been enabled to effect very considerable purchases, a practice so little uncommon as to establish the allegation of the existence of distress and oppression extremely exaggerated, and not at all general. The back rents, under the liability to pay which the tenantry have placed themselves, is a heavy burden which the tenantry have acquired by attending to the advice of those who induced them to believe that by refusing payment of rent they were acting legally, and this advice was given by men as mischievous as ever disturbed a country, but who were sufficiently artful to induce amongst the population the belief that opposition to the laws was the surest course to independent possession of the land now held by them as tenantry.

5th Resolution.

\* \* \* \* \*

It would be needless to occupy your Lordship's time in reviewing the Resolutions Nos. 6 and 7, the purport of both having been already so fully under discussion with Her Majesty's Government, and there appearing nothing in them but the reiteration of old argument, unsupported by any thing fresh; I will only observe, that I think the ensuing elections will prove how very little the "despatches" alluded to "are prejudicial to the colony," and how very little they "operate upon the hopes and fears" of any persons in the manner described in the seventh Resolution.

6th and 7th Reso-  
lutions.

Upon the eighth Resolution I have to remark, that the prayer which it contains for the appointment of commissioners from Nova Scotia, or New Brunswick, is, in my opinion, totally uncalled for; first, because the grounds for claiming an escheat no longer exist; secondly, because the tenantry are now not only paying their rents, but to a certain degree paying up back rents; and thirdly, because the discontent which prevailed has now subsided, the people being sensible of the errors into which a few designing men had led them.

8th Resolution.

I have, my Lord, the assurances of several of the proprietary agents in corroboration of my statements, and I have a return before me, showing that where, in 1839, (the hottest period of escheat agitation) only 2*l.* 14*s.* was paid upon rent account, in 1841 there has been received from the same property 136*l.* 16*s.*; and in many cases the back rents have been, at the request of the tenant, allowed to remain unpaid, to enable the said tenant to erect some building, or otherwise improve the property,—a course which the agent felt would be more for the interest of his employer than the receipt of the rent, and consequent prevention of the improvement proposed.

It is a prayer, also, conceived in injustice, the Crown having given the land upon certain conditions, which, with one exception, have been fulfilled: how can the Crown be now called upon to appoint commissioners to appraise the land, and, deciding upon the value arbitrarily, fix a rent for land over which it has no power, after the terms of the original grant had been fulfilled? And as to the necessity of securing, by the intervention of a commissioner, to the tenant the value of improvements made by his own exertions, I would beg to suggest a far more simple process, namely, paying his rent with regularity; for having a long lease always, often one of 999 years, so long as he pays his rent, the law, which he has of late been so mischievously advised to oppose, will secure to him all his improvements. I must look upon this prayer for the appointment of commissioners as the mere effort of a faction pledged to keep the question of escheat and settlement before the population for the sole purpose of continuing dissension.

In reply to the ninth Resolution, which observes, "While the law for re-vesting forfeited lands in the Crown is suspended in this colony, and the law for the recovery of rents for such lands is carried into operation, &c.," I have to observe, that what the House of Assembly is pleased to call "the law," is nothing else than the prerogative of the Crown, which the Crown may unquestionably exercise

9th Resolution.

PRINCE EDWARD  
ISLAND.

cise or not, at its pleasure. The House of Assembly has no power or right to call upon the Crown to exercise that prerogative against its will, and still less so against a sense of justice.

\* \* \* \* \*

14th Resolution.

Nos. 2 and 3.

In the 14th Resolution it is stated, "That the land assessment imposed by an Act passed in 1837, for 10 years, has been of no service whatever to induce the proprietors to settle the present tenantry and occupants, or to settle the wilderness lands;" your Lordship, by referring to the statistical returns of 1833, and the same of 1841, will be informed, that between those periods 222,000 acres of land have been sold and occupied, and that the population has increased nearly 15,000 in number; the Land Assessment Act has been in operation since 1837, and was passed with the view of forcing the proprietors to settle their wild lands, which the House says it has not succeeded in doing; then it is fair to presume, that some natural circumstances, highly favourable to the island, and in spite of all the oppression and other evils described by the House as overwhelming the colony, have effected that which the artificial effort of the Legislature could not. It is difficult to imagine why the Assessment Act should have been declared inoperative by the House, without noticing the gratifying fact, or assigning any reason in explanation of so extraordinary an increase, both in occupation of land and population, in a country whose prosperity, the House says, is obstructed by injustice and oppression.

15th and 18th  
Resolutions.

The 15th Resolution is of little import; and upon the subject of the 18th, I have already had the honour to address your Lordship.

16th Resolution.

The 16th Resolution is worthy of some explanation, which will tend to show at once the peculiar disposition and incapacity of the House of Assembly of 1842, in its majority; this Resolution was, in its origin, brought forward by Mr. Palmer, member for Charlotte-town, as an amendment, to negative all the other Resolutions, and in that shape terminated at the words "irredeemable burden;" when it was itself amended by Mr. Clarke, member for Prince-town, who proposed that the words "which public measures have been supported by the proprietors and their abettors," should be added after the word "burden;" this proposition was eagerly adopted by Mr. Clarke's supporters; and though its folly was pointed out by an opposition to it, yet Mr. Clarke not only carried his proposal, but also by a subsequent vote advanced the amended amendment into the list as a Resolution; by which the House of Assembly declares that the proprietors themselves actually support all "public measures tending to render insecure the titles to landed estates;" probably no legislative body ever before discovered the possession of so much inaptitude as has been displayed by the House of Assembly on this occasion.

Resolution proposed by Mr. Rae, carried, but not given with the owners, although upon the Journals of the House.

Then follows another Resolution, introduced by Mr. Rae, ironical in its meaning, and only tending to show that passion was dictating a disgraceful termination to a House of Assembly, the majority of which had encouraged every view destructive to the rights of property, while at the same time it exhibited a lamentable absence of disposition and capability to engage in useful legislation until the very last session.

17th Resolution.

This Resolution represents generally the view taken by the House of the colony; there appears to be little in it that has not already been before Her Majesty's Government; and I cannot but remark, that if there is any depression in the condition of the colony, that might not have been contemplated as arising from a climate which denies the power of engaging in the labour of the soil during at least half each year, it is to be attributed solely to the too successful endeavours of designing men to entice the population into the pursuit of results springing from inequitable demands, of which the same population have been made sensible, and are now, I think, seriously attempting by industry to extricate themselves from the difficulties in which they have been involved by their advisers.

No. 4.

It would only be uselessly occupying your Lordship's time by descanting upon the two Addresses which I have the honour to transmit; the examination of the Resolutions equally apply to the Addresses, which are indeed founded upon the Resolutions.

Enclosure

## Enclosure 1, in No. 9.

PRINCE EDWARD  
ISLAND.

PRINCE EDWARD ISLAND.

In the House of Assembly, 11 April 1842.

RESOLUTIONS reported from the Committee of the whole House, on the State of the Colony, and adopted by the House.

Encl. 1, in No. 9.

1. **RESOLVED**, That it is the opinion of this committee, that they see no reason to depart from any of the Resolutions, as to the state of the colony, passed in the sessions of 1839, 1840, 1841, nor from any of the representations contained in the Addresses forwarded to the Colonial Secretary and the House of Commons in those years.

2. Whereas Lord John Russell, Her Majesty's Principal Secretary of State for the Colonies, in a despatch to Sir Charles A. Fitzroy, bearing date the 25th June 1841, contains a conclusion to which Her Majesty's Government has come, in reference to the question of escheat; viz. that the original terms of settlement were impracticable, and that any escheat at the present day, on the ground of the failure to fulfil the conditions in the original grants, would be unjust—which said conclusion is in direct contradiction to the statements made by the House of Assembly in 1797—to the admission contained in Lord Hobart's despatch in answer thereto, dated in 1802—to the Act of the Legislature in 1803, passed as recommended by the said despatch of 1802, the disallowance of which has never yet been satisfactorily accounted for—to the Resolutions of the House of Assembly in 1805—to the proceedings taken by Government against townships 15 and 55, in 1816—to the despatch of the Earl of Bathurst, with the Prince Regent's proclamation of 1818, granting an indulgence to the grantees and proprietors for ten years from 1816, allowing the lands to be settled by British subjects in the same proportion as originally intended with foreign Protestants—to the actual state of the population in several townships at the expiration of the said indulgence in 1827—to the opinions of the Crown Officers in 1832, taken by the then House of Assembly—to the Act of 1833, intituled, "An Act to encourage the Settlement and Improvement of Lands in this Island, and to regulate the Proceedings of a Court of Escheats therein;" which Act was disallowed, not because the terms of settlement were impracticable, but because the said Act might fetter his Majesty in the free exercise of his royal prerogative—to the reasons given for passing the several Acts for levying an assessment on all lands—to the report of the Earl of Durham to the Imperial Parliament in 1839—to the admission in the despatch of Lord Stanley, Lord Goderich and Lord Glenelg, from 1831 to 1840—and to the published admission of Governors Fanning, Smith, Ready, Young, Harvey and Fitzroy—to the practice pursued in the old colonies, and in the neighbouring, and also stated to be pursued in the Australian colonies—to Lord John Russell's own opinion at one time, which he states to be, that the question at issue "was a public question, and as such must be treated"—and to evidence taken by and within the knowledge of this House:—Resolved, therefore, That this House considers the said opinion, contained in Lord John Russell's despatch of the 25th June, to be singular, unsupported by evidence, and in direct opposition to the various statements and opinions above referred to.

3. Whereas it appears by a despatch laid before this House, dated Downing-street, 25th June 1841, that the Right honourable Lord John Russell, Her Majesty's late Principal Secretary of State for the Colonies, is of opinion, "that the original terms of settlement were impracticable, and that any escheat at the present day, on the ground of the failure to fulfil such conditions, would be unjust:" Resolved, That the House of Assembly have not desired an escheat solely on the grounds of the failure to fulfil the original terms of settlement, but principally on account of the exorbitant rents demanded by the proprietors, which absorb the labour and capital invested by the tenant in the improvement of the land; and it would be unjust to allow the proprietors to claim such property through their failure to fulfil their conditions. The true value of the grants to which the proprietors have any right in equity can be estimated only when connected with the apparent expense and difficulty attending the performance of the original conditions for settlement; and any delay of the executive to enforce the forfeiture of the grants, when such conditions were not performed, or to release the grantees from said conditions, and authorize them to introduce British subjects instead of foreign Protestants, has given a new value and construction to the grants—the amount of such enhanced value being in proportion to the prices or terms the respective grantees or proprietors have let or disposed of the land to immigrants, which new value is abstracted from the colony generally, but from British subjects individually; and as the land is let far above its value, the labour and capital in improving it becomes the property of the proprietor, while, on the other hand, the non-settlement with foreign Protestants held out a fair prospect to British subjects emigrating to the colonies that the lands would be re-vested in the Crown, and that such immigrants would be settled in the same manner as Government have settled them in the other colonies.

4. Resolved, That the terms proposed by Mr. George R. Young were rejected unanimously by the House of Assembly, as unworthy of being recommended by the Government, or accepted by the people.

5. And whereas the said last despatch recommends it as Her Majesty's desire, that the Assembly and Council should "turn their attention to the improvement of the resources, and the encouragement of the growing wealth, of Prince Edward Island, and leave to the gradual operation of time the settlement of a question which affords no sound footing for direct legislation:" Resolved, That where public wrongs disturb the minds of a people, and

PRINCE EDWARD  
ISLAND.

---

thus retard the prosperity of a colony, it is the duty of the House of Assembly respectfully to represent it to Her Majesty, and seek redress; and the wrongs of this colony may be briefly stated as follows: The land of this island was let in its wilderness state to British subjects, without any improvement, at a rent far above the interest of the fee-simple value of the land, as stated in the 3d and 4th Resolutions of 1839, and those of the 24th April 1841, and many of the tenantry are greatly in arrears for rent, which they are unable to pay, much less to redeem their improvements at the proprietors' terms by the purchase of the fee-simple. And the practice of adding the arrears of rent to the fee-simple, and demanding interest as rent, or taking the tenant's bond on interest for such arrears, is most discouraging to the tenant, and renders it utterly hopeless for the tenant to derive any benefit from his improvements. The grantees have also exercised an ownership over the lands reserved in the Crown for the fisheries, and have let the same on rent, together with the township lands; and immigrants, on their arrival, had to become tenants, to procure a location where they could fish for their subsistence; and when the improvements (which is the growing wealth of Prince Edward Island) are assumed by the proprietors under such practices, to leave to the gradual operation of time the settlement of a question of such vast importance to the happiness of the people and the prosperity of the colony, would discourage industry, render property insecure, and bring the justice of Her Majesty's Government into disrepute.

6. Resolved, That the House of Assembly have not sought an advance of money from the Imperial Revenue, to purchase the lands from the proprietors, to enable the Crown to sell or re-grant the same to the tenants; but from a desire to settle the tenantry and occupants of land. The House of Assembly passed a Bill for that purpose in the session of 1839, which was rejected by ministers, on the ground that it embraced the principle of escheat; and in the sessions of 1840 and 1841, the House of Assembly passed another Bill, which went to re-vest the lands in the Crown, and to settle the tenants and occupants thereon, on their paying the full price of wilderness land for such quantity as they held under lease or occupation—which price, together with a land-tax, was placed at the disposal of the Crown, to award to the respective proprietors such portion of the said sum as Her Majesty might be advised to grant in equity as the value of the grants, and for any expense or loss the proprietors might sustain.

7. Resolved, That the despatch laid before the House of Assembly in 1841 states, that the settlement of the tenantry must be treated as a public question; and the despatch laid before the House this present session, in reference to the same question, concludes, that it offers no sound footing for direct legislation, which vacillating despatches are prejudicial to the colony, and operate on the hopes and fears of a numerous class of persons, who have improved the lands of this colony, and stand in jeopardy of being deprived of their improvements.

8. Resolved, That whatever injustice may attend an escheat at the present day, on the ground of the failure to fulfil the conditions for settlement, proceeds from the vacillating despatches received from time to time from the Secretaries of State for the Colonies. A despatch from Lord Hobart, in the year 1802, recommended the Legislature of this island to pass a Bill for the regulation of a Court of Escheat, which was passed accordingly, but afterwards suppressed, through some undue influence; and, in the year 1816, a despatch from the Earl of Bathurst went to release the grantees from the performance of the conditions of their grants; and when the Right honourable Lord John Russell, Her Majesty's late Secretary of State for the Colonies, discourages all such legislation in this island as would settle the inhabitants, it becomes necessary to pray Her Majesty to lay the unsettled state of this colony before the Imperial Legislature, and recommend to their consideration to pass an enactment to authorize the Crown to appoint commissioners from the provinces of New Brunswick and Nova Scotia—men whose experience in the practice of settling the lands in those provinces would enable them to make an appraisement; to find the original fee-simple value of the land in its wilderness state; and also the value thereof in its improved state; and to settle the inhabitants in this colony in such a manner, that while the Government may deem it just to award to the proprietors the fee-simple value of the land in its wilderness state, or the interest thereof as a rent, it appears equally just and reasonable that those who have cleared and improved the land, and erected the buildings thereon at their own cost and labour, should be secured in the value of their improvements.

9. Resolved, That while the law for re-vesting forfeited lands in the Crown is suspended in this colony, and the law for the recovery of rents for such lands is carried into operation, giving the proprietors of forfeited grants an undue claim to recover rent, and also the improvements made upon those lands by persons who were to have been settled, there is no expectation that such proprietors will consent to relinquish such claims, or submit to an equitable arrangement, as recommended in the foregoing Resolutions, unless the Government is prepared (in the event of the proprietors' refusal) to institute proceedings by a Court of Escheat, to re-vest the forfeited lands in the Crown, and settle the inhabitants.

10. Resolved, That it is a subject of complaint in this colony, that the grantees or proprietors of the township lands have been suffered to exercise acts of ownership over the lands for the fisheries, including them in their leases to the tenants, or otherwise having disposed of the fee-simple with the land in the rear thereof; and immigrants on their arrival to settle in this colony, had either to purchase or to pay rent for such re-

servations

servations before they could obtain a location where they could fish for their subsistence—whereby the grantees or proprietors have obtained large sums of money, to the loss of the inhabitants and the colony; whereas the late Lieutenant-governor, Sir Charles A. Fitzroy, in the session of 1839, by message, laid before the House of Assembly certain despatches relating to the lands reserved for the fisheries, setting forth that it was the determination of Her Majesty's Government to throw open the reserves to all British subjects engaging in the fisheries, and suggesting to the House of Assembly the propriety of passing such laws as might be necessary, "for preventing improvident and injurious practices in carrying them on," as recommended by Her Majesty's Secretary of State for the Colonies.

11. Resolved, That the House of Assembly have, in the sessions of 1839, 1841 and 1842, passed Bills for the regulation of the reserves, to afford every facility for carrying on the fisheries; but as the persons located upon these reservations had cleared and improved the same, and in most cases have erected their dwelling-houses and other buildings thereon, and have either purchased the fee-simple thereof, or paid rents for such reservations to the proprietors of the adjoining townships, the House of Assembly provided in their Bills that the persons who cleared the land, or were entitled to the improvements, should be quieted in their possessions; but the Council virtually rejected the said Bills, by their amendments thereto—which amendments went to exclude the fishermen, not only from all bays and harbours, but also from parts of the out-sea coast, and to give the fee-simple to the proprietors of the townships in the rear of the fishery reserves.

12. Resolved, That every indulgence that has been given to the proprietors from time to time has been at the expense of the tenantry; that when the Imperial Government reduced the quit-rents, at the desire of the grantees, they were increasing the rent upon the tenantry; and when the despatch from Earl Bathurst went to release the grantees from the settlement of their grants with foreign Protestants, the grantees, through such indulgence, imposed terms of settlement upon British subjects far less favourable than any settlement practised in the British colonies; that when the late Secretary of State for the Colonies declined to authorize the appointment of a court of escheat, and declared that it would be unjust to divest the proprietors of the land, the proprietors were and are thereby encouraged to distress and deprive the tenants of their improvements; and every indulgence given to the proprietors emboldens them still further to oppress the tenants; that as the House of Assembly knew that the fishery reserves were the most desirable for the location of immigrants, for the convenience of fishing, and that such lands were the first brought into cultivation, and, together with the fishery, were the principal sources from which the tenant could pay rent—which rent the proprietors have received since the first colonization of this island—therefore, there could be no injustice done to the proprietors of the township lands to pass a law to quiet the tenant in the possession of such portion of the reserves as he has cleared and brought into cultivation at his own cost and labour—subject, nevertheless, to the original conditions of being open to the fisheries.

13. Resolved, That while the proprietors are allowed to demand and recover rent for the lands reserved for the fisheries, or to dispose of them in fee-simple, it operates as a reward to the proprietors to defeat any law being made for the regulation of the fishery reserves, or for the settlement of the inhabitants of this colony; and that therefore it be respectfully submitted to the Government, that it is necessary that the Government should, without delay, institute proceedings for the recovery of such rents or purchase-money from the proprietary claimants, as have been received by them, and to order such regulations as shall make such reserves available in future for the purposes for which said lands were reserved.

14. Resolved, That the land assessment imposed by an Act passed in 1837, for 10 years, has been of no service whatever to induce the proprietor to settle the present tenantry and occupants, or to settle the wilderness land; but this tax has released the proprietors from the payment of a quit-rent, and often is an additional burden of 2s. per hundred acres upon the tenant and occupant; except in cases where they were previously bound by their leases to pay said quit-rent; and the tax of 4s. per hundred acres upon the proprietors for wild land is but an advance of 8d. sterling upon a quit-rent of 2s. sterling per hundred acres, which the proprietors are bound to pay; the 4s. currency being 2s. 8d. sterling.

15. Resolved, That the rejection by the Legislative Council of the Bill passed by the House of Assembly for the payment of 100 l. sterling to the individual whom the Assembly shall appoint as their agent in Great Britain, for the purposes expressed in the preamble to the said Bill, is denying to the representatives of the people of this colony the power of appropriating from the funds received from the people a sum, which, thus applied, was likely to be of the most material service to the people, and is barring them from the means of employing an efficient individual to act for them in Great Britain at the time when the petition of the House of Assembly is pending before the House of Commons, and when those of whose procedure the people of this colony complain have an organized system and agency in Britain actively engaged in counteracting the views and injuring the interests of the people of this colony.

16. Resolved, That while the main interests and resources of this island depend on the number, industry and wealth of its agricultural population, so long will its prosperity be retarded by any public measure calculated to render insecure the titles to landed estates; to discourage the ingress and settlement of agricultural capitalists, or which may prove to its numerous tenantry an inducement to withhold the payment of their rents until all arrears accumulate to a ruinous and irredeemable burthen; which public measures have been supported by the proprietors and their abettors.

PRINCE EDWARD  
ISLAND.

17. Resolved, That the following report of the special committee appointed to report on the value of property enumerated in the census returns be adopted :—  
Your Committee have respectfully to submit that, at this late period of the session, they have not been able to bestow that time which the nature of the subject would require, in order to state, in all particulars, exact amounts; that, after some days, part of the information which they required has not been furnished, owing probably to the pressure of other business in one of the public offices, and that, in some of its bearings, the committee could not ascertain from any authentic record at their command exact numbers or exact amounts. Under these circumstances, the only course left open to your committee was to decline reporting, or so to guard their statements as that when exact information was unattainable they should underrate any number or amount which bore against the statements and arguments of the proprietary claimants, and should, at the same time, overrate any number or amount which was in favour of these claimants. The documents as to arable, freehold and leased land, mills, farming stock and crop, churches, schools, and the number of the male population liable to statute labour, are all taken from the census, so far as number, the values only having been affixed by the committee.

PROPERTY of the Townships of Prince Edward Island, by Census of 1841, exclusive of any value which may be put on the claims of the Grantees of Townships and their Assigns, to demand Rent.	
Cleared, arable, fenced land in townships, 135,000 acres, at, for clearing	£.
and fencing, per acre, 3 <i>l.</i> 10 <i>s.</i> - - - - -	472,000
Houses, barns, &c., of 7,000 farms, erected by the farmers, at 100 <i>l.</i> - - - - -	700,000
177 mills, at 200 <i>l.</i> - - - - -	34,000
Roads, bridges and wharves - - - - -	106,000
£. 1,312,400	

MOVEABLE PROPERTY.	
	£.
9,600 horses, at 12 <i>l.</i> - - - - -	115,200
40,000 cattle, at 4 <i>l.</i> - - - - -	160,000
70,000 sheep, at 15 <i>s.</i> - - - - -	52,500
33,000 hogs, at 25 <i>s.</i> - - - - -	41,250
Agricultural implements and household furniture of 7,000 families, at 40 <i>l.</i> - - - - -	280,000
648,950	
£. 1,961,350	
Grain for bread, and sowing, &c., one-half of what is raised, and the same of potatoes - - - - -	107,869
Independent of 3,000 tons of shipping belonging to individuals on the townships - - - - -	13,500
£. 2,082,719	
Thence deduct as follows :—Of 10,000 acres held by sundry proprietary claimants of townships for their own farms, with the same proportion of stock and crop—these 10,000 being $\frac{1}{39}$ of the whole land occupied, that is, $\frac{1}{39}$ of 2,082,719 <i>l.</i> gives 53,403 <i>l.</i> , and double this, as the buildings and stock of these farms are much superior to the generality - - - - -	
70,594	
Which deducted, leaves as total capital of the farming population - - - - -	
£. 2,012,125	

PUBLIC BUILDINGS on the Townships, raised, with few exceptions, entirely by the farmers :	
67 churches, at 250 <i>l.</i> - - - - -	19,750
100 school-houses, at 30 <i>l.</i> - - - - -	3,000
The above prices are on the supposition that the farming stock are at the prices they would be sold for in barter, and rather over the cash prices; and were any quantity thrown into the market here, and cash payments required, the price would fall very considerably. The other values are estimated in produce, the work required in performing the same being generally thus paid.	
IMPORTS for 1840.—Invoiced value, sterling, 140,000 <i>l.</i> , and which exceeds the exports by 78,000 <i>l.</i> sterling, which deficiency is believed to be nearly made up by the sale of vessels built in the colony, and the value whereof is not included in the Custom-house statement of exports - - - - -	
£. 140,000	
On the above invoiced value add 100 per cent., as the price at which the goods are sold in the colony in colonial currency - - - - -	
140,000	
Average of labour, or commutation paid for labour, on public roads by inhabitants, seven-sixths, or 9,000 individuals liable to labour, including teams - - - - -	3,350
Proportion of land assessment paid by farmers - - - - -	380
Salaries to clergymen and teachers, and annual repairs of churches and schools, and voluntary subscriptions to bridges and wharves - - - - -	7,500
£. 291,130	
Showing	

Showing that the expenditure of the colony, independent of rents, amounts to about 14 per cent. on the capital accumulated, chiefly by labour on the land, for the last 70 years. And, in regard to this expenditure, your committee have to remark, that though it may be thought the colony could dispense with the greater part of some of the articles imported, yet that it is equally clear, the colony requires far more of some other articles than are imported, *e. g.*, iron and salt, and all ship stores. Your committee have also to remark, that the quantity of wheat raised in the colony affords three bushels for the consumption of every individual; and that your committee believe the quantity of wheaten flour exported from the out-ports to be at least equal to what is imported at Charlotte-town. Whereas the average consumption of wheat in England appears, by Macculloch, folio 416, to be from four to eight bushels per head.

Your committee also submit, as indicative of the state of the colony, that the Spanish dollar, current in the adjoining provinces at 5s. and 5s. 3d. of their currency, passes here at 6s. of this island currency; that their 1*l.* notes pass here for 23s.; and that the British shilling, which with them varies from 1s. 1d. to 1s. 3d. here passes for 1s. 6d.; and that the temporary employment of agricultural labourers, and the employment of mechanics, would be much circumscribed were they in all instances to refuse to take from their employers the produce of the country and to insist for money.

Your committee submit, that the population of this island appears to have been doubled since the year 1827; but that, though this is held by some as an argument of this island offering advantages superior to the neighbouring colonies, your committee cannot agree to the deduction. The number of immigrants within that period bears a large proportion to the total population in 1827, for in that year it was 23,000, and last year 2,000 immigrants arrived; and laying aside this item of account, it may be observed, that some portions of the British dominions which receive no accession of numbers from abroad, but are every year sending out great numbers of their native population, and are, in spite of such drain, rapidly increasing in amount, are at the same time rather diminishing than increasing in wealth. The exact increase of population, from births among the people resident in this island in 1827, appears from the census to be 8,295, or 35 per cent. in 14 years.

RENT.—Of the land occupied, 300,000 acres appear from the census to be under rent. This, on several townships, is 1s. 6d. and 2s. sterling on leases of 42 years, the lessees entering not on houses and land cleared and fenced, but on wilderness wood-land. On some townships the earlier settlers obtained leases at 6d. per acre for 999 years. In general the rent is 1s. sterling per acre per annum, and the duration 999 years; and the yearly rent at this date may be calculated at 16,250*l.* currency.

Previous to 1830 no law existed in the colony compelling the claimants of townships to contribute to the expense of making roads through such townships. Since that time a law was passed compelling them to contribute to the formation (but not to the maintenance) of such roads as should thereafter be run through the land claimed by them, in so far as a jury should find that such land was increased in value by said road; but if deteriorated, then the treasury had to pay the amount of such deterioration to the claimants of the land. Under this law, which was put into operation in 1833, verdicts have been given against the claimants of land to the amount of

-	-	-	-	-	-	-	-	-	-	£.2,929
---	---	---	---	---	---	---	---	---	---	---------

And in their favour, as for damages	-	-	-	-	-	-	-	-	-	351
-------------------------------------	---	---	---	---	---	---	---	---	---	-----

Showing the balance assessed on them to be—(see Return by prothonotary)	£.2,578
---	---------

Of which there has been paid, up to the 5th April 1842, 388*l.*, as by search of committee; stated by the treasurer at 310*l.*

Thus it appears that the total amount which the proprietary claimants, as such, have been assessed for roads, since the colony received a legislature, is only one-half of what was last year voted by the House of Assembly, in aid of roads, bridges and wharves, and not more than 1-15th of what has, by vote of successive Houses of Assembly, been paid for similar purposes since 1824, and not equivalent to one year of the statute labour; and of this small assessment only 388*l.* appear to have been paid,—a sum not far exceeding the expense to which the country has been put in summoning and paying juries and witnesses, &c. to obtain the whole of the verdicts.

As to the sales of land by the claimants of townships to actual cultivators, by the census it would appear that 239,000 acres are held in freehold; but this was not all sold by these claimants to the farmers, for two townships, each of 20,000 acres, were escheated by Governor Smith, and the greater part of these has been granted in tracts of from 500 to 100 acres; and much of what was thus granted is now held in freehold by farmers. Of 200,000 acres which the proprietary claimants offered in 1782-3, to surrender to loyalists, a quantity, estimated at 25,000 acres, is held by loyalists or their assigns. One entire township, No. 3, was made over by one claimant to his creditors, and by them sold in lots of 900 acres; and at different times individual farmers have purchased small tracts of wilderness land at sales for arrears of quit-rent or land assessments due by the townships. About 7,500 acres of glebe and school lands were sold in lots not exceeding 130 acres; and the moieties of townships 45 and 52, for which moieties (according to the best information your committee can acquire) no claimants ever appeared, as well as portions of other townships, which were for many years unclaimed, have been taken up by individuals who, by undisputed possession, for a series of years, have acquired a legal right to the land, and thus may be reckoned amongst the freeholders; so that from the above 239,000 acres marked in the census as held

PRINCE EDWARD  
ISLAND.

in fee-simple, a considerable proportion has not been sold by the claimants of townships to the farmers thereof, and therefore "the gradual operation of time," recommended by Lord John Russell, appears to your committee likely to extend to some centuries. As to the value of the claim to the soil of the island, maintained by the heirs and assigns of the grantees, about 1,300,000 acres were granted. Of these, 239,000 are, as above-mentioned, now held in fee-simple, and this being deducted, leaves 1,061,000 acres claimed by these grantees, part of which they have leased, but the greater part is unleased; and of both leased and unleased, the greater part, or at least nine-tenths, is not reclaimed from the state of nature.

Now, 5 s. per acre for wilderness land may be taken as the outside value thereof, and rather exceeds the average value of sales of Government land in New Brunswick, and this gives the value of this seigneurial claim (if valid) at 265,250 l.

Taking another view of the matter, and referring to the account published in London about 1807, by Captain John Stewart, and to other accounts, it would appear that the average market value of a claim to one of the townships of this colony, from 1769 to 1800, was about 600l., which, for 67 townships, would give

-	-	-	-	-	-	-	-	-	-	£. 33,300
Interest on that sum	-	-	-	-	-	-	-	-	-	141,858
										<u>£. 175,158</u>

And your committee, making every deduction, cannot estimate the amount of prices received by the proprietary claimants and their agents, at less than

-	-	-	-	-	-	-	-	-	-	£. 50,000
And of rents, at less than	-	-	-	-	-	-	-	-	-	160,000
										<u>£. 210,000</u>

Nor the amount of quit-rents, land assessment and road compensation assessment, and all other advances, at more than

-	-	-	-	-	-	-	-	-	-	25,000
Leaving	-	-	-	-	-	-	-	-	-	<u>£. 185,000</u>

It is submitted by your committee, that if in addition to the 185,000 l. which they or their agents have received, the Imperial Government award them either the above 265,250 l. or the smaller amount of 175,158 l., it will award more than can in equity be claimed by those who have acted as have the grantees, and those who succeeded to their territorial claims or demands; and it is also submitted, that from the tables and accounts herein referred to, it is beyond the means of the colony to pay the rents demanded by these individuals.

Your committee, in reference to Mr. Cunard's answers before the House of Commons, questions 3097, 3098, have required the Rev. L. C. Jenkins, Ecclesiastical Commissary for the Church of England in this colony, to state the amount of monies paid by Mr. Cunard towards the erection or endowment of churches, and find that he has paid nothing; and on requiring further information as to the amount contributed by claimants of townships, they find that the whole, to the best of the commissary's knowledge, is 35l. in money, and 75 acres of land. Your committee have ascertained that 75 l. were contributed by the Countess of Westmorland towards a Methodist chapel; in regard to other contributors, your committee cannot, for want of time to correspond with the clergymen of different persuasions throughout the island, ascertain the exact amount of the few other contributions of money, and the number of acres of land, given as sites for churches, by the claimants of the townships; but feel confident that the total value contributed by them for the last 70 years, in any shape, towards the erection and endowment of places of worship of all denominations, and of schools every where throughout the townships, is under 700l.

18. Resolved, That it is the opinion of this committee, that an humble Address be prepared to Her Majesty, praying that out of the unappropriated funds now or hereafter to be paid into the treasury of this island, arising from the sale of Crown lands, Her Majesty will be graciously pleased to allow the sum of 500 l. to be applied, in addition to the sum at present granted by the colonial legislature, in the purchase of a piece of ground for the purposes of the contemplated lunatic asylum; and also the sum of 150 l. to be applied in opening the George-town Royalty Roads; and also the sum of 100 l. to open new roads throughout, and in the improvement of the communications in Prince-town and Royalty.

(A true copy.)

(signed) William Cullen,  
Clerk, House of Assembly.

Enclosure

CORRESPONDENCE: PRINCE EDWARD ISLAND.

Enclosure 2, in No. 9.

CENSUS of the POPULATION, and STATISTICAL RETURN, taken under the authority of the Act WILL. 4, c. 7, A.D. 1833.

NUMBER of TOWNSHIP.	MALES.				FEMALES.				Number of Insane Persons.	Number of Acres of Land occupied.	Number of Acres of improved Land occupied.	Number of Cows owned.	Number of Oxen owned.	Number of other kinds of Neat Cattle.	Number of Horses.	Number of Sheep.	Number of Hogs.	Produce raised during the last Year.				Number of Grist Mills.	Number of Saw Mills.	Number of Schools.	No. of Scholars.

PRINCE EDWARD  
ISLAND.

Encl. 4, in No. 9.

Enclosure 4, in No. 9.

To The QUEEN's most Excellent Majesty.

WE, the representatives of Your Majesty's faithful and loyal people of Prince Edward Island, in Colonial Parliament assembled, humbly submit to Your Majesty's royal consideration, that in the session of 1840, the House of Assembly addressed Your Majesty, to which they beg reference, as well as to several Resolutions passed by this House when on the state of the colony, which are herewith submitted with regard to the fishery reserves of this island, under the impression that Your Majesty would be pleased to cause the Executive to put in force a despatch from Lord Glenelg, then Secretary of State for the Colonies, to his Excellency Sir Charles A. Fitzroy, which is as follows:—" (No. 66.) Downing-street, 14th September 1838. Sir, I have received your despatch (No. 27) of the 26th July, recommending the adoption of the alternative suggested in my despatch of the 10th May last (No. 43), of throwing open the fishery reserves on the shores of Prince Edward Island to all British subjects engaging in the fisheries. I have to convey to you my authority for carrying this measure into effect in the manner which you propose. I have, &c. &c. (signed) Glenelg."

The House of Assembly placing every confidence in Your Majesty's justice towards Your loyal subjects, the inhabitants of this island, feel, with unfeigned regret, that there has been no answer to their humble Address, and that thereby a great portion of the inhabitants of this island engaging in the fisheries are subject to very heavy grievances. The House of Assembly would beg to submit, that in addition to the Bills passed by this House in 1839 and 1840, for the regulation of the fishery reserves, the House of Assembly passed a Bill to the same effect in the present session, which the Legislative Council rejected; and as the proprietary claimants of townships in this island are continually harassing with law proceedings fishermen and others located on such reservations, and raising a revenue from that to which they never had any title, to the great discouragement of trade and loss of property in this colony. The House of Assembly beg that Your Majesty would be pleased to order the Crown officers of this island to take legal proceedings against proprietary claimants, for recovering all rents or sums of money which they have received in any ways as arising from said reservations, and give such other directions to the Lieutenant-governor of this island as will in future prohibit proprietary claimants from exacting any rents or arrears of rent for any quantity of lands contained in said reservations. And further, the House of Assembly would humbly, but most earnestly, pray, that Your Majesty would be pleased to order the Lieutenant-governor of this island to throw open said reservations in accordance with said despatch; and that if any dispute should arise between parties availing themselves of the said privilege, that the Legislature shall apply such remedy thereto as the nature of the case may appear to require.

House of Assembly,  
13 April 1842.(signed) W<sup>m</sup> Cooper,  
Speaker.

To The QUEEN's most Excellent Majesty.

The humble Petition of the House of Assembly of Prince Edward Island.

Most respectfully sheweth,

THAT this island was originally granted in large tracts, upon condition that the grantees were to introduce and settle their grants with foreign Protestants, which conditions have not been performed, and the lands are subject to forfeiture; but Your Majesty's predecessors extended indulgence to the grantees to enable them to settle their grants with British subjects. Of this arrangement your Petitioners would not complain, had the proprietors disposed of their lands at a price which emigrants and others could pay, or the interest thereof, as a rent. But the grantees and their assigns, taking advantage of such indulgence to raise the price of the land that the inhabitants were endeavouring to purchase, and had to become tenants, and covenant to pay a rent, which, notwithstanding their best exertions, they are unable to pay, and the tenantry are greatly in arrears for rent, for which many of them are liable to be ejected and deprived of their improvements, made with much cost and labour.

The House of Assembly, to relieve them from much distress, pray Your Majesty to recommend to the Imperial Parliament to pass an enactment for the appointment of commissioners from the neighbouring provinces, authorizing them to fix the price of the land in its original wilderness state, that the tenantry may be enabled to pay such fixed price, or the interest thereof, as a rent; and if the proprietors refuse to submit to this equitable measure, we pray Your Majesty, as an act of justice, to revest the forfeited lands in the Crown.

The House of Assembly herewith forward a series of Resolutions passed on the state of the colony in support of the above, to all of which they pray Your Majesty's favourable consideration.

And Your Petitioners will ever pray for Your Majesty's sacred person.

House of Assembly,  
13 April 1842.(signed) W<sup>m</sup> Cooper,  
Speaker.

— No. 10. —

(No. 34.)

COPY of a DESPATCH from Lieutenant-governor Sir *Henry Vere Huntley* to Lord *Stanley*.Government House, Prince Edward Island,  
22 May 1842.

My Lord,

I HAVE the honour to lay before your Lordship a printed Petition given into my hands by Mr. Cooper, the Speaker of the House of Assembly, at the same time that he also gave me the printed Addresses to Her Majesty upon the subjects of the fishery reserves and escheat.

I have also to transmit to your Lordship a manuscript Petition presented to me, in conjunction with the manuscript Addresses to Her Majesty; all the former professing to be copies of the latter.

Your Lordship will observe, that the manuscript Petition is an original document, and I have every reason to suppose was given to me in mistake, for the House could not have imagined that the Secretary of State would present it to the House of Commons, and a copy would have answered every purpose of making your Lordship aware of the existence of the Petition, if such was their object.

I do not trouble your Lordship with this additional despatch in order to scrutinize this Petition, because I believe that my observations upon the "Resolutions" upon which it is founded will equally apply to it; but more particularly for the purpose of pointing out a discrepancy of some material consideration, which I have marked in each paper by underlining; and it is necessary to state that the original manuscript Petition enclosed strictly corresponds with that now standing upon the Journals of the House, as it was delivered to me. Your Lordship will be pleased to bear in mind that the printed Petition, called a "true copy," which it certainly is not, although dated the "12th of April," was not printed until many days afterwards; indeed, I believe weeks had elapsed, because I felt it necessary to address the Speaker upon the delay in the delivery of the Resolutions connected with it, and these latter, with the said printed Petition, were then presented about the 20th of this month.

Having called your Lordship's attention to these documents, I now beg leave to bring forward an Address which the Legislative Council felt it their duty to present to me, in contradiction of that part of the manuscript Petition relating to conferences.

I have, &amp;c.

(signed) *H. V. Huntley*,  
Lieutenant-governor.

Enclosure 1, in No. 10.

To the Right Honourable and Honourable the Knights, Citizens and Burgesses, in Parliament assembled.

The Petition of the House of Assembly of Prince Edward Island,

Respectfully sheweth,

THAT in 1840 and 1841, your Petitioners applied to your Honourable Body for the redress of heavy grievances affecting the cultivators of land in this colony, in consequence of the whole soil having been granted, in lots of 20,000 acres, to individuals whose management has proved most prejudicial to the interests of the colony, as an appendage of Britain, and most oppressive to the farmers. Printed copies of applications, made in past time to the Privy Council, and of sundry other documents, in proof of the statements of your Petitioners, were last year forwarded to Joseph Hume, Esq., and Resolutions, explanatory of the present state of the colony, are herewith forwarded. Encl. 1, in No. 10.

Your Petitioners are aware of the many important and difficult questions which, relating directly to your own constituents, have a preferable claim to your attention; but they earnestly entreat, that by means of a Committee, or in whatever way to your Honourable Body may seem meet, some steps may be taken this session towards the redress of the heavy grievances which have long oppressed this island.

Your Petitioners have further to submit, that the land on the sea-coast of this island was not granted on the same terms as the rest, but was reserved, part in the Crown, and part "for a free fishery for all British subjects;" that said land has, in many instances, been sold or leased by the grantees; that Lord Glenelg, by despatches dated in 1838, signified Her Majesty's pleasure, that the same should be thrown open, as originally intended, and required the Lieutenant-governor to recommend to the Legislature to pass a law

PRINCE EDWARD  
ISLAND.

No. 10.

Despatch from  
Lieut.-governor  
Sir H. V. Huntley  
to Lord Stanley,  
22 May 1842.

No. 1.

No. 2.

PRINCE EDWARD  
ISLAND.

a law for the regulation of these reserves; that your Petitioners and the Legislative Council entertain views so different, as to the intent of the reservation and the meaning of the despatches, as to have been unable to agree on some principal sections of the Bill which passed the House of Assembly, *though repeated communications, by means of amendments*, have been held betwixt the two bodies, during the three previous sessions; and that there seems no prospect of the Legislative Council ever agreeing to such a Bill as your Petitioners must pass, to do justice to their constituents; and under these circumstances, your Petitioners are under the necessity of praying your Honourable House to take such measures for their relief in this matter, also, as in your wisdom you may deem meet.

And your Petitioners will ever pray.

House of Assembly, April 12th, 1842.

(signed) *William Cooper*,  
Speaker.

(A true copy.)

*William Cullen*, Clerk.

---

Enclosure 2, in No. 10.

Council Chamber, 16 April 1842.

Encl. 2, in No. 10.

WHEREAS in a Petition from the House of Assembly of this island, adopted in this present session, and which is to be presented to the House of Commons of Great Britain, it is stated, that this House entertains different views as to the intent and meaning of certain reservations in the original grants of land to the grantees of the Crown, which reservations concern fishery reserves, and likewise different views as to the intent and meaning of certain despatches received from The Queen's ministers on the subject of fishery reserves; and in the said Petition, the Legislative Council are further represented as having been unable to agree with the House of Assembly in some principal sections of the Bills respecting fishery reserves which passed the House of Assembly, though "repeated conferences and communications have been held between the bodies during the three previous sessions:"

Resolved, That after a search of the Journals of both Houses for the years 1839, 1840 and 1841, it appears to this House, that no conference has been at any time held or asked for between the two Houses on the subject of fishery reserves. Therefore, that the allegations of the said Petition, as they respect the proceedings of this House, are entirely without foundation.

And whereas, in the sessions of 1839, 1840 and 1841, as well as in the present, Bills respecting fishery reserves have been sent to this House for its concurrence, from the House of Assembly, containing several provisions in themselves deemed by this House to be inequitable: And whereas the amendments made by this House have been repeatedly rejected by the House of Assembly, and the Bills which have been sent to this House for its concurrence have reiterated the same provisions upon each occasion: Resolved, That this House, consistently with its duty, has been hitherto unable to legislate on this subject, although they fully recognize, and are prepared to protect, the rights of fishermen to exercise their trade on the fishery reserves of this island.

Resolved, That a copy of the foregoing Resolutions be communicated to his Excellency the Lieutenant-governor.

(signed) *K. W. Desbrisay*, D.C.C.

Sir H. V. Huntley,  
14 July 1842.

I HAVE had the honour to receive your despatches, Nos. 33 and 34, of the 22d of May 1842, enclosing an Address and Petition to The Queen from the House of Assembly of Prince Edward Island, and a Petition to the House of Commons from the House of Assembly, and also enclosing certain Resolutions on the subject of the state of the colony adopted by the House of Assembly. These documents relate to the two questions of the rights of the grantees of Crown land, and to the fishery reserves in Prince Edward Island.

I have laid the Address and the Petition before The Queen. The Petition to House of Commons has been presented to that House.

In obedience to Her Majesty's commands, I have to acquaint you, for the information of the House of Assembly, that Her Majesty's Executive Government must decline to interfere any further in the question in debate between the grantees  
of

of lands in Prince Edward Island, and their tenantry, experience having sufficiently shown that no beneficial result is to be anticipated from any such interference. The duty of the Government will be limited to enforcing a strict observance of the law by the contending parties.

On the subject of the fishery reserves, it will not be in my power to submit to The Queen any advice as to the answer which it may be proper for Her Majesty to return to the Address of the House of Assembly, until I shall be in possession of the report of Her Majesty's Attorney and Solicitor-general on the question of legal right involved in that Address.

I have, &c.,  
(signed) *Stanley.*

PRINCE EDWARD  
ISLAND.

— No. 12. —

(No. 37.)

COPY of a DESPATCH from Lieutenant-governor Sir *Henry Vere Huntley* to Lord *Stanley*.

Government House, Prince Edward Island,  
13 June 1842.

My Lord,

I HAVE the honour to enclose for your Lordship's consideration the copy of a letter I have just received from Mr. Cooper, late Speaker of the House of Assembly, and which that gentleman had addressed to your Lordship in the original.

No. 12.  
Despatch from  
Lieut.-governor  
Sir H. V. Huntley  
to Lord Stanley,  
13 June 1842.

I beg leave to point out an extraordinary error in the fifth paragraph of this copy, wherein Mr. Cooper states that he actually signed the "three copies" as soon as they were struck off by the printer; when in reality these copies are not signed in any handwriting, but have printed upon them, "(signed) William Cooper, Speaker," and attested beneath in writing as "a true copy, Will. Cullen, Clerk H. A."

I have, &c.  
(signed) *H. V. Huntley,*  
Lieutenant-governor.

Enclosure in No. 12.

My Lord,

Township 56, Prince Edward Island,  
North America, 6 June 1842.

THE anxiety felt by many of the inhabitants of this island, that the representations of the House of Assembly on the state of this colony may be favourably treated by ministers, has induced me to address your Lordship to rectify a mistake. The enclosures will show that I am informed of a mistake in the Petitions printed, together with a series of Resolutions agreed to by the House of Assembly, on the state of the colony, which are forwarded by the Lieutenant-governor to the Colonial Office.

Encl. in No. 12.

At the close of the last Session, the clerk of the House of Assembly, and also the printer, were considerably in arrears with their work, and to shorten the Session it was ordered that the Speaker should wait upon the Lieutenant-governor to deliver copies of the Resolutions as soon as they could be prepared after the prorogation.

When the House was prorogued I found that the documents which I was to present to the Governor could not be printed for some time, and I waited upon the Governor to inform him, and to see if he would dispense with my attendance, as the documents could be had or sent to the Governor as soon as they were printed, and with this understanding I obtained the Governor's permission to go home to attend to my farm.

On the receipt of enclosure No. 1, dated the 11th May, I went to Charlotte-town and found that the Resolutions were not printed, but that the printers were ready to begin; and as the Clerk of the House of Assembly has the custody of the votes, I sent for him to attend the printing of the Resolutions and to correct the press, and as soon as three copies were struck off, the clerk handed them to me as correct for my signature; they were signed the 18th May, and presented to the Governor the next day.

And on the 4th June I received from the Governor enclosure No. 2, pointing out that material difference exists between the manuscript Petition presented to the Governor by a Committee of the House of Assembly, and the printed copies presented by me to his Excellency, and it appears the Governor has pointed out the mistake to your Lordship as an extraordinary circumstance.

506.

I received

PRINCE EDWARD  
ISLAND.

I received the last 12 sheets of the printed Journals of the House of Assembly by the same post which brought me the Governor's letter, but I have no copy of the printed documents containing the mistake to compare with the Journals, to know where or what the mistake is.

No. 3 is a copy of my answer to the Governor's letter; and enclosure No. 4 is a copy of my letter to the Clerk of the House of Assembly, desiring him to find out the mistake, and to explain the reasons thereof to the Governor.

The object of the foregoing is to enable your Lordship to discriminate betwixt the Governor's representation of the mistake and mine; and I submit to any censure your Lordship may award on the score of negligence; but I beg your Lordship will not (without proof) impute any intention to me of altering the documents of the House of Assembly to the prejudice of the Government, or of the interest of the people of this colony.

The Right hon. Lord Stanley,  
Her Majesty's Secretary of State  
for the Colonies, &c. &c. &c.

I have, &c.  
(signed) *W<sup>m</sup> Cooper,*  
Speaker.

No. 1.

Secretary's Office, Charlotte-town,  
11 May 1842.

Sir,

I HAVE been directed by the Lieutenant-governor to acquaint you, that he has not yet received the Resolutions passed by the House of Assembly in the late Session, on the state of the colony.

And as the House in their Petition to the House of Commons in reference to this subject, have expressed their earnest desire that steps may be taken during the present Session of Parliament to redress the alleged grievances complained of in these Resolutions, it will be impossible for his Excellency to comply with the wishes of the Assembly by forwarding their Petition, to admit of its being entertained before the prorogation of Parliament, unless the Resolutions be placed in his hands without delay.

Speaker of the House of Assembly.

I have, &c.  
(signed) *T. H. Haviland,*  
Secretary.

No. 2.

Government House, 28 May 1842.

Sir,

I FEEL it right to call your attention to a very material difference which exists between the printed Petition presented by you to me a few days ago, and the manuscript Petition presented to me by a committee of the House of Assembly, the former professing to be "a true copy" of the latter, which is an original signed by yourself, and strictly corresponds with the words of the same document now appearing upon the Journals of the House.

It is almost unnecessary to state, that I have considered proper, in transmitting these documents, to point out this extraordinary circumstance to the Secretary of State for the Colonies.

The Hon. the Speaker of the House of Assembly,  
&c. &c. &c.

I am, &c.  
(signed) *H. V. Huntley,*  
Lieutenant-governor.

No. 3.

Sailor's Hope, 4 June 1842.

Sir Henry,

I HAVE to acknowledge the receipt of your letter of the 28th ult., informing me that the Petition printed with other documents which I had the honour to deliver to your Excellency is different from the original as printed in the Journals. I am sorry that any mistake should appear in the Journals of the House of Assembly, or in the documents forwarded to Her Majesty's Secretary of State for the Colonies; but as the Clerk of the House of Assembly holds the original papers of the Votes of the House, I sent for him to attend the printing of the Resolutions and Petitions, and correct the press, and when he said that the printed copies were correct, I took it for granted they were so, and signed them, as I had no copies or originals to compare with.

I have received the last sheets of the Journals by this post, but I have no means of finding out the mistake; but I have forwarded copies of your Excellency's letter and this to the Clerk of the House, and he will see the necessity of explaining to your Excellency the cause of the mistake.

I have, &c.  
(signed) *William Cooper.*

P.S.—I have enclosed the copy of an apology to the Right honourable Lord Stanley, Her Majesty's Secretary of State for the Colonies, which I trust will meet your Excellency's approbation. *W. C.*

His Excellency Sir Henry V. Huntley,  
Lieutenant-governor, &c. &c. &c.

No. 4.

No. 4.

Dear Sir,

Sailor's Hope, 4 June 1842.

You will see by the Governor's letter to me, and also of my answer (copies of which are enclosed), that there is a mistake in the Petition accompanying Resolutions, which I delivered lately to his Excellency to be forwarded to the Colonial Office. I would understand by the Governor's letter that the mistake is of importance.

You will soon find out the cause, and explain it to the Governor's satisfaction, that it may be corrected at the Colonial Office in England, and prevent any injurious consequences that might result to the colony.

I am, &amp;c.

To William Cullen, Esq.  
Clerk of the House of Assembly, &c. &c. &c.

(signed) William Cooper.

— No. 13. —

(No. 45.)

COPY of a DESPATCH from Sir Henry Vere Huntley to Lord Stanley.

Government House, Prince Edward Island,  
16 July 1842.

My Lord,

WITH reference to my despatch of the 13th June, No. 37, respecting the discrepancy existing between the manuscript and the printed Petitions of the late House of Assembly to the House of Commons, I have the honour to lay before your Lordship an explanation which has been sent to me by the clerk of the former, who had received directions to do so by the late Speaker, Wm. Cooper, Esq.

(signed) H. V. Huntley, Lieut.-gov.

No. 13.  
Despatch from  
Sir H. Vere  
Huntley to  
Lord Stanley,

Enclosure in No. 13.

Sir,

Charlotte-town, 5 July 1842.

HEREWITH I have the honour to hand you, for the information of his Excellency the Lieutenant-governor, a transcript of the Petition of the late House of Assembly to the Imperial Parliament, on the subject of the fishery reserves.

Encl. in No. 13.

That any discrepancy should have occurred between the engrossed copy and the printed Journals is to me a matter of sincere regret; an interpolation, I find, however, has been surreptitiously made in the original draft of the Petition; viz., the term "Conference" has been struck out, and the words "by means of amendments" are substituted in lieu thereof; which alteration I believe to have been unauthorized by either the Speaker or the House of Assembly.

That a procedure of the kind referred to should have been done by a Member of the House of Assembly would appear to me utterly inconceivable; but I am in duty compelled to state, that such has been actually the case, as there is no room for doubt that the accompanying engrossed copy of the Petition literally corresponds with the original document in my possession, as it stood at the time of setting up the printed Journals.

I have, &amp;c.

The Hon. T. H. Haviland,  
Colonial Secretary, &c. &c. &c.

(signed) W. Cullen,  
Clerk, House of Assembly.

## HUDSON'S BAY COMPANY.

COPY of a LETTER from the Governor of the Hudson's Bay Company to  
Lord Stanley.

My Lord,

Hudson's Bay House, London, 8 June 1842.

I HAVE the honour to acknowledge receipt of Mr. G. W. Hope's letter of the 4th instant, enclosing, by direction of your Lordship, copy of an Address of the House of Commons for certain papers relating to the Hudson's Bay Company; and requesting that you may be furnished, for presentation to the House, with a copy of the existing Charter or Grant by the Crown to the Company, together with a list of the dates of all former Charters or Grants to them.

Letter from the  
Governor of the  
Hudson's Bay  
Company to  
Lord Stanley,  
8 June 1842.

In compliance with your Lordship's request, I herewith hand a printed copy of the first and only Charter for incorporating the Hudson's Bay Company, granted by his Majesty King Charles the Second in the year 1670; together with copy of the License given to the Company by Her Majesty, on the 30th May 1838 (under the provisions of the Act 1 & 2 Geo. 4, c. 66), of the exclusive trade with the Indians in such parts of North America as are not part of the lands or territories granted to the Company by their Charter, and not forming any of Her Majesty's provinces in North America, or of any lands or territories belonging to the United States of America or other foreign power.

(A.)

(B.)

The Grant of exclusive trade was first made, on the 6th December 1821, to "The Governor and Company of Adventurers of England trading to Hudson's Bay," in conjunction with "William M'Gillivray, of Montreal, in the province of Lower Canada, esquire, Simon M'Gillivray, of Suffolk-lane, in the city of London, merchant, and Edward Ellice, of Spring-gardens, in the county of Middlesex, esquire."

These gentlemen subsequently surrendered their interest to the Hudson's Bay Company, to whom Her Majesty was pleased to make the Grant of 1838.

I have, &c.

(signed) J. H. Pelly, Governor.

### Enclosure (A.)

THE ROYAL CHARTER for incorporating the HUDSON'S BAY COMPANY, granted by his Majesty King CHARLES the Second, in the 22d year of his reign, A. D. 1670.

CHARLES THE SECOND, by the grace of God King of England, Scotland, France and Ireland, Defender of the Faith, &c., To ALL to whom these presents shall come, greeting: WHEREAS our dear and entirely beloved Cousin, Prince Rupert, Count Palatine of the Rhine, Duke of Bavaria and Cumberland, &c.; Christopher Duke of Albemarle, William Earl of Craven, Henry Lord Arlington, Anthony Lord Ashley, Sir John Robinson, and Sir Robert Vyner, Knights and Baronets; Sir Peter Colleton, Baronet; Sir Edward Hungerford, Knight of the Bath; Sir Paul Neele, Knight; Sir John Griffith and Sir Philip Carteret, Knights; James Hayes, John Kirke, Francis Millington, William Prettyman, John Fenn, Esquires; and John Portman, Citizen and Goldsmith of London; have, at their own great cost and charges, undertaken an expedition for Hudson's Bay, in the north-west part of America, for the discovery of a new passage into the South Sea, and for the finding some trade for furs, minerals and other considerable commodities, and by such their undertaking have already made such discoveries as do encourage them to proceed further in pursuance of their said design, by means whereof there may probably arise very great advantage to us and our kingdom: AND WHEREAS the said Undertakers, for their further encouragement in the said design, have humbly besought us to incorporate them, and grant unto them and their successors the sole trade and commerce of all those seas, straits, bays, rivers, lakes, creeks and sounds, in whatsoever latitude they shall be, that lie within the entrance of the straits, commonly called Hudson's Straits, together with all the lands, countries and territories upon the coasts and confines of the seas, straits, bays, lakes, rivers, creeks and sounds aforesaid, which are not now actually possessed by any of our subjects, or by the subjects of any other Christian Prince or State: Now KNOW YE, that we, being desirous to promote all endeavours tending to the public good of our people, and to encourage the said undertaking, HAVE, of our especial grace, certain knowledge and mere motion, given, granted, ratified and confirmed, and by these presents, for us, our heirs and successors, do give, grant, ratify and confirm, unto our said Cousin, Prince Rupert, Christopher Duke of Albemarle, William Earl

Preamble.

Grant of incorporation.

Names of original grantees.

Body corporate to be styled "The Governor and Company of Adventurers of England trading into Hudson's Bay."

Rights and privileges, &c. of the Governor and Company.

Grant of a common seal.

A Governor and Committee to be chosen.

Prince Rupert to be the first Governor.

Names of the first Committee.

Power to elect a Deputy Governor.

Oath to be administered to him.

Future Governors how elected.

of Craven, Henry Lord Arlington, Anthony Lord Ashley, Sir John Robinson, Sir Robert Vyner, Sir Peter Colleton, Sir Edward Hungerford, Sir Paul Neele, Sir John Griffith and Sir Philip Carteret, James Hayes, John Kirke, Francis Millington, William Prettyman, John Fenn and John Portman, that they, and such others as shall be admitted into the said society as is hereafter expressed, shall be one body corporate and politic, in deed and in name, by the name of "The Governor and Company of Adventurers of England trading into Hudson's Bay," and them by the name of "The Governor and Company of Adventurers of England trading into Hudson's Bay," one body corporate and politic, in deed and in name, really and fully for ever, for us, our heirs and successors, we do make, ordain, constitute, establish, confirm and declare by these presents, and that by the same name of Governor and Company of Adventurers of England trading into Hudson's Bay, they shall have perpetual succession, and that they and their successors, by the name of "The Governor and Company of Adventurers of England trading into Hudson's Bay," be, and at all times hereafter shall be, personable and capable in law to have, purchase, receive, possess, enjoy and retain lands, rents, privileges, liberties, jurisdictions, franchises and hereditaments, of what kind, nature or quality soever they be, to them and their successors; and also to give, grant, demise, alien, assign and dispose lands, tenements and hereditaments, and to do and execute all and singular other things by the same name that to them shall or may appertain to do; and that they and their successors, by the name of "The Governor and Company of Adventurers of England trading into Hudson's Bay," may plead and be impleaded, answer and be answered, defend and be defended, in whatsoever courts and places, before whatsoever judges and justices, and other persons and officers, in all and singular actions, pleas, suits, quarrels, causes and demands whatsoever, of whatsoever kind, nature or sort, in such manner and form as any other our liege people of this our realm of England, being persons able and capable in law, may or can have, purchase, receive, possess, enjoy, retain, give, grant, demise, alien, assign, dispose, plead, defend and be defended, do, permit and execute; and that the said Governor and Company of Adventurers of England trading into Hudson's Bay, and their successors, may have a common seal to serve for all the causes and businesses of them and their successors, and that it shall and may be lawful to the said Governor and Company, and their successors, the same seal, from time to time, at their will and pleasure, to break, change, and to make anew or alter, as to them shall seem expedient: **AND FURTHER WE WILL**, and by these presents, for us, our heirs and successors, we do ordain, that there shall be from henceforth one of the same Company to be elected and appointed in such form as hereafter in these presents is expressed, which shall be called the Governor of the said Company; and that the said Governor and Company shall or may elect seven of their number, in such form as hereafter in these presents is expressed, which shall be called the Committee of the said Company, which Committee of seven, or any three of them, together with the Governor or Deputy Governor of the said Company for the time being, shall have the direction of the voyages of and for the said Company, and the provision of the shipping and merchandizes thereunto belonging, and also the sale of all merchandizes, goods and other things returned, in all or any the voyages or ships of or for the said Company, and the managing and handling of all other business, affairs and things belonging to the said Company: **AND WE WILL**, ordain and grant by these presents, for us, our heirs and successors, unto the said Governor and Company, and their successors, that they the said Governor and Company, and their successors, shall from henceforth for ever be ruled, ordered and governed according to such manner and form as is hereafter in these presents expressed, and not otherwise; and that they shall have, hold, retain and enjoy the grants, liberties, privileges, jurisdictions and immunities only hereafter in these presents granted and expressed, and no other: And for the better execution of our will and grant in this behalf, **WE HAVE ASSIGNED**, nominated, constituted and made, and by these presents, for us, our heirs and successors, we do assign, nominate, constitute and make our said Cousin, **PRINCE RUPERT**, to be the first and present Governor of the said Company, and to continue in the said office from the date of these presents until the 10th November then next following, if he, the said Prince Rupert, shall so long live, and so until a new Governor be chosen by the said Company in form hereafter expressed: **AND ALSO WE HAVE** assigned, nominated and appointed, and by these presents, for us, our heirs and successors, we do assign, nominate and constitute, the said Sir John Robinson, Sir Robert Vyner, Sir Peter Colleton, James Hayes, John Kirke, Francis Millington and John Portman to be the seven first and present Committees of the said Company, from the date of these presents until the said 10th day of November then also next following, and so until new Committees shall be chosen in form hereafter expressed: **AND FURTHER WE WILL** and grant by these presents, for us, our heirs and successors, unto the said Governor and Company, and their successors, that it shall and may be lawful to and for the said Governor and Company for the time being, or the greater part of them present at any public assembly, commonly called the Court General, to be holden for the said Company, the Governor of the said Company being always one, from time to time to elect, nominate and appoint one of the said Company to be Deputy to the said Governor, which Deputy shall take a corporal oath, before the Governor and three or more of the Committee of the said Company for the time being, well, truly and faithfully to execute his said office of Deputy to the Governor of the said Company, and after his oath so taken shall and may from time to time, in the absence of the said Governor, exercise and execute the office of Governor of the said Company, in such sort as the said Governor ought to do: **AND FURTHER WE WILL** and grant by these presents, for us, our heirs and successors, unto the said Governor and Company of Adventurers of England trading into Hudson's Bay, and their successors, that they, or the greater part of them, whereof the Governor for the

the

the time being or his Deputy to be one, from time to time, and at all times hereafter, shall and may have authority and power, yearly and every year, between the first and last day of November, to assemble and meet together in some convenient place, to be appointed from time to time by the Governor, or in his absence by the Deputy of the said Governor for the time being, and that they being so assembled, it shall and may be lawful to and for the said Governor or Deputy of the said Governor, and the said Company for the time being, or the greater part of them which then shall happen to be present, whereof the Governor of the said Company or his Deputy for the time being to be one, to elect and nominate one of the said Company, which shall be Governor of the said Company for one whole year then next following, which person being so elected and nominated to be Governor of the said Company as is aforesaid, before he be admitted to the execution of the said office, shall take a corporal oath before the last Governor, being his predecessor or his Deputy, and any three or more of the Committee of the said Company for the time being, that he shall from time to time well and truly execute the office of Governor of the said Company in all things concerning the same; and that immediately after the same oath so taken, he shall and may execute and use the said office of Governor of the said Company for one whole year from thence next following: And in like sort we will and grant, that as well every one of the above-named to be of the said Company or Fellowship, as all others hereafter to be admitted or free of the said Company, shall take a corporal oath before the Governor of the said Company or his Deputy for the time being to such effect as by the said Governor and Company, or the greater part of them, in any public court to be held for the said Company, shall be in reasonable and legal manner set down and devised, before they shall be allowed or admitted to trade or traffic as a freeman of the said Company: AND FURTHER WE WILL and grant by these presents, for us, our heirs and successors, unto the said Governor and Company, and their successors, that the said Governor or Deputy Governor, and the rest of the said Company, and their successors for the time being, or the greater part of them, whereof the Governor or Deputy Governor from time to time to be one, shall and may from time to time, and at all times hereafter, have power and authority, yearly and every year, between the first and last day of November, to assemble and meet together in some convenient place, from time to time to be appointed by the said Governor of the said Company, or in his absence by his Deputy; and that they being so assembled, it shall and may be lawful to and for the said Governor or his Deputy, and the Company for the time being, or the greater part of them, which then shall happen to be present, whereof the Governor of the said Company or his Deputy for the time being to be one, to elect and nominate seven of the said Company, which shall be a Committee of the said Company for one whole year from then next ensuing, which persons being so elected and nominated to be a Committee of the said Company as aforesaid, before they be admitted to the execution of their office, shall take a corporal oath before the Governor or his Deputy, and any three or more of the said Committee of the said Company, being their last predecessors, that they and every of them shall well and faithfully perform their said office of Committees in all things concerning the same, and that immediately after the said oath so taken, they shall and may execute and use their said office of Committees of the said Company for one whole year from thence next following: AND MOREOVER, our will and pleasure is, and by these presents, for us, our heirs and successors, WE DO GRANT unto the said Governor and Company, and their successors, that when and as often as it shall happen, the Governor or Deputy Governor of the said Company for the time being, at any time within one year after that he shall be nominated, elected and sworn to the office of the Governor of the said Company, as is aforesaid, to die or to be removed from the said office, which Governor or Deputy Governor not demeaning himself well in his said office, WE WILL to be removable at the pleasure of the rest of the said Company, or the greater part of them which shall be present at their public assemblies, commonly called their General Courts holden for the said Company, that then and so often it shall and may be lawful to and for the residue of the said Company for the time being, or the greater part of them, within a convenient time after the death or removing of any such Governor or Deputy Governor, to assemble themselves in such convenient place as they shall think fit, for the election of the Governor or Deputy Governor of the said Company; and that the said Company, or the greater part of them, being then and there present, shall and may, then and there, before their departure from the said place, elect and nominate one other of the said Company to be Governor or Deputy Governor for the said Company, in the place and stead of him that so died or was removed; which person being so elected and nominated to the office of Governor or Deputy Governor of the said Company, shall have and exercise the said office for and during the residue of the said year, taking first a corporal oath, as is aforesaid, for the due execution thereof; and this to be done from time to time so often as the case shall so require: AND ALSO, our will and pleasure is, and by these presents, for us, our heirs and successors, WE DO GRANT unto the said Governor and Company, that when and as often as it shall happen any person or persons of the Committee of the said Company for the time being, at any time within one year next after that they or any of them shall be nominated, elected and sworn to the office of Committee of the said Company as is aforesaid, to die or to be removed from the said office, which Committees not demeaning themselves well in their said office, we will to be removable at the pleasure of the said Governor and Company, or the greater part of them, whereof the Governor of the said Company for the time being or his Deputy to be one, that then and so often, it shall and may be lawful to and for the said Governor, and the rest of the Company for the time being, or the greater part of them, whereof the Governor for the time being or his Deputy to be one, within convenient time after

Oath to be administered to them,

and to each member of the Company

Annual election of a new Committee.

Oath to be administered to the Committee.

Vacancies in the office of Governor and Deputy Governor, how filled up.

Governor or Deputy Governor may be removed,

and others elected.

Members of the Committee may be removed,

and others elected.

Grant of the sole trade, lands, mines, minerals, fisheries, &c.

The territory to be reckoned one of his Majesty's Plantations or Colonies in America, and called Rupert's Land; and the Governor and Company to be the Lords Proprietors of the same for ever.

Governor and Company may assemble and make laws, ordinances, &c. for the good government of their territory and the advancement of their trade;

and may impose penalties and punishments, provided the same are reasonable, and not repugnant to the laws of England.

the death or removing of any of the said Committee, to assemble themselves in such convenient place as is or shall be usual and accustomed for the election of the Governor of the said Company, or where else the Governor of the said Company for the time being or his Deputy shall appoint: And that the said Governor and Company, or the greater part of them, whereof the Governor for the time being or his Deputy to be one, being then and there present, shall and may, then and there, before their departure from the said place, elect and nominate one or more of the said Company to be of the Committee of the said Company in the place and stead of him or them that so died, or were or was so removed, which person or persons so nominated and elected to the office of Committee of the said Company shall have and exercise the said office for and during the residue of the said year, taking first a corporal oath, as is aforesaid, for the due execution thereof, and this to be done from time to time, so often as the case shall require: And to the end the said Governor and Company of Adventurers of England trading into Hudson's Bay may be encouraged to undertake and effectually to prosecute the said design, of our more especial grace, certain knowledge and mere motion, WE HAVE given, granted and confirmed, and by these presents, for us, our heirs and successors, do give, grant and confirm, unto the said Governor and Company, and their successors, the sole trade and commerce of all those seas, straits, bays, rivers, lakes, creeks, and sounds, in whatsoever latitude they shall be, that lie within the entrance of the straits, commonly called Hudson's Straits, together with all the lands and territories upon the countries, coasts and confines of the seas, bays, lakes, rivers, creeks and sounds aforesaid, that are not already actually possessed by or granted to any of our subjects, or possessed by the subjects of any other Christian Prince or State, with the fishing of all sorts of fish, whales, sturgeons, and all other royal fishes in the seas, bays, inlets and rivers within the premises, and the fish therein taken, together with the royalty of the sea upon the coasts within the limits aforesaid, and all mines royal, as well discovered as not discovered, of gold, silver, gems and precious stones, to be found or discovered within the territories, limits and places aforesaid, and that the said land be from henceforth reckoned and reputed as one of our plantations or colonies in America, called "Rupert's Land:" AND FURTHER, WE DO by these presents, for us, our heirs and successors, make, create and constitute the said Governor and Company for the time being, and their successors, the true and absolute lords and proprietors of the same territory, limits and places aforesaid, and of all other the premises, SAVING ALWAYS the faith, allegiance and sovereign dominion due to us, our heirs and successors, for the same, TO HAVE, HOLD, possess and enjoy the said territory, limits and places, and all and singular other the premises hereby granted as aforesaid, with their and every of their rights, members, jurisdictions, prerogatives, royalties and appurtenances whatsoever, to them the said Governor and Company, and their successors for ever, TO BE HOLDEN of us, our heirs and successors, as of our manor of East Greenwich, in our county of Kent, in free and common soccage, and not in capite or by Knight's service; YIELDING AND PAYING yearly to us, our heirs and successors, for the same, two elks and two black beavers, whensoever and as often as we, our heirs and successors, shall happen to enter into the said countries, territories and regions hereby granted: AND FURTHER, our will and pleasure is, and by these presents, for us, our heirs and successors, WE DO grant unto the said Governor and Company, and to their successors, that it shall and may be lawful to and for the said Governor and Company, and their successors, from time to time, to assemble themselves, for or about any the matters, causes, affairs or businesses of the said trade, in any place or places for the same convenient, within our dominions or elsewhere, and there to hold court for the said Company, and the affairs thereof; and that, also, it shall and may be lawful to and for them, and the greater part of them, being so assembled, and that shall then and there be present, in any such place or places, whereof the Governor or his Deputy for the time being to be one, to make, ordain and constitute such and so many reasonable laws, constitutions, orders and ordinances as to them, or the greater part of them, being then and there present, shall seem necessary and convenient for the good government of the said Company, and of all governors of colonies, forts and plantations, factors, masters, mariners and other officers employed or to be employed in any of the territories and lands aforesaid, and in any of their voyages; and for the better advancement and continuance of the said trade or traffic and plantations, and the same laws, constitutions, orders and ordinances so made, to put in, use and execute accordingly, and at their pleasure to revoke and alter the same or any of them, as the occasion shall require: And that the said Governor and Company, so often as they shall make, ordain or establish any such laws, constitutions, orders and ordinances in such form as aforesaid, shall and may lawfully impose, ordain, limit and provide such pains, penalties and punishments upon all offenders, contrary to such laws, constitutions, orders and ordinances, or any of them, as to the said Governor and Company for the time being, or the greater part of them, then and there being present, the said Governor or his Deputy being always one, shall seem necessary, requisite or convenient for the observation of the same laws, constitutions, orders and ordinances; and the same fines and amerciaments shall and may, by their officers and servants from time to time to be appointed for that purpose, levy, take and have, to the use of the said Governor and Company, and their successors, without the impediment of us, our heirs or successors, or of any the officers or ministers of us, our heirs or successors, and without any account therefore to us, our heirs or successors, to be made: All and singular which laws, constitutions, orders and ordinances, so as aforesaid to be made, WE WILL to be duly observed and kept under the pains and penalties therein to be contained; so always as the said laws, constitutions, orders and ordinances, fines and amerciaments, be reasonable, and not contrary

## TO THE CHARTER OF THE HUDSON'S BAY COMPANY.

7

trary or repugnant, but as near as may be agreeable to the laws, statutes or customs of this our realm: AND FURTHERMORE, of our ample and abundant grace, certain knowledge and mere motion, WE HAVE granted, and by these presents, for us, our heirs and successors, DO grant unto the said Governor and Company, and their successors, that they and their successors, and their factors, servants and agents, for them and on their behalf, and not otherwise, shall for ever hereafter have, use and enjoy, not only the whole, entire and only trade and traffic, and the whole, entire and only liberty, use and privilege of trading and trafficking to and from the territory, limits and places aforesaid; but also the whole and entire trade and traffic to and from all havens, bays, creeks, rivers, lakes and seas, into which they shall find entrance or passage by water or land out of the territories, limits or places aforesaid; and to and with all the natives and people inhabiting, or which shall inhabit within the territories, limits and places aforesaid; and to and with all other nations inhabiting any the coasts adjacent to the said territories, limits and places which are not already possessed as aforesaid, or whereof the sole liberty or privilege of trade and traffic is not granted to any other of our subjects: AND WE, of our further royal favour, and of our more especial grace, certain knowledge and mere motion, HAVE granted, and by these presents, for us, our heirs and successors, DO grant to the said Governor and Company, and to their successors, that neither the said territories, limits and places, hereby granted as aforesaid, nor any part thereof, nor the islands, havens, ports, cities, towns or places thereof or therein contained, shall be visited, frequented or haunted by any of the subjects of us, our heirs or successors, contrary to the true meaning of these presents, and by virtue of our prerogative royal, which we will not have in that behalf argued or brought into question: WE STRAITLY charge, command and prohibit, for us, our heirs and successors, all the subjects of us, our heirs and successors, of what degree or quality soever they be, that none of them, directly or indirectly, do visit, haunt, frequent or trade, traffic or adventure, by way of merchandize, into or from any of the said territories, limits or places hereby granted, or any or either of them, other than the said Governor and Company, and such particular persons as now be or hereafter shall be of that Company, their agents, factors and assigns, unless it be by the license and agreement of the said Governor and Company in writing first had and obtained, under their common seal, to be granted, upon pain that every such person or persons that shall trade or traffic into or from any of the countries, territories or limits aforesaid, other than the said Governor and Company and their successors, shall incur our indignation, and the forfeiture and the loss of the goods, merchandizes and other things whatsoever, which so shall be brought into this realm of England, or any the dominions of the same, contrary to our said prohibition, or the purport or true meaning of these presents, for which the said Governor and Company shall find, take and seize in other places out of our dominions, where the said Company, their agents, factors or ministers shall trade, traffic or inhabit by virtue of these our letters patent, as also the ship and ships, with the furniture thereof, wherein such goods, merchandizes and other things shall be brought and found; the one-half of all the said forfeitures to be to us, our heirs and successors, and the other half thereof WE DO by these presents clearly and wholly, for us, our heirs and successors, give and grant unto the said Governor and Company, and their successors: AND FURTHER, all and every the said offenders, for their said contempt, to suffer such other punishment as to us, our heirs and successors, for so high a contempt, shall seem meet and convenient, and not to be in anywise delivered until they and every of them shall become bound unto the said Governor for the time being in the sum of One thousand pounds at the least, at no time then after to trade or traffic into any of the said places, seas, straits, bays, ports, havens or territories aforesaid, contrary to our express commandment in that behalf set down and published: AND FURTHER, of our more especial grace, WE HAVE condescended and granted, and by these presents, for us, our heirs and successors, DO grant unto the said Governor and Company, and their successors, that we, our heirs and successors, will not grant liberty, license or power to any person or persons whatsoever, contrary to the tenor of these our letters patent, to trade, traffic or inhabit, unto or upon any the territories, limits or places afore specified, contrary to the true meaning of these presents, without the consent of the said Governor and Company, or the most part of them: AND, of our more abundant grace and favour to the said Governor and Company, WE DO hereby declare our will and pleasure to be, that if it shall so happen that any of the persons free or to be free of the said Company of Adventurers of England trading into Hudson's Bay, who shall, before the going forth of any ship or ships appointed for a VOYAGE or otherwise, promise or agree, by writing under his or their hands, to adventure any sum or sums of money towards the furnishing any provision, or maintenance of any voyage or voyages, set forth, or to be set forth, or intended or meant to be set forth, by the said Governor and Company, or the more part of them present at any public assembly, commonly called their General Court, shall not within the space of twenty days next after warning given to him or them by the said Governor or Company, or their known officer or minister, bring in and deliver to the Treasurer or Treasurers appointed for the Company, such sums of money as shall have been expressed and set down in writing by the said person or persons, subscribed with the name of said Adventurer or Adventurers, that then and at all times after it shall and may be lawful to and for the said Governor and Company, or the more part of them present, whereof the said Governor or his Deputy to be one, at any of their General Courts or General Assemblies, to remove and disfranchise him or them, and every such person and persons at their wills and pleasures, and he or they so removed and disfranchised not to be permitted to trade into the countries, territories and limits aforesaid, or any part thereof, nor to have any adventure or stock going or remaining with or amongst

Further grant of trade.

And no subjects of his Majesty to trade within the Company's territories without leave from the Company, in writing, under their common seal.

Under penalty of forfeiting all goods, &c. brought from thence into England.

One-half to go to the King, the other to the Company.

Nor will liberty of such trade be given by his Majesty to any person without consent of the Company.

Persons free of the Company, failing to pay the sums respectively engaged to be furnished by them in the Adventure of the Company, may be removed and disfranchised.

What persons may be admitted into the Company.

Votes to be regulated by quantity of stock.

All lands, &c. aforesaid, to be under the government of said Company, who may appoint Governors and other officers to preside within their territories, and judge in all causes, civil and criminal, according to the laws of England;

or criminals may be sent to England for trial.

The Governor and Company may employ, for the protection of their trade and territory, armed force, appoint commanders, erect forts, &c.

Authority given to the Governor and Company to seize any of his Majesty's subjects who (without leave of the Company) trade in their territory, and may send them to England.

the said Company, without the special license of the said Governor and Company, or the more part of them present at any General Court, first had and obtained in that behalf, any thing before in these presents to the contrary thereof in anywise notwithstanding: **AND OUR WILL AND PLEASURE IS**, and hereby we do also ordain, that it shall and may be lawful to and for the said Governor and Company, or the greater part of them, whereof the Governor for the time being or his Deputy to be one, to admit into and to be of the said Company all such servants or factors, of or for the said Company, and all such others as to them or the most part of them present, at any court held for the said Company, the Governor or his Deputy being one, shall be thought fit and agreeable with the orders and ordinances made and to be made for the government of the said Company: **AND FURTHER**, our will and pleasure is, and by these presents, for us, our heirs and successors, **WE DO** grant unto the said Governor and Company, and to their successors, that it shall and may be lawful in all elections and bye-laws to be made by the General Court of the Adventurers of the said Company, that every person shall have a number of votes according to his stock, that is to say, for every hundred pounds by him subscribed or brought into the present stock, one vote, and that any of those that have subscribed less than One hundred pounds may join their respective sums to make up One hundred pounds, and have one vote jointly for the same, and not otherwise: **AND FURTHER**, of our especial grace, certain knowledge and mere motion, **WE DO**, for us, our heirs and successors, grant to and with the said Governor and Company of Adventurers of England trading into Hudson's Bay, that all lands, islands, territories, plantations, forts, fortifications, factories or colonies, where the said Company's factories and trade are or shall be, within any the ports or places afore limited, shall be immediately and from henceforth under the power and command of the said Governor and Company, their successors and assigns; **SAVING** the faith and allegiance due to be performed to us, our heirs and successors as aforesaid; and that the said Governor and Company shall have liberty, full power and authority to appoint and establish Governors and all other officers to govern them, and that the Governor and his Council of the several and respective places where the said Company shall have plantations, forts, factories, colonies or places of trade within any the countries, lands or territories hereby granted, may have power to judge all persons belonging to the said Governor and Company, or that shall live under them, in all causes, whether civil or criminal, according to the laws of this kingdom, and to execute justice accordingly; and in case any crime or misdemeanor shall be committed in any of the said Company's plantations, forts, factories or places of trade within the limits aforesaid, where judicature cannot be executed for want of a Governor and Council there, then in such case it shall and may be lawful for the chief Factor of that place and his Council to transmit the party, together with the offence, to such other plantation, factory or fort where there shall be a Governor and Council, where justice may be executed, or into this kingdom of England, as shall be thought most convenient, there to receive such punishment as the nature of his offence shall deserve: **AND MOREOVER**, our will and pleasure is, and by these presents, for us, our heirs and successors, **WE DO** give and grant unto the said Governor and Company, and their successors, free liberty and license, in case they conceive it necessary, to send either ships of war, men or ammunition, unto any their plantations, forts, factories or places of trade aforesaid, for the security and defence of the same, and to choose commanders and officers over them, and to give them power and authority, by commission under their common seal, or otherwise, to continue or make peace or war with any prince or people whatsoever, that are not Christians, in any places where the said Company shall have any plantations, forts or factories, or adjacent thereunto, as shall be most for the advantage and benefit of the said Governor and Company, and of their trade; and also to right and recompense themselves upon the goods, estates or people of those parts, by whom the said Governor and Company shall sustain any injury, loss or damage, or upon any other people whatsoever that shall any way, contrary to the intent of these presents, interrupt, wrong or injure them in their said trade, within the said places, territories and limits granted by this Charter: And that it shall and may be lawful to and for the said Governor and Company, and their successors, from time to time, and at all times from henceforth, to erect and build such castles, fortifications, forts, garrisons, colonies or plantations, towns or villages, in any parts or places within the limits and bounds granted before in these presents unto the said Governor and Company, as they in their discretion shall think fit and requisite, and for the supply of such as shall be needful and convenient, to keep and be in the same, to send out of this kingdom, to the said castles, forts, fortifications, garrisons, colonies, plantations, towns or villages, all kinds of clothing, provision of victuals, ammunition and implements necessary for such purpose, paying the duties and customs for the same, as also to transport and carry over such number of men, being willing thereunto, or not prohibited, as they shall think fit, and also to govern them in such legal and reasonable manner as the said Governor and Company shall think best, and to inflict punishment for misdemeanors, or impose such fines upon them for breach of their orders, as in these presents are formerly expressed: **AND FURTHER**, our will and pleasure is, and by these presents, for us, our heirs and successors, **WE DO** grant unto the said Governor and Company, and to their successors, full power and lawful authority to seize upon the persons of all such English, or any other our subjects which shall sail into Hudson's Bay, or inhabit in any of the countries, islands or territories hereby granted to the said Governor and Company, without their leave and license in that behalf first had and obtained, or that shall contemn or disobey their orders, and send them to England; and that all and every person or persons, being our subjects, any ways employed by the said Governor and Company, within any the parts, places and limits aforesaid, shall be liable unto and suffer such punishment for any offences by them committed

committed in the parts aforesaid, as the President and Council for the said Governor and Company there shall think fit, and the merit of the offence shall require, as aforesaid; and in case any person or persons being convicted and sentenced by the President and Council of the said Governor and Company, in the countries, lands or limits aforesaid, their factors or agents there, for any offence by them done, shall appeal from the same, that then and in such case it shall and may be lawful to and for the said President and Council, factors or agents, to seize upon him or them, and to carry him or them home prisoners into England, to the said Governor and Company, there to receive such condign punishment as his cause shall require, and the law of this nation allow of; and for the better discovery of abuses and injuries to be done unto the said Governor and Company, or their successors, by any servant by them to be employed in the said voyages and plantations, it shall and may be lawful to and for the said Governor and Company, and their respective President, Chief Agent or Governor in the parts aforesaid, to examine upon oath all factors, masters, pursers, supercargoes, commanders of castles, forts, fortifications, plantations or colonies, or other persons, touching or concerning any matter or thing in which by law or usage an oath may be administered, so as the said oath, and the matter therein contained, be not repugnant, but agreeable to the laws of this realm: AND WE DO hereby straitly charge and command all and singular our Admirals, Vice-Admirals, Justices, Mayors, Sheriffs, Constables, Bailiffs, and all and singular other our officers, ministers, liege men and subjects whatsoever, to be aiding, favouring, helping and assisting to the said Governor and Company, and to their successors, and to their deputies, officers, factors, servants, assigns and ministers, and every of them, in executing and enjoying the premises, as well on land as on sea, from time to time, when any of you shall thereunto be required; ANY STATUTE, act, ordinance, proviso, proclamation or restraint heretofore had, made, set forth, ordained or provided, or any other matter, cause or thing whatsoever to the contrary in anywise notwithstanding. IN WITNESS WHEREOF we have caused these our Letters to be made Patent. WITNESS OURSELF at Westminster, the second day of May, in the two-and-twentieth year of our reign.

The Governor and Company may authorize their Presidents, Agents and others to administer oaths in certain cases.

All Admirals and others his Majesty's officers and subjects, to be aiding and assisting in the execution of the powers, &c. granted by this Charter.

By Writ of Privy Seal.

*Pigott.*

#### Enclosure (B.)

CROWN GRANT to the HUDSON'S BAY COMPANY of the exclusive Trade with the Indians in certain parts of North America, for a further term of Twenty-one Years, and upon the Surrender of a former Grant.

VICTORIA R.

(L. S.)

VICTORIA, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith.

To all to whom these Presents shall come, greeting.

WHEREAS, by an Act passed in the Session of Parliament holden in the first and second year of the reign of his late Majesty King George the Fourth, intituled, "An Act for regulating the Fur Trade, and establishing a Criminal and Civil Jurisdiction within certain parts of North America," it was amongst other things enacted, that from and after the passing of the said Act, it should be lawful for his said Majesty, his heirs or successors, to make Grants, or give his or their Royal License, under the hand and seal of one of his or their Principal Secretaries of State, to any body corporate or company, or person or persons, of or for the exclusive privilege of trading with the Indians in all such parts of North America as should be specified in any such Grants or Licenses respectively, not being part of the lands and territories theretofore granted to the Governor and Company of Adventurers of England trading to Hudson's Bay, and not being part of any of our Provinces in North America, or of any lands or territories belonging to the United States of America, and that all such Grants and Licenses should be good, valid and effectual for the purpose of securing to all such bodies corporate, or companies or persons, the sole and exclusive privilege of trading with the Indians in all such parts of North America (except as hereinafter excepted) as should be specified in such Grants or Licenses, any thing contained in any Act or Acts of Parliament, or any law to the contrary notwithstanding; and it was further enacted, that no such Grant or License made or given by his said Majesty, his heirs or successors, of any such exclusive privileges of trading with the Indians in such parts of North America as aforesaid, should be made or given for any longer period than 21 years, and that no rent should be required or demanded for or in respect of any such Grant or License, or any privileges given thereby under the provisions of the said Act for the first period of 21 years; and it was further enacted, that from and after the passing of the said Act, the Governor and Company of Adventurers trading to Hudson's Bay, and every body corporate and company and person to whom any such Grant or License should be made or given as aforesaid, should respectively keep accurate registers of all persons in their employ in any parts of North America, and should once in each year return to the Principal Secretaries of State accurate duplicates of such registers, and should also enter into such security as should be required for the due execution of all processes criminal and civil, as well within the territories included within any such Grant, as within those granted by Charter to the Governor and Company of Adventurers of England trading to Hudson's Bay, and for the producing or delivering into safe custody, for the purpose of trial, all persons in their employ or acting under their authority, who should be charged with any criminal offence, and also for the due and faithful observance of all such rules, regulations and stipulations as should be contained

Enclosure (B.)

in any such Grant or License, either for gradually diminishing and ultimately preventing the sale or distribution of spirituous liquors to the Indians, or for promoting their moral and religious improvement, or for any other object which might be deemed necessary for the remedy or prevention of any other evils which had hitherto been found to exist: And whereas it was in the said Act recited, that by a convention entered into between his said late Majesty and the United States of America, it was stipulated and agreed, that every country on the North-west coasts of America to the westward of the Stoney Mountains should be free and open to the citizens and subjects of the two powers for the term of ten years from the date of the signature of that convention; and it was therefore enacted, that nothing in the said Act contained should be deemed or construed to authorize any body corporate, company or person to whom his said Majesty might, under the provisions of the said Act, make or grant or give a License of exclusive trade with the Indians in such parts of North America as aforesaid, to claim or exercise any such exclusive trade within the limits specified in the said article, to the prejudice or exclusion of any citizens of the said United States of America who might be engaged in the said trade; with a proviso, that no British subject should trade with the Indians within such limits without such Grant or License as was by the said Act required:

And whereas by an instrument under the hand and seal of the Right honourable Earl Bathurst, then one of his said late Majesty's Secretaries of State, and dated the 6th day of December 1821, after reciting therein, as or to the effect aforesaid, and also reciting that the said Governor and Company of Adventurers of England trading to Hudson's Bay, and certain Associations of persons trading under the name of "The North-west Company of Montreal," had respectively extended the fur trade over many parts of North America which had not been before explored, and that the competition in the said trade had been found, for some years then past, to be productive of great inconvenience and loss, not only to the said Company and Associations, but to the said trade in general, and also of great injury to the native Indians and of other persons his said Majesty's subjects; and that the said Governor and Company of Adventurers trading to Hudson's Bay; and William M'Gillivray of Montreal, in the Province of Lower Canada, esquire; Simon M'Gillivray, of Suffolk-lane, in the city of London, merchant; and Edward Ellice, of Spring-gardens, in the county of Middlesex, esquire; had represented to his said Majesty that they had entered into an agreement, on the 26th day of March last, for putting an end to the said competition, and carrying on the said trade for 21 years, commencing with the outfit of 1821, and ending with the returns of the outfit of 1841, to be carried on in the name of the said Governor and Company exclusively, and that the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice had humbly besought his said late Majesty to make a Grant and give his Royal License to them jointly of and for the exclusive privilege of trading with the Indians in North America, under the restrictions and upon the terms and conditions specified in the said recited Act: his said late Majesty, being desirous of encouraging the said trade, and remedying the evils which had arisen from the competition which had theretofore existed therein, did give and grant his Royal License, under the hand and seal of one of his Principal Secretaries of State, to the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice, for the exclusive privilege of trading with the Indians in all such parts of North America to the northward and to the westward of the said lands and territories belonging to the United States of America, as should not form part of any of his said Majesty's Provinces in North America, or of any lands or territories belonging to the said United States of America, or to any European government, state or power; and his said late Majesty did also give and grant and secure to the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice, the sole and exclusive privilege, for the full period of 21 years from the date of that Grant, of trading with the Indians in all such parts of North America as aforesaid (except as hereinafter excepted), and did thereby declare that no rent should be required or demanded for or in respect of that Grant and License, or any privileges given thereby for the said period of 21 years, but that the said Governor and Company of Adventurers trading to Hudson's Bay, and the said William M'Gillivray, Simon M'Gillivray and Edward Ellice, should, during the period of that Grant and License, keep accurate registers of all persons in their employ in any parts of North America, and should once in each year return to his said Majesty's Secretary of State accurate duplicates of such registers, and enter into and give security to his said Majesty, his heirs and successors, in the penal sum of 5,000*l.* for ensuring, as far as in them might lay, or as they could by their authority over the servants and persons in their employ, the due execution of all criminal processes, and of every civil process in any suit where the matter in dispute shall exceed 200*l.*, by the officers and persons legally empowered to execute such processes within all the territories included in that Grant, and for the producing or delivering into custody for purposes of trial all persons in their employ or acting under their authority within the said territories, who should be charged with any criminal offence; and his said Majesty did thereby require that the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice, should, as soon as the same could be conveniently done, make and submit for his said Majesty's consideration and approval, such rules and regulations for the management and carrying on of the said fur trade with the Indians, and the conduct of the persons employed by them therein, as might appear to his said Majesty to be effectual for diminishing or preventing the sale or distribution of spirituous liquors to the Indians, and for promoting their moral and religious improvement; and his said Majesty did thereby declare, that nothing in that Grant contained should be deemed or construed to authorize the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice, or any persons in their employ, to claim or exercise any trade with the Indians on the North-west coast of America to the westward of the Stoney Mountains

Mountains, to the prejudice or exclusion of any citizens of the United States of America who might be engaged in the said trade; and providing also by the now reciting Grant, that no British subjects other than and except the said Governor and Company, and the said William M'Gillivray, Simon M'Gillivray and Edward Ellice, and the persons authorized to carry on exclusive trade by them on Grant, should trade with the Indians within such limits during the period of that Grant:

And whereas the said Governor and Company have acquired to themselves all the rights and interests of the said William M'Gillivray, Simon M'Gillivray and Edward Ellice, under the said recited Grant, and the said Governor and Company having humbly besought us to accept a surrender of the said Grant, and in consideration thereof to make a Grant to them, and give to them our Royal License and authority of and for the like exclusive privilege of trading with the Indians in North America, for the like period and upon similar terms and conditions to those specified and referred to in the said recited Grant: NOW KNOW YE, That in consideration of the surrender made to us of the said recited Grant, and being desirous of encouraging the said trade, and of preventing as much as possible a recurrence of the evils mentioned or referred to in the said recited Grant; as also in consideration of the yearly rent hereinafter reserved to us, We do hereby grant and give our License, under the hand and seal of one of our Principal Secretaries of State, to the said Governor and Company, and their successors, for the exclusive privilege of trading with the Indians in all such parts of North America, to the northward and to the westward of the lands and territories belonging to the United States of America, as shall not form part of any of our provinces in North America, or of any lands or territories belonging to the said United States of America, or to any European government, state or power, but subject nevertheless as hereinafter mentioned: And we do by these presents give, grant and secure to the said Governor and Company, and their successors, the sole and exclusive privilege, for the full period of 21 years from the date of this our Grant, of trading with the Indians in all such parts of North America as aforesaid (except as hereinafter mentioned): And we do hereby declare, that no rent shall be required or demanded for or in respect of this our Grant and License, or any privileges given thereby, for the first four years of the said term of 21 years; and we do hereby reserve to ourselves, our heirs and successors, for the remainder of the said term of 21 years, the yearly rent or sum of 5s. to be paid by the said Governor and Company, or their successors, on the first day of June in every year, into our Exchequer, on the account of us, our heirs and successors; and we do hereby declare, that the said Governor and Company, and their successors, shall, during the period of this our Grant and License, keep accurate registers of all persons in their employ in any parts of North America, and shall once in each year return to our Secretary of State accurate duplicates of such registers; and shall also enter into and give security to us, our heirs and successors, in the penal sum of 5,000*l.*, for ensuring, as far as in them may lie, or as they can by their authority over the servants and persons in their employ, the due execution of all criminal and civil processes by the officers and persons legally empowered to execute such processes within all the territories included in this our Grant, and for the producing or delivering into custody for the purposes of trial all persons in their employ or acting under their authority within the said territories who shall be charged with any criminal offence: And we do also hereby require, that the said Governor and Company, and their successors, shall, as soon as the same can be conveniently done, make and submit for our consideration and approval such rules and regulations for the management and carrying on the said fur trade with the Indians, and the conduct of the persons employed by them therein, as may appear to us to be effectual for diminishing or preventing the sale or distribution of spirituous liquors to the Indians, and for promoting their moral and religious improvement: But we do hereby declare, that nothing in this our Grant contained shall be deemed or construed to authorize the said Governor and Company, or their successors, or any persons in their employ, to claim or exercise any trade with the Indians on the North-west coast of America to the westward of the Stoney Mountains, to the prejudice or exclusion of any of the subjects of any foreign states, who, under or by force of any convention for the time being between us and such foreign states respectively, may be entitled to and shall be engaged in the said trade: Provided nevertheless, and we do hereby declare our pleasure to be, that nothing herein contained shall extend or be construed to prevent the establishment by us, our heirs or successors, within the territories aforesaid, or any of them, of any colony or colonies, province or provinces, or for annexing any part of the aforesaid territories to any existing colony or colonies to us, in right of our Imperial Crown, belonging, or for constituting any such form of civil government as to us may seem meet, within any such colony or colonies, province or provinces:

And we do hereby reserve to us, our heirs and successors, full power and authority to revoke these presents, or any part thereof, in so far as the same may embrace or extend to any of the territories aforesaid, which may hereafter be comprised within any colony or colonies, province or provinces as aforesaid:

It being nevertheless hereby declared, that no British subjects other than and except the said Governor and Company, and their successors, and the persons authorized to carry on exclusive trade by them, shall trade with the Indians during the period of this our Grant within the limits aforesaid, or within that part thereof which shall not be comprised within any such colony or province as aforesaid.

Given at our Court at Buckingham Palace, 30th day of May 1838.

By Her Majesty's command.

(L. S.)

*Glenelg.*

— No. 1. —

Copy of a LETTER from the Governor of the Hudson's Bay Company to  
Lord *Glenelg*.

Hudson's Bay House,  
London, 10 February 1837.

No. 1.  
Letter from the  
Governor of the  
Hudson's Bay  
Company to  
Lord Glenelg,  
10 February 1837.

My Lord,

THE peace, order and tranquillity which have so successfully been maintained by the Hudson's Bay Company, during the last 15 years, throughout their extensive territories and the adjoining Indian countries, since the passing of the Act 1st & 2d Geo. 4, c. 66, have hitherto made it unnecessary to trouble your Lordship, or the department over which you preside, with any applications or representations relating to the country.

The approaching termination, however, of the grant of exclusive trade to the Company within their limits and the other fur trading districts (15 years of a term of 21 having already expired), and other circumstances and changes which have occurred in the situation of these countries, make it my duty to bring the whole case under the consideration of his Majesty's Government, in order that their opinion may be ascertained with regard to the renewal of the grant, and the further measures that have already become necessary for the administration of justice, the police and government of the increasing population and establishments of this extensive part of his Majesty's dominions.

Your Lordship is aware that the Hudson's Bay Company was incorporated under Charter of his Majesty Charles the Second, in the year 1670; and that that Charter conveyed to them the sole trade and commerce, together with the lands and territories upon the countries, coasts, &c., that were not actually possessed by or granted to any British subjects, or possessed by the subjects of any other Christian Prince or State, to be reckoned and reputed as one of the British plantations or colonies in America called "Rupert's Land."

One of the principal objects in the incorporation of this Company was the fur trade with the Indians inhabiting the territories ceded to them. For many years prior to the conquest of Canada, French subjects had penetrated by the St. Lawrence to the frontiers of Rupert's Land; but no competition had occurred between the traders of the two countries within the territories of the Hudson's Bay Company previous to the cession of Canada to Great Britain.

Subsequent to that period, the greater capital and activity of British subjects led to a competition, first on the frontier parts, then in the interior, and at last to the formation of a Company, combining all the individuals at that time engaged in the trade, to the countries bordering on and west of Lake Superior, under the firm of the North-west Company of Montreal.

It is unnecessary to say more of the eager competition into which this association entered with the Hudson's Bay Company for the trade of the Indian districts, or of the scenes of demoralization and destruction of life and property to which it led; than to refer your Lordship to the ample details on this revolting subject in the Colonial Department; to the agreements at last entered into between the rival companies to put an end to them by the union of their interests in 1821; and to the Act of Parliament passed in the same year to give effect to that union, and to prevent the possibility of the recurrence of competition, by enabling the Crown to grant to the parties interested a License for the exclusive trade, the only means of restraining violence and crime, and of maintaining order under the peculiar circumstances of the country and the case.

The several parties to whom the license was granted made an absolute surrender of their interests in it, in pursuance of further arrangements between them, to the Hudson's Bay Company, in 1824.

Encouraged by the protection given to them by this license, the Hudson's Bay Company have gradually extended their establishments and trade, and taken the further measures for the improvement and civilization of the country and its inhabitants, which I shall have the honour of detailing for your Lordship's information. The result of these measures, and the growth and increasing population of the settlements in the interior, bring yearly additional demands on the resources of the Company for the means of protection and administration. These demands will still further increase in future years; and it becomes absolutely necessary either that an arrangement should be soon made for the extension of the License to the Company, or that some other means should be taken for the expenditure and government of these establishments, in anticipation of the

the

the expiration of the present term, if a different policy shall appear advisable to his Majesty's Government.

Before the union of the rival Companies in 1821, the trade on the north-west coast of America, from the Mexican frontiers to Behring's Straits, was nearly or wholly enjoyed by American and Russian subjects. Some efforts had been made, at enormous costs and sacrifices by the North-west Company, to compete with the Americans, the history of which is recorded in a popular work lately published by Mr. Washington Irving, under the title of "Astoria;" but these efforts were both costly and unsuccessful, and the North-west Company were on the point of being compelled to abandon the trade.

The Russian establishment at Norfolk Sound, and at other places on the coast, even so far south as the coast of California, and the American expedition subsequent to the peace from Boston, New York and other parts of the United States, had obtained a monopoly of the coast trade.

In the face of these disadvantages, the Hudson's Bay Company felt it their duty to attempt to regain the trade, and to re-establish British influence in the countries adjoining the coast, and to the mouth of the river of Columbia, within the limits of the last convention entered into with the court of Russia; and they have succeeded, after a severe and expensive competition, in establishing their settlements, and obtaining a decided superiority, if not an exclusive enjoyment of the trade, the Americans having almost withdrawn from the coast.

In the course of the last year they had occasion to appeal to his Majesty's Government for protection and indemnity for a serious act of aggression and violence on the part of an armed Russian force on the coast, which impeded their operations, and occasioned them a loss to the extent of upwards of 20,000*l*. The Russian government has hitherto only consented to disavow the act of its officer, and to give instructions prohibiting further obstruction to the expeditions of the Company within the trading limits agreed upon in the convention; and the Company now wait with the firmest reliance on the further efforts of the Government for an indemnity for their great loss.

Beyond the difficulties arising from an active competition with the Americans, and the violent and oppressive proceedings on the part of the Russians, the Company have had to contend with other serious obstacles, both on the coast and in the interior, from a savage and formidable native population, whose habits of intoxication and other vices, encouraged by the competition, have been to a great degree restrained by the temperate and vigorous conduct of their traders.

Great loss of property, and in some cases loss of life, have been incurred by savage and murderous attacks on their hunting-parties and establishments, and order has only been restored and peace maintained by the employment, at a great expense, of considerable force, and by the exercise, on the part of their servants, of the utmost temper, patience and perseverance.

The Company now occupy the country between the Rocky Mountains and the Pacific by six permanent establishments on the coasts, sixteen in the interior country, besides several migratory and hunting-parties, and they maintain a marine of six armed vessels, one of them a steam-vessel, on the coast.

Their principal establishment and depôt for the trade of the coast and the interior is situated 90 miles from the Pacific, on the northern banks of the Columbia river, and called Vancouver, in honour of that celebrated navigator. In the neighbourhood they have large pasture and grain farms, affording most abundantly every species of agricultural produce, and maintaining large herds of stock of every description; these have been gradually established; and it is the intention of the Company still further, not only to augment and increase them, to establish an export trade in wool, tallow, hides and other agricultural produce, but to encourage the settlement of their retired servants and other emigrants under their protection.

The soil, climate and other circumstances of the country are as much if not more adapted to agricultural pursuits than any other spot in America, and with care and protection the British dominion may not only be preserved in this country, which it has been so much the wish of Russia and America to occupy to the exclusion of British subjects, but British interest and British influence may be maintained as paramount in this interesting part of the coast of the Pacific.

Great exertions have also been made, and much expense incurred by the Company in exploring and taking possession of the interior country between the

Russian

Russian maritime limits and the Frozen Ocean, although little has yet been done in forming permanent establishments, in consequence of the obstruction of the late expedition by the Russians; they also, at considerable cost, and some inconvenience, have not only afforded every assistance to the expeditions fitted out by Government for exploring the coast of the Polar Sea, but in the last season the Council in the interior, under the sanction of, and by the advice of the Board over which I preside, to anticipate the intentions of Russia and the United States, have undertaken to fit out an expedition, composed of their own officers and servants, at the sole expense of the Company, to complete the surveys left unfinished by Sir John Franklin, Captain Beechey and Captain Back.

The Company entertain the most sanguine expectations that the result of this expedition will be the complete survey of the coast of the Polar Sea not hitherto visited by European navigators, and that they will secure for England the reputation of having effected this work, and the other advantages anticipated from previous expeditions undertaken at such expense and risk of life to the nation.

With a view to the formation of a large agricultural settlement within the Company's territories, named in their Charter "Rupert's Land," the Hudson's Bay Company made a grant to the late Earl of Selkirk, in the year 1811, of a tract of country on the banks of the Red and Assiniboim rivers, in about 50° north lat. and 97° west long., where the soil and climate are favourable to cultivation, it being intended that this settlement should be peopled by emigrants from Britain, and that native Indians should be drawn thither from all parts of their territory, with a view to their civilization and moral and religious improvement; and with the object of establishing, in time, a valuable export trade from thence to the mother country in wool, flax, tallow, and other agricultural produce.

Under that arrangement his Lordship, at a very heavy expense, conveyed several hundred families from Europe to that settlement; but the evils attendant on the competition in the fur trade extending to this settlement, occasioned serious breaches of the peace, much loss of life, and the breaking up or abandonment of the settlement by the whites on two different occasions.

In order to remedy certain inconveniences that were found to exist from a divided interest and management in the country, an arrangement was lately entered into with the present Earl of Selkirk, by which the district of country that had been granted to the late Earl has reverted to the Company, under whose management that infant colony is now conducted; and, by the accompanying report of Mr. Simpson, Governor of the Company's territories in North America, it will be seen that Red River settlement has advanced rapidly in population and improvement since 1821, the population being now about 2,000 whites, and 3,000 Indians and half-breeds, who are no longer occupied in the chase, but maintain themselves by agriculture; and there is a prospect that at no very distant period a considerable export trade in the articles of wool, flax, &c., will be established from that settlement.

The right of jurisdiction within Rupert's Land was granted, together with that territory, by the Royal Charter to the Governor and Company, through their local governors and chief factors; and hitherto, whilst there has been no competition between the rival traders, under the protective powers of the Act, has been found sufficient to maintain peace and tranquillity in the settlement at Red River; but the population located there already amounts to 5,000 souls, of a mixed character and degree of civilization, and is increasing so rapidly that it will soon be necessary to have the assistance of a person of competent legal knowledge as Recorder, with other requisite officers, so as to form a more regular court of justice. It will also be necessary to provide a sufficient military or police force to support the civil power.

This rising community, if well governed, may be found useful at some future period, in the event of difficulties occurring between Great Britain and the United States of America, who have several military posts, say those of the Sault St. Mary's, Prairie du Chiens, and the River St. Peter's, established on their Indian frontiers along the line of boundary with British North America.

By the report of Mr. Simpson, your Lordship will likewise see what has been done up to the present time, in reference to the native population, in accordance with the benevolent provisions contained in the License of exclusive trade, under which the Hudson's Bay Company conduct that part of their business, situated beyond the limits of the territories they hold under their Charter; as without that

that License they could not have sufficiently protected even their own territory from the evils of opposition, to have justified or enabled them to carry into effect the various measures described in Mr. Simpson's report, in regard to the civilization and amelioration of the condition of the natives.

By that report it will moreover be seen that the animosities and feuds which kept the Indian country in a state of continued disturbance, extending to the loss of lives and to the destruction of property, ~~have~~, since 1821, entirely ceased; that the sale or distribution of spirituous liquors to the Indians has, in most parts of the country, been entirely discontinued, and in all other parts so much reduced as to be no longer an evil; and that the moral and religious improvement of the native population has been greatly promoted.

And from what I have had the honour of bringing under your Lordship's notice in this communication, it will be seen what the Company has done in reference to the extension of the British trade on the north-west coast, and the exertions they are making in the causes of discovery and science.

Also the views of the Company in regard to the establishing valuable branches of trade from the country to the west of the Rocky Mountains, which they occupy under the exclusive License in question, as well as from the Red River settlement formed within their own territories.

Your Lordship will perceive that much has already been done by the Hudson's Bay Company, resulting from the privileges they enjoy; but that much more, involving great outlay of money and heavy responsibility, will soon be required to be done, in order to complete the operations they have in hand, and to give effect to the measures they have in contemplation, which may hereafter become important to Great Britain in a national point of view; and that without the extension of the term of the License the Company now hold, they could not feel justified, with a due regard to the interests of the numerous parties connected with the business, in following up several of the extensive and expensive arrangements before mentioned, which are now in progress.

I have, therefore, to request that your Lordship will be pleased to bring the subject of this communication under the consideration of his Majesty's ministers; and as there are several important points connected with this subject, that cannot so well be explained in an official despatch as by personal communication, that your Lordship will be further pleased to honour me with an audience as early as convenient, at which Mr. Simpson, who is now preparing for his departure to Hudson's Bay *via* Canada, may attend.

I have, &c.

(signed) *J. H. Pelly*, Governor.

---

Enclosure in No. 1.

COPY of a LETTER from *George Simpson*, Esq., to *J. H. Pelly*, Esq.

Sir,

London, 1 February 1837.

Encl. in No. 1.

IN obedience to your commands that I should report on the state of the Indian country and trade, both previous to the year 1821 (when an Act of Parliament was passed, under which the Hudson's Bay Company has, since that time, by virtue of exclusive License, conducted the fur trade) and subsequently to that period, I now do myself the honour of laying before you a brief outline of the then and the present state of the fur trade.

The Indian country, which, previous to the passing and granting of that Act and License, was a scene of violence and outrage, productive of injury to the native population, and of the worst consequences, amounting in very many instances to the loss of life among the whites actively engaged therein, and to a vast sacrifice of property to the parties interested, all arising from the violent competition that existed among the traders, I have the satisfaction to say, has, ever since that period, been in a state of the most perfect tranquillity, beneficial as well to the Indian population as to the parties interested and engaged in the trade.

Previous to that period, an unrestricted supply of spirituous liquor, then an important article of trade, led to the commission of crimes, to the injury of health, and to a state of demoralization among the native population truly lamentable. The measures since taken by the Council in the country, under the instructions of the Board of Direction in England, to remedy those evils have been attended with the happiest results: drunkenness is now of very rare occurrence in any part of the country, and quite unknown throughout the extended district situated to the northward of the Suskatchewaine and Churchill rivers, occupied by the Chipewyan, Beaver Indian, Cree, Yellow Knife, Hare, Dog Rib, and other tribes throughout the numerously inhabited and widely extended plain country to the southward of Suskatchewaine; in the country situated between the

Rocky Mountains and the shores of the Pacific, watered by the Columbia river and its tributaries; in the country known by the name of New Caledonia, situated inland, to the northward of the Columbia river; and among the Chippewa tribes on the shores and interior country of Lakes Superior and Huron; the introduction and use of spirituous and other intoxicating liquors having been strictly prohibited, except in very rare cases for medicinal purposes.

The first introduction of this measure was so unpopular among the natives as to endanger the safety of the trading establishments, rendering it necessary to maintain a large force for their protection, at a heavy expense; and it was only by compensating them for the loss of this baneful indulgence by large gratuities, consisting of presents of British manufacture, that they became reconciled to the privation. In other parts of the country, where it could not, in safety to the white population, be entirely prohibited, the use of it is now gradually diminishing, so as at this time to be no longer an evil; and in no part of the countries through which the Hudson's Bay Company's operations extend are spirituous or intoxicating liquors of any description sold to Indians, or used as a medium of barter or trade. But so inseparable is drunkenness or the abuse of spirituous liquors from opposition in the Indian trade, that on the north-west coast, where we have to contend with the Americans and Russians, and even on the banks of the St. Lawrence and Ottawa rivers, which are exposed to competition in trade, and where the Indians are partially civilized, I am sorry to say our utmost efforts to check it have been altogether unavailing.

A confirmation of these statements is to be seen by reference to the exportations of spirituous liquors to Hudson's Bay, which, since the year 1821, do not exceed on the average 43 puncheons of rum annually for the supply of the whole country situated to the eastward of the Rocky Mountains, comprised in the License of trade granted to the Company, as well as the Company's territories, the population of which, including servants, may be estimated at 120,000 souls, no spirituous liquors having up to this period been distilled in the country.

During the competition in trade previous to the year 1821 (when the exclusive management fell into the hands of the Hudson's Bay Company), it was found impossible to take any effectual measure towards the civilization or moral and religious improvement of the native population. Since that period the Company have established two Protestant missions, under the management of their chaplains at Red River settlement, where there are likewise two Catholic missions and 13 schools.

In this settlement there are resident several thousand Indians and half-breeds, drawn together from all parts of the country, with a view to their civilization and moral and religious improvement. These people have abandoned the chase, and now devote themselves to agricultural pursuits, and it is gratifying to be enabled to say that the zealous endeavours of our missionaries have been most successful.

The Hudson's Bay Company have likewise established missions and schools at several of their principal depôts or posts on the Columbia river, west side of the Rocky Mountains, under the management of another of their chaplains; and at the Red River and Columbia schools, Indian children are educated belonging to many of the distant tribes, who, after attaining the age of manhood, are allowed the option of returning to their homes, becoming agriculturists at Red River settlement, or entering into the Company's service. We are using our utmost endeavours in every other part of the country, where the climate and soil admit of it, to collect the Indians into villages, and direct their attention to agriculture, as the first step towards civilization. This operation is, however, attended with much difficulty, from their erratic habits, and the scanty and precarious subsistence afforded by the chase, which prevents their keeping together in considerable numbers, and applying themselves to husbandry and the pursuits of civilized life, and compels them to separate into small parties of single families, and to wander about in search of food, under circumstances where it is impossible for the missionary to follow them.

I can say, without fear of contradiction, from my intimate knowledge of the country and natives, and of the mode in which the business was conducted, both previous and subsequent to the period since which the exclusive trade has been in the hands of the Company, having held the situation I now have the honour of filling for many years, during which I have been in constant communication with the different tribes inhabiting these extensive countries, and I say it with peculiar satisfaction, that their condition is much ameliorated.

When competition in trade existed, the encouragement afforded to the Indians to make large collections of skins led to the destruction of the fur-bearing animals of all ages and sexes, and at all seasons. If this system had been continued much longer, those animals, which were rapidly decreasing in numbers, would have been almost entirely extirpated. Instead of exhausting the country, we now use every means in our power to preserve it, by withdrawing our trading posts, and the Indians attached to them, for a time from such parts as have been impoverished, so as to enable them to recruit; and by discouraging hunting during the seasons when the females are bearing and rearing their young, the animals are now becoming numerous. The employment we afford at those seasons to many of the Indians, whereby they are brought into frequent communication and intercourse with our officers and servants, tends towards their gradual civilization and improvement; and we find our own interests promoted by an equitable and liberal system of trade and management.

Our different trading establishments are the resort or refuge of many of the natives, who, from age, infirmity or other causes, are unable to follow the chase: they have the benefit of the care and attention, free of expense, of our medical men, of whom about 12 are usually employed in the service, every trading establishment being, in fact, an Indian hospital; advantages which were not and could not have been afforded to them during the competi-  
tion

tion in trade. In short, I have no hesitation in saying, that the native population of the countries through which the Hudson's Bay Company's business extends never derived any real benefit from their intercourse with the whites until the fur trade became exercised under the existing license. In proof of this, the population of some of the tribes, previous to that time, sensibly diminishing, is now increasing; and from my experience of the times of opposition, I can further say, that if the trade were again thrown open to competition, all the horrors of the late contest would break out afresh; drunkenness and demoralization would have their former sway, not only among the natives but among the whites, whom we are now enabled to keep under proper subordination, which was never the case during the excitement occasioned by the rivalry in trade; the fur-bearing animals would in the course of a very few years become nearly extinct; and the inevitable consequences would be, the desertion of the natives by the traders, the latter having no longer any inducement to remain among them; that unfortunate population, thus left to their own resources, must inevitably perish from cold and hunger,—the use of the bow and arrow, and other rude implements, formerly affording them the means of feeding and clothing themselves, being now unknown, and our guns, ammunition, fishing-tackle, iron works, cloth, blankets and other manufactures having become absolutely necessary to their very existence. The country in which the Hudson's Bay Company now trade is divided into four great districts, known by the names of the Northern, Southern, Columbia and Montreal Departments, in which there are 136 establishments, besides hunting expeditions and shipping, affording employment to 25 chief factors, 27 chief traders, 152 clerks, and about 1,200 regular servants, besides the occasional labour in boating and other services of a great number of the natives.

Previous to 1821 the business of the Columbia department was very limited; but it has since been very greatly extended at much expense, and, I am sorry to add, at a considerable sacrifice of life among the Company's officers and servants, owing to the fierce, treacherous and blood-thirsty character of its population, and the dangers of the navigation; it now comprehends 22 trading establishments, besides several migratory, hunting and trading expeditions, and six armed vessels on the north-west coast.

The fur trade is the principal branch of business at present in the country situated between the Rocky Mountains and the Pacific Ocean. On the banks of the Columbia river, however, where the soil and climate are favourable to cultivation, we are directing our attention to agriculture on a large scale, and there is every prospect that we shall soon be able to establish important branches of export trade from thence in the articles of wool, tallow, hides, tobacco, and grain of various kinds.

I have also the satisfaction to say, that the native population are beginning to profit by our example, as many, formerly dependent on hunting and fishing, now maintain themselves by the produce of the soil.

The country situated between the northern bank of the Columbia river, which empties itself into the Pacific, in lat.  $46^{\circ} 20'$ , and the southern bank of Frazer's river, which empties itself into the Gulf of Georgia, in lat.  $49^{\circ}$ , is remarkable for the salubrity of its climate and excellence of its soil, and possesses, within the Straits of De Fuca, some of the finest harbours in the world, being protected from the weight of the Pacific by Vancouver's and other islands. To the southward of the Straits of De Fuca, situated in lat.  $48^{\circ} 37''$ , there is no good harbour nearer than the bay of St. Francisco, in lat.  $37^{\circ} 48''$ , as the broad shifting bar off the mouth of the Columbia, and the tortuous channel through it, renders the entrance of that river a very dangerous navigation even to vessels of small draught of water.

The possession of that country to Great Britain may become an object of very great importance, and we are strengthening that claim to it (independent of the claims of prior discovery and occupation for the purpose of Indian trade) by forming the nucleus of a colony through the establishment of farms, and the settlement of some of our retiring officers and servants as agriculturists.

Our population in Red River settlement amounts to about 5,000 souls, say about 2,000 whites, and about 3,000 half-breeds and Indians. The population, at the close of the late contest in trade, did not amount to as many hundreds; but so pernicious was the excitement occasioned by the contest, even among that small population, that it was then frequently the scene of bloodshed, robbery and riot; and in one of those riots, in the year 1816, 22 persons were killed, and several wounded; among the former was Mr. Semple, Governor of the Company's territories; a man of judgment and discretion, and of the most amiable and benevolent character.

The blessings of tranquillity, however, immediately followed the cessation of that contest, peaceful industry having reigned in the settlement ever since, and offences so few as rarely to call for magisterial interference. Our population, however, is now so large, and increasing so rapidly, both as regards Indians and half-breeds, and whites, that the time has arrived when it is no longer safe to trust the peace of the settlement solely to the good-will of its inhabitants. I, therefore, consider it highly necessary to the security of lives and property, that a court of justice, for the trial of civil and criminal cases, with an efficient police to support the civil power, should be established there without delay.

I have, &c.

28 February 1837.

Sir,

Downing-street, 28 February 1837.

I AM directed by Lord Glenelg to transmit to you herewith a letter addressed to his Lordship by the Governor of the Hudson's Bay Company, describing the present state of the Company's establishment in North America, and calling his Lordship's attention to the approaching termination of the Charter, granting them the exclusive right of trading within their territories.

I am to request that you will bring this letter before the Lords of the Committee of the Privy Council for Trade, and move their Lordships to favour Lord Glenelg with their opinion how far it would be expedient to entertain and encourage the application made by the Company for a renewal of their commercial privileges at the expiration of their present Charter.

## No. 3.

Letter from *Denis  
Le Marchant*, Esq.  
to the Under-  
Secretary of State  
for the Colonies,  
2 June 1837.

Sir,

Office of Committee of Privy Council for Trade,  
Whitehall, 2 June 1837.

I HAVE laid before the Lords of the Committee of Privy Council for Trade your letter of the 28th February last, with its enclosures, respecting the Hudson's Bay Company, and I am directed by their Lordships to request that you will inform Lord Glenelg, that after an attentive consideration of the facts stated in the above-mentioned enclosures, and of such additional information as their Lordships have been able to obtain on the subject, they have arrived at the conclusion that it is desirable that the application of the Company for a renewal of the exclusive License to trade in those parts of North America beyond the limits of their Charter, which they at present enjoy, should be favourably entertained by his Majesty's Government, with a view to their extension for a definite term of years after the present License shall have expired. The proceedings of the Company of late years appear to their Lordships to have been distinguished generally by a liberal and enlightened policy; and the peculiar nature of the fur trade seems to justify, and even to recommend, the adoption of the principle of conferring exclusive privileges upon a great body engaged in it, however objectionable such a principle appears with reference to commercial affairs generally. It is with reference to these particular circumstances that their Lordships have satisfied themselves that it would not be safe to withdraw from the Company the powers which they now exercise.

Their Lordships have only further to observe, that as to any pecuniary conditions being attached to the renewal of the License under the 1 & 2 Geo. 4, c. 66, that is a point which they presume will be made the subject of communication between Lord Glenelg and the Commissioners of Woods and Forests. They may, however, remark that it would be very unadvisable, in their opinion, to adopt any provisions upon this subject which might tend to cramp the operations of the Company, or place them in unfair competition with other traders in fur.

I am, &amp;c.

to *Denis Le Marchant*, Esq.

## No. 4.

Letter from the  
Under-Secretary  
of State for the  
Colonies to  
*Denis Le Marchant*,  
Esq.  
25 July 1837.

Sir,

Downing-street, 25 July 1837.

I AM directed by Lord Glenelg to acknowledge your letter of the 2d ultimo, relative to the application from the Hudson's Bay Company for a renewal of the exclusive privilege of trading on certain parts of the continent of North America, which they at present enjoy, under a Charter granted in pursuance of the Act 1 & 2 Geo. 4, c. 66.

Lord

Lord Glenelg desires me to express his concurrence in the opinion of the Lords of the Committee of Privy Council for Trade as to the expediency of reviving this Charter; but he directs me to observe, that whenever that step shall be taken it will be indispensable to introduce into the new Charter such conditions as may enable Her Majesty to grant, for the purpose of settlement or colonization, any of the lands comprised in it, and with that view his Lordship thinks that a power should be reserved even of establishing new colonies or provinces within the limits comprised in the Charter. With whatever confidence the sterility of a great part of that extensive portion of the globe, and its unfitness to sustain any considerable population, may have hitherto been asserted, Lord Glenelg thinks that such statements cannot be assumed as incontrovertible; and as the country is very imperfectly known, especially in that part of it which borders on the chain of the lakes, his Lordship is disposed to regard them with distrust. I am, therefore, to request that you will inform me, whether in their negotiations with the Company, the Lords of the Committee of Privy Council for Trade have adverted to any stipulation for the purposes above mentioned, and if not, I am to suggest, that before any further steps are taken, it would be desirable to ascertain whether the Company would object to receive an extension of their Charter at the present time, introducing into it such a reservation as has been mentioned, of the right of establishing new colonies, and of the right of withdrawing from the control and authority of the Company any of the lands comprised in such future colonies.

Office of Committee of Privy Council for Trade,  
Whitehall, 7 August 1837.

Sir,

YOUR letter of the 25th ultimo, relative to the privileges of the Hudson's Bay Company, has been laid before the Lords of the Committee of Privy Council for Trade, and their Lordships, after having adverted to your former letter of the 28th of February last on the same subject, and the answer thereto of the 2d June, to which you now refer, have directed me to request that you will inform Lord Glenelg that no negotiation has been entered into with this department by the Hudson's Bay Company for a renewal of their License; nor has any measure been taken in the matter under their Lordships' directions, except the transmission of the letter of the 2d of June before mentioned.

I am, however, to state to you, for the information of Lord Glenelg, that the Lords of this Committee are ready, if so desired by him, to confer with the Company upon this subject: at the same time, I am to observe, that, as the peculiar point for discussion relates to colonization, it may be desirable that Lord Glenelg should, in the first instance, apprise the Company of his views upon that subject.

I am, &c.

Lordships than by Lord Glenelg ; and in this conclusion he is confirmed by the consideration, that the question is important chiefly in its bearing on the commercial interests of the empire at large.

With regard to the question of colonization, Lord Glenelg will of course explain his views to the Company, if their Lordships should, on further reflection, think that course expedient. But, as he is apprehensive of some danger of producing misconceptions by multiplying the channels of official communication with that body, and as his views on the subject of colonizing the territory in question lie within a very narrow compass, it appears to Lord Glenelg that they may be perhaps more conveniently stated to the Company by the Board of Trade than by himself. Lord Glenelg is of opinion that the public interest may not improbably require the erection of some part of the territory comprised in the Company's Charter into one or more colonies, independent of and distinct from either Upper or Lower Canada. The limits of any such colonies must, for the present, be matter of conjecture and surmise ; but Lord Glenelg thinks that the proposed new Charter should contain an express condition, providing that nothing to be therein contained should prevent Her Majesty, Her heirs and successors, from establishing any such colonies within the territories in question, and that, from the time of their being so established, all the rights of the Company within the limits of any such colony should cease.

I am, &c.

## — No. 9. —

COPY of a NOTE from the Governor of the Hudson's Bay Company to the Under-Secretary of State for the Colonies.

Hudson's Bay House, 25 October 1837.

MR. PELLY presents his compliments to Mr. Stephen, and sends herewith a draft for a Grant to the Hudson's Bay Company of exclusive trade with the Indians in certain parts of North America, drawn in conformity with the original one, and of the Act passed in the second year of his late Majesty Geo. 4, and providing for the conditions contained in Mr. Stephen's letter to him. In it is likewise extended the reservation of trade to the subjects of *any* Foreign State, who, under or by force of any convention between Great Britain and such Foreign State, may be entitled and shall be engaged in said trade. This in the old grant was reserved exclusively for the subjects of the United States; since which a convention has been entered into with the Emperor of Russia. Mr. P. has therefore had it drawn to include *any* Foreign State, which alteration he submits would be advisable to adopt. Should Mr. S. wish to see Mr. P. on the subject, he will, after next week, attend any appointment.

Note from the Governor of the Hudson's Bay Company to the Under-Secretary of State for the Colonies, 10 November 1837.

## Enclosure in No. 11.

GEORGE R.

(L. S.)

GEORGE the Fourth, by the Grace of God of the United Kingdom of Great Britain and Ireland King, Defender of the Faith.

To all to whom these Presents shall come, greeting.

WHEREAS an Act passed in the second year of our reign, intituled, "An Act for regulating the Fur Trade, and for establishing a Criminal and Civil Jurisdiction within certain parts of North America;" wherein it is amongst other things enacted, that from and after the passing of the said Act, it should be lawful for us, our heirs or successors, to make Grants or give our Royal License, under the hand and seal of one of our Principal Secretaries of State, to any body corporate or company, or person or persons, of or for the exclusive privilege of trading with the Indians in all such parts of North America as should be specified in any such Grants or Licenses respectively, not being part of the lands or territories heretofore granted to the Governor and Company of Adventurers of England trading to Hudson's Bay, and not being part of any of our provinces in North America, or of any lands or territories belonging to the United States of America, and that all such Grants and Licenses should be good, valid and effectual, for the purpose of securing to all such bodies corporate, or companies or persons, the sole and exclusive privilege of trading with the Indians in all such parts of North America (except as thereafter excepted) as should be specified in such Grants or Licenses,

Encl. in No. 11.

any thing contained in any Act or Acts of Parliament or any law to the contrary notwithstanding; and it was in the said Act further enacted, that no such Grant or License made or given by us, our heirs or successors, of any such exclusive privileges of trading with the Indians in such parts of North America as aforesaid should be made or given for any longer period than 21 years, and that no rent should be required or demanded for or in respect of any such Grant or License, or any privileges given thereby, under the provisions of the said Act, for the first period of 21 years; and it was further enacted, that from and after the passing of the said Act, the Governor and Company of Adventurers of England trading to Hudson's Bay, and every body corporate and company and person, to whom every such Grant or License should be made or given as aforesaid, should respectively keep accurate registers of all persons in their employ, in any parts of North America, and should once in each year return to our Principal Secretaries of State accurate duplicates of such registers, and should also enter into such security as should be required by us for the due execution of all criminal processes, and of any civil process in any suit where the matter in dispute shall exceed 200*l.*, and as well within the territories included in any such Grant as within those granted by Charter to the Governor and Company of Adventurers of England trading to Hudson's Bay, and for the producing and delivering into safe custody, for the purpose of trial, all persons in their employ, or acting under their authority, who should be charged with any criminal offence, and also for the due and faithful observance of all such rules, regulations and stipulations as should be contained in any such Grant or License, either for gradually diminishing and ultimately preventing the sale or distribution of spirituous liquors to the Indians, or for promoting their moral and religious improvement; or for any other object which we might deem necessary for the remedy or prevention of any other evils which have been hitherto found to exist: And whereas it was also in the said Act recited, that by a Convention entered into between his late Majesty and the United States of America, it was stipulated and agreed, that every country on the North-west coast of America to the westward of the Stoney Mountains should be free and open to the citizens and subjects of the two powers for the term of ten years from the date of the signature of that Convention; and it was therefore enacted, that nothing in the said Act contained should be deemed or construed to authorize any body corporate, company or person, to whom his Majesty might, under the provisions of the said Act, make or grant, or give a license of exclusive trade with the Indians, in such parts of North America as aforesaid, to claim or exercise any such exclusive trade within the limits specified in the said article, to the prejudice or exclusion of any citizens of the said United States of America who might be engaged in the said trade: Provided always, that no British subject should trade with the Indians within such limits without such Grant or License as was by the said Act required.

And whereas the said Governor and Company of Adventurers of England trading into Hudson's Bay, and certain Associations of persons trading under the name of the "North-west Company of Montreal," have respectively extended the fur trade over many parts of North America which had not been before explored: And whereas the competition in the said trade has been found for some years past to be productive of great inconvenience and loss, not only to the said Company and Associations, but to the said trade in general, and also of great injury to the native Indians, and of other persons our subjects: And whereas the said Governor and Company of Adventurers of England trading into Hudson's Bay, and William M'Gillivray, of Montreal, in the Province of Lower Canada, esquire, Simon M'Gillivray, of Suffolk-lane, in the City of London, merchant, and Edward Ellice, of Spring-gardens, in the County of Middlesex, esquire, have represented to us, that they have entered into an agreement, on the 26th day of March last, for putting an end to the said competition, and carrying on the said trade for 21 years, commencing with the outfit of 1821, and ending with the returns of 1841, to be carried on in the name of the said Governor and Company exclusively:

And whereas the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice, have humbly besought us to make a Grant, and give our Royal License to them jointly, of and for the exclusive privilege of trading with the Indians in North America, under the restrictions and upon the terms and conditions specified in the said recited Act: Now know YE, That we, being desirous of encouraging the said trade and remedying the evils which have arisen from the competition which has heretofore existed therein, do grant and give our Royal License, under the hand and seal of one of our Principal Secretaries of State, to the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice, for the exclusive privilege of trading with the Indians in all such parts of North America to the northward and the westward of the lands and territories belonging to the United States of America as shall not form part of any of our provinces in North America, or of any lands or territories belonging to the said United States of America, or to any European government, state or power; and we do by these presents give, grant and secure to the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice jointly, the sole and exclusive privilege, for the full period of 21 years from the date of this our Grant, of trading with the Indians in all such parts of North America as aforesaid (except as hereinafter excepted); and we do hereby declare that no rent shall be required or demanded for or in respect of this our Grant and License, or any privileges given thereby, for the said period of 21 years, but that the said Governor and Company, and the said William M'Gillivray, Simon M'Gillivray and Edward Ellice shall, during the period of this our Grant and License, keep accurate registers of all persons in their employ in any parts of North America, and shall once in each year return to our Secretary of State accurate duplicates of such registers, and shall also enter into and give security to us,

our

## TO THE CHARTER OF THE HUDSON'S BAY COMPANY.

23

our heirs and successors, in the penal sum of 5,000*l.* for ensuring, as far as in them may lie, the due execution of all criminal processes, and of any civil process in any suit where the matter in dispute shall exceed 200*l.*, by the officers and persons legally empowered to execute such processes within all the territories included in this our Grant, and for the producing and delivering into safe custody, for purposes of trial, any persons in their employ, or acting under their authority within the said territories, who may be charged with any criminal offence.

And we do also hereby require, that the said Governor and Company, and William M'Gillivray, Simon M'Gillivray and Edward Ellice shall, as soon as the same can be conveniently done, make and submit for our consideration and approval such rules and regulations for the management and carrying on the said fur trade with the Indians, and the conduct of the persons employed by them therein, as may appear to us to be effectual for gradually diminishing or ultimately preventing the sale or distribution of spirituous liquors to the Indians, and for promoting their moral and religious improvement.

And we do hereby declare, that nothing in this our Grant contained shall be deemed or construed to authorize the said Governor and Company, or William M'Gillivray, Simon M'Gillivray and Edward Ellice, or any person in their employ, to claim or exercise any trade with the Indians on the north-west coast of America to the westward of the Stoney Mountains, to the prejudice or exclusion of any citizens of the United States of America, who may be engaged in the said trade: Provided always, that no British subjects other than and except the said Governor and Company, and the said William M'Gillivray, Simon M'Gillivray and Edward Ellice, and the persons authorized to carry on exclusive trade by them on Grant, shall trade with the Indians within such limits during the period of this our Grant.

Given at our Court at Carlton-house the 5th day of December 1821, in the second year of our reign.

By his Majesty's command.

(L. s.)

*Bathurst.*

COPY of a LETTER from the Secretary of the Committee of Privy Council for Trade to the Governor of the Hudson's Bay Company.

Office of Committee of Privy Council for Trade,  
Whitehall, 20 January 1838.

Sir,

I AM directed by the Lords of the Committee of Privy Council for Trade to inform you, that they have received from Lord Glenelg your application on behalf of the Hudson's Bay Company for a renewal of the exclusive right of trading granted to the Company by the Royal License dated the 6th of December 1821, with the view of leaving the arrangement of the terms of such renewal to the determination of this Board.

Their Lordships not feeling themselves qualified, without further information than is contained in the papers transmitted to them from the Colonial Office, to settle this matter satisfactorily, I am directed to request that you will favour this Board with some account of the past and present state of the Company, with reference to its capital, and the dividends paid thereon, as well as any other circumstances that may assist the Board in coming to a decision upon the terms of the proposed License.

I am, &c.

## No. 12.

Letter from the Secretary of the Committee of Privy Council for Trade to the Governor of the Hudson's Bay Company,  
20 January 1838.

## No. 13.

Letter from the Governor of the Hudson's Bay Company to the Lords of the Committee of Privy Council for Trade,  
7 February 1838.

account of the past and present state of the Company, with reference to its capital, and the dividends paid thereon, as well as any other circumstances that may assist the Board in coming to a decision on the terms of the proposed License.

In accordance with that request, I now beg to lay before you the following particulars, which I have no doubt will satisfy you that the Hudson's Bay Company have every reason confidently to expect that Her Majesty's Government will be pleased to grant them a renewal of the License of exclusive trade of the country denominated "Indian Territories," beyond the limits of the Company's Charter, without any rent or pecuniary consideration being required for the same, nor subject to any other condition than that proposed by the accompanying letter from the Secretary of State for the Colonies.

The Hudson's Bay Company was incorporated in the year 1670, under a Royal Charter of Charles the Second, which granted them certain territories in North America described in that Charter, together with exclusive privileges of trade, &c. &c. Between the years 1670 and 1690, a period of 20 years, the profits appear to have been very large, as, notwithstanding losses sustained by the capture of the Company's establishments by the French in the years 1682 to 1688, amounting to 118,014*l.*, they were enabled to make a payment to the proprietors in 1684 of 50 per cent.; another payment in 1688 of 50 per cent.; and of a further payment in 1689 of 25 per cent.

In 1690 the stock was trebled without any call being made, besides affording a payment to the proprietors of 25 per cent. on the increased or newly-created stock; in the years 1692, 1694, 1696 and 1697, the Company incurred loss and damage, to the amount of 97,500*l.*, by other captures of their establishments by the French.

These losses appear to have rendered it necessary for the Company to borrow money, on which they paid six per cent. interest; they were enabled, nevertheless, in 1720, again to treble their capital stock, with only a call of 10 per cent. on the proprietors, and, notwithstanding another heavy loss sustained, by the capture of their establishments by the French under La Perouse, in 1782, they appear to have been enabled to pay dividends of from 5 to 12 per cent., averaging nine per cent., and showing, as nearly as I am able to judge from the defective state of the books during the past century, profits on the originally subscribed capital stock actually paid up of between 60 and 70 per cent. per annum from the year 1690 to 1800.

Up to this period the Hudson's Bay Company had no great cause for complaint of interference with their inland trade, and if they had been left unmolested, or been protected in the undisturbed possession of it, and of the rights and privileges vested in them by their Charter, they would in all probability have continued in the enjoyment of the advantages they were then deriving from their labours and exertions in those remote and little frequented wilds.

But about that period their rights of territory and trade were invaded by rival traders, which led to animosities, feuds and breaches of the peace, extending to the loss of lives, and considerable destruction of property, injurious to the native Indians, by reason of the unrestricted use of spirituous liquors and other demoralizing influence, consequent on opposition, and so prejudicial to the interests of the Hudson's Bay Company, that between 1800 and 1821, a period of 22 years, their dividends were, for the first eight years, reduced to four per cent.; during the next six years they could pay no dividend at all; and for the remaining eight years they could only pay four per cent.

During a long succession of years, while this destructive contest existed, very frequent applications for protection and redress were made by the Hudson's Bay Company to his Majesty's Government, as may be seen by reference to the records of the Colonial Office, but without avail, and scenes of bloodshed, robbery and demoralization, revolting to humanity, were allowed to pass without any effectual measures being taken to punish or prevent them, although the Hudson's Bay Company had every claim on Government to support them in their just rights of territory and trade.

At length, in the year 1821, when the violence of the contest had nearly exhausted the means of both parties, an arrangement was entered into between them, by which their interests became united, under the management of the Hudson's Bay Company.

The proprietary were then called upon to pay 100*l.* per cent. upon their capital, which, with the stock in trade of both parties in the country, formed a capital

capital stock of 400,000*l.*, on which four per cent. dividend was paid in the years 1821 to 1824, and from that time to the present, half-yearly dividends of five per cent., with a bonus of 10 per cent. from the year 1828 to 1832, and since that an average bonus of six per cent. until last year, when none was paid.

When your Lordships come to consider the very hazardous nature of the trade, requiring a degree of enterprise unknown to almost any other business, together with the heavy losses to which the parties interested therein were subjected for a long series of years, from the want of protection and support, which they had a right to expect from his Majesty's Government, I feel assured your Lordships will join me in opinion that the profits now arising from the business are no more than a fair return for the capital employed, and the services the Hudson's Bay Company are rendering the mother country in securing to it a branch of commerce which they are at present wresting out of the hands of foreigners, subjects of Russia and the United States of America, but which the Company would have been unable to prosecute, had they not been protected by the License of exclusive trade they now hold.

In looking at these profits, however, it should be borne in mind that Hudson's Bay stock, in like manner as in all other stocks, changes hands very frequently, and that the price of the stock is entirely regulated by the return it produces, thereby affording to the bulk of the present proprietors little more than six per cent. for their money.

In order to secure to the Company the enjoyments of the rights of territory and trade granted to them by their Charter, and to prevent a recurrence of the evils attendant on rivalry or competition in trade that existed for so long a time, and were productive of such disastrous consequences in so remote a country, that the difficulty of bringing offenders to justice amounted to an impossibility of giving effect to the laws, the Act of 1st & 2d Geo. 4, c. 66, was passed, and under the provisions of that Act, a License was granted to the Hudson's Bay Company for the exclusive privileges of trade in the districts of country denominated the Indian Territories for a term of 21 years.

That the peace and tranquillity of the country has been restored; that the abuse of spirituous liquors has been discontinued; that the condition of the native population is greatly ameliorated; and that the commercial interests of Great Britain are improving under the management of the Hudson's Bay Company, through the provisions of that Act, will appear manifest by the report of Mr. Simpson, the governor of the Company's territories, and their principal representative in North America, which accompanied my application of 10th February last to Lord Glenelg (*vide* page 12), copies of which are herewith transmitted for your Lordships' information.

The Act in question, while extending the criminal and civil jurisdiction of the courts in Canada to the Company's territories, held under their Charter, and to the Indian territories comprehended in the License of exclusive trade, contemplated the necessity of establishing courts of record, under the great seal, for the trial of criminal and civil offences, and for the appointment of proper officers to act in aid of such courts within the territories of the Hudson's Bay Company and the Indian territories.

Had the establishment of such courts been necessary, it would have subjected the Government to a heavy expense in the payment of Commissioners and in the maintenance of legal authority; and from the state of the country while open to competition, it is natural to infer, that such would have been necessary had the exclusive right of trade not been in the hands of the Hudson's Bay Company, who by their good management have rendered those measures uncalled for, thereby occasioning a considerable saving of expense, to which, under other circumstances, the mother country would have been exposed.

Hitherto the peace of the country has been maintained at a moderate expense to the Hudson's Bay Company; but the population of their principal agricultural settlement of Red River is now so much increased, amounting to upwards of 5,000 souls, principally Indians and half-castes belonging to all the interior tribes, who are very difficult of management, that it has become necessary to establish a more regular form of government and administration of the

laws

laws than heretofore. These measures are now in progress, and it is estimated that the attendant expenses will exceed 5,000*l.* per annum, which will be borne by the Company, although they might, with great propriety, call on Her Majesty's Government to relieve them from that charge.

By reference to Mr. Simpson's report, your Lordships will observe, that the Company are incurring other heavy expenses, which are augmenting from year to year, connected with that infant settlement, from which they derive no benefit in regard to trade, as there are no fur-bearing animals in that part of the country, but which in due time promises to become valuable to the mercantile interests of the mother country in the production of wool, flax, and other exports; while the population benefit by the change of habits of life that have been produced by a change of occupation, as the inhabitants have abandoned the chase, and now employ themselves in agricultural pursuits; while moral and religious instruction are afforded them by the Company's chaplains and schoolmasters.

This settlement, which affords so much benefit to the native population, requires the most vigilant attention on the part of the Company, as its inhabitants are of so mixed a character, and so little used to the restraints of civilized life, that mismanagement would inevitably lead to an outbreak among them, which would prove ruinous to their trade throughout the country.

Such outbreak had very nearly occurred last year, occasioning much apprehension in the minds of the Company, through the mischievous instigation of a man named "Dickson," styling himself "Liberator of the Indian Race," who succeeded in assembling a number of leading half-breeds, and proceeded with them to Red River, with the view of raising that population, so as to seize the Company's depôts and trading posts, and taking possession of the trade and country, as may be seen by reference to the accompanying correspondence with the Foreign Office.\* this I notice, in order to show how precarious the Company's tenure of their trade is, and how much they require the countenance and support of Her Majesty's Government, in affording them protection from the intrusion of strangers.†

The principal benefit the Company derive from the exclusive License of trade is the peaceable occupation of their own proper territory, from which they draw nearly the whole of the profits of their trade, and for the protection of which they have a right to look to Government in common with the rest of Her Majesty's subjects, as the trade of the country embraced in the Royal License is as yet of very little benefit to them, and affords greater advantages to the mother country in the employment of shipping, and in the revenue arising from imports and exports, than the Company derive from it.

The country denominated "Indian Territories," comprehended in the Royal License, is principally situated on the west side of the Rocky Mountains, the most valuable part thereof being the north-west coast, bordering on the shores of the Pacific.

For many years previous to the grant of exclusive trade to the Hudson's Bay Company, the trade of that coast was engrossed by the subjects of the United States of America and Russia, the only establishment occupied by British traders being "Astoria," afterwards named "Fort George," at the mouth of the Columbia River, while no attempt was made, through the means of shipping, to obtain any part of the trade of the coast; and so unprofitable was it in the years 1818, 1819, 1820, 1821 and 1822, and so difficult of management, that several of the leading and most intelligent persons in the country strongly recommended that the Company should abandon it altogether. The Company, however, felt that the honour of the concern would, in a certain degree, be compromised were they to adopt that recommendation, holding as they did under Government the License in question, and with a degree of energy and enterprise, which I feel assured your Lordships will admit, reflects much credit on themselves and on their officers and servants in the country, they directed their efforts so vigorously to that branch of the business, that they compelled the American adventurers, one by one, to withdraw from the contest, and are now pressing the Russian Fur Company so closely, that although that association is supported by its government to the extent of affording them the assistance of a strong military guard at each of their establishments, which, with their shipping,

\* As the Correspondence with the Foreign Office referred to does not relate to the renewal of the Grant to the Hudson's Bay Company, it has not been appended to these Papers.

shipping, are officered by naval and military officers of the Imperial army and navy, we are gaining ground upon them, and hope at no very distant period to confine them to the trade of their own proper territory.

The outlay and expense attending this competition in trade are so heavy, that the profits are yet but in perspective, none worthy of notice having been realized, the result showing some years a trifling loss, and in others a small gain, fluctuating according to the degree of activity with which the contest is maintained; but by energy and perseverance, we hope, in due time, to bring it to a more favourable issue, if the facilities of protection now required of Her Majesty's Government be afforded.

This trade, nevertheless, affords employment to about 1,000 men, occupying 21 permanent trading establishments, two migratory, trading and trapping expeditions, a steam vessel, and five sailing vessels from 100 to 300 tons burthen, all armed; and so dangerous is the trade, that I lament to say that it has not been unattended with loss of life.

In order to afford your Lordships an opportunity of forming some idea of the strength of opposition we have to contend against, and the difficulty we have to encounter in this branch of business, I beg to enclose copy of a memorandum\* I lately had occasion to hand to Her Majesty's Secretary of State for Foreign Affairs, in reference to the operations of the Russians in that quarter.

That the Hudson's Bay Company have the strongest possible claims upon Her Majesty's Government for a renewal of the exclusive License of trade, without any rent or pecuniary consideration whatsoever, cannot, I should hope, admit of a question after the explanation I have given; but when it is considered that the greater part of the country to which the License applies is Indian country, opened by treaty to citizens of the United States of America, as well as to British subjects, and, consequently, the License of exclusive trade does not protect the Company from the competition of citizens of the United States, it must appear evident that no substantial benefit is likely to arise from the boon we are soliciting, beyond the probable means of affording peace to our own territories, in the tranquillity of which Her Majesty's Government ought to feel as deep an interest as the stockholders of the Hudson's Bay Company.

If further proof be necessary that we are not in the undisturbed enjoyment of the fur trade, I beg to hand to your Lordships copy of applications we have lately had occasion to make to the Secretary of State for Foreign Affairs for redress of grievances sustained by the aggression of Russian authorities at Stikine, on the north-west coast, in the year 1834, by the violation of a treaty between Great Britain and his Imperial Majesty, involving a claim of 20,000*l.*, loss and damage actually sustained by the Hudson's Bay Company, for which, as yet, they have received no indemnification, although they confidently look to obtain such through the efforts of Her Majesty's Secretary of State for Foreign Affairs.

On the grounds of promoting discovery and science, we have likewise a strong claim on the countenance and support of Her Majesty's Government, as at this moment the Company have an expedition on foot, quite unconnected with any ulterior views towards any pecuniary advantage or benefit arising from trade, but solely for the honour of completing the survey of the northern coast of America, at a cost to the Company, before it can be accomplished, of several thousand pounds,—an object that has attracted the attention not only of Great Britain, but of Russia and other foreign powers.

I could enlarge on the claims of the Hudson's Bay Company to the privileges I am now soliciting at your Lordship's hands, but I should hope that sufficient has been already said to induce you to concur with the Secretary of State for the Colonies, in granting a renewal of the exclusive License of trade to the Hudson's Bay Company, on the conditions detailed in Mr. Stephen's letter to me of 19th September last, by Lord Glenelg's directions, already referred to, and with the conditions of which I am, on behalf of the Hudson's Bay Company, ready to comply.

Allow me to hope for an early and favourable consideration of this subject, as several important arrangements, in reference to the government of the country, the

---

\* As the Memorandum referred to does not relate to the renewal of the Grant to the Hudson's Bay Company, it has not been appended to these Papers.

the formation of a police corps, the mode of administering justice, and further measures for more effectually resisting the encroachments of the Russians on the British territory, all involving a heavy outlay of money, are now pending, and cannot be determined until I am favoured with your Lordship's decision on this subject.

I have, &c.

(signed) *J. H. Pelly*, Governor.

—No. 14.—

COPY of a LETTER from the Under-Secretary of State for the Colonies to the Governor of the Hudson's Bay Company.

Sir,

Downing-street, 3 February 1838.

No. 14.  
Letter from the  
Under-Secretary  
of State for the  
Colonies to the  
Governor of the  
Hudson's Bay  
Company,  
3 February 1838.

WITH reference to your letter of the 25th October last, I am directed by Lord Glenelg to inform you, that his Lordship, having attentively considered the draft of the Royal License, granting to the Hudson's Bay Company the exclusive trade with the Indians in certain parts of North America for a further period of 21 years, and the draft of the Covenant for the performance of the conditions contained in that License which you have transmitted, will be prepared, subject to one alteration, to advise Her Majesty to direct the issue of Her Royal License in the terms which you have proposed. The alteration to which I have alluded is in the final clause, respecting the erection of colonies within the territory comprised in the grant, for which Lord Glenelg would propose to substitute the following words:—

"Provided nevertheless, and we do hereby declare our pleasure to be, that nothing herein contained shall extend or be construed to extend to prevent the establishment by us, our heirs or successors, within the territories aforesaid, or any of them, of any colony or colonies, province or provinces, or for annexing any part of the aforesaid territories to any existing colony or colonies, to us in right of our Imperial Crown belonging, or for constituting any such form of civil government as to us may seem meet within any such colony or colonies, province or provinces; but with a view to the establishment of any such colony or colonies, province or provinces, or to the introduction of any such form of civil government, we do hereby reserve to us, our heirs and successors, full power and authority to revoke these presents, or any part thereof, in so far as the same may embrace or extend to any of the territories aforesaid, which may hereafter be comprised within any such colony or colonies, province or provinces as aforesaid."

For Correspondence  
relative to the  
Amount of Rent,  
vide Nos. 16 to 20

If you should be prepared, on behalf of the Hudson's Bay Company, to accede to this alteration, the only question which will remain to be decided will be the amount of the rent which, in conformity with the 2d clause of the Act 1st & 2d Geo. 4, c. 66, is to be paid by the Company after the expiration of the first period of 21 years from the date of their original grant. This is a question lying exclusively within the cognizance of the Lords Commissioners of the Treasury, and Lord Glenelg has accordingly referred it for their Lordships' consideration. You will probably receive from their Lordships an early communication on the subject.

I have, &c.

(signed) *Geo. Grey*.

—No. 15.—

COPY of a LETTER from the Governor of the Hudson's Bay Company to the Under-Secretary of State for the Colonies.

Sir,

Hudson's Bay House, 7 February 1838.

No. 15.  
Letter from the  
Governor of the  
Hudson's Bay  
Company to the  
Under-Secretary of  
State for the  
Colonies,  
7 February 1838.

I HAVE the honour to acknowledge your letter of 3d instant, with reference to my letter of 25th October, wherein you say that you are directed by Lord Glenelg to inform me, "that his Lordship having attentively considered the draft of the Royal License, granting to the Hudson's Bay Company the exclusive trade with the Indians in certain parts of North America for a further period of 21 years, and the draft of the Covenant for the performance of the conditions contained in that License, will be prepared, subject to one alteration, to

to advise Her Majesty to direct the granting of the Royal License on the terms which you have proposed."

And further saying, that the alteration to which you "have alluded is in the final clause, respecting the erection of colonies within the territory comprised in the grant, for which Lord Glenelg would propose to substitute the following words," &c. &c.

In reply, I beg to say I have considered the alteration proposed by Lord Glenelg, and that I am prepared, on behalf of the Hudson's Bay Company, to accept the License, subject to the alteration in question.

I have, &c.  
(signed) *J. H. Pelly.*

— No. 16. —

COPY of a LETTER from the Under-Secretary of State for the Colonies  
to *A. Y. Spearman, Esq.*

Sir,

Downing-street, 3 February 1838.

I AM directed by Lord Glenelg to inform you, that in the month of February 1837, his Lordship received from the Hudson's Bay Company the accompanying letter, soliciting a renewal of the Grant of exclusive trade, which they hold under the provisions of the Act 1 & 2 Geo. 4, c. 66.

This letter having been referred for the consideration of the Lords of the Committee of Privy Council for Trade, their Lordships have expressed their opinion that, adverting to the peculiar nature of the trade in question, the application of the Hudson's Bay Company should be complied with.

I enclose for the information of the Lords Commissioners of the Treasury, copies of the correspondence on this subject, which has passed between this department and the Board of Trade.

You will observe that in renewing the Grant to the Hudson's Bay Company, it is intended to insert in that instrument a clause authorizing Her Majesty to erect, within the limits of the Grant, any new colonies or provinces which Her Majesty may be disposed to establish there; and that if any such province or colony should be so established, the Charter should thenceforth cease to be in force, so far as respects the territories which may be included within the limits of the new colony.

This condition having been communicated to the Governor of the Hudson's Bay Company, he has forwarded to Lord Glenelg the draft of a Charter, herewith enclosed, embracing a provision to that effect; as, however, this provision does not appear to be correctly expressed, Lord Glenelg proposes to substitute for it one in the following words:

"Provided nevertheless, and we do hereby declare our pleasure to be, that nothing herein contained shall extend, or be construed to extend, to prevent the establishment by us, our heirs or successors, within the territories aforesaid, or any of them, of any colony or colonies, province or provinces, or for annexing any part of the aforesaid territories to any existing colony or colonies to us, in right of our Imperial Crown, belonging, or for constituting any such form of civil government as to us may seem meet, within any such colony or colonies, province or provinces; but with a view to the establishment of any such colony or colonies, province or provinces, or to the introduction of any such form of civil government, we do hereby reserve to us, our heirs and successors, full power and authority to revoke these presents, or any part thereof, in so far as the same may embrace or extend to any of the territories aforesaid, which may hereafter be comprised within any such colony or colonies, province or provinces as aforesaid."

Assuming that this alteration will be accepted by the Hudson's Bay Company, another question remains to be decided—that, namely, of the rent to be demanded from the Company in conformity with the second section of the Act 1 & 2 Geo. 4, c. 66, after the expiration of the period of 21 years, for which their first Charter was granted: this is a question lying especially within the province of the Lords Commissioners of the Treasury; and I am therefore to request that you will move their Lordships to enter into communication with the Hudson's Bay Company for the purpose of concluding a satisfactory adjustment of it.

## — No. 17. —

COPY of a LETTER from *A. Y. Spearman, Esq.*, to the Under-Secretary of State for the Colonies.

No. 17.  
Letter from  
*A. Y. Spearman,*  
Esq. to the Under-  
Secretary of State  
for the Colonies.  
8 March 1838.

Sir,  
Treasury Chambers, 8 March 1838.  
THE Lords Commissioners of Her Majesty's Treasury having had under their consideration your letter, dated 3d ultimo, with the enclosed application from the Hudson's Bay Company, soliciting a renewal of the Charter of exclusive trade which they hold under the provisions of the Act 1 & 2 Geo. 4, c. 66, I have it in command from the Lords Commissioners of Her Majesty's Treasury to request you will state to Lord Glenelg, with reference to the suggestion which his Lordship has submitted to this Board that they should enter into communication with that Company respecting the amount of rent which should be paid in conformity with the second section of the said Act for the proposed extension of their exclusive privilege of trading in the North-west territory of North America, that my Lords apprehend that no further information respecting the establishments or proceedings of the Company can be obtained than is afforded by the statements which have been submitted to his Lordship on behalf of the Company; and that as his Lordship has been enabled to determine on the expediency of renewing their exclusive privilege, he will be more competent than their Lordships to form an opinion as to the utility and value of the Company's establishments for the suppression of crime among the hunters and traders, the improvement and civilization of the Indians, and the maintenance of the British influence in the territories to which the privilege in question extends, or the charges which the Company may incur for these purposes, and as to the propriety, with reference to these considerations, of demanding rent from the Company, or of granting the Charter which they apply for, with the reservation of the nominal rent only, provided for in the draft Grant which accompanied your letter.

I am directed, therefore, to request you will move Lord Glenelg to favour my Lords with a communication of the opinion which his Lordship may entertain on the subject.

I am, &c.

6 March.

Sir,  
Downing-street, 14 March 1838.  
I AM directed by Lord Glenelg to acknowledge your letter of the 8th inst., referring for his Lordship's decision the question of the rent to be paid by the Hudson's Bay Company for the Royal License of exclusive trade in certain parts of North America. In reply, I am to transmit to you herewith a copy of a letter on the same subject from the Secretary to the Board of Trade, and to inform you that Lord Glenelg concurs in the opinion of the Lords of the Committee of Privy Council for Trade, that the rent to be demanded from the Hudson's Bay Company should be merely nominal. I am, therefore, to request that you will move the Lords Commissioners of the Treasury to instruct their solicitors to co-operate with the proper officers of the Company in carrying the proposed arrangement into execution, with a due observance of all the necessary forms of law, and with a reference to the suggestions contained in my letter of the 3d ult.

6 March 1838.

Sir,  
Office of Committee of Privy Council for Trade,  
Whitehall, 6 March 1838.  
WITH reference to your letter of the 15th August 1837, on the subject of the proposed License of exclusive trade to the Hudson's Bay Company, I am directed by the Lords of the Committee of Privy Council for Trade to request that

## TO THE CHARTER OF THE HUDSON'S BAY COMPANY.

31

that you will inform Lord Glenelg that they have settled the terms of such License with the Governor of the Company, pursuant to his Lordship's desire, and in accordance with his Lordship's views, as expressed in your above-mentioned letter.

The accompanying draft Grant of License and Covenant have been submitted on behalf of the Company to this Board, and the same being, as far as their Lordships can judge, unexceptionably worded, their Lordships would recommend Lord Glenelg to obtain Her Majesty's assent to the Grant, upon the Covenant being duly executed by the Company, and after both instruments shall have received the approval of the law officers of the Crown. Their Lordships have only further to observe, that they have communicated with Her Majesty's Commissioners of Woods and Forests on the question of the rent to be made payable to the Crown under the License, and the circumstances of the case having been laid before the Commissioners, they concurred with this Board in the propriety of such rent being only nominal.

I am, &c.

## Enclosure in No. 21.

COVENANT by the Hudson's Bay Company for performance of Conditions and Reservations contained in the Crown Grant of even date.—(Dated 30 May 1838.)

Encl. in No. 21.

WHEREAS Her Majesty hath, by an instrument under the hand and seal of the Secretary of State, the Right honourable Charles Lord Glenelg, bearing even date herewith, granted and given Her Royal License to us, the Governor and Company of Adventurers of England, trading into Hudson's Bay, and our successors, the exclusive privilege of trading with the Indians in all such parts of North America to the northward and to the westward of the lands and territories belonging to the United States of America as shall not form part of any of Her Majesty's provinces in North America, or of any lands or territories belonging to the United States of America, or to any European government, state or power, and hath secured to us, the said Governor and Company, and our successors, the sole and exclusive privilege, for the full period of 21 years from the date of the said grant, of trading with the Indians in all such parts of North America as aforesaid (except and with such restrictions as hereinafter excepted), and hath thereby declared that no rent shall be required or demanded for or in respect of the said Grant or License, or any privileges given thereby, for the first four years of the said term of 21 years, and hath thereby reserved to Her Majesty, Her heirs and successors, for the remainder of the said period of 21 years the yearly rent of 5s., to be paid by us, the said Governor and Company, and our successors, on the 1st day of June in every year, into Her Majesty's Exchequer, on account of Her Majesty, Her heirs and successors: We, therefore, the said Governor and Company of Adventurers of England trading into Hudson's Bay, do hereby covenant and bind ourselves and our successors, that we and they shall yearly and every year, and on every 1st day of June, from and after the expiration of the first four years of the said term of 21 years, and thenceforth during the continuance of the said Grant and License, pay or cause to be paid the said yearly rent of 5s. into Her Majesty's Exchequer, and on the account of Her Majesty, Her heirs and successors, and that we and our successors shall, during the period of the said Grant and License, keep accurate registers of all persons employed by us or our successors in any parts of North America, and shall once in each year return to Her Majesty's Secretary of State accurate duplicates of such registers; and we, the said Governor and Company, do hereby bind ourselves and our successors in the penal sum of 5,000*l.*, that we will, as far as in us may lie, ensure the due execution of all criminal and civil processes by the officers and persons legally empowered to execute such process within all the territories for the time being included in the said grant, and for the producing or delivering into safe custody for the purpose of trial of any person in our employ or acting under our authority within the said territories who may be charged with any criminal offence; and we do also hereby covenant that we will, as soon as the same can be conveniently done, make and submit to the consideration and approval of Her Majesty such rules and regulations for the management and carrying on the said fur trade, and the conduct of the persons employed by us therein, as have appeared or may appear to us to be most effectual for gradually diminishing and ultimately preventing the sale or distribution of spirituous liquors to the Indians, and for promoting their moral and religious improvement. Witness the seal of the said Company the 30th day of May 1838.

By order of the Governor and Committee,

## EMIGRATION—CANADA.

(No. 34.)

DESPATCH from the Right Hon. Sir CHARLES BAGOT, G.C.B. to Lord  
STANLEY.

MY LORD,

Government House, Kingston, 17th February, 1842.

I HAVE the honour to transmit to your Lordship herewith copies of the Reports made to me by the emigrant agents for the two divisions of this province, and by the medical superintendent at Grosse Isle in respect to the emigration to Canada during the last season. These documents did not reach me until after my Despatches for the last packet had been sent off.

Your Lordship will observe that the result of the emigration during the season of 1841, was in every respect satisfactory; that there was less sickness or destitution than usual, notwithstanding the great increase in the numbers; and that employment had been found for all before the winter set in. The absence of sickness is to be attributed in great measure to the improvement in the habits of the class from which the great mass of the emigrants is drawn, and to a considerable extent also, to the favourable weather which most of the vessels met with. Much is also no doubt due to the stricter supervision latterly exercised over emigrant vessels by the Government agents both in England and in Canada.

My predecessor entered so fully into the subject of emigration in his Despatches of the 12th October 1840, and 26th January 1841, that there remains but little for me to suggest, either in respect to the improvement of the law or the manner in which it should be carried into operation. I would, however, draw your Lordship's notice to the suggestion of Mr. Buchanan, that the penalty for carrying more passengers than the law allows, should be calculated on the excess of the passengers, and not be imposed in one sum. According to the present system as Mr. Buchanan has pointed out, the infraction of the law may, notwithstanding the penalty, be very advantageous to the ship-owner, and more so, of course, in proportion to the extent of the infraction.

The emigration of the last year strikingly illustrates the advantage to the emigrant of an early departure from the British coast. Not only is he thereby enabled to settle himself more completely before the approach of the following winter, but he will generally experience a shorter passage, and arrive in Canada at a more healthy season. Your Lordship will observe that to this fact Doctor Douglas attributes to a considerable extent the absence of sickness among the emigrants.

The expenses of the emigration within this province during the past season did not exceed 6,000*l*. The greater part of this sum was employed in conveying destitute emigrants from Quebec and Montreal to places where their labour would be required, the remainder in defraying the salaries of the local agents with the exception of the agent at Quebec, who is paid from the Civil List. The vote of 3,500*l*. obtained from the legislature during the last session, and the sum of 1,500*l*. granted, as your Lordship informs me, by the Imperial Parliament, will nearly cover the whole of this expenditure. The remainder, which will not exceed 1,000*l*., will be provided for by the legislature at its next meeting.

I observe that the question of emigration is engaging much attention in England, and has been pressed on the notice of Her Majesty's Government from several influential quarters. I presume, however, that it would not be the intention of Her Majesty's Government to pay any part of the passage of emigrants proceeding to this province. The expense of such an arrangement would be very great, and I agree with Lord Sydenham in thinking that it would be neither necessary nor expedient. But the plan proposed by Lord John Russell, viz. that the Government should pay the tax on such emigrants as should come out under their auspices, appears to be both practicable and judicious. The fund thus created, together with the proceeds of the tax on those who come out without Government assistance, with the annual grant for agency, will probably suffice for the emigration and quarantine expenses of the present year. But, if not, I anticipate no difficulty in

For Lord Sydenham's Despatches of the 12th Oct. 1840, and 26th Jan. 1841, *vide* Correspondence relative to Emigration in Canada, presented to Parliament by Her Majesty's Command, 1841, pp. 35 and 71.

*Emigration.*  
CANADA.

obtaining any additional sum that may be required from the legislature. Should the Imperial Parliament grant any further sum towards emigration, I would suggest the propriety of employing at least a portion of it as suggested by Lord Sydenham, in placing a Government agent, who should also act as medical attendant, on board each vessel containing a large number of emigrants.

During the past season great difficulty was found in procuring employment for emigrants who came here merely as labourers without any previous knowledge of agriculture or of any mechanical trade. Under ordinary circumstances the demand for unskilled labour is exceedingly small, and I should be disposed to dissuade rather than encourage the emigration of that class. But during the approaching season so many public works will I trust be in operation that there can be no fear of a want of employment for all who are able to work. I have already devoted a great deal of attention to this subject, and assuming that the loan to be guaranteed by Great Britain will be raised at an early date, I expect that in the course of the summer a considerable progress will be made in the improvements of the St. Lawrence navigation by the completion of the Cornwall Canal; the commencement of a canal between Coteau du Lac and the Cascades; the completion of the lock and dam at St. Ann's Rapids, and the widening of the Lachine Canal. The improvements on the Welland Canal are already in progress, and those in Lake St. Peter and on the Bay of Chaleurs and Gosford Roads will be commenced as soon as the season will permit. These, with the completion of the Montreal and Quebec Roads, and with the local employment which will be provided by the several district councils, will absorb all the emigrants who can be expected. It is probable also that some other of the public works, especially the erection of bridges on the main Province Road, will be completed this year. The great bulk however, of the labour required on this work, will be skilled labour, that of carpenters principally, and masons.

The emigration during the past year from this province to the United States has been comparatively small; and there seems reason to believe that it has been balanced by the immigration from the United States. Those who went from this were principally persons whose relations were settled in the United States, and who, coming out to join them, had taken the route of the St. Lawrence, on account of its superior cheapness.

## REPORT ON EMIGRATION TO CANADA—1841.

BY MR. BUCHANAN.

Office of Her Majesty's Chief Agent for the  
Superintendence of Emigration in Canada,  
Quebec, 31st December, 1841.

*Emigration.*  
CANADA.

Sir,

I HAVE the honour to lay before your Excellency, for the information of Her Majesty's Government, the following Report of the Immigration to this province during the past season.

It is gratifying to me to be able to inform your Excellency that a considerable increase has taken place in the number of emigrants from the United Kingdom this season over last year.

On reference to paper No. 1, page 11, of the Appendix, it will be seen that the total number recorded at this office this year is 28,086, being an increase over 1840 of 5,852. Paper No. 2, gives an abstract return of the number of emigrant vessels, with the average length of passage, and the number embarked, distinguishing males from females, as also adults from children; also the number of deaths and births during the voyage, and in quarantine, and the actual number landed in the colony.

It is highly satisfactory to find that the general condition of the emigrants during the voyage has been healthy. The deaths at sea, and until arrival, numbered 194, five-sixths of whom were young children, principally infants.

Paper No. 3, page 12, shows a detailed statement of the ports whence the emigrants sailed, with the particular number from each port and country, viz., from England, 5,970; from Ireland, 18,317; from Scotland, 3,559; and from lower ports, 240.

Paper No. 4, page 12, exhibits a comparative statement of the emigration to these provinces since the year 1829, a period of 13 years, amounting in the aggregate to 321,807 souls.

It is my painful duty to record the loss from shipwreck of three vessels with emigrants, bound to this port during the past season, by which 189 lives were unhappily lost. The barque *Minstrel*, Captain Outerbridge, from Limerick, with 141 passengers, and 15 of a crew, were wrecked on the 18th May, on Red Island Reef; only 8 persons were saved; 4 passengers, and 4 of the crew. The survivors succeeded in reaching White Island, and were taken off by Captain McIntire, of the ship *Wellington*, and brought to Quebec. The second vessel was the *Breeze*, Captain O'Donnell, from the same port, wrecked on the 12th May, on the fatal island of Scatarie, with 180 passengers, and 15 of a crew. The vessel was a total loss, but the passengers and crew were saved, and brought up here in a schooner. The third vessel was the barque *Amanda*, Captain Davis, also from Limerick, on her second voyage. She was lost on Little Metis, with 39 passengers, and 18 of a crew, on the morning of the 29th September. The master, 5 of the crew, and 10 passengers, were all that were saved, after having been 12 hours on the wreck. The remaining 41 were drowned. The survivors came up in safety to Quebec.

I am happy in reporting to your Excellency that the health of the emigrants this season after arrival in the river, has been much more satisfactory than last year. I beg to refer to Paper No. 5, page 13, which exhibits a copy of the returns received from the medical superintendent, of the admissions and deaths at the quarantine station, as also a copy of the return received from the medical officer in charge of the marine hospital in this city. By the former, it appears that there were 290 admissions, and 38 deaths; and by the latter, 370 admissions, and 20 deaths; making a total of 660 admissions, and 58 deaths, over two-thirds of whom were children.

By the reports received from the different Government agents throughout the province, it will be seen that the number of deaths has also been diminished; although the emigrants in the western part of the province have been subjected to a good deal of sickness from ague, a disease which, though seldom fatal, is productive of extreme debility, and tends to depress the spirits, and damp the exertions of those suffering under its effects.

It is a source of much satisfaction that I am able to report to your Excellency, that fewer cases of distress, caused from want of sufficient food during the voyage, existed this season. I attribute this favourable change to the increased exertions of the Government agents at the out-ports in the United Kingdom, and to a closer and more strict attention being paid to the quantity of provisions put on board by the passengers. Although in some instances emigrants arrived here in a suffering state from want of sufficient food, yet there has been no instance of that extreme and painful want which I have had occasion to report on during the last and preceding years.

The cases of the following vessels are alluded to in my weekly reports, viz., brig *Hope*, from Dublin; *Warrior*, from Killala; *Clifton*, from Cork; *Astrea*, from Dublin; brig *Bruce*, from Newport; and *China*, from Limerick,—particulars of all which will be found as stated above in the Appendix, at pages 18, 19, and 20. In the case of the latter vessel (the *China*) from Limerick, a large proportion of the passengers' provisions consisted of potatoes, which from improper stowage, and the damp and heat of the vessel's hold, soon decayed, and became unfit for use,—whereas, had they been properly stowed, the passengers would have had a surplus on arrival here. From this cause many families landed in distress, having expended all their money in purchasing food from the master. This has been a fruitful source of complaint for several years past, and to it may be attributed the distressed state in which so many poor families landed here, as well as the addition to the amount of assistance which the Government is obliged to extend every season.

*Emigration.*  
CANADA.

The best remedies which suggest themselves to prevent a recurrence of this evil is first, one which would place the principal and bulky articles of provisions under the immediate control and superintendence of a proper and responsible person on board each vessel, who might also act as surgeon.

I have taken the liberty of bringing this plan under your Excellency's notice, as it was one suggested by the late and respected Governor-General Lord Sydenham, in his Despatch, forwarding my Report of last year, dated 26th January, 1841.

Secondly, a measure which would oblige the ships to furnish a portion of the provisions necessary for the voyage, for which an extra charge should be made on the passengers. This plan I had the honour to recommend in my report of last year, in the suggested amendment of the third clause of the present Passengers' Act, a copy of which will be seen at page 28 in the Appendix. The adoption of either of these plans would be the means of securing the passenger from the miseries arising from want of the necessaries of life, and protecting them from the heavy contributions which shipmasters so frequently exact from those who may require supplies.

Statements have also been made to this office by the passengers of several vessels, complaining of a short supply of water. This deficiency of water in the case of the *Grace*, from Liverpool, is stated in my weekly report at page 16, was caused by leakage, as the quantity put on board at Liverpool would otherwise have been ample. In the *Hector* from the same port, the passengers were also on short allowance; (see page 20, weekly report). It would appear that the deficiency in this case was caused from waste, and want of proper attention on the part of the master.

In the case of the *Wanderer*, from Glasgow, the passengers presented a petition, a copy of which will be seen at page 26 of the Appendix. They appear to have been on a restricted allowance from the commencement, of three and a-half gallons per week; and as the owner of the vessel, Mr. McCall, stated to them as the vessel got under weigh, that this quantity was all they could be allowed during the passage, they were necessarily prevented from going on shore for redress. They are desirous that their representation may protect others from a recurrence of this evil.

I am gratified in being able to report to your Excellency that complaints during the past season against the improper conduct of the passenger agents in the United Kingdom are more rare than formerly. Grievances do still, in some degree, exist, and will continue until the amendments required in the present Imperial Passenger Act are effected. I had the honour in my report of last year, to bring under the consideration of our late Governor-General, a few amendments to the present Act. Amongst them he was pleased to express his approbation of those offered in the 1st, 6th, 18th, and 20th clauses, a copy of which will be seen in the Appendix, at page 28, and as the subject may now be under the consideration of Her Majesty's Government, I beg respectfully again to allude to this important matter.

Several vessels this season have been fined by the Collector of the Customs at this port, for an infringement of the second clause of the Imperial Passenger Act, in carrying an excess of passengers. It is evident, in many instances that it is done intentionally, as the highest penalty is only 20*l.* sterling. I refer to the case of the ship *Lord Cochrane*, from Tralee, the particulars of which are given in my weekly report, at page 15 of the Appendix. This vessel arrived here with an excess of 60 adult passengers, which, allowing the master of the vessel the usual rate of passage from Ireland, 40*s.* sterling each, would have yielded 100*l.*, after paying the fine imposed by the law, which, as it now stands, is, in fact, offering a premium for its own infringement. I would respectfully represent, that if a penalty of 3*l.* or 5*l.* per head, for all over the number, was fixed by law, the practice would soon be put a stop to.

The number of emigrants who have received parochial aid or assistance from their landlords to emigrate this season, considerably exceeds that of 1840, and amounts to 2,124, of whom from England there were 807; Ireland, 546; and from Scotland, 771. Those from England, with the exception of 110 Irish emigrants from Liverpool, aided by the Earl Fitzwilliam, from his estate in Wicklow, were sent out chiefly under the sanction of the Poor Law Commissioners, and were (as well as all those who have emigrated during these several years past under the same authority) well and amply provided for. They are chiefly from the ports of London, Gravesend, and Rye; and were supplied with sufficient means to enable them to proceed to their destination, or where their labour might be required. Those from Ireland consisted chiefly of small cotters, whose landlords provided them with sufficient assistance to procure a passage to this port. Many landed very poor, and were dependent on immediate employment for their support; but others had sufficient means to enable them to reach their friends. Those who were unable to proceed further, and were desirous of employment, procured it here without difficulty, and soon earned sufficient to carry them further up the country to their friends.

The Scotch emigrants were, I regret to say, not so well provided, and many of them were quite unsuited, by their previous mode of life, to succeed in a country where agricultural employment is their chief dependence. They are principally from Glasgow and Paisley, and landed here, many in great distress, and all very poor. From the former port there were 663, chiefly weavers, and a few mechanics; the latter have generally done well. They are members of the different emigration societies, and have been enabled to emigrate by public subscriptions and weekly contribution made by each family, by which means they were barely able to procure a passage and the necessary provisions for the voyage. They consequently landed here in a destitute state, and depending on immediate employment for the support of their numerous families. They all appear to have left their homes under the impression that they would be supported and forwarded to any section of the province they wished to settle in, at Government

expense, and that if they could only reach this port, all their wants would be provided for. I had the greatest difficulty in making them understand that all the Government would undertake to do for them would be to put them in the way of obtaining employment, which I offered to them in this neighbourhood, and that they must depend on their own industry for support. Should employment not be procured here, I stated that they would be assisted to proceed to other places where it would be obtained. Some few families, numbering nearly 60 persons, remained here and worked for two or three months on the roads, at 2s. 9d. and 3s. per day. They are now settled on land in the flourishing townships of Leeds and Ireland, about 50 or 60 miles from this city, and are in a fair way, from their own industry, of being in a few years independent. I have the gratification at present to know that their families are above want. Their success has been promoted by some influential Scotch gentlemen in this city, who, seeing their willingness and industry, have assisted them with provisions and a few other necessities to enable them to get through the winter. With the exception of this party all the others were determined to proceed further up the country. Toronto appears to be their halting place. A few had sufficient means to carry them so far, and others disposed of their effects to enable them to reach Montreal, where some obtained employment, but the greater part were forwarded at Government expense to Toronto. By a report received from the Emigrant Agent in that city, forwarded to me by Mr. Hawke, it appears that the Scotch weavers are the only immigrants this season who appear to have been unsuccessful. An extract from Mr. Hawke's report will be found in the Appendix, page 23. From their want of knowledge of agricultural labour these immigrants were of little or no use to the farmer; and in the absence of any public work in that section of the province they found great difficulty in obtaining employment. Another party of Scotch immigrants, who landed in an equally, if not in a more, destitute state, were those in the brig *Lady Hood*, and ship *Charles*, from *Thurso*. They are of the agricultural class, and consist of 38 families, 223 persons, from the Western Isles, principally from *Lewis*, and only two or three of them speak English. Owing to a long and tedious passage they landed here in great distress from want of provisions. They all proceeded to settle in the townships of *Bury* and *Lingwick*, in the eastern townships, and appear to have emigrated on the invitation of a party of their countrymen, who came out a few years since, and who, although they landed poor and friendless, are now doing well, and placed in comfortable circumstances. Owing to the lateness of the season when this party arrived (September), and their utterly destitute and unprovided state, depending entirely on employment for the support of their families, and feeling for their anxiety to reach their destination, I furnished them with a free passage to *Port St. Francis*, and a few days' provisions, at Government expense. Appeals have been made in their behalf by the Emigrant Association of the *St. Francis's* district to their countrymen in this city and *Montreal*, which have been most liberally responded to, in order to enable them to get through the winter. Had these people arrived a month or two earlier in the season, when employment was abundant, they would have no doubt been able to get through the winter with comparative ease, as during the harvest months employment was very abundant in that section of the province, and labourers in great demand.

It is of the greatest importance that the advantage of arriving in the colony at as early a period in the season as possible should be impressed on the labouring portions of the emigrants who come out at their own expense, and also on the landholders who wish to give assistance to their poor tenantry to emigrate, as everything depends on the time of their arrival here. Those who sail from the United Kingdom in the months of April and May arrive in time to take advantage of the spring and summer work. They have thus time to look about them, and secure a home for their families, against the coming of winter. On the other hand, as in the instance of the last mentioned party, if emigrants arrive at a season when nearly all employment ceases, the winter approaches before they can get themselves and their families into the interior of the country, and they are thrown on the benevolence of the colonist, or have to drag through a long and severe winter, depending on charity for support. This is equally an injustice to the poor emigrant, and a serious tax on the colonist, which might be avoided in a great measure by leaving their homes at a proper season. By sailing at an early period in the year they can calculate on a more expeditious voyage, which is an all-important consideration. I beg leave to submit a table, which will be found at page 14 of the Appendix. This will show an accurate statement of the sailing of emigrant vessels during the season, with the number of days, enumerating the longest, the shortest, and the average passages during the summer. To the unprovided state and late arrival of emigrants in the province, and to the other causes which I have alluded to above, many of which are set forth in my weekly reports during the past season, I must attribute, in a great measure, the expense incurred by the different agencies in the province. It is, nevertheless, gratifying to know, that there has been a considerable decrease in the number of those assisted this season. In paper No. 6, page 13, of the Appendix, is a statement of the number of destitute persons who received assistance at this port during the past season, numbering 1,904 persons, at a charge of 311l. 12s. 7d. The expense incurred at *Montreal* agency is much greater, a statement of which I am unable to furnish at present, not having received the report from the agent for that city. The increased expenditure may, however, be attributed to the following cause.

The charge of transport for an adult emigrant from this port to *Montreal*, with all his luggage, is only 2s. 6d. currency; children under twelve years half price; and under three years free. This low rate is caused by opposition steamers. Whereas, at the early part of the season, they commenced running at 5s. each, which continued until the middle of June. Many poor families are able to pay their fare as far as *Montreal*, but are prevented proceeding further, owing to the much increased rate of passage thence to *Bytown* and *Kingstown*; the

*Emigration.*  
CANADA.

charge to Bytown being 8s., and two per cent. for luggage. They may be able to meet the first expense, but their funds will not admit of their proceeding further.

The emigration to these provinces may be divided into three classes. First, Those who have sufficient means and a destination in view. All they require is correct information as to the best and most expeditious route to their respective localities. Secondly, Those who emigrate (a very numerous class of late years) to join friends and relations already settled in the province, but whose limited means do not enable them to reach their destination. These persons require assistance, as, with very few exceptions, they become actual settlers in the province, and cannot be induced to deviate from the route with which they have been furnished before leaving their homes. The application of public funds cannot, I consider, be better or more judiciously applied than in assisting persons of this class. The third class are the indigent, who have no peculiar destination, and who have, by the greatest exertions, and frequently by appeals to public charity, been enabled to scrape together a sufficient sum to pay their passages and provide a scanty store of provisions for the voyage. The last class, consequently, must either be provided with employment or assisted to parts of the country where it may be procured. Very many of this description of persons are not fit for farm servants, and such work as they have been accustomed to must be provided either by private persons or by Government.

This difficulty has in a great measure been removed during the past season, as the public improvements in this neighbourhood and Montreal have furnished employment to a large number of poor of this last class. I quite coincide in the opinion expressed by Mr. Hawke, that we receive in Canada quite too large a proportion of mere labourers, that is, persons who can only use the spade and pickaxe. Unless when some extensive public work is in operation, there is much less demand for persons of this class in the province than people at home are generally aware of; and these form the principal mass of emigrants who proceed to the United States.

Although I have represented to your Excellency that a large portion of the emigrants have arrived poor and in distress, still the number of those whose intelligence and proportionate wealth will add to the value of our colonial population is incomparably greater; and I consider, on the whole, that the emigration of the past season presents the most favourable aspect. The general character and conduct of the emigrants is gratifying beyond description, and I have not heard of a single instance of improper conduct or crime from any of the different agencies throughout the province. This is greatly to be attributed to the increasing influence of the temperance societies, which, I am happy to state, are extending throughout this province.

I here take the opportunity of alluding with much satisfaction to the condition in which a party of emigrants arrived, who were sent out by Neill Malcolm, Esq., from his estates in Argyleshire, numbering 52 persons (see weekly report, page 19). These people were abundantly provided during the passage, and I had instructions to advance them a sufficient sum to enable them to join their friends settled in the London district. This gentleman's liberality and kindness will long be remembered by this party.

In paper No. 7, page 13 of the Appendix, I have set forth the distribution of the immigrants of the past season, as near as they can possibly be ascertained. From the returns received from Mr. Hawke, which will be seen at page 31 of the Appendix, it appears that near 19,000 have proceeded to the western section of the province, of whom about 1,200 have gone over to the United States. I estimate the total number who may have left the province at from 3,000 to 4,000; but the exact amount it is impossible to ascertain. They are, with few exceptions, persons who have friends and relations already settled in the United States, and whom no inducement which could be offered would persuade to remain in the colony. The voluntary emigration to that country has this season much decreased, as, owing to the financial distress in the neighbouring republic, very few of their public works are in operation, and consequently there is a decrease in the demand for labour. It is, however, satisfactory to learn that we every season receive large numbers from the United States, and among them many of the better class, who either have emigrated by that route or have been residing in the republic for a few years.

In support of these statements, I beg to refer to extracts from letters received from Mr. Hawke, at page 22 of the Appendix. The agent at Toronto in his report states the number who left that port for the United States at 280 persons, and that 620 arrived at his agency from thence.

By a report received from the agent at Bytown, which will be seen at page 25 of the Appendix, I beg to direct your Excellency's attention to the favourable and advantageous condition which those emigrants enjoy who have been induced to settle in that highly advantageous (but still to the emigrant imperfectly known) section of the Ottawa country. I consider that no portion of the province possesses greater facilities, or offers more encouragement to the industrious immigrant than the Ottawa river. This being the great lumbering dépôt of the country, the farmer is certain to find a ready sale and a good market at his door for all the surplus produce he may be able to raise. To the poor but industrious labourer it also presents a sure and certain field for employment at all seasons of the year—a most important consideration. The thousands of settlers throughout that section of the country in prosperous circumstances are living proofs of the truth of this fact. It having come to my knowledge that labourers were in demand in this district, I forwarded in the month of October eleven poor families, in all eighty persons, who had been employed during the summer on the public works; but, owing to their large families, could not, living in town, do more than support themselves; and who were desirous of proceeding into the country to seek employment for the winter. I sent on these people to Bytown at Government expense, and furnished them

with recommendations to influential persons who took an interest in the establishment of immigrants in that part of the province. By the accounts which I have received, all these families who followed the advice given them have done well, having procured immediate employment on their arrival. They are chiefly settled in Clarendon and Litchfield, about 70 miles west of Bytown. Any facilities which Government may afford poor immigrants to proceed to settle in the Ottawa country are well bestowed, as they are certain in the course of a year or two to become permanent occupiers of land. Nor are they likely to be seduced or imposed on by the alluring though false reports circulated by those who wish to lead them to the United States. And it may be stated here, without fear of contradiction, that every immigrant family settled in this province, after the second year, becomes a consumer of British manufactures to a greater or less extent.

The number of families located on the Lambton and Kennebec road settlement is twelve, principally old residents in the country. At the early part of the season, it was utterly impossible for persons desirous of settling there to reach the land, for want of a road; this, however, is now obviated, as a good road has been opened from the Kennebec to Lake St. Francis, a distance of 34 miles; and I have no doubt that a considerable addition to this settlement will be made next season.

I beg leave to suggest the propriety of continuing this road from Lake St. Francis to the Victoria Settlement, about 18 miles, which would open a direct route from Quebec to Sherbrooke, and which could be accomplished at a small outlay. This would afford a vast additional inducement to immigrants to locate themselves in this settlement, thereby adding materially to the value of the other lands of the Crown in that section of the province.

On reference to paper No. 8, page 14 of the Appendix, will be seen the number of emigrants from the United Kingdom who arrived at the port of New York; also the number each year respectively since 1829, amounting in the aggregate to 347,632. It will appear by this statement that the emigration at that port has considerably decreased during the last year, while there has been an increase in the emigration to this province.

In connection with the subject of emigration to the United States, I take this opportunity of bringing under your Excellency's notice the address of the Irish Emigrant Society of New York, to the people of Ireland.

This address, though drawn up in a somewhat peculiar style, and but little applicable to the emigration into this province, contains, nevertheless, some excellent advice, which it would be well to bring under the notice of those who, on leaving Ireland, feel disposed to give preference to a foreign state over these appendages to the Imperial Crown of Great Britain.

It is sufficient to read the statement made in this address, and to be convinced that emigration to the United States holds out no prospect of superior advantage. The melancholy description given of the fate of persons above the class of labourers who aspire to employment in the counting-houses of the merchant, or the office of the lawyer, has no parallel in this province. The emigration even of labourers to the Atlantic cities is feelingly deprecated. While nothing can be more judicious than the recommendation of the Society that all emigrants should bring with them sufficient means beyond their passage money, to convey them into the interior, and to locations proper for settlement.

The truth as to emigrants being enticed, on promise of finding them employment, to proceed to unhealthy parts of the country, is not disguised in this address; but as the paper is of considerable length, I have contented myself with inserting the most material passages, which will be found in page 26 of the Appendix.

The general results of the emigration to this province may be appealed to in favourable contrast to the picture presented by the New York Emigration Society. The emigration to this province during the past season has been, generally speaking, highly successful. Few have failed in obtaining employment, and with respect to those who may have so failed, it can only be attributed to their perverseness in not following the advice which they received on landing here. It was in my power to procure employment for all who sought it, but as I have already had occasion to state, few could be prevailed upon to accept it here, if they had the means of proceeding up the country. In fact, in the early part of the season, labourers were with difficulty obtained; and those who were willing to work for moderate wages, need not have been an hour idle; while those who may have suffered from sickness or poverty, were provided for, and assisted to reach their friends in whatever section of the province they might reside.

I think, then, I am justified in referring to this address, to show that the balance of advantage from immigration is decidedly in favour of this province. This opinion I have never swerved from; but I think it right that the corroborative evidence of a charitable body, so respectable as the Emigration Society of the principal Atlantic city, should be made available to induce the Irish emigrant to pause before he separates himself altogether from his native country, and his natural Sovereign; instead of by settling in this province, identifying himself with the prosperity and glory of a colony, which bids fair to attain the highest destinies under the fostering care of Great Britain.

With reference to the amount of capital brought into the province by the immigrants of this season. I regret that I have no means of ascertaining the total with any degree of certainty. In making inquiries of this kind, it is very difficult to come at the truth, as immigrants are naturally cautious in giving information on this head. I estimate it, however, at not less than from 100,000*l.* to 120,000*l.* sterling.

I beg leave to state to your Excellency, that from all appearances, and from the accounts received from the United Kingdom, I anticipate a large increase in the immigration of next year. The subject seems to excite unusual interest in the public mind, and to be regarded as a means of relieving the distress among the superabundant population of the mother country.

*Emigration.*  
CANADA.

In consequence, therefore, of the moderate rate of passage, it may be reasonably expected that a large portion of the emigration will be directed to this colony.

I have had occasion to remark that year following a season of distress among the labouring classes, has generally produced an increase in the voluntary emigration; and it would appear from the accounts received from the United Kingdom, that such distress has existed to a considerable extent.

I have the satisfaction of stating, that the natural demands of this colony for the absorbing of a large number of emigrants are in the fullest operation, as will appear from the degree of enterprize with which both the public and private improvements are advancing in every section of this province.

The establishment of a Board for the superintendence of public works, and the numerous improvements which were sanctioned by the Legislature during the last session, hold out prospects of increased employment to the labourer. Among these, the widening of the Welland, and the finishing of the St. Lawrence Canals, are two works of the greatest and most vital importance to the progress of the colony.

The improvements on the Welland Canal have been commenced this winter. Upwards of 2,000 hands are now employed, and I am given to understand that many more would obtain employment at this moment. Should the St. Lawrence Canal be commenced in spring, as well as some other district improvements, no fears need be entertained as to any want of employment, whatever may be the extent of emigration next season. But should the commencement of these all-important works be delayed, I must confess I should regret to see an extensive immigration of the poorer class, without some provision having been made beforehand for their reception, as otherwise they will necessarily entail a serious expense on the Government. This part of the subject I respectfully leave to your Excellency's consideration.

The renewal of the provincial Act, imposing a tax of 5*s.* currency on all immigrants landing in this colony will provide the means of affording relief to the sick and destitute portion, on their immediate arrival, without drawing on the public funds of the province.

I anticipate the most satisfactory results from several of the clauses in this Act. I allude to the 4th, 5th, and 8th clauses; the two former requiring more strict attention on the part of the shipmaster, to the correctness of his passage lists, as also to the accommodation of the emigrants for a specified period after their arrival in port. The latter affords to the party complaining a summary mode of redress; without being subjected to the delays and difficulties to which he was previously exposed, under the provisions of the Imperial Act; delays and difficulties which have been the cause of very many abuses being passed over with impunity. I beg leave to express a hope that the amendments to this important Bill (the Imperial Passenger Act) which are now under the consideration of Her Majesty's Government, will be the means of checking many of the evils which have heretofore existed.

Before concluding this Report, I cannot refrain from bearing testimony to the great services rendered to the cause of emigration by the mission to the United Kingdom, of Dr. Thomas Rolph. His exertions are universally acknowledged on this side of the Atlantic; nor can there be a doubt, that through his means, a more extended knowledge of this province, and its capabilities of receiving and providing for a large number of emigrants, has been diffused through those parts of the United Kingdom which he had occasion to visit, to the manifest benefit of the emigrating portion of the population.

In closing this report, I beg to state to your Excellency, that I have endeavoured to adhere as much as possible, to matters which have come under my own observation, the details of which will be seen in the Appendix. Submitting the whole to the favourable consideration of your Excellency, I have the honour to request that you will be pleased to transmit this Report to Her Majesty's Principal Secretary of State for the Colonies, for the information of Her Majesty's Government.

I have, &c.

The Right Hon. Sir Charles Bagot,  
&c. &c. &c.

(Signed) A. C. BUCHANAN, Chief Agent.

APPENDIX TO REPORT ON EMIGRATION TO CANADA—1841.

No. 1.

The following statement shows the weekly arrival of emigrants at Quebec and Montreal during the year 1841; specifying the number of adult males and females, also the male and female children under fourteen and seven years, as well as the number of voluntary emigrants and those that received parochial aid. In this Return the deaths on the voyage and in hospital are deducted :—

No. 11.

EXTRACTS from the several Weekly Reports made to the Governor-General by the Chief Agent for Emigrants at Quebec.

Week ending May, 1841.

The number of emigrants arrived this week has been unusually large, in fact over 8,600 have landed during the last four days, all in good circumstances. Their destination is, with few exceptions, to the western section of the province, where a large number have friends and relations already settled. I am happy to state that there has not been a single well-founded complaint from any of them. They have all landed with a large surplus of stock of provisions, owing to the favourable passages they have had, the average of which has been 38 days.

The Marchioness of Abercorn, with 508 passengers, landed them on the 26th day from Londonderry.

Amongst the total number of emigrants arrived are 460, who have been assisted by their landlords. Of this number were 190 by the Prince George, 15 of whom embarked at London, sent out by the Poor Law Commissioners; 116 embarked at Gravesend, sent out by Lord Portman from his estates in Dorsetshire and Kent; and 59 from the House of Industry, Isle of Wight, and from the parish of Salthurst and Read Court.

These people were all amply provided for, and received on leaving the ship two days' rations, and a free passage to Montreal, with 20s. sterling, each adult to assist them up the country. A few of the young men went to friends near Albany, state of New York; the remainder went up the country for employment.

In the Sarah Botsford were 180 persons connected with the Calton Emigration Society; the greater part of these people are hand-loom weavers. They have been assisted to emigrate by the liberality of private individuals and public bodies. These people arrived in excellent health, and proceeded direct in the vessel to Montreal; they were well provided for during the voyage.

In the Hampton were seven families, 45 persons, who were assisted to emigrate by Lord Charlemont from his estates in Armagh; they were all provided for, and proceeded direct on their route to the midland district.

In the James Cook from Limerick were 48 persons, assisted by Colonel Wyndham; they had sufficient means to carry them up the country, where they had friends in the Newcastle district, and had a large surplus stock of provisions on landing. This vessel made the quickest passage this season, being only 20 days on the voyage. The English emigrants from Padstow and Hull are a small and healthy body of settlers, nearly all going to settle in the Home and Newcastle districts. A few families have relations in Ohio and Pennsylvania, whom they are going to join. On the whole, I consider that but a small proportion of the emigration this season is going to the United States; and from what I can learn from them here, much fewer of the Irish, with the exception of those who have friends already settled there, than in former years. If those depending on immediate labour for their support could only be induced to listen to what is most for their advantage, they would accept of employment here or in Montreal.

We have plenty of employment, and I have arranged that all who want it will be employed on the roads, yet is it with difficulty I can induce them to remain; if they have sufficient to pay their passage in the steamer they will go on.

Wages here on the Government works is 3s. 1½d. per day, and on the roads it is job work, by which they can earn 3s. to 3s. 6d. On board of vessels they get from 4s. to 5s., and good men get as high as 6s.; but this will only continue for a short time during the hurry occasioned by the arrival of so large a spring fleet.

I have obtained employment for upwards of 500 persons this season, and as near as I can judge about double that number are at present employed here. Mr. Hawke writes me from Kingston, that all those who have arrived there this season seeking employment stated they were offered employment both here and at Montreal, but refused to work, as they expected higher wages at Kingston and Toronto. Very many ridicule the idea of working here at 3s. per day; the consequence is, on their arrival at Kingston or Toronto they are disappointed.

A large number of emigrants from Belfast and other ports in the north of Ireland are going to settle in the Bathurst and Johnston district: a good many are going to Cavan, in the Newcastle district.

---

#### From the 22nd May to the 5th June.

The emigrants arrived during the last fortnight are chiefly Irish, and all in good health; a large portion are going up the country to join their friends. I regret to have to report a gross infringement of the 2nd clause of the Imperial Passenger Act, in the case of the ship Lord Cochrane, Captain Williams, from Tralee. This vessel had upwards of 60 adult passengers over her complement, and out of 399 persons on board, there were only 322 names on her passenger list. The master was fined by the collector 20l. sterling, which was the highest penalty under the Act. In the space occupied by the passengers, there was only six feet five inches superficies, whereas by the Act there should be 10 feet. These people, notwithstanding their crowded state, landed in good health. The only death during the voyage, was that of a child of two and a half years. The master appears to be quite ignorant of the regulations respecting the carrying of passengers; and had not a copy of the Passenger Act on board. This vessel is owned by Messrs. R. and W. Hickson, of Tralee.

The demand of labour still continues, but in spite of all I can do or say to those seeking employment, they will not remain here, if they have means to proceed further up. A party I directed across the river St. Lawrence to New Liverpool, for employment, were on arrival there, offered 4s. per day, and refused it, and afterwards applied to be sent up free.

---

#### Week ending 12th June.

The arrivals during the past week, are chiefly of Irish, and mostly of the labouring class. A few respectable farmers with capital, from 100l. to 200l. sterling, came out in the Obern, from Liverpool. About 200 of the passengers by this vessel, proceeded immediately to Montreal, on the route to Upper Canada, where they intend to settle. Five young men are going to New Brunswick, and a few to the United States. Those by the Tom, from Dublin, and Souris from Belfast, landed in good health. A number remained here for employment, the remainder proceeded up the country.

*Emigration.*  
CANADA.

In the *Rose Bank*, from Belfast, were 28 families, members of the North Quarter Glasgow Emigration Society, principally weavers. They have been assisted to emigrate by public subscription, and by weekly contribution made by each family. They number in all 160 persons: a surplus amounting to 60*l.* currency was divided among them on their landing here, which enabled some of them to reach Montreal, whither they were determined to proceed, notwithstanding what I stated to them of the difficulty they would find there, and higher up the country, in obtaining employment, and the certainty of work they would find here. A few of them have, however, taken my advice, and are now at work. In fact very few of the emigrants are inclined to work, if they can possibly avoid it, and they all appear to land here with the impression that the Government will forward them free.

In the schooner *Mary*, from Sydney, Captain Briton, were 107 passengers, the remainder of those in the *Breeze*, O'Donnel master, from Limerick, which vessel was wrecked on the island of Scatari, on the 14th May, passengers all saved, but with the loss of their baggage and provisions. She had 160 on board, 53 of whom remained at Sydney for employment; a few went to St. John's and Halifax, and those that came on here are going to their friends; about 51 of them will remain in the province, the remainder are going to a place called Silver Lake in the state of New York. In consequence of their condition, I forwarded them to Montreal, and gave them a supply of provisions, as they were nearly all penniless.

The total number of persons assisted from this office this season with the exception of these people are 85, namely 4 men and 81 women and children, either widows or married women, with families going to their husbands in different parts of the province.

Those by the *Idea* from Galway, and *Julia* from Sligo, landed on Saturday in good health, and many of them have remained here for employment from want of means to proceed further up.

---

Week ending the 19th June.

The emigrants arrived during the past week all landed in good health. Some of those by the *Lively*, and *Mary Coxin*, from Cork, are in good circumstances, and proceeded on their route to their friends in different parts of the province. The passengers per *Cornelia* and *Mary Ann* are members of the Glasgow Emigration Society, and have all been assisted to emigrate; they are anxious to proceed to Upper Canada, but their means are very limited, and they can barely pay their passage to Montreal. I have offered them all employment, but very few would accept it, and prefer paying their last shilling to take them to Montreal. These people all appear to have emigrated with the impression that Government would assist them to their destination. A party of gentlemen in this city offered to subscribe a sum sufficient to procure them provisions during the winter, if they would remain and settle in this district, and to place those desirous on land. One or two families intend to avail themselves of this liberal offer, but the remainder proceed upwards. I am still able to procure employment for all who will accept of it on the roads. When at job work, industrious men can earn 3*s.* to 3*s.* 6*d.* per day. About 300 hands are now employed on them.

---

Week ending 26th June.

The emigrants arrived during the past week are in good health and consist of farmers and labourers; the great majority intend settling in Upper Canada, where they have friends.

The passengers in the *Robert Alexander Park* and *Unicorn*, from Londonderry, are respectable settlers, and all appear in good circumstances; they, with few exceptions have their relations settled in the Home, Gore, and Wellington districts.

In the barque *Harmony* from Bristol, were a party of Mormons, going to settle in Illinois; they report that two other vessels are expected from the same port this season. Three families are going to the Newcastle district.

Those in the *Lady Fitzherbert* from Plymouth, 135 in number, are principally farmers and going to the Western division of the province. Three families complained to this office that Mr. Resterick, the owner of the vessel, with whom they engaged their passage, charged them 5*s.* a-head for landing charges, and which he told them would be refunded by the master on arrival here, if the charge was incorrect. He stated on application that he was not aware of any such agreement, and refused to refund; the parties having no written proof, I could not enforce their claim, but from the manner in which these people tell their story, I have no doubt that it is correct.

In the *Perseverance*, from Dublin, were 106 passengers, who were assisted to emigrate by their landlord, the Honourable Charles Butler Clarke, from his estate in Kilkenny. They landed in good health, and proceeded on their route up the country. The rest of the passengers in this vessel are labourers. One family went to the Eastern townships, and some to friends in Bytown and Toronto. A large number of the labourers from the different vessels have availed themselves of the employment which offers, on the roads in this neighbourhood. A large number of emigrants are reported at Grosse Isle.

---

Week ending 3rd July.

The passengers arrived during the past week consist of labourers and farmers; the greater portion of them appear in middling circumstances, and are proceeding up the country to their friends. About 76 I consider are going to join their relations in the United States.

The *Princess Victoria*, and *Grace*, from Liverpool, with 593 passengers, all Irish. The passengers by the latter ship have had a long passage of 56 days, and owing to the insufficient

state of the water casks, they were on short allowance, and had only four casks of the ship's stock left on arrival at Grosse Isle. On opening the casks, put on board for the use of the passengers, they were found to be not more than two-thirds full, which so soon as the master ascertained, he reduced the allowance to a quart per day, which was further reduced previous to arrival here. I have inspected the casks and find that had they been full, the supply would have been sufficient. The master states that they were all filled up on the day previous to sailing. They are all old leagers, which hold from 250 to 300 gallons, with pine heads, but not sufficiently hooped, to which cause may be attributed the leakage. Their fuel was also expended. The brokers, Messrs. Robinson and Co., had put about four chaldrons of coals on board, which the Government agents, on inspection previous to sailing, considering not enough, ordered an additional three tons, which however was not sent. The master fortunately had five tons on board for their own supply, which was nearly all expended on arrival here and prevented the serious inconvenience which would otherwise have occurred from the want of fuel. The berthing was also put up in so slight a manner that it fell down several times during the voyage, in heavy weather. This vessel cleared out under the old tonnage measurement, and had 29 passengers over her complement, for which the master was fined 20*l.* sterling by the collector. Taking the superficies of the space occupied by the passengers, she was within the Act, and would also have been, if the passengers were calculated according to her tonnage under the new measurement.

The passengers by several vessels which arrived this week, suffered from sickness, measles, and small-pox. The Lord Seaton, from Belfast, had 14 deaths, and the Grace 7, chiefly children; some others had a few cases, but very slight. Those from Sligo have landed in good health, and are proceeding up the country to their friends. Employment is becoming more scarce in this neighbourhood, and those depending on immediate work for their support, find difficulty in obtaining it, the demand for labour on the roads being limited. From 350 to 400 hands are now employed here, and the Commissioners are in hopes of being able to take on an additional number of those most in need in the course of next week.

I have been obliged to give assistance to 21 families during the past week; they were chiefly women and children, and had their husbands and relations settled in the province.

---

Week ending 10th July.

The emigrants arrived during the past week are chiefly labourers and farmers. On board the George Marsden from Rye, were 227 passengers, who were assisted to emigrate by their respective parishes in Sussex and Kent. They were furnished with a free passage and provisions, and the sum of 140*l.* was divided among them according to their families. They were also forwarded free to Montreal. On board the Canadian, from London, were some respectable steerage passengers going to settle in the Home District; also 18 boys sent out by the Society for the Refuge for the Destitute: they have all been instructed in trades, and were forwarded to Montreal.

The passengers from Belfast and Londonderry are chiefly labourers and farmers; some of them have good means and they are all going to settle in Upper Canada. Among the Londonderry passengers there were a number of poor families coming out to their relations, to whom I was obliged to furnish assistance to enable them to proceed. The passengers in the La Plate from Cork, and Dolphin from Limerick, are in good circumstances, and proceed up the country for settlement. One family in the Thomas Williams from Cardigan, which has brought out about 60*l.*, has settled on the Lambton Road. They hope to bring out several of their friends to join them next season.

---

Week ending 17th July.

A large proportion of the emigrants arrived this week are in good circumstances, and all intend settling in Canada West. The passengers in the Centenary from London, are chiefly farmers and labourers, and proceeded direct on their route up the country. The passengers in the Taurus from Aberdeen are intelligent Scotch settlers, and most of them have friends up the country, in the London and Western districts. They proceeded direct to Montreal, having their passage paid to that port.

In the Mary Anne were 26 families from Banff, all with good means and proceeding to settle at Goderich, and a few going to their friends in the vicinity of Perth and Lanark. The passengers in the Bachelor from Londonderry are in good health, and the greater part proceed up the country. A few families who had not the means of proceeding further are employed here, and to others with large helpless families I have granted limited assistance to enable them to reach their friends.

The passengers, per the Maria Brennan, from Limerick, and Countess of Arran, from Donegal, are of the labouring class; a few of them are going to their friends in the United States, but the greater portion to the western part of the Province.

---

Week ending 24th July.

The passengers arrived during the past week are all in good health, and consist of farmers and labourers. In the Margaret Boyle were some very respectable Scotch emigrants from Leith, who, with the exception of one family, were all in good circumstances; five families have gone to settle in the Huron Tract, and the remainder in the Home and Gore Districts. The Pomona, Captain Hutchinson, from Sligo, cleared from that port with 214 passengers, as certified in the list forwarded to me by the Government agent for that port, and her bill of health from the Custom House certified for 228, including master and crew. On arrival

*Emigration.*  
—  
CANADA.

here, she was found to have 250 passengers on board, making an excess of 27 adults over the complement she is entitled to carry by law. The master was fined 20*l.* sterling by the collector of the customs. It is much to be regretted that the law does not fix the penalty at so much for each one over the number prescribed by law. As the law stands now, the owner or charterer will pocket 35*l.* sterling by the operation after paying the fine.

The passengers, per the *Victory*, are intelligent settlers from the vicinity of Hull, and are proceeding to settle in the western division of the province. The *Huron*, from Liverpool, with 327 passengers, are chiefly labourers; there are a few Scotch families in good circumstances, 26 in number, from Paisley, and a few English families from Newcastle. Two Irish families have gone to settle near Sherbrook, and a few are remaining here for employment; the rest are proceeding up the country.

In the brig *Hope*, from Dublin, were 71 passengers, who had a passage of 51 days. Many of them were short of provisions, and had to purchase from the master, who appears to have taken every advantage of their distress. One poor family coming out to their friends in Montreal was in debt to the master for provisions near 5*l.* on arrival here. The master states that before he was a month out some families applied to him for provisions; their stock, consequently, could not have been laid in according to the Act. Three families in the *Huron* are going to Nova Scotia to their friends.

---

Week ending 7th August.

The passengers arrived during the past week are chiefly Irish and Scotch, many of them very poor and depending on immediate employment for their support. The passengers, per the *Sterling*, from Glasgow, 154 in number, 150 of whom are members of the Glasgow Emigration Society, landed here very poor and without sufficient means to pay their passage even as far as Montreal. Seven families are employed here, and I have offered work to the rest; but nothing but the necessity of their situation would induce them to accept of it here. Some refused and even disposed of their effects to enable them to proceed.

It is much to be regretted that exaggerated accounts have been circulated among (more particularly the Scotch) emigrants this season. They all land here with the idea that they are to be forwarded at Government expense to whatever section of the province they may fix on, and it is with great difficulty I can persuade them that such is not the case. The passengers by the *Lady Charlotte Guest* were in better circumstances. These people emigrated at their own cost, and proceeded in the vessel to Montreal; the greater portion of them have their relations settled in the province,—some in the Bathurst district, and others are going to Goderich and Dumfries. Those by the *Josepha*, from Belfast, are all in good circumstances; one family are going to their friends in St. Giles, and several others have their friends in the neighbourhood of Montreal: but the great majority of them proceed to the western division of the province.

In the *Catherine*, from Liverpool, they are mostly labourers, and very poor; some few farmers have good means. About 100 of them are from the estates of the Earl Fitzwilliam, in the county Wicklow, who assisted them to emigrate. All of them require employment, and such as I could induce to work I obtained employment for; but the greater part of them have proceeded up the country. In the brig *Sapphira*, from Thurso, were about 20 families, who have been assisted to emigrate by the Duke of Sutherland from his estates in Sutherlandshire. These people have all left their homes of their own accord, and his Grace has been pleased to assist them to the extent of from 3*l.* to 7*l.* sterling each family; only four families of this party were furnished altogether by his agent. From the exaggerated accounts told to them at home, they all expected, on landing here, to be forwarded to the London District, where it appears they wish to proceed, although scarcely a family of them have a friend or acquaintance in the province, and appeared much disappointed when it was refused, and employment offered them. This they did not calculate on, and only a few of them appeared inclined to avail themselves of it. They afterwards proceeded up to Montreal, and I fear will become a charge on the agency there, and further up the country.

Seven families,—widows and orphans, and mostly females,—I have given a free passage to. Their only chance of succeeding is to get into some of the old country settlements, as it is impossible to get them any employment in or about this city or Montreal. I have also been obliged to assist a number of females who came out in the *Catherine* from Liverpool on similar grounds; but in no instance has any aid been given to persons who are able to work, employment being abundant on the roads. I have also most favourable accounts from the Eastern townships of the demand for labourers, wages 3*s.* 6*d.* to 3*s.* 9*d.*, with board; but it is very few who can be induced to go to that section of the province, their prejudices are so strong against our winter.

---

Week ending 14th August.

The passengers arrived during the past week are chiefly labourers and farmers of the better class, many of them in possession of capital. In the *Independence*, from Liverpool, are some very respectable Scotch farmers, with good means; they are principally going to settle in the Bathurst, Home, Gore, and London Districts. About 20 have decided to take Sherbrooke, Eastern townships, on their route, in hopes of meeting with a desirable location in that section of the country.

Passengers per *Olando*, from London and Gravesend, are paupers, who have been sent out by the Poor Law Commissioners. They consist of about 12 families, and are all going to the Western section of the province. These people were well provided for during the voyage, and were forwarded free to Montreal at ship's expense.

## EMIGRATION IN CANADA.

19

*Emigration.*  
CANADA.

Those in the Clifton, from Cork, and Abercrombie, from Liverpool, all landed in good health; a number of the passengers in the former vessel are going to their friends in the United States. A few in the Abercrombie, young men, are going to their friends in New Brunswick. These vessels have all had long passages, average being 56 days. Those in the Warrior and Clifton were short of provisions, owing to the greater part of their stock, consisting of potatoes, which, from the heat of the vessel's hold and the lateness of the season, soon became unfit for use; they consequently were obliged to purchase from the master, and three families, whose means were limited, landed here in a destitute state. To six families, consisting of women and children, who were going to join their relations and friends in the province, I was under the necessity of giving assistance in provisions and a free passage to Montreal.

---

Week ending 21st August.

Passengers arrived during the past week are generally in good circumstances, and are all proceeding up the country, with the exception of a few families from Sligo, and Dublin, whose means were exhausted, and who are now at work here, to earn sufficient to carry them up.

In the brig Wanderer were eight families, 58 in number, who have been assisted to emigrate by their landlord, Neill Malcolm, Esq., from his estates in Argyllshire. These people were well provided for during the voyage, and I had received orders to advance them means sufficient to enable them to reach their friends settled in the London district, and to draw on Mr. Malcolm for the amount. They all proceeded from this two days since, provided with every information necessary to enable them to reach their destination.

The passengers per the Dee, from Bristol, are respectable farmers and farm labourers. They have all a little money, but have no particular place fixed on for settlement. They give the preference to the western part of the province, where they intend to proceed, and to judge for themselves. I furnished them with routes, distances, and the names of the different Government agents along their route. One family, eight in number, was assisted to emigrate by their parish. Seventy-one passengers in the brig Rowena, from Sligo, had a long passage of nine weeks; they all landed in good health, and with the exception of four families who remained here for employment, proceeded direct on their route up the country. Two families are going to their relations in the state of New York; the others to the Eastern, Newcastle, and Gore Districts.

The brig Astrea, from Dublin, with 147 passengers, was two months on her voyage; they, however, landed in good health, but a number of the families were very poor, having expended all their money in purchasing food from the master. The greater number of them proceeded direct on their route up the country,—those who had not means, I have furnished with employment here.

Fifty-two passengers in the Marquis of Wellesley are in good circumstances; a number of them had their friends in the neighbourhood of Montreal, and others in different sections of the province.

---

Week ending 28th August.

Passengers arrived during the past week are generally in good circumstances, and consist of farmers, labourers, and tradesmen, and with few exceptions, are able to pay their way to their respective destinations. The greater portion of them are going to settle in the western division of the province, and some to their friends in the United States. These vessels all have had long passages, the average being over 60 days. The passengers, per Ch'na, from Limerick, were 10 weeks on the voyage; their supply of provisions falling short, they were obliged to purchase from the captain at high rates. They stated that their supply of provisions was sufficient, when they left for three months; but that their potatoes, which constituted their chief stock, owing to the wet and heat in the vessel's hold, soon rotted, and became unfit for use. Several cases have occurred this season, in which this most essential, and I may say principal food of the Irish emigrants has been destroyed from neglect and improper stowage. I should recommend, if considered practicable, that this article of provision should be placed in charge of the master of the vessel, and be issued by him to each individual twice a-week, or oftener, if he thought proper. At present, they are brought on board in sacks, and thrown into the hold on the wet ballast, or on the water casks, and in the course of a few days (owing to the thoroughfare made over them by the crew and passengers going for water and other provisions, or baggage,) they soon become so trampled and bruised as to be unfit for use.

In the Lady Jane Grey, from Cromarty, were 85 passengers. This vessel sailed with a full complement, but landed 155 at Picton, where they were detained five days. She had been a month on her voyage thence to this port, during which time four adults and one child died, and 18 were left at Grosse Isle in hospital, all of whom Dr. Douglas reports will recover, except one old man, aged 75. These people had fever previous to arrival at Picton. There were two deaths at sea.

In the John Walker were 49 passengers from the Isle of Sky. They consist of 10 families; farmers and farm labourers. They are going to their friends in Glengarry, and to the Home and London districts; this vessel sailed with her full complement, and landed about 200 at Sydney, Cape Breton. Those in the Patriot, from Leith, were in good circumstances, 19 in number; they are going to their friends in the Gore and London districts.

The Andrew White, from Glasgow, with 138 passengers. This vessel proceeded direct to Montreal; the passengers having engaged their passage to that port. They appear in middling circumstances, and are proceeding to the Home, Gore, and London districts to join

*Emigration.*  
CANADA.

their friends. A few, whose means are limited, intend to remain in Montreal, for employment.

Passengers per the Woodland Castle, 36 in number, from Cork, are mostly young single men and women; there are five mechanics, the remainder are labourers and servants, all very poor. They were eight weeks on the voyage, and running short of provisions, they exhausted their little stock of money, purchasing them from the captain. The greater part are going to the United States. In the brig Bruce, from Newport, county Mayo, were 205 passengers, principally labourers; they had a long and tedious passage of 63 days, and were also short of provisions. They landed at Metis and Green Island for a supply, and also obtained some from two vessels in the gulf. This vessel lost some of her spars off Cape Clear, in a gale, which detained her several days. A large portion of her passengers intend going to the United States, and all proceeded direct from this, with the exception of 12 or 14, who had not means, and have obtained employment here.

---

Week ending 4th September.

The emigrants arrived during the past week are nearly all Scotch and Irish, of whom a number are in very destitute circumstances, owing to their having very long passages; the average of this week being 57 days.

Passengers per the Hector, from Liverpool, 71 in number, are respectable people, who all proceeded direct to Montreal; many of them have been in the province before, and are now returning with their friends. Several of the passengers complain of being on short allowance of water, viz., a quart per day, and that the master was obliged to send on shore several times in the river for a supply. This vessel was 57 days on her voyage, and had the quantity of water been on board as fixed by law, this deficiency could not occur. Captain Patton, on examination, admitted the deficiency, but stated that it was caused by the waste of the passengers themselves. I have reported the case to the Government agent at Liverpool for inquiry.

The brig Evelin, with 132 passengers, 50 days from Londonderry, are chiefly labourers, farmers, and a few trades. They have all landed in good health, but many of them very destitute. I have been under the necessity of extending assistance to four families, 32 in number, who are going to settle on the Ottawa. A number of others are employed in this neighbourhood; three families, 25 in number, have been assisted to emigrate by their landlord, Mr. Watts, county Donegal.

In the brig Lady Hood, from Stornaway, were 14 families, 78 in number, all very poor; and landed here after a passage of 70 days in great distress, from want of provisions. They had expended all their money in purchasing supplies from the master during the passage. I distributed 2 cwt. of oatmeal among them, and forwarded them to Port St. Francis; they are all going to join their countrymen in the township of Bury and Lingwick.

By the ship Charles were 24 families, 145 persons, from the same port, and also bound for the same destination. They are chiefly from the Isle of Lewis, and I regret to say, nearly as destitute. This vessel had her full complement of passengers, but landed 233 at Sydney, Cape Breton. They had a passage of 51 days, and also suffered from want of provisions. I issued a small supply of oatmeal among the most needy. These families have all emigrated on the invitation of a party who came out in 1838, and who landed equally poor, but are now doing well, and have promised to assist their friends to get through the winter. Very few of them can speak English; but I have no doubt they will prove a valuable addition to our population in the eastern townships.

In the Canada, from Greenock, 115 passengers, all in good circumstances. Several wealthy families are going to settle in the Bathurst district, and others, with their friends in Toronto, Oro, and Eldon. The passengers in the brig Hants and Jessie Logan, from the same port, are also respectable settlers in good circumstances, and all are proceeding to the western section of the province, some to Lancaster, Paslnich, and Dundas, &c.

Those per Nelson Village from Belfast, 120, are farmers, labourers, and trades, and with the exception of three families, appear in good circumstances. The greater part of them proceeded up the country to join friends about Bytown, Port Hope, and Toronto: 139 passengers in the Cumberland Lass, from the same port were 66 days on the voyage. Many of them landed in great distress, from want of provisions. They purchased from Captain Smith as long as their money lasted; and he had to support from 40 to 50 of the poorest for the last three weeks. When he arrived here, all his ship's stores were exhausted, besides supplies, which he obtained from different places in the gulf. I forwarded eight families, 43 in number, to Montreal, to enable them to reach their friends, and also gave them a small supply of oatmeal. Their destination is Bytown and Cavan, Newcastle district.

The brig Bon Accord; 70 in number, from Aberdeen, are in good circumstances. They are chiefly farmers, and proceeded direct in the vessel to Montreal. They were 69 days on the voyage, but landed in good health, and were well supplied.

---

Week ending 11th September.

The emigrants landed during the past week are, with few exceptions, in good circumstances, and principally came out to join their friends. The passengers per Princess Royal, from Carmarthen, are very respectable Welsh farmers; they consist of one family of eight persons. The rest are young men, and, with the exception of two, are going to settle in the Huron Tract. The Energy and Ellen Stewart, from Limerick, and Blanch, from Donegal, are on their second voyage this year, and bring out very few emigrants. In the Energy were eight families and six single men, in all forty-four persons, who have been assisted to emigrate by

the Marquis of Clanricarde from his estate in Galway. His lordship gave them a free passage and 5*l.* to each family. They are all proceeding to the western section of the province. A few of them have means to purchase land, and are proceeding to join their friends in the neighbourhood of Kingston. The remainder appear to have no fixed object in view, and are going up for employment. As it is now getting late in the season, I endeavoured to induce as many as possible to proceed into the country, and to secure some permanent employment before the winter sets in. I have received the most favourable accounts from the Ottawa river, west of Bytown, of the demand for all classes of emigrants, and where abundance of employment is to be obtained during the approaching winter among the lumbermen and farmers. The passengers per *Watchful*, from Limerick, have had a long passage of eight weeks, and a number of them landed in distress. They were, however, in good health; and those who had not the means of proceeding further I obtained employment for in this neighbourhood. Nine Scotch families, 54 in number, who have been employed on the roads since their arrival here in June, have gone in and settled on lands in the county of Megantic, in Leeds, and Inverness. Fifty-four passengers per *Caledonia*, from Greenock, are all in good circumstances, and are going to join their friends in Glengarry, and about Perth, Brockville, and Kingston. I consider the emigration of this season as drawing to a close, and have only advices of two vessels, viz., the *Tom Moore*, from Belfast, with 173, and the *Governor*, from Limerick, with 58 passengers, to arrive.

*Emigration.*  
CANADA.

---

Week ending 18th September.

The emigrants arrived during the past week are generally in good circumstances, and have nearly all proceeded upwards to different sections of the province. A number of passengers per the *John Bell*, from Ross, state that they were assisted with a free passage and provisions by Butler Clarke, Esq., from his property in the county of Kilkenny. They are, with few exceptions, going to their friends in the Niagara and Gore district. There has been no complaint among any of the passengers arrived this week, and they have all landed in excellent health. The Scotch emigrants are in good circumstances, and are going to settle in the province.

---

Week ending 25th September.

The emigrants arrived during the past week are chiefly of the labouring class, and nearly all have friends in the province. They have all emigrated at their own expense, except two families in the *Clio*, from Padstow, 14 in number, whose passage was paid to this port by their parish. The remainder of the passengers by this vessel are in good circumstances, and are going to their friends in the Newcastle and Home district. The Scotch emigrants in the *Favourite* are also going to join their friends in the Bathurst, Midland, and Home districts.

The passengers per the *Agenoria*, from Liverpool, are all very poor. They were detained a long time in Liverpool after they had engaged and paid their passage. This is a fine large vessel, of 731 tons, chartered by a broker named William Rafferty, of the Waterloo-road, to bring out 100 passengers, as he would not ship a sufficient number to bring him within the provisions of the Passenger Act. I beg to say that Captain Giffney has been for a number of years in the habit of carrying passengers, and he states that it was with the greatest difficulty he could get Mr. Rafferty to fit up proper accommodations for their use. The passengers speak in the kindest manner of the captain's attention to their comfort during the voyage. This vessel, including her crew, had 140 adult passengers, and she came under the 20th clause in the present Act, carrying  $146\frac{1}{2}$  adult passengers, without being subject to any of its penalties.

---

Week ending 9th October.

The emigrants arrived since the 26th ultimo are, with few exceptions, in good circumstances, and the chief part are going to join their friends already settled in the province.

The passengers in the *Colina*, from Gloucester, are all of the better class of farmers, and in good circumstances. Only two families remain in Canada; the remainder, 63 in number, are going to join their friends in the state of Pennsylvania. Some of those in the *Tom Moore*, from Belfast, about 50 in number, are also proceeding to the same direction; also, three families in the *Midas*, from Galway, are going to their friends in Illinois.

In the brig *Universe*, from Thurso, were two poor families, 19 in number, who came out to join their relations settled in the neighbourhood of Kingston and Toronto. They landed here penniless, and, in consideration of their large families, I assisted them with a free passage. This vessel landed 74 passengers in Picton.

I regret to have to report the loss of another emigrant ship this season, which has been attended with a serious loss of life. The barque *Amanda*, Captain Davis, from Limerick, with 39 passengers and 18 of a crew, was wrecked at Little Metis Point on the morning of the 26th ultimo. The master, five of his crew, and ten passengers were all that were saved, after being 12 hours on the wreck; the remaining 41 persons were drowned. The surviving passengers, seven men and three women, arrived here on the 3rd instant, with the loss of everything except the clothes on their back. One of the men remained in this city, the others I assisted with provisions and a free passage to their friends, who reside in the township of Buckingham, on the Ottawa.

I consider the emigration of this year nearly closed; few emigrants are expected in any of the vessels to arrive. All the vessels reported to me by the Government agents at the out-ports have arrived, the unfortunate *Amanda* being the last.

Navigation closed November, 1841.

*Emigration.*

## CANADA.

EXTRACTS of Letters from the Emigrant Agents in Canada West, to Mr. Buchanan.

Sir,

Emigrant Office, Kingston, 22nd May, 1841.

I APPREHEND much difficulty in getting work for emigrants, as there is very little demand for labour west of Kingston, and even here the market is overstocked. A few good mechanics, and domestic servants would find ready employment at good wages.

I hope a very considerable number of this year's emigrants will be induced to settle in the lower section of the province. Emigrants certainly commit a great error, and incur much useless expense, in pushing on to the west.

I have, &amp;c.

A. C. Buchanan,  
&c. &c. &c.

(Signed)

A. B. HAWKE, Chief Emigrant Agent, Western Division.

Sir,

Emigrant Office, Kingston, 30th May, 1841.

YOURS of the 27th instant reached me in due course of post, and I am happy to learn that employment is plentiful at the lower ports.

Nearly 300 emigrants have reached this place. All the labourers admit that they might have obtained employment at Quebec and Montreal, but refused to work, because they thought they could get higher wages at this place; in this they are disappointed.

I have, &amp;c.,

A. C. Buchanan,  
&c. &c. &c.

(Signed)

A. B. HAWKE, Chief Emigrant Agent, Western Division.

Sir,

Emigrant Office, Kingston, 7th June, 1841.

ABOUT 2,300 emigrants have reached this place, nearly two-thirds have gone to Coburg, Port Hope, and Toronto. I have been obliged to assist a good many, as their money was exhausted, and they were anxious to join their friends. I learned from Mr. Burke, that nearly 2,000 have passed the Bytown locks during the 2nd and 3rd of June.

Mr. Burke says, a very large number of the poorest description of emigrants have passed this lately, this day alone near 1,000 have arrived here, and some of them from the length of time that they have been on the way from Montreal, must be suffering from want. I was forced to relieve a few of the most pressing cases, fearing the consequences that would result from their being without food from this to Kingston. The emigrants have suffered but little from sickness, but we must expect our usual amount of affliction as the season advances. I have had to fit up an hospital here.

I am preparing to employ the indigent who require work, in breaking stone in the vicinity of this town.

I have, &amp;c.

A. C. Buchanan,  
&c. &c. &c.

(Signed)

A. B. HAWKE, Chief Agent, Western Division.

Sir,

Emigrant Office, Kingston, 3rd August, 1841.

THE total number of emigrants who have come to the western section of the province during the current season, is 10,138. As nearly as I can ascertain, they have been distributed as follows:—1,260 have settled on the Ottawa and Rideau; 2,500 in the Midland, Prince Edward, and Victoria districts; 1,100 at Coburg, Port Hope, and Whitby; 3,300 in the Home district; and the remainder, nearly 2,000 in the Gore, London, and Niagara districts.

The emigrants landed here since my last report, belong, with few exceptions, to the better class of labourers. I have received a letter from the agent at Toronto, complaining that many poor and infirm emigrants continue about the streets of that city, but I am not aware that the number is greater than former years.

The only emigrants who appear to have been unsuccessful, are two parties consisting of about 300 weavers and wool-carders from Glasgow and Paisley, and as they had some correspondence with the Emigrant Association at Toronto, I furnished them in June last with a letter to that Association, in hopes that they will do something for them. I am sorry, but not at all surprised to learn from Dr. Bradley's letter of the 1st instant, that many of these emigrants were still unemployed. They say that they were induced by Government to emigrate, and as they have not been successful, they complain that the Government has neglected them; so far is this, however, from being the case, that to my knowledge, they have received more assistance than is usually given to persons of this class. Dr. Bradley writes;—"I have procured employment for all the emigrants, except those who are old, infirm, or otherwise useless to the farmer. The Scotch weavers, and wool-carders are very badly off, as they can neither reap nor plough. They are very troublesome, daily bringing me letters from their clergy, and insisting upon support until employment be procured for them; many of them state that Government encouraged them to come out, and are now letting them starve. I endeavour to persuade them that the Government did not give them any encouragement to emigrate."

I have received another letter from Captain Patterson on the subject of emigration to the United States, a copy of which I have the honour to transmit you herewith. It fully sustains the opinion expressed in my last report, that the number of settlers from the States greatly exceed the number of emigrants who leave Canada for that country.

I have, &amp;c.

A. B. HAWKE, Chief Agent, Western Division.

Sir,

Steamer, Commodore Barrie, Kingston, 19th July, 1841.

*Emigration.*  
CANADA.

AGREEABLY to your request, I spoke with Captain Kerr, of the steamer Gore, concerning the passages of emigrants on board his boat. He states that he has taken none from Canada, but that he has brought a number of the better class from the States, principally settlers able to purchase farms. I have also to state, that those who have crossed to the States in the Barrie are all the labouring class, and those who return with me to settle in Canada have been in the better class, such as I should think would be able to purchase lands and pay for them.

I have, &c.

(Signed)

ROBERT PATTERSON,

Master of the Steamer, Commodore Barrie.

A. B. Hawke, Esq.,  
&c. &c. &c.

Sir,

Emigrant Office, Kingston, 28th September, 1841.

EARLY in the present month, complaints reached the Government that there were considerable numbers of indigent emigrants at the upper ports, for whom the agents could not find employment, and who were consequently clamorous for relief.

In order to ascertain the actual condition of the parties, I left this place on the 12th instant, and during my tour I visited Coburg, Port Hope, Toronto, and Hamilton. At these places I found more or less emigrants, who complained of want of employment, but it was evident that most of them preferred idleness to industry, and that they had made little or no effort to provide for themselves. Many young men confessed that they had been offered four, and in some instances five, dollars a-month, and their board, for a period of six or twelve months, and that they refused to work for such low wages. They were told that so long as their labours would procure them food to eat, they must supply their own wants.

About 60 persons were sent into the interior at the Government expense. Those who were evidently loitering on the frontier until a chance of getting into the States presented itself, were left to shift for themselves.

Employment is exceeding scarce except for mechanics, and I fear that as soon as the winter puts an end to out-door work, that there will be considerable suffering. We get too large a proportion of mere labourers, that is, men who can only use the spade and pick-axe. There is less demand for unskilled labour in this section of the province than is generally imagined. If our public works go into operation, the difficulty of providing this class of persons with work will be removed; but until they do commence, I hope we shall have but few to provide for.

The season has been healthy, and on the whole there has been much less suffering than I anticipated at its commencement. The number of emigrants landed at this port, to this date, is 14,379.

I have, &c.,

(Signed)

A. B. HAWKE,

Chief Emigrant Agent, Western Division.

A. C. Buchanan, Esq.,  
&c. &c. &c.

My dear Sir,

Emigrant Office, Kingston, 19th November, 1841.

I SHOULD have attended to the request contained in your letter of the 4th October, at an earlier date, but I have not been able to ascertain, very satisfactorily, the number of emigrants who have settled in the Bathurst, Ottawa, and Eastern districts, during the current season.

The number of emigrants landed at this port is 15,703, and, as nearly as I can ascertain, they have been distributed as follows.—Districts on the Bay of Quinte, viz. :—

Midland, Prince Edward, and Victoria . . . . .	2,500
Coburg, Port Hope, Whitby, and Darlington . . . . .	1,850
Home District, according to Dr. Bradley's Return, to the 23rd October . . . . .	6,012
To which must be added, for the number to the 19th inst. . . . .	500
	<hr/> 6,512
Gore, London, and Niagara Districts . . . . .	2,500
Settled on the St. Lawrence, between Kingston and Cornwall . . . . .	1,200
Leaving 1,141 to be accounted for. N.B. Most of them, if not all, have gone to the United States . . . . .	1,141
On referring to my Report of the 15th instant, I find I have estimated the number of emigrants settled on the Ottawa and Rideau . . . . .	3,260

And Bathurst and Eastern Districts, as making the total number settled west of Montreal . . . . . 18,963

Leaving upwards of 10,000 to be accounted for. It is impossible, of course, to be exact in such estimates, as the emigrants frequently shift from place to place during the first year. For instance many, who in my statement are returned as having settled in the Midland District, are preparing to go to St. Catharine's, under the expectation of obtaining better wages on the Welland Canal during the winter. But from all my correspondence, as well

Emigration.  
CANADA.

as from many verbal communications, I am satisfied that my statement is, in the main correct.

I have, &c.,

(Signed) A. B. HAWKE,  
Chief Emigrant Agent, Western Division.

A. C. Buchanan, Esq.,  
&c. &c. &c.

My dear Sir,

Emigrant Office, Kingston, 14th December, 1841.

I BEG to acknowledge the receipt of your letter of the 8th instant. I send you herewith a copy of Dr. Bradley's Report. What he says of the Home, applies to the Midland, Newcastle, and other districts. Considering that there was no public employment, we have got through the season well, *very* well.

In order to prevent distress, I was obliged to scatter the indigent emigrants as much as possible. My forwarding accounts will consequently be heavy, but I am of opinion that the expense of this season will not exceed that of last year—the number of passages has been greater, but the expenditure for other services has been much less.

I fully concur in all Dr. Bradley says of the good conduct and sobriety of the emigrants.

I have also sent you extracts from the Hamilton Report; the Bytown Report has not yet come to hand.

Unless some of our public works commence next year, I should be extremely sorry to see a very numerous emigration of poor people to this province.

I have, &c.,

(Signed) A. B. HAWKE,  
Chief Emigrant Agent, Western Division.

A. C. Buchanan, Esq.,  
&c. &c. &c.

EXTRACT from Dr. Bradley's Report to Mr. Hawke.

Sir,

Emigrant Office, Toronto, 24th November, 1841.

THE number of emigrants received at this port this season amounts to 6,612 souls, 4,200 at least of whom are settled in the Home District, including those sent to Oakville, Esquesing, Chinguacousy, Erin, and Owen's Sound. The following townships contain the remainder, except those here in the city, amounting to 230, chiefly servants and invalids, viz.:—Toronto, Scarborough, Pickering, Whitby, Markham, Adjala, David Town, Monro, King, Albion, Vaughan, Etobicoke, Whitchurch, Guillumbuy, Mara, Thora, Georgina, Barrie, Nottawasaga, Mulmur, &c. All that I have cognizance of going to the United States only amounts to 280 individuals. I received 620 emigrants through the States to this agency, some of whom were wealthy, others apparently very poor.

The general condition of the emigrants exhibited poverty; one-third of them appeared to have no means whatever. Their personal appearance as to costume, &c., was better than usual in past years. Their health was much impaired during the summer months with bowel complaints, ague and typhus fevers, &c., among the adults. Children suffered from the effects of measles, hooping cough, scarlet fever, dysentery, small pox. The number of deaths at this agency was only 19 adults and children; those who went into the country having frequently called for medicine and advice, and in due time reported convalescent.

The proportion appearing to be men of capital, could scarcely be reckoned at the fiftieth; mechanics numbered very low, not an hundredth of the entire, and very poor.

The number of applicants for free passages was more than the number granted, as I sent none save those whom I found assurances had friends or employment where they desired to go. The free passages given by water amounted to 580; those sent by land, at the Government expense, being about 250.

The number settled here, or about this immediate neighbourhood, exceeds not more than 400. The men are hired at 2*l.* per month, and the females at from 20*s.* to 15*s.* per month; they are content so far. Every one able to work seemed to be favoured with an employer. I exerted all my power, and succeeded beyond my most sanguine expectation. Mechanics suffered for a time ere employment was procured for them.

The number of destitute emigrants in my vicinity are those only who have suffered much from sickness; they reckon about 40. Indeed some of them need the extension of charity to a great degree. I think all that troubled private ladies and gentlemen exceed not 23 families for the whole season.

The deportment and conduct of all the emigrants who arrived here exceeds description; there was not a single instance of ill behaviour known to the civil authorities, nor yet to me, that would cause me to report thereon. Temperance prevailed, and peace among themselves seemed replete.

I have, &c.

(Signed) R. D. BRADLEY, Emigrant Agent.

EXTRACT from the Report of the Emigrant Agent at Hamilton, dated 19th November, 1841,  
addressed to Mr. Hawke.

Sir,

THE total number of emigrants landed at Hamilton may be stated at 1,680 persons. With respect to the destination of the emigrants, I can only reply that those whom I have for-

warded have been invariably in a western direction, chiefly to the London District. It has come to my knowledge, however, in repeated instances, that emigrants who have received free passages hither have crossed over to the United States; and I am of opinion that a majority of those who have arrived here without relations in this country have proceeded thither.

The general condition of the emigrants who have passed under my notice has been that of persons in the lower class, chiefly Irish; though there has been a large consignment of Scotch from the counties of Sutherland and Caithness, and a few families from Glasgow and Paisley, weavers. For most of the Scotch, independently of the small assistance which I rendered them, a subscription was obtained from the St. Andrew's Society and from the charitable of their countrymen. The Irish were mainly dependent on the emigrant fund; some of them, however, although applicants for relief, were found to be possessed of sums varying from 10*l.* to even 20*l.* The health of the emigrants might be said to have been good, were it not for the extensive prevalence of ague, which, though rarely fatal, is productive of extreme weakness, and it has consequently entailed much expense upon the agency.

Four deaths only among the emigrants of the present season, residing in this immediate neighbourhood, have come to my knowledge. Scarcely any capitalists, according to the usual acceptation of that term, have come under my notice during the present season.

All the emigrants have applied either for free passages westward, or for both. I have rarely forwarded them, except when the object has been to join friends; and in such cases I generally defrayed only a portion of the expense, compelling the emigrant to resort to public subscription for the remainder, or the sale of a portion of his clothing. I have adopted this method, not only in consequence of the ruinous expense of land travelling, but also in order to test the real or pretended property of the applicant.

I am enabled to enumerate 17 families still remaining here; most of them have procured temporary and partial employment,—two in mechanical, the remainder in ordinary labour. Five heads of families are suffering from sickness, whose domestic distress will consequently be very great.

There are no emigrants who cannot obtain occasional work, and permanent employment is scarcely to be obtained for any of them; indeed it has been found throughout the summer that labouring work has been scarce, even for the permanent labourers; and it would be unreasonable to anticipate an improvement during the winter season. There are no public charities in this district. I have reason to believe that there is great distress among both the emigrants and those of longer residence here, arising from sickness, improvidence, or other causes; such cases are left to private charity, excepting in the last stage of distress, when the district fund is generally laid under contribution.

The present season has proved more expensive than the preceding: firstly, because the emigration hither has increased; and secondly, much more has been done for the emigrants than formerly, in free passages and other attentions to their wants.

I have, &c.

(Signed) E. C. THOMAS, Emigrant Agent, Hamilton.

---

EXTRACT of a Letter from the Emigrant Agent at Bytown.

Sir,

Bytown, 7th December, 1841.

I AM in receipt of your favour of the 27th ultimo, requesting information concerning several emigrant families named therein. Accompanying this I beg leave to transmit a statement showing the places to which they have been forwarded; and although I can give you no particular information as to the success they have met with, yet I am perfectly satisfied that those who went up the Ottawa river to the places to which they had been previously advised to proceed by yourself, Mr. Kerr, and others, could not fail in obtaining immediate employment provided they used the necessary exertions to procure it. The only obstacle in the way of those who came up latterly was the lateness of the season at which they arrived; but from the accounts I had from persons resident in the settlements to which most of the families alluded to make their way, I am convinced that they did not suffer from that cause. If similar exertions were made at an earlier period of the season, a great many more could be comfortably provided for in the settlements, on the banks of the Ottawa, above this.

You could not possibly serve poor emigrants more (I mean, of course, a reasonable number of them) than by encouraging them to try their fortune up the Ottawa; for in no part of Canada can they have a better, or indeed so favourable an opportunity of speedily bettering their condition, there being in all this section thousands of settlers in prosperous circumstances, living proofs of the fact. The immense lumber-trade going on causes wages to be high; and when, after a shorter time than he could accomplish it in any other part of Canada, the emigrant is enabled to settle on land, (which is easily procured, and that of as good quality as any in the province,) he has a market at his door for all the extra produce he can spare, at prices which are no where to be exceeded.

As further requested by you I also transmit a statement, showing the number of emigrants who passed this place during the season, and the number that landed here, &c.; also the number that received assistance from Government. Those forwarded at Government expense, as well as many who landed, received a small supply of provisions, and, when required, medical assistance, &c.

All I can say as regards the condition and means of those who landed here for the purpose of settling in this neighbourhood is, that the greater portion of them were of the poorer class; at the same time there has been a decided increase over last year of wealthy and respectable settlers. It gives me much pleasure to be able to add that there is no likelihood of distress

*Emigration.*  
—  
CANADA.

Emigration.

(Signed) GEORGE R. BURKE, Emigration Agent.

The Petition of the Passengers arrived at the Port of Quebec on board the brig Wanderer, Cowen, Master, from Glasgow,  
HUMBLY SHEWETH,

THAT your petitioners sailed from Glasgow in the full expectation of receiving at least Government allowance of water ; but while raising anchor to proceed on the voyage, your petitioners were informed by one of the owners that no further allowance of water would be given than half a gallon per diem for each adult, a quantity insufficient for the wants of your petitioners.

Your petitioners being well aware of the intended disposition for emigration from those parts of Scotland from which your petitioners in general emigrated, humbly beseech that some measure be taken for the suppression of such an afflicting grievance, which cannot fail to depress the tide of emigration so universally predominant at present. May it, therefore, please your honour to take into your serious consideration the most effectual means for the future prevention of an evil so detrimental to the community ; or to grant your petitioners such advice as may enable them to prevent the recurrence of such an evil in future, and your petitioners, as in duty bound, will ever pray.

To the Chief Agent for Emigrants, Quebec.  
15th August, 1841.

EXTRACTS of an Address of the Irish Emigrant Society of the City of New York to the people of Ireland.

Desirous of promoting, to the utmost practicable extent, the interests of our emigrating countrymen, we must, at the same time, endeavour to avoid, by timely precaution, any evil consequences which may arise from mistaken or exaggerated conceptions of our capability to serve them. With this view we have determined on laying before you the precise objects of our association, the sphere of duties to which its operations are limited, and such advice, relative to the important subject of emigration, as diligent inquiry, attentive observation, and information, recently received from various parts of the Union, enable us to afford. Perhaps we would not have deemed this address necessary, had we not been warned from several sources that many, entertaining an erroneous estimate of our ability and duties, would be encouraged to abandon settlements at home for precarious or illusive prospects in a distant country, alluring them to inevitable disappointment and disaster.

Ours is entirely a benevolent association. It possesses no property, no influence, except the moral influence arising from the conviction which we trust prevails among our countrymen in America, that our motives are disinterested, and our method of carrying them into execution prudent and hitherto successful. We can only assist the emigrant by advice and information. By advice we are able to protect him against the imposition, by which the unfortunate stranger is frequently plundered of his money, or induced to vest it in some unsafe and tottering business ; or enticed away, if a labourer, to some unwholesome spot, where, after a brief career of toil and vain regrets, and unavailing complaint, he falls a victim to the malaria. Our advice may also save him from the baneful effects of evil company, to which the poor emigrant is particularly exposed.

Without society life is at all times comfortless. Constituted as man is, this is one of the most pressing wants of his nature, and when well directed is the most grateful source of enjoyment, and of his social progress. The emigrant without society is wretched. He has left his friends, and his kindred, and his companions far behind. He feels a void in his heart, which he is anxious to fill up ; and, under such circumstances, he is not very apt to scrutinize the

character of those with whom he comes in contact. The profligate too frequently entice him away, and thus he enters upon a career of dissipation and idleness, at a time when the difficulties of his situation require unflinching firmness, industry, frugality, and integrity. How many would have been saved from irrecoverable ruin if they had avoided this first snare in the poor emigrant's path,

There is a considerable portion of our countrymen who have no chance of success in the United States of America. This is emphatically the land of labour, and although too many even here eat the bread, the bitter bread of idleness, yet their speedy and inevitable fate is contempt, disgrace, and want. Numerous and ingenious indeed are the contrivances by which the indolent and worthless strive to appropriate to themselves the fruits of labour. But success in such attempts is precarious and short-lived, and the man who lives in idleness and splendour to-day vanishes from the scene to-morrow, consigned to oblivion and want.

We allude the more particularly to this subject, in consequence of being obliged to witness for many years past the cruel sufferings and disappointments of hosts of interesting young men, who have been induced to visit these shores without a single qualification for success. Never were persons in a land of strangers so utterly helpless as the persons to whom we allude. Brought up in the lap of comfort, perhaps luxury, in their native country, unable to work, without a trade or any vocation, and completely ignorant of the most ordinary details of business, it is easy to anticipate their fate in the land of labour. Their fate has been in many cases deplorable. Time would fail us in recording the hapless history of the many noble-hearted, well educated, and tenderly reared young man, who, incapable of providing for themselves in this country, have fallen victims to penury in its direst forms. We regret to say that a large class of our countrymen at home, possessing small incomes, and engaged in no regular occupations themselves, bring up their children to no business, habituate them to no pursuit, and indulging the disgraceful prejudice against labour, encourage them in lounging and idleness; and yet they think they provide for them, if they furnish them with an outfit, pay their passage to the United States or the colonies, and give them money enough to last a few weeks after their arrival. To the friends and parents of such persons, duty compels us to say, that this course is in the highest degree cruel. It is in the first place cruel to rear them in idleness, and in the next place it is the highest aggravation of that cruelty to send them forth in that helpless condition to a distant and strange land, where none but the industrious can hope for a livelihood. And not only such would we caution against coming to America, but we would extend the same advice to clerks, accountants, and copyists, and all who seek for employment in the counting rooms of merchants, or the offices of lawyers. All such occupations are overstocked. For many years, in consequence of the great stimulus given to trade, there was a constant rush from the agricultural districts to the towns and cities, all striving to avoid the necessity of manual labour; the cares and vexations of a commercial life. Young men in multitudes abandoned their paternal farms where they would have been blessed with healthy independence had they not aspired to the fictitious refinement and wealth of cities. Many obtained situations and became themselves principals in mercantile concerns; but the revulsion came, and while numbers of the former were thrown out of employment, several of the latter were reduced to hopeless bankruptcy. The consequence is, that all commercial places are crowded with young men natives of the United States, entirely destitute of support, and who, when a vacancy offers, are invariably preferred. Many of them now rue the silly ambition that enticed them away from the wholesome and independent avocations of their fathers.

In short, we cannot with confidence, advise any persons to remove to America, except labourers, mechanics, and those who, possessing a small capital, and some practical acquaintance with agriculture, are willing to settle in our new states and territories. We would tell all to avoid the Atlantic cities, and to distribute themselves throughout the land. And here we would urge upon all the necessity of providing themselves, before their departure, with something more than the price of their passage and supplies. Thousands continually land entirely penniless, and are at once in a state of destitution; whereas each person should have at least 5*l.* on his arrival to enable him to prosecute his journey to the interior. Immediate application for information and advice should be made at the office of the Society, so that there may not be a moment's unnecessary delay; never considering the journey ended until the point in the country, selected as most suitable to his capacity and circumstances is reached. The condition of the emigrant who remains in the Atlantic cities, is very little if at all improved. He has not the same chance of employment; he is more exposed to the contagion of vicious habits; all the necessities and comforts of life are fourfold higher than in the country; and he has not the same opportunity of providing respectably for his family. We need not add, that, for all persons, in all occupations, temperance, integrity, and the love of peace, are indispensable, and that Father Mathew's pledge is as good as the best letter of recommendation. It is at all events *primâ facie* evidence in favour of the emigrant.

The season of the year at which it is best to arrive in America, should also be seriously considered. Beyond all question, the months of April, May, and June, are to be preferred; and April, when circumstances permit, should be preferred to all others. When the latter month is fixed upon, the emigrant should be ready to take his departure in the middle of February. It is always well to allow two months for the voyage, including the journey to the port of embarkation, and even this time is too short, if vessels of the first class are not selected. Summer is a disagreeable and dangerous time to arrive, owing to the intense heat, and the greater prevalence of disease. Autumn is also unhealthy to the emigrant, besides being too quickly followed by winter, when there is not the same demand for labour, and when the settler can do nothing.

Emigration.  
CANADA.

*Emigration.*  
CANADA.

We must also direct attention to the shameful frauds practised by ship agents and others at Liverpool and other ports of embarkation. Let no one proceed to those ports without being properly advised of the best vessels, of the days of sailing, and the character of the agents or ship-owners. Let no money be parted with without due enquiry. Beware of the infamous land-pirates to whom we allude; our attention is fixed upon them, and we hope one day to be able to hold them up to the scorn and execration of the world. It is our intention forthwith to communicate with suitable persons in the principal sea ports of the United Kingdom, with the view of establishing branch societies for the protection of emigrants from the frauds of these heartless wretches. We would also say to those who intend to come to the United States, that instead of embarking for any port in British America, their proper course is to take passage in the first instance for New York. This route is not only much more direct, but its navigation is incomparably less dangerous.

Let none then take the step precipitately; but the virtuous and the capable, who, after ripe deliberation, have resolved to come, we cordially welcome; and we affectionately offer them our assistance and advice.

(Signed) ROBERT HOGAN,  
President Irish Emigrant Society.

George L. Keefe, } Secretaries.  
Michael Burke, }

SUGGESTED AMENDMENTS to the present Passenger Act, with explanatory Notes, submitted for the consideration of His Excellency the Governor-General.

#### Second Clause.

Two passengers to every four tons; in no case should there be allowed more than one passenger to every 12 superficial feet of the 'twixt decks, or platform, which may be appropriated exclusively to their accommodation; or say a number equal to two-thirds tonnage, and all children to count.

The space of  $5\frac{1}{2}$  feet should be counted from beam to beam, and not from the deck to the platform, as the two beams frequently occupy from  $2\frac{1}{2}$  to 3 feet of the space, in small vessels.

If the number of passengers in proportion to tonnage were so fixed, that instead of computing them by different ages, every soul were counted as one passenger, much difficulty would be avoided, and if a penalty of 5% per head was imposed for every one beyond the number allowed, the practice of carrying an excess would soon be checked. The manner of computing children, prescribed by the 13th clause of the present Act, is one which has always caused difficulty, and is the occasion of fraud by the falsification of ages. The law in the United States allows only two passengers to every five tons actual measurement.

#### Third Clause.

Ships carrying passengers, to provide five pounds of biscuit per week for each passenger.

*Note.*—This amendment, I conceive, will obviate and remove one of the great causes of the distress which is found so frequently to exist on board of emigrant ships, viz., a deficiency of provisions. It is next to impossible for agents at home to ascertain whether the provision of the law, as it now stands, have been complied with. An extra charge of 7s. 6d. for each passenger would cover this expense, and the emigrant would not object to pay it on being made aware that he would receive an equivalent in return.

#### Sixth Clause.

The master to be restricted as to the prices which he may charge his passengers for any provisions which they may be under the necessity of purchasing from him; say, limit him to 10 per cent. advance on the first cost. The sale of spirituous liquors should be prohibited under a heavy penalty, unless ordered as medicine.

*Note.*—This or some other restriction should be adopted in order to prevent a recurrence of the numerous complaints which have been made of late years against the exorbitant charges which masters exact from their passengers for any provisions they are obliged to purchase. If the third clause was altered as proposed, this would not be of so much importance.

The present disgraceful practice of selling spirituous liquors to emigrant passengers, is the frightful source of disease and want.

#### Eleventh Clause.

The Government agent for emigrants at the ports of embarkation, to certify on each passenger list as to its correctness, and that the conditions of this Act have been duly fulfilled. This should be done in duplicate, and one of the lists delivered to the Government emigrant agent at the port of landing, the other to the collector or chief officer of Her Majesty's customs, as is at present provided for in the Act. The certificate of the Government agent at the port of landing of the due fulfilment of contract on the part of the master to be required to enable masters or owners of vessels to cancel bonds in the United Kingdom.

*Note.*—The certificate as to the correctness of the passenger lists is very necessary, as the lists furnished now, are in many instances wholly incorrect as to names and ages. A duplicate list should be deposited with the Government agent to enable him to make his return with accuracy; it should remain in his office as a public record for free inspection.

## Eighteenth Clause.

" Jurisdiction to be given to justices of the peace in the colonies, and the course of proceedings to be defined.

The object of the 18th clause is defeated in Canada by the want of jurisdiction of the local magistrates, under any Acts of the Parliament now in force relating to smuggling, to the customs, to trade or navigation. The Court of Vice Admiralty is the only tribunal before which the proceedings contemplated by this Act, can be taken. If jurisdiction should be given to colonial magistrates, a general reference to a course of proceedings, of which they have no knowledge, would not be sufficient.

## Twentieth Clause.

All ships carrying steerage passengers to be subject to the general provisions of this Act, but if the number do not exceed 50 souls, the master not to be required to enter into any bond.

## Additional New Clauses.

First. Passenger broker not to be permitted to exercise their calling without a licence from the Land and Emigration Commissioners.

Second. The master or person in command of vessels carrying passengers to be held liable to them for all contracts and bargains made by the charterer, broker, or ostensible agent.

(B.)

## REPORT OF DR. DOUGLAS,

*Medical Superintendent at Grosse Isle.*

Sir,

I HAVE the honour to submit for the information of his Excellency the Governor-General, a return of emigrants admitted, discharged, and died at the Quarantine Hospital, under my superintendence for the season ending October 20th.

By reference to the annexed Table, marked B., of admissions to the same hospital for the last eight years, it will be seen that the proportion of sick to the number of emigrants arrived has been much less than in any previous year. I ascribe this gratifying circumstance to two or three causes. 1st. The shortness of the passages of emigrant vessels this year, and the consequent abundance of provisions. 2dly. To the non-prevalence of typhus in the south and west of Ireland last winter and spring, the result of a plentiful potatoe harvest. 3dly. To the comparative small number of emigrant vessels, on board of which small pox broke out on the passage. While last season the number of passenger-ships on board of which this epidemic prevailed, was 17; this year the number has not exceeded seven.

Nearly one half of the whole number of emigrants that arrived this season came out in the month of May, at which time, from the prevalence of east wind in the River and Gulf of the St. Lawrence, the voyage is usually short, and the coolness of the weather unfavourable to the generation of febrile miasm. Another obvious advantage of the short voyage, is the abundance of food, the scarcity of which is so great a predisposing cause of disease.

On board of some of the most crowded of the vessels this season, the Lord Seaton, with 546 passengers; the Dumfriesshire, 621; Ann Jeffry, 261; and George Marsden, 229; measles and hooping cough prevailed extensively among children, and as usually happens in similar cases, proved fatal to a great degree; the Lord Seaton having lost 14, the George Marsden 13, the Ann Jeffry 9 of their passengers. The total number of deaths of emigrants on the voyage out this season, has been 222, five-sixths of whom are young children, and very old persons, whose extreme age and feebleness rendered them unfit to encounter the privations of a sea voyage.

Twenty-nine children were born on the voyage out; notwithstanding the unfavourable circumstances under which these births took place, both mothers and infants, with a few exceptions, were doing well on their arrival at the Quarantine station. Two female emigrants, one in the barque Borneo, from Limerick, and another in the ship Lord Seaton, from Belfast, died in childbirth on the passage; and among other casualties, a female passenger in the brig Duchess of Buccleugh, was washed overboard and drowned in a gale of wind, and two men, one a passenger in the barque Julie, from Sligo, and the other in the barque Agenora, from Liverpool, were lost out of the ship's head, the usual places of accommodation having been knocked down by order of the master, on the plea of want of cleanliness on the part of the passengers. I have brought this circumstance under the notice of the Chief Agent for emigrants at this port as deaths take place from the same cause every season.

The emigrants as a body appeared in more comfortable circumstances than last year, being better provided with wearing apparel and bedding, and presenting fewer cases of squalor and misery. It is to be regretted that the difference of the law regulating the transport of passengers to this port and to that of New York should prove an inducement to send out by vessels coming to Quebec, large families of women and children unprovided with their natural protectors. The Passenger Act of the state of New York imposes an uniform tax of two dollars a-head upon emigrants of all ages (children as well as adults) and limits also the number embarked to two passengers to every five tons, making no distinction between children and adults. The sum charged the emigrants for passage is, therefore, double that paid by those coming to this port, and is exacted without reference to age. It is found, therefore, to

*Emigration.*  
CANADA.

(A.)

(B.)

Emigration,  
CANADA.

be a great saving for the adults of a family to embark for New York, and to leave the younger members to come out by the St. Lawrence under the charge of some female relative or other friend, trusting, in many instances, to receive assistance on their arrival here to enable them to proceed on to join their parents. The consequence of this is, that emigrant vessels coming to this port are too often crowded to excess, though the number actually on board does not exceed that allowed by the Act. This arises from the great proportion of children under 12 months, that are not included in the passenger list, and from those under seven years, three of whom are only counted as one adult, and from those under 14, two of whom are counted as one.

A medical inspection of passengers previous to leaving the port of embarkation in Europe, and a careful rejection of all such as are found labouring under fever, small pox, measles, or scarlatina, would tend to remove much mortality and suffering on the voyage. If the agents at the different ports in Great Britain were instructed to ascertain by actual inspection, not only that each passenger was provided with the quantity of provisions required by the Act, but that they had one change of clothing at least, and bedding sufficient to enable them to endure the cold from which passengers so frequently suffer in approaching the American coast, in the early spring voyage, it would tend also much to prevent the generation of fever.

I have, &c.

REPORT OF MR. HAWKE.

Sir, Emigration Office, Kingston, February 1st, 1842.

I HAVE the honour to transmit to you herewith, for the information of his Excellency the Governor-General, a statement showing the number of emigrants landed at Quebec from 1829 to 1841, inclusive.

The time embraced by the statement is 13 years; and it appears that during that period 322,291 emigrants came to the Canadas, viz. :—

From England and Wales . . . . .	74,073
,, Ireland . . . . .	202,855
,, Scotland . . . . .	41,426
,, all other countries . . . . .	3,937
Total . . . . .	322,291

On referring to the population returns for Upper and Lower Canada, I find that the population in 1829 may be stated at 650,000. If no immigration had taken place, the population would be in 1841, supposing it to have increased at the usual rate, viz., 3½ per cent. per annum, 945,750.

The best information as to the number of our population at present I have obtained from the Inspector-General for Canada West; and it would appear, from various data, that United Canada at present contains 1,250,000 people. If we deduct the 945,750, it appears that 304,250 persons have been added to our population from 1829 to 1841 by emigrants and their descendants.

Of the 28,228 immigrants landed at Quebec last year, 18,963 came to Canada West; the remainder, I am assured by the Chief Emigrant Agent for Canada East, have settled in that section of the province.

The emigrants who came to Canada West have been distributed as follows:—

Districts on the Bay of Quinte, viz.:	
Midland, Prince Edward, and Victoria . . . . .	2,500
Coburg, Port Hope, Whitby, and Darlington . . . . .	1,850
Gore, London, and Niagara districts . . . . .	2,500
Home District . . . . .	6,512
Settled on the St. Lawrence, between Kingston and Cornwall . . . . .	1,200
On the Ottawa and Rideau, and in the Bathurst and Eastern districts . . . . .	3,260
Gone to the United States . . . . .	1,141
Total . . . . .	18,963

It is impossible to be exact in such statements, as the emigrants frequently shift from place to place during the first year or two after their arrival; but, from all my correspondence, as well as from many verbal communications, I am satisfied that the statement showing the distribution is, in all its material features, correct.

The emigrants of last year were generally poor; at least, two-thirds of them were mere labourers, for whom, as we had no public works in operation, it was frequently very difficult to obtain suitable employment.

By scattering them over a wide space of country, they have, I believe, all succeeded in obtaining work, although at lower wages than usual.

In the absence of public works, the demands for unskilled labour in Canada is always very limited. Good farm servants and mechanics experience no difficulty in getting work, and I could have found employment last year for a much greater number belonging to these classes than visited our shores.

Very few emigrants applied for free grants of land on the Garrafraxa and Owen's Sound Road, as they were not in possession of sufficient means to maintain themselves and families until they could get a crop from the land; and emigrants of small capital generally, and I think wisely, preferred purchasing partially improved farms in more settled parts of the province to going upon wild land.

The expenditure on account of emigration west of Montreal for 1841, may be stated at 4,218*l.* 16*s.* 5*d.* currency. Emigrant agents are stationed at Bytown, Toronto, and Hamilton, who receive their instructions from this office. It is their duty, as well as mine, to afford emigrants information respecting the Crown and other lands offered for sale in the different districts, and to direct them to places where they can obtain work; to afford relief, when necessary, in food and transport, as well as authorize medical attendance and comforts in cases of sickness, and to see that they are not imposed upon.

The out-agents report to me from time to time during the season, and the substance of their reports is condensed, and communicated by me to the head of the Government.

I am accountable for the expenditure, and my accounts, supported by proper vouchers, are sent to the Inspector-general at the close of each season.

Although the General Report for 1841, prepared at Quebec, will put his Excellency in possession of much of the information contained in this communication, I have felt it my duty to give a condensed view of the emigration to Canada generally, during the time I have been employed as chief emigrant agent, and to point out the duties of my office.

I have, &c.

T. W. C. Murdoch, Esq.,  
&c.      &c.      &c.

## CLERGY RESERVES (CANADA).

RETURN to an Address of the Honourable The House of Commons,  
dated 14 July 1842;—for,

ACCOUNTS of the Proceeds of all SALES of the CLERGY RESERVES in *Canada*, and of the Amount thereof invested in the PUBLIC FUNDS in the Province of *Canada*, or in the PUBLIC FUNDS of *Great Britain* and *Ireland*, and of the Annual Interest and Dividends thereof; distinguishing the Sales which were effected under the Authority of the Act 7 & 8 Geo. 4, c. 62, and those which have taken place under the Act 3 & 4 Vict., c. 78:—Of all RENTS arising from the CLERGY RESERVES that have been demised for any Term of Years, and of the Amount of the ANNUAL FUND directed to be formed under the Act 3 & 4 Vict., c. 78:—Of the ANNUAL STIPENDS and DIVIDENDS which are payable out of said ANNUAL FUND, and were assigned and given to the Clergy of the Churches of *England* and *Scotland*, and to any other Religious Bodies or Denominations of Christians in *Canada*, and to which the Faith of the Crown is pledged; distinguishing such Religious Bodies or Denominations of Christians, and specifying the Amount payable to each respectively out of said Fund:—Of the Application and Appropriation of the said ANNUAL FUND to the Churches of *England* and of *Scotland*, and of the Application of such Part thereof as the Act 3 & 4 Vict. directs the Governor of *Canada* to apply to the Purposes of Public Worship and Religious Instruction in *Canada*; distinguishing the Religious Bodies and Denominations of Christians to whose Public Worship and Religious Instruction such Annual Fund shall have been applied.

Colonial Office, Downing-street,  
30 May 1843. }

G. W. HOPE.

(No. 40.)

—No. 1.—

My Lord,

Government House, Kingston, 10 March 1843.

IN reply to your Lordship's Despatch of the 18th July 1842, No. 204, conveying to me Her Majesty's pleasure that certain Returns required by the House of Commons, according to the Address therein enclosed, should be prepared forthwith, I have the honour to state, that it is only within the present week that I have been able to obtain from the different officers the necessary information to complete these Returns, which I now lose no time in transmitting.

As your Lordship has already anticipated, the Lords Commissioners of Her Majesty's Treasury will be able to furnish the most accurate statement of the amount of the Clergy Reserve Fund invested in the Public Funds of Great Britain, and of the annual interest and dividends therefrom. It remains for me to state, with reference to this fund, that it arises entirely from sales effected under the Act 7 & 8 Geo. 4, c. 62.

*Vide Return No. 3.*

I have, &c.

The Right honourable Lord Stanley,  
&c. &c. &c.

(signed) *Charles Bagot.*

AN ACCOUNT of the PROCEEDS of all SALES of the CLERGY RESERVES in *Canada*, invested in the Public Funds\* in the Province of *Canada*, and of the Annual Interest and Dividends thereof; distinguishing the Sales which were effected under the Authority of the Act 7 & 8 Geo. 4, c. 68, and those which have taken place under the Act 3 & 4 Vict., c. 78.

—Nil.—

\* For Return showing the Amount of Investments in the British Funds, *vide* No. 3.

AN ACCOUNT of all RENTS arising from the CLERGY RESERVES that have been demised for any Term of Years, and of the Amount of the Annual Fund directed to be formed under the Act 3 & 4 Vict., c. 78.

Total Amount of Rents of Leased Clergy Reserves in *Canada West*, collected by the Commissioner of Crown Lands during the year 1842 - - £.1,108. 0. 7.

The same in *Canada East* - - - - - Nil.

No monies have been available for the formation of the fund directed by the Act 3 & 4 Vict. c. 78.

2 RETURNS RELATIVE TO THE PROCEEDS ARISING FROM

AN ACCOUNT of the ANNUAL STIPENDS and DIVIDENDS which are payable out of the said Annual Fund, and were assigned and given to the Clergy of the Churches of *England* and *Scotland*, and to any other Religious Bodies or Denominations of Christians in *Canada*, and to which the Faith of the Crown is pledged; distinguishing such Religious Bodies or Denominations of Christians, and specifying the Amount payable to each respectively out of said Fund, and of the Application and Appropriation of such Annual Fund to the Churches of *England* and of *Scotland*, and of the Application of such part thereof, as the Act 3 & 4 Vict. directs the Governor of *Canada* to apply to the purposes of Public Worship and Religious Instruction in *Canada*; distinguishing the Religious Bodies and Denominations of Christians to whose Public Worship and Religious Instruction such Annual Fund shall have been applied.

No appropriation has yet been made for public worship "and religious instruction," under the 3 & 4 Vict., c. 78, no investments having yet been effected under the said Act.

(Separate.) —No. 2.—

My Lord, Government House, Kingston, 10 March 1843.  
WITH reference to my Despatch, No. 40, of the present date, transmitting certain Returns relative to the Clergy Reserve Fund, in compliance with the instructions conveyed in your Lordship's Despatch of the 18th July 1842, No. 204, I have the honour to add the following statement for your Lordship's information, which, as it was not called for by the House of Commons, I have not deemed proper to append to those documents:

The total number of Clergy lots under lease in Canada West is 1,147, at an aggregate annual rental of 4,096*l.* 17*s.* 2*d.*

Of this amount, there would only be collected in the year 1842, including arrears for previous years, the sum stated in the above Returns; viz., 1,108*l.* 0*s.* 7*d.*

In Canada East there are 78 Clergy lots under lease, at an annual rental of 258*l.* 8*s.* 9*d.*, of which no portion was received during the year 1842.

There have also been sold in Canada East 8,400 acres of Clergy lands on quit-rent amounting altogether to 1,690*l.*, which, at an interest of 5 per cent., should yield annually, 84*l.* 10*s.*; but of this amount no portion was received during the year 1842.

From this statement your Lordship will perceive how disadvantageous the system of leasing these lands has proved, and how urgent the necessity was for abandoning it. At first sight your Lordship might be disposed to consider that measures might be adopted to compel the more punctual payment of these rents, but experience has proved the almost total insufficiency of past efforts of this nature; and I have, on a previous occasion, adverted to the irritation and ill-will which would be sure to follow the adoption of any extreme legal measures

\* The excess of this charge above the proceeds of the Clergy Reserve Fund is defrayed out of the Consolidated Revenue Fund of the Province, with the exception of the sum of 469*l.* 18*s.* 4*d.*, for which the Imperial Government has become liable during the year 1842, under the 8th section of the Act 3 & 4 Vict., c. 78, guaranteeing a certain amount to the Churches of England and Scotland within the Province.

THE SALE OF CLERGY RESERVES IN CANADA.

3

measures by the Government, or any public corporation, to enforce the payment of instalments by a number of tenants of this class.

I have, however, some hope that by a watchful supervision of the agents, and perhaps by some modification of the present arrangement for receiving the rents, a larger annual income may in future be derived from this source. The attention of the department with whom the collection rests has been given to the matter, and its best efforts will be directed to this object.

The Right honourable Lord Stanley,  
&c. &c. &c.

I have, &c.  
(signed) Charles Bagot.

P. S.—In the return of payments to which the faith of the Crown is pledged, the sum of 700*l.*, formerly received by the Wesleyans, has been intentionally omitted, as it has not been paid since the Union ; and Her Majesty's Government has decided that, under present circumstances, it shall continue to be withheld.

—No. 3.—

## PUBLIC WORKS (CANADA).

## CANADA ACTS.

(No. 28.)

4 &amp; 5 VICT., CAP. XXVIII.

AN ACT to appropriate certain Sums of Money for PUBLIC IMPROVEMENTS in this Province, and for other purposes therein mentioned.

(18 September 1841.)

MOST GRACIOUS SOVEREIGN,

WHEREAS it will conduce to the prosperity and advancement of this province, that the public works hereinafter mentioned be undertaken and completed with the least possible delay ; May it therefore please your Majesty, that it may be enacted ; and be it therefore enacted by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the Province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada ;" and it is hereby enacted by the authority of the same, that for the construction and completion of the public works of this province, there be granted to Her Majesty, Her heirs and successors, the sum of One million, six hundred and fifty-nine thousand six hundred and eighty-two pounds, sterling, which said sum shall be applied and expended under the charge and superintendence of the Board of Works of this province, for the erection and completion of the following public works, and in the proportions and within the periods herinafter mentioned ; that is to say :

Preamble.

A certain sum granted for public works.

For the Welland Canal, the sum of Four hundred and fifty thousand pounds, sterling ;

Welland Canal.

For the improvement of the navigation of the Saint Lawrence, exclusive of Lake Saint Peter, Six hundred and ninety-one thousand six hundred and eighty-two pounds, sterling ;

Improvement of the St. Lawrence.

For the improvement of the navigation of the Lake Saint Peter, Fifty-eight thousand five hundred pounds, sterling ;

Lake St. Peter.

For the Burlington Bay Canal, Forty-five thousand pounds, sterling ;

Burlington Bay Canal.

For improving the internal waters of the Newcastle district, the construction of slides, locks and certain roads leading thereto, Fifty thousand pounds, sterling ;

Waters of Newcastle District.

For constructing or improving harbours and light-houses on Lakes Ontario and Erie, and roads leading thereto, Seventy-four thousand pounds, sterling ;

Harbour and Light-houses on Lakes Ontario and Erie.

For improving the River Richelieu, Twenty-one thousand pounds, sterling ;

River Richelieu.

For improving the River Ottawa, and building bridges and constructing slides on the same, Twenty-eight thousand pounds, sterling ;

River Ottawa.

For improving the Bay of Chaleurs Road, between Percé Point and the Indian Mission, and a portion of the Métis or Kempt Road, Fifteen thousand pounds, sterling ;

Bay of Chaleurs Road.

For improving and completing the Gosford Road, between Quebec and the Eastern Townships, through the block of land possessed by the Government, Ten thousand pounds, sterling ;

Gosford Road.

For improving and completing the Main Northern Road from Lake Ontario, at Toronto, to Lake Huron, continuing and perfecting the same from the termination

Main Northern Road.

termination of the portion already undertaken by the district of Barrie, establishing toll-bars thereon, and improving sundry parts thence to Penetanguishine, and on the Cold-water Portage, Thirty thousand pounds, sterling ;

Main Province Road.	For improving the Main Province Road from Quebec to Amherstburg and Port Sarnia, building certain bridges on the same between Montreal and Quebec, and improving those portions of the line along which the river or lakes are not now available for the transport of the mails, that is to say :
Cascades to Province Line.	To macadamize or otherwise improve that portion between the Cascades and the Province line, and to establish toll-bars thereon, Fifteen thousand pounds, sterling ;
Brantford to London.	To macadamize or otherwise complete that portion from the termination of the part already undertaken by the district of Brantford to London, and establish tolls thereon, Fifty-five thousand pounds, sterling ;
London to Port Sarnia.	To drain, trunk, form, and otherwise improve the road thence to Port Sarnia, Fifteen thousand, pounds, sterling ;
London to Chatham, &c.	To drain, trunk, form, and otherwise improve the road from London to Chatham, Sandwich and Amherstburg, Fifty-five thousand pounds, sterling ;
Bridges between Quebec and Montreal.	For building bridges over the large rivers between Quebec and Montreal, Thirty-four thousand pounds, sterling ;
L'Original to the St. Lawrence.	For the completion of the Military Road, from the Ottawa near L'Original to the Saint Lawrence, Fifteen hundred pounds, sterling ;
Hamilton to Port Dover.	For the formation of a line of road from Hamilton to Port Dover, Thirty thousand pounds, sterling.

Powers heretofore vested in any Directors or Commissioners of any of the said Public Works transferred to the Board of Works.

Proviso as to certain powers to settle claims or damages given by Act of U. C., 3 Will. 4, c. 18.

II. And be it Enacted, That from and after the passing of this Act, all Directors or Commissioners appointed by or under the authority of any of the laws now in force, authorizing the construction or carrying on of any of the said works and improvements, shall be superseded, and their respective offices shall cease and be determined to all intents and purposes whatsoever; and that all and every the powers and authorities conferred upon any such Directors or Commissioners in or by any such law or laws shall be transferred to and shall and may be used, exercised and enjoyed by and under the direction of the Board of Works, in as full and ample a manner to all intents and purposes as the same might or lawfully could be used, exercised or enjoyed by such Directors or Commissioners or any number of them respectively: Provided, that nothing herein contained shall diminish or affect the authority and powers of the Commissioners appointed by or under the authority of an Act of the Legislature of the late Province of Upper Canada, passed in the third year of the reign of his late Majesty King William the Fourth, and intituled, "An Act granting to Her Majesty a sum of Money, to be raised by Debenture, for the Improvement of the River Saint Lawrence," in so far as regards the settlement of the claims for compensation for damages made under the said Act, by any person whomsoever, before the passing of this Act; but such powers and authorities, and all the provisions of the said Act shall, in so far as regards any such claim, be and remain in full force and effect, as if this Act had not been passed; and provided also, that nothing herein contained shall in anywise affect the rights or powers of the Stockholders of the capital stock of the Welland Canal Company, or any Directors by them elected according to law.

Rights and liabilities of the Commissioners and Directors transferred to the Board of Works.

III. Provided always, and be it Enacted, That nothing herein contained shall be construed in anywise to annul, discharge, vacate or make void any contract, agreement, debt or liability lawfully made, entered into or incurred by or to such Directors or Commissioners; but that every such contract, agreement, debt or liability shall be performed, fulfilled, paid and discharged to or by the said Board of Works, in like manner and subject to the same conditions as it would have been to or by the said Directors or Commissioners if they had continued in office.

A loan may be raised by the Governor to an amount equal to the

IV. And be it Enacted, That it shall be lawful for the Governor, Lieutenant-governor or person administering the government of this Province, from time to time,

time, and as occasion shall require, to raise by loan the said sum of One million six hundred and fifty-nine thousand six hundred and eighty-two pounds, sterling, for the construction and completion of the several public works hereinbefore enumerated.

total amount of the sums hereby granted.

V. And be it Enacted, That it shall be lawful for the Governor, Lieutenant-governor or person administering the government of this Province, to cause or direct any number of debentures to be made out for such sum or sums of money, not exceeding in the whole the amount hereinbefore authorized to be raised, as any person or persons, body or bodies corporate or politic, shall agree to advance upon such debentures, with interest payable half-yearly at a rate not exceeding the rate of five pounds for every hundred pounds by the year, and which said debentures shall be made payable at twenty years from the date thereof.

Debentures to be issued to the amount aforesaid.

VI. And be it Enacted, That all such debentures and interest thereon, and the charges incident thereto or attending the same, shall be and are hereby declared to be charged and chargeable upon and shall be borne and paid out of the Consolidated Revenue Fund of this Province.

Debentures issued under this Act to be chargeable on the revenue of the Province.

VII. And be it Enacted, That if any person or persons shall forge or counterfeit any such debenture as aforesaid, which shall be issued under the authority of this Act and remain uncanceled, or any stamp, indorsement or writing thereon or therein, or shall tender in payment any such forged or counterfeited debenture, or any debenture with such counterfeited indorsement or writing thereon, or shall demand to have such counterfeit debenture, or any debenture with such counterfeited indorsement or writing thereupon or therein, exchanged for ready money by any person or persons who shall be obliged and required to exchange the same, or by any other person or persons whomsoever, knowing the debenture so tendered in payment or demanded to be exchanged, or the indorsement or writing thereupon or therein, to be forged or counterfeited, and with intent to defraud Her Majesty, Her heirs or successors, or the person appointed to pay off the same, or any of them, or any other person or persons, bodies politic or corporate, then every such person or persons so offending, being thereof lawfully convicted, shall be adjudged guilty of felony, and shall suffer punishment accordingly.

Counterfeiting debentures, &c., with intent to defraud, to be felony.

VIII. And be it Enacted, That the Receiver-general of this Province for the time being, shall before each session of the Parliament of this Province, transmit to the Governor, Lieutenant-governor or person administering the government of this Province, a correct account of the numbers, amount and dates of the different debentures which may have been issued under the authority of this Act, of the amount of the debentures redeemed by him, and the interest paid thereon respectively, and also of the amount of the said debentures outstanding and unredeemed at the period aforesaid, and of the expenses attending the issue of the same, and of carrying this Act into effect.

Accounts to be rendered by the Receiver-general.

IX. And be it Enacted, That the interest accruing upon the said debentures shall and may be demandable at half-yearly periods computing from the date thereof, and shall and may be paid on demand by the Receiver-general of this Province for the time being, who shall take care to have the same indorsed on each debenture at the time of payment thereof, expressing the period up to which the said interest shall have been paid, and shall take receipts for the same from the parties respectively; and that the Governor, Lieutenant-governor or person administering the government of this Province, shall after the thirtieth day of June, and the thirty-first day of December in each and every year, issue warrants to the said Receiver-general, for the payment of the amount of interest that shall have been advanced according to the receipts to be by him taken as aforesaid.

Such interest to be payable by the Receiver-general half-yearly.

X. And be it Enacted, That a separate warrant shall be made to the Receiver-general, by the Governor, Lieutenant-Governor or person administering the government of this Province for the time being, for the payment of each debenture as the same may become due and be presented, in favour of the lawful holder thereof, and that such debentures as shall from time to time be discharged and paid off, shall be cancelled and made void by the said Receiver-general.

Debentures redeemable how to be paid off.

Debentures redeemable may be called in, and further interest stopped on those not presented accordingly.

XI. And be it enacted, That at any time hereafter it shall and may be lawful for the Governor, Lieutenant-governor or person administering the government of this Province, if he thinks proper so to do, to direct a notice to be inserted in the Gazette, requiring all holders of such of the said debentures as shall be then redeemable to present the same for payment, and if (after insertion of the said notice for three months) any debenture then payable shall remain out more than six months from the first publication of such notice, all interest on such debentures after the expiration of the said six months shall cease and be no further payable in respect to the time which may elapse between the expiration of the said six months and their presentment for payment.

Accounts of monies expended and tolls collected on such works to be laid before Parliament.

XII. And be it enacted, That there shall be annually laid before both Houses of the Legislature of this Province, accounts in detail of the expenditure made in the prosecution of the several public works hereinbefore mentioned, and also of the rates and tolls received on account of each of said works respectively.

Accounting Clause.

XIII. And be it enacted, That the due application of the monies herein granted shall be accounted for to Her Majesty, Her heirs and successors, through the Lords Commissioners of the Treasury, in such manner and form as Her Majesty, Her heirs or successors shall be graciously pleased to direct.

(No. 33.)

4 & 5 VICT., CAP. XXXIII.

AN ACT to facilitate the Negotiation of a LOAN in *England*, and for other purposes therein mentioned.—(18 September 1841.)

MOST GRACIOUS SOVEREIGN,

Preamble.

WE, Your Majesty's most dutiful and loyal subjects, the Legislative Assembly of the province of Canada, in Parliament assembled, having taken into our serious consideration the present state of the public debt of this province, and the message of Your Majesty's Governor-General of this province, transmitting a despatch from Your Majesty's Principal Secretary of State for the Colonies, bearing date the 3d of May, in the year of our Lord 1841, and containing among other things the following passage :

Despatch of the Secretary of State for the Colonies, dated 3d May 1841, in part recited.

“ The Queen's Government coincide in your views of the expediency of making such arrangement as may employ the credit of this country for the benefit of the finances of Canada, and have given their consideration to the plan proposed in your despatches. They are of opinion that such an arrangement, if it can be carried into effect with the consent of the creditors, would be in every way desirable ; but they feel that the objections to a Bill compelling parties to receive payment of their money in breach of agreement entered into with them by competent authority are insuperable.

“ Her Majesty's Government are ready to give any assistance in conformity with your proposal, which does not appear to them inconsistent with good faith. They are ready to propose to Parliament to guarantee a loan which may be required for Public Works (under the restrictions suggested by you), for the repayment of such part of the debt as may be now redeemable, or may be held by creditors who shall declare themselves willing to accept reasonable terms,”—and being desirous of lessening the charge of the said debt, as well as of making provisions for the continuance and completion of public works commenced in this province, by means of a loan at a reduced rate of interest, under the guarantee proposed in the said despatch, humbly beseech Your Majesty that it may be enacted ; and be it therefore enacted by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, “ An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada ;” and it is hereby enacted by the authority of the same, That after the charges made on the Consolidated Revenue Fund of this province, under and by virtue of the said Act of Parliament of Great Britain and Ireland, the said Consolidated Fund shall be charged and chargeable with the payment of the interest and principal of any new debentures, loan or stock not exceeding the sum of One million five hundred thousand pounds sterling money of

The Consolidated Revenue Fund of the province to be charged with any sum not exceeding £.1,500,000 sterling, raised by loan for the purposes aforesaid.

of Great Britain, which shall be raised or created on behalf of this province by virtue of this Act or of any Act or Acts of the Parliament of Great Britain and Ireland, to be passed for the raising and creating any such loan or stock, or for the purpose of guaranteeing the payment of the same and interest thereon by this province.

II. And be it enacted, That in case it shall be necessary to effect such loan, it shall and may be lawful for the Governor of this province to authorize debentures to the amount of One million five hundred thousand pounds of sterling money to be issued in such form, and payable at such period, and for such sums, and at such rate of interest as shall be most convenient, and as shall be in accordance with the terms in which such new loan may be guaranteed as aforesaid.

The Governor may issue debentures for such loan if necessary.

III. And be it enacted, That all and every the provisions of a certain Act of the Parliament of Upper Canada, passed in the seventh year of the reign of his late Majesty King GEORGE the Fourth, and intituled, "An Act to authorize the Government to borrow a certain Sum of Money upon Debentures to be loaned to the Welland Canal Company," which relate to the debentures authorized by that Act, passing current with certain public accountants, the suspension of interest in certain cases, the submitting to the Legislature accounts of such debentures and the interest paid thereon, and the expenses attending the same, and the paying off and cancelling the said debentures; and also the provisions contained in the seventh section of the said Act, declaring and making the forging any such debenture, or any stamp, writing or indorsement thereon or therein; and the tendering in payment any such forged debenture, or any debenture with such counterfeit stamp, indorsement or writing thereupon or therein; and the demanding to have such counterfeit debenture, or any debenture, with such counterfeit stamp, indorsement or writing thereupon or therein, exchanged for ready money by any person or persons who shall be obliged or required to exchange the same, or by any other person or persons whomsoever, knowing such debenture, or the stamp, indorsement or writing thereupon or therein to be forged or counterfeited, and with intent to defraud, as in the said Act is mentioned—Felony, and subjecting the person or persons guilty thereof to suffer as in the cases of felony, shall be and are hereby enacted and declared to be in force with regard and in respect to all and every debenture or debentures to be issued in pursuance of this Act.

Certain provisions of the Act of Upper Canada, 7 Geo. 4, cap. 20, relative to the debentures therein mentioned, extended to debentures to be issued under this Act.

IV. And be it enacted, That it shall be lawful for the Governor of this province to nominate and appoint such person or persons as he shall think the most fit for the purpose, of arranging and negotiating the mode and terms in and upon which such new loan or stock may be most advantageously raised or created, and to advance and pay to the person or persons so employed such sums of money as shall be reasonable and necessary to defray the expenses attending his or their employment; and that such person or persons (subject to instructions to be from time to time given to him or them by the Governor of this province), shall have full power and authority to negotiate on behalf of this province, in such form and manner as shall be rendered necessary by any such Act or Acts to be passed by the Parliament of Great Britain and Ireland, or as shall be directed and approved by Her Majesty's Principal Secretary of State for the Colonies for the time being.

The Governor may appoint a person or persons to negotiate such loan on the part of this province.

Expenses.

Powers.

V. And be it enacted, That it shall and may be lawful for the Governor of this province, out of the monies to be raised by any such new stock or loan, to direct and order the payment in full of all and every the public debentures of the late provinces of Upper and Lower Canada, or of either of them, which are now due, or which may hereafter be lawfully called in for the payment thereof, or which shall become due and payable, together with all interest due or to become due thereupon.

Governor may pay off

VI. And be it enacted, That it shall and may be lawful for the Governor of this province to authorize and direct the redemption of any debenture or debentures of either of the said late provinces, out of the monies so to be raised, as aforesaid, at such rates and upon such terms and conditions as shall and may be agreed upon with the holder or holders thereof: Provided always, that in no case shall any greater sum than is expressed in any such debenture, together with the interest due and unpaid, be paid for the redemption of the same.

or redeem debentures with proceeds of loan.

Executors, &c. may agree to such redemption.

VII. And be it enacted, That all executors, administrators, guardians, trustees, tutors, curators, and all curators or committees of the estates of idiots and lunatics, or absentees, who shall as such have the custody or control of or over any such debentures in this province, may agree for the redemption thereof, and receive the sums of money to be respectively paid therefor, and shall hold and be accountable for such sums as they shall respectively receive for any such debenture, upon, with, under and subject to the same uses, trusts, powers, conditions and purposes as such debentures were subject or liable to, when in their possession, custody or control.

Residue of loan to be appropriated as Legislature shall direct.

VIII. And be it enacted, That the residue of the monies so to be raised as aforesaid, after redemption of such debentures, shall be paid to and remain in the hands of the Receiver-general of this province, subject to such disposal and appropriation as the Legislature may, from time to time, by an Act or Acts direct and appoint.

Proceeds of loan to be accounted for.

IX. And be it enacted, That all monies to be raised by such loan or stock, as aforesaid, shall be accounted for to Her Majesty, Her heirs and successors, through the Lords Commissioners of Her Majesty's Treasury, in such manner and form as Her Majesty, Her heirs and successors, shall be graciously pleased to direct.

(No. 38.)

4 & 5 VICT. CAP. XXXVIII.

AN ACT to repeal certain ORDINANCES therein mentioned, and to establish a BOARD of WORKS in this Province.—(17 August 1841.)

Preamble.

The Ordinance of Lower Canada, 2 Vict. cap. 64, repealed.

WHEREAS it is expedient to repeal two certain Ordinances hereinafter mentioned, and to establish a Board of Works in and for this province; Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada," and it is hereby enacted by the authority of the same, that a certain Ordinance of the Legislature of the late Province of Lower Canada, passed in the second year of Her Majesty's reign, and intituled, "An Ordinance to establish a Board of Works in this Province," and a certain other Ordinance of the said Legislature, passed in the fourth year of Her Majesty's reign, and intituled, "An Ordinance to amend and render permanent the Ordinance establishing a Board of Works in this Province," shall be and the said Ordinances are hereby repealed.

And the Ordinance of Lower Canada, 4 Vict. cap. 38, repealed.

Contracts, &c. entered into by the Board of Works for Lower Canada, and rights acquired under the Ordinance repealed, to remain valid, and the Board of Works constituted under this Act to be with regard to such contracts, rights, &c. substituted for the Board of Works for Lower Canada.

II. Provided always, and be it enacted, That all contracts and agreements made and entered into by the Board of Works heretofore established and subsisting under the authority of the said Ordinances, and all rights, titles, interests or obligations, by the said Board of Works, or by any person or party whatsoever, acquired, held or contracted under the authority of the said Ordinances, or either of them, and all matters and things done or performed by the said Board of Works, or by any person or party under the said authority, shall subsist and continue to be good and valid, and in full force and effect, to all intents and purposes, as if this Act had not been passed; and the Board of Works to be established under the authority of this Act shall, with regard to all such contracts, agreements, rights, titles, interests, obligations, matters and things, be substituted for the Board of Works established under the authority of the Ordinances aforesaid.

A Board of Works to be established for the province.

III. And be it enacted, That there shall be in and for this province a Board of Works for the superintendence, management and control of public works therein, which said Board of Works shall consist of such and so many persons, not exceeding five in number, as the Governor, Lieutenant-governor, or person administering the Government of this province shall from time to time appoint to be members of the said Board, one of whom shall be appointed to be Chairman; and the said Board shall have such powers, authority and capacities as are provided by this

To have such powers as are expressly given it and no others.

Act,

## PUBLIC WORKS (CANADA).

7

Act, or may hereafter be provided by any Act of the Legislature of this province, and no others.

IV. And be it enacted, That a fit and proper person shall be appointed, in the manner aforesaid, to be Secretary of the said Board, and that the Governor, Lieutenant-governor, or person administering the Government, may remove the members of the said Board, or the said Secretary, or any of them, and appoint others in their stead, or reinstate those so removed, when and so often as he shall deem it expedient.

A Secretary to be appointed by the Governor.

Members and Secretary to hold their offices during pleasure.

V. And be it enacted, That the Chairman and the Secretary of the said Board shall respectively receive a yearly salary, and their actual disbursements and travelling expenses when away from their usual place of residence on the business of the Board, and shall devote their whole time to the business of their respective offices, and shall not exercise any other profession or calling while they shall respectively hold the said offices; and the members of the Board, other than the Chairman, shall receive their actual disbursements and travelling expenses when away from their several places of residence on the business of the Board.

Chairman and Secretary to be allowed a yearly Salary.

Other Members to be allowed their actual disbursements only.

VI. And be it enacted, That the Chairman and Members of the said Board for the time being shall be a body politic and corporate, by the name of "The Board of Works," and may by that name sue and be sued, and may have a common seal, and alter it at pleasure, and may hold real property, and shall generally have all the powers and capacities which bodies politic and corporate have by law.

Board of Works to be a body corporate, and to have the usual powers of corporate bodies.

VII. And be it enacted, That the office of the said Board shall be at such place as the Governor, Lieutenant-governor, or person administering the Government shall appoint for that purpose, and shall be the legal office of the Corporation; and the Board shall meet thereat, or at such other place as the Governor, Lieutenant-governor, or person administering the Government shall appoint, at such times as he may direct, and at any time to which it may have adjourned at any previous meeting.

Office and meeting of the Board where to be kept and held.

VIII. And be it enacted, That the Chairman for the time being shall be the legal organ of the Corporation, and all writings and documents signed by him and sealed with the seal of the Corporation, and no others, shall be held to be acts of the Corporation.

What shall be deemed acts of the Corporation.

IX. And be it enacted, That it shall be the duty of the said Board to examine and report upon all matters which may be referred to it by the Governor, Lieutenant-governor, or person administering the Government, connected with the objects for the promotion of which it is constituted, as aforesaid, and to obtain all such evidence and information, plans, estimates, drawings, or specifications, and to cause such surveys, visits and examinations to be made, and generally to do all such things as may be necessary to enable it to make such report in the manner best adapted to advance the public good: Provided always, That no expense shall be incurred or authorized by the Board with regard to any matter so referred, unless with the sanction and approval of the Governor, Lieutenant-governor or person administering the Government.

Duties of the Board.

Expenses not to be incurred by the Board without the approval of the Governor.

X. And be it enacted, That the said Board may suggest to the Governor, Lieutenant-governor, or person administering the Government of this province, any public works or improvements therein, which it may appear to the Board could be undertaken with advantage to the province; but shall incur no expense relative to the object of such suggestion, unless with the sanction and approval of the Governor, Lieutenant-governor, or person administering the Government as aforesaid.

Board may suggest improvements relative to public works; but shall incur no expense touching the same without the Governor's approval.

XI. And be it further enacted, That all applications for any grant of public money for any of the objects for the superintendence of which the said Board is constituted, as aforesaid, which the Governor, Lieutenant-governor or person administering the Government shall think may be undertaken with advantage to the public, or any matter connected with such object which he may himself suggest, shall be referred to the said Board, which shall report thereon in the manner and under the provisions aforesaid.

Matters which shall be referred to the Board.

Board may make regulations with regard to Public Works.

Proviso.

What public monies shall be expended under the control and superintendence of the Board.

Such monies not to be expended until after the Board shall have reported on the mode of expenditure, and this report shall be approved by the Governor.

No public work to be commenced, unless it can be completed for the sum appropriated for it.

The Board, with the approval of the Governor, may employ and pay Engineers, Surveyors, &c.

All public works not specially vested in other persons shall be vested in the Board.

The Board, or their Engineers, &c. may enter upon property for the purpose of taking measurements, &c.

Making compensation for any damage they may occasion.

Board to have power to take and hold real property for Public Works.

XII. And be it enacted, That the said Board shall in like manner report on any reference which may be made to it, with regard to the tolls and duties to be collected on or for the use of any public works; and may make such regulations for the use of any public work of any kind, vested in the Board, or under its control, as shall not be inconsistent with the law, or with the purposes of such work; but such regulations shall impose no fine, unless the power of imposing such fine shall be given to the Board by some law relating to such work.

XIII. And be it enacted, That no sum of public money, now appropriated or to be hereafter appropriated for any public work, of the nature of those for the superintendence of which the said Board is constituted, as aforesaid, and the expenditure of which is not by law directed to be made, under the control of, or by any certain person or persons, or officer, or body corporate, shall be expended, except under the control and superintendence of the said Board.

XIV. Provided always, and be it enacted, That no part of any sum so appropriated shall be expended or advanced until the said Board shall have reported to the Governor, Lieutenant-governor or person administering the Government, in detail, the mode in which it is proposed to expend the same, nor until such report shall have been approved by him; nor shall any contract be entered into by the said Board for the performance of any work, except good and sufficient security, to the satisfaction of the Board, and of the Governor, Lieutenant-governor or person administering the Government, be given for the performance of the contract, within a time to be specified in the contract.

XV. And be it enacted, That no contract shall be entered into, or any money expended on any work for which any public money shall have been or shall be appropriated, unless it shall appear that the work can be completed, according to the intention of the Legislature, for the sum appropriated for it; excepting always such preliminary expenses as shall be necessary to ascertain whether it can or cannot be so completed.

XVI. And be it enacted, That the said Board shall (with the approval of the Governor, Lieutenant-governor or person administering the Government, as aforesaid) employ for the accomplishment of the objects for which it is constituted, such and so many engineers, surveyors, architects, clerks, draughtsmen, superintendents and other persons as may be necessary, and allow and pay them a fair and adequate compensation, not exceeding the usual allowances, salary or pay allowed to such persons respectively by other persons.

XVII. And be it enacted, That all public works which are not or shall not hereafter be specially vested in other persons, bodies or officers, shall be and are hereby vested in the said Board of Works, and placed under its superintendence, management and control, excepting always, that the tolls, revenue or income derived from any public work shall be or continue to be received, and accounted for by the persons appointed or to be appointed for that purpose; but the amount of such tolls and the expenses of collecting them, and all such other information as the Board may require from time to time, shall be reported and furnished to it by such persons on the requisition of the Secretary or Chairman.

XVIII. And be it enacted, That it shall be lawful for the said Board of Works, their engineers, agents, servants and workmen, to enter into and upon any and all lands and grounds to whomsoever belonging, and to survey and take levels of the same or of any part thereof, for any or all of the purposes and objects for which the said Board is so constituted, as aforesaid, and in and for the execution of the said purposes, and for the attainment of the said objects or any of them, to set out and ascertain such parts of any such lands and grounds, as the said Board shall deem necessary or proper, making compensation for all damages which shall be sustained by the owner or occupier of such land or ground, such compensation being ascertained by arbitration in the manner hereinafter provided, in case the said Board and the party to whom compensation is to be made shall not agree as to the amount thereof.

XIX. And be it enacted, That the said Board shall have power to acquire and hold all such land and real property of any description as may be necessary or useful for the performance of any work directed or to be hereafter directed by the Legislature, and may for that purpose contract and agree with all persons, bodies corporate

corporate, guardians, tutors, curators and trustees, whatsoever, not only for and on behalf of themselves, their heirs, successors and assigns, but also for and on behalf of those whom they shall represent, whether infants, (*minor children*) absentees, lunatics, idiots, femmes covert or other persons otherwise incapable of contracting, who are or shall be possessed of or interested in such property; and all such contracts and agreements, and all conveyances or other instruments made in pursuance thereof, shall be valid and effectual in law to all intents and purposes whatsoever.

Certain parties otherwise unable to convey property may convey to the Board.

XX. And be it enacted, That whenever the owner, or person so representing as aforesaid the owner, of any such land or real property, shall refuse to agree for the sale and conveyance thereof, it shall be lawful for the said Board of Works to make a legal tender to him or her of the probable and reasonable value of such land or real property, with a notification that the said Board of Works will submit the settlement of the value thereof to arbitration; and upon such tender and notification having been so made, it shall be lawful for the said Board of Works to enter upon and take possession of the land and real property to which such tender shall relate: Provided always, That the said Board of Works shall, within three days after so taking possession, name an arbitrator, and the owner or person representing the owner of the land or real property so taken possession of shall, within three days from such nomination also name an arbitrator, and the two arbitrators so named shall, before proceeding, name a third arbitrator; and the said three arbitrators shall inquire of, and they or any two of them shall award and adjudge upon the value of such lands and real property, and shall signify their award and judgment to the parties interested, within a period not exceeding ten days next after the appointment of the said third arbitrator; and the said Board of Works shall, upon the signification of any such award and judgment, forthwith tender to the owner or person representing the owner of such land or real property, the sum so demanded and adjudged; and if the same exceed the sum originally tendered, the Board of Works shall pay the costs of arbitration, but if not, the costs shall be paid by the person so refusing the tender made by the said Board as aforesaid.

When the Board and the party interested cannot agree on the compensation for the property or damages, such compensation may be ascertained by arbitration.

But the Board may enter on such property after making a reasonable tender.

Mode of appointing arbitrators.

Award to be made within a certain time.

Board must tender the sum awarded.

Costs of arbitration.

XXI. And be it enacted, That any award made under this Act concerning land or real property situate in that part of this province formerly called Upper Canada, shall be subject to be set aside on application to the Court of Queen's Bench, in the same manner and on the same grounds, as in ordinary cases of submission to arbitration by the parties; in which case a reference may be again had to arbitrators as hereinbefore provided; and any award made under this Act, concerning land or real property situate in that part of the province formerly called Lower Canada, shall be liable to be set aside at the instance of any party interested by the judgment of any court of competent jurisdiction, in that part of the said province, if the court shall be of opinion that injustice has been done by the award to the party complaining, and the value to be paid by the Board for such land or real property shall in such case be finally determined by the judgment of such court: Provided always, That no such award shall be set aside in any case unless the application to the court shall be made within one year from the date of such award.

Awards made in Canada West, how liable to be set aside.

And if made in Canada East.

Limitation of time within which any award shall be liable to be set aside.

XXII. And be enacted, That if the said Board shall neglect in any way to comply with any of the requirements of this Act touching the appointment of an arbitrator, or if no award shall be made within the period hereinbefore prescribed for making the same, then the party to whom the compensation is due shall have an action against the Board for the amount of such compensation, which shall then be ascertained, as to law may appertain, saving the right of the Board to plead any tender made of the amount of such compensation: Provided always, That nothing herein contained shall prevent the parties from agreeing to the extension of the period for making any such award, and such period shall in any such case be extended accordingly for all the purposes of this Act.

Party interested to have an action for the compensation if the Board neglect to appoint an arbitrator or award be made within the time limited.

Proviso.

XXIII. And be it enacted, That the arbitrators so appointed as aforesaid shall have power to examine any person upon oath touching the value of the property, or the amount of any compensation which they shall be required to ascertain, and they or any one of them may administer such oath; and the said arbitrators shall themselves be sworn to the due performance of their duties before some Judge or Justice of the Peace, before they shall proceed to perform such duties.

Arbitrators may examine witnesses on oath, and must themselves be sworn.

Duties of the Secretary of Board.

Accounts.

Plans, etc.

Contractors.

Reports.

Correspondence.

Travelling.

General duties.

Proviso.  
Plans, Documents, Instruments, &c., relative to Public Works, to be delivered to the Board.

Board may require the attendance of persons whom it may be requisite to examine touching any Public Work.

Penalty on persons refusing so to attend.

Board may require accounts to be sworn to; any Member may administer the oath.  
False swearing to be perjury.

Warrants for money appropriated for Public Works under the Board not to issue except on certificate of the Chairman.

Certain sum may be advanced to the Secretary to meet the disbursements of the Board.

Accounts of monies expended under the Act, how to be rendered.

XXIV. And be it enacted, That it shall be the duty of the Secretary of the said Board (with such assistance as may be found necessary) to keep a separate account of the monies appropriated for and expended on each public work ; to have charge of and keep all plans, contracts, estimates and documents, models or other things relative to any such work ; to keep regular accounts with each contractor or other person employed by the Board ; to see that all contracts made with the Board are properly made and prepared ; to draw out all certificates upon which any warrant is to issue, as hereinafter mentioned ; to prepare all reports to be submitted to the Board for its adoption, and to receive and answer, according to the instructions he may receive from the Board, all letters to, or from members of the Board, or other persons, on the business thereof ; to notify the members of all meetings of the Board which may be called at any time, other than that to which the Board shall have adjourned at its then last meeting ; to keep minutes of its proceedings at all meetings ; and to proceed to any place at which any public work may be undertaken, if directed to do so by the Board ; to have the general superintendence of all other matters which he may be instructed to superintend by the Board ; and generally to do all ministerial acts connected with the business of the Board, which it may direct him to do, or which may devolve upon him, by a fair construction of the meaning and intent of this Act, in all cases not expressly provided for: Provided always, That it shall be lawful for the Governor, Lieutenant-Governor or person administering the Government to require any person or persons, whomsoever, having in their possession any instruments, plans, papers, books, drawings, models, estimates or documents relative to any public work, and belonging to the province, to deliver the same to the Chairman of the said Board, and also from time to time to place in his charge and keeping, for the uses of the Board, any instruments, books, drawings, models or documents relative to the objects for which the said Board is constituted, which may be the property of the province, and required for the better attainment of the objects of the Board.

XXV. And be it enacted, That the said Board shall have power to send for and examine on oath all such persons as it shall deem necessary to examine touching any matter referred to the Board, as aforesaid, and to cause such persons to bring with them such papers, documents and things, as it may be necessary to examine with reference to such matter ; and to pay such persons a reasonable compensation for their time and disbursements ; and such persons shall be bound to attend at the summons of the said Board, after due notice, under penalty of such damages as may be awarded in favor of the said Board, as the loss the public may have sustained by the non-attendance of such person, in an action to be brought by the Board in that behalf.

XXVI. And be it enacted, That the Board may require any account sent in by any contractor or any person in its employ to be attested on oath, which oath, as well as the oath to be taken by any witness, the Secretary or any member of the Board may administer ; and any false statement wilfully made under any such oath, or in any case where an oath is required or authorized by this Act, shall be perjury.

XXVII. And be it enacted, That no warrant shall be issued for any sum of the public money appropriated for any public work under the superintendence of the said Board, except on the certificate of the Chairman, sealed with the seal of the said Board, that such sum ought to be paid to the person or persons named in the certificate in whose favor a warrant may be issued accordingly.

XXVIII. Provided always, and be it enacted, That it shall be lawful for the Board from time to time to grant such certificates, in favour of their Secretary, for such sums as may be necessary to meet any disbursements allowed to him or the members of the Board when on duty, or which the Board may order to be made immediately by the Secretary, in any report approved by the Governor, Lieutenant-governor or person administering the Government ; but the sum which shall at any one time be in the hands of the said Secretary shall in no case exceed Five hundred pounds currency.

XXIX. And be it enacted, That the said Secretary shall make up detailed accounts of the expenditure of all monies advanced or paid under certificates of the said Board, showing the sum appropriated for each public work, the sum so paid or advanced, and the balance, if any, remaining unexpended, and in whose hands ; and each such account shall be accompanied by vouchers, corresponding with

with the numbering of the items of such account, and shall be made up to and closed on the first day of January and the first day of July in each year, and shall be attested before some Judge of the Court of King's Bench or of the Court of Queen's Bench, or before some Justice of the Peace, and shall be transmitted to the officer whose duty it shall be to receive it, within fifteen days after the said periods respectively.

XXX. And be it enacted, That it shall be the duty of the Chairman of the said Board of Works to transmit to the Executive Government of this province, to be laid before the other two branches of the Legislature, within fifteen days after the opening of the Session, a detailed statement of the several public works carried on under the direction of the Board, and of the progress made in the said works since the previous Session of the Legislature, and of the amount of monies so far expended upon them, respectively, together with all such further information as the said Chairman may deem proper to be submitted for the information of the Provincial Parliament.

Chairman to report annually upon the state of the Public Works, for the information of the Legislature.

XXXI. And be it enacted, That nothing in this Act contained shall be taken or construed to authorize the expenditure of any greater or further sum of money in the payment of the yearly salary of the Chairman and Secretary, or in the payment of their travelling expenses, or in the payment of the actual disbursements and travelling expenses of the other members of the Board, than is at present provided for by an Act of the Imperial Parliament of Great Britain and Ireland passed in the third and fourth years of the reign of our Sovereign Lady Queen Victoria, intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada."

Salaries of Chairman and Secretary, &c., and other expenses, not to exceed the appropriation under Imp. Act 3 & 4 Vict.

XXXII. And be it enacted, That any Member of the Legislative Assembly of this province accepting the office of Chairman or of Secretary of the said Board of Works, shall thereby vacate his seat as such Member, and shall be incapable of sitting or voting in the said Legislative Assembly, unless elected to the said Assembly subsequent to his acceptance of any such office as aforesaid.

Any Member of the Assembly becoming Chairman or Secretary to vacate his seat, but may be re-elected.

XXXIII. And be it enacted, That the due application of all monies expended by, for or under the superintendence of the said Board, shall be accounted for to Her Majesty, Her heirs and successors, through the Lords Commissioners of the Treasury, in such manner and form as Her Majesty, Her heirs and successors shall direct.

Due application of all such monies to be accounted for to Her Majesty.

XXXIV. And be it enacted, That this Act shall be deemed and taken to be a public Act, and as such shall be judicially taken notice of by all Judges and other persons and in all Courts without being specially pleaded.

This Act to be deemed a Public Act.

(No. 103.)

6 VICT., CAP. VIII.

AN ACT to authorize the raising by way of LOAN in *England*, the sum of One million five hundred thousand pounds sterling, for the construction and completion of certain Public Works in *Canada*.—(12 October 1842.)

WHEREAS by a certain Act, passed in the last Session of the Provincial Parliament of Canada, intituled, "An Act to appropriate certain Sums of Money for Public Improvements in this Province, and for other purposes therein mentioned," there was granted to Her Majesty, Her heirs and successors, the sum of One million six hundred and fifty-nine thousand six hundred and eighty-two pounds sterling, to be expended and applied under the charge and superintendence of the Board of Works of this Province, for the erection and completion of certain Public Works in the said Act specified, and which said sum of money was to be raised by way of loan in manner provided by the said Act: And whereas in and by an Act of the Imperial Parliament of Great Britain and Ireland, passed in the last Session of the said Parliament, intituled, "An Act for guaranteeing the payment of the Interest on a Loan of One million five hundred thousand pounds, to be raised by the Province of Canada," after reciting that Her Majesty was graciously pleased to signify to the Legislative Counsel and Legislative Assembly of the Province of

Preamble: Act 4 & 5 Vict., c. 28, cited.

Imperial Act cited.

Canada, by a message sent to the said Council and Assembly by the Governor-general of the said Province, acting for and in the name of Her Majesty, that Her Majesty was ready to propose to Parliament, to guarantee a loan which might be required for public works in the said Province, under certain restrictions therein referred to, for the repayment of such part of the debt of the said Province as might be then redeemable or might be held by creditors who should declare themselves willing to accept reasonable terms; it is enacted, That it shall and may be lawful for Her Majesty, Her heirs and successors, to guarantee the payment of the dividends and interest, not exceeding the yearly rate of four pounds in the hundred, on any principal sum or sums of money, not exceeding the sum of One million five hundred thousand pounds in the whole, which shall be raised for all or any of the purposes aforesaid, by loan, debenture or otherwise, and which said dividends and interest so guaranteed, are charged and provided for in manner specified in the said Act: And whereas for carrying into effect the said above-mentioned Act of the Parliament of this Province, and in order that this Province may be most fully benefited by Her Majesty's gracious intentions, and by the guarantee provided by the said above-mentioned Act of the Imperial Parliament, it is considered expedient that the guarantee aforesaid shall be made, so far as it will go, applicable to the loan to be raised and the money granted to Her Majesty in and by the said first mentioned Act; Be it therefore enacted by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the Province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, and intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada," and it is hereby enacted by the authority of the same, That to the amount of the said sum of One million five hundred thousand pounds, the dividends and interest upon which are guaranteed as aforesaid, the said sum so granted to Her Majesty by the said Act of the Parliament of this Province, for the erection and completion of the public works in the said Act specified and mentioned, shall be raised and borrowed upon the said guarantee, and shall be expended in the construction and completion of the said public works, according to law.

£1,500,000 of the money appropriated by 4 & 5 Vict., c. 28, shall be raised under the guarantee in the said Imperial Act mentioned, and applied for the works mentioned in 4 & 5 Vict., c. 28.

Manner in which the said sum may be raised.

II. And be it Enacted, That, notwithstanding any thing contained in the said Act of the Parliament of this Province, the said sum of One million five hundred thousand pounds, shall be raised and borrowed, with the guarantee aforesaid, by any person or persons appointed in that behalf by Her Majesty, Her heirs and successors, or by the Governor of this Province, by loan, debentures or otherwise, and the principal sum so raised, the dividend and interest thereupon, and a sinking fund for the payment of the said principal sum, not exceeding five pounds per cent. per annum, on the said principal sum, shall be, and the same is hereby charged on the Consolidated Revenue Fund of this Province, next after the charges now made thereon by law.

The principal, interest, and a sum to form a sinking fund, charged on the revenue of this Province.

Sum raised to be paid the Receiver-general.

III. And be it Enacted, That the principal sum so to be raised and borrowed, shall be received from time to time, as the same shall be raised by the Receiver-general of this Province, who shall upon the warrants of the Governor of this Province, pay the dividends and interest thereupon, as the same shall become due, together with the sums accruing to the said sinking fund; and the said sinking fund shall be paid and managed for the redemption and payment of the said principal sum, in such manner as shall be agreed upon and negotiated when the said principal sum shall be raised, or if there shall be no agreement in that behalf, then in such manner as the Governor of this Province, by and with the advice of the Executive Council thereof, shall from time to time direct and appoint.

Interest, how paid.

Sinking fund, how managed.

Punishment of persons forging debentures, &c. &c.

IV. And be it Enacted, That if any person or persons shall forge or counterfeit any debenture or other security issued under the authority of this Act, or any stamp, indorsement, or writing thereon or therein, or shall demand to have such counterfeit debenture or other security, or any debenture or other security with such counterfeited writing or other indorsement thereon or therein, to be exchanged for money by any person or persons who shall be obliged or required to exchange the same, or by any other person or persons whomsoever, knowing the debenture or other security so tendered, or the indorsement or writing thereon or therein, to be so forged or counterfeited, with intent to defraud Her Majesty,

Majesty, Her heirs or successors, or the person appointed to pay off the same, or any of them, or any other person or persons, body or bodies, politic or corporate, then every person so offending, being thereof lawfully convicted, shall be adjudged guilty of felony, and shall suffer such punishment as shall be adjudged in that behalf, not exceeding imprisonment at hard labour for life in the provincial penitentiary.

V. And be it Enacted, That the Receiver-general of this Province for the time being, shall, before each Session of the Parliament of this Province, transmit to the Governor of this Province, a correct and detailed statement and account of the sums raised under the authority of this Act, and of the debentures or other securities which shall have been issued, and of the dividends and interest paid thereon, and of the sinking fund, and of the redemption of the whole or any part of the said principal sum, by means of the said sinking fund or otherwise, and of the expenses attending the negotiation, management, payment, and redemption of the said loan.

Accounts to be laid before the Governor by the Receiver-general of things done under this Act.

VI. And be it Enacted, That the due application of the monies so to be raised shall be accounted for to Her Majesty, Her heirs and successors, through the Lords Commissioners of Her Majesty's Treasury, in such manner and form as Her Majesty, Her heirs and successors shall be graciously pleased to direct.

Due application of monies to be accounted for.

VII. And be it Enacted, That the words "Governor of this Province," wherever the same occur in this Act, shall be construed to mean the Governor, Lieutenant-governor, or person administering the government of this Province.

Word "Governor" interpreted.

## CORRESPONDENCE.

### —No. 1.—

(No. 131.)

COPY of a DESPATCH from Lieutenant-Governor Sir *G. Arthur*, to the Marquis of *Normanby*.

My Lord,

Government House, Toronto, 8 June 1839.

WITH reference to the Bills transmitted to your Lordship with my despatch, No. 108, of the 14th of May, particularized in the accompanying Schedule marked (A.), having for their object the raising money to carry on this government, and to continue and perfect some of the public works undertaken in the Province, I have now the honour to submit the following remarks.

No. 1.  
Sir Geo. Arthur to the Marquis of Normanby,  
8 June 1839.

2. In my despatch of the 20th November last (No. 91), I stated to Lord Glenelg the probability of the arrival of very serious financial difficulties: I mentioned the causes of expenditure generally, as well as the occurrences which occasioned a sudden check to the public credit, and which threatened to cause the most serious evils, unless some means could be devised to place the financial concerns of this Province upon a satisfactory and permanent footing.

For Sir G. Arthur's Despatch, 20 November 1838, No. 91, vide Papers ordered by The House of Commons to be printed, 12 July 1839, No. 347.

3. I have since met the Provincial Parliament, and your Lordship is in possession of the speech with which I opened the session.

4. It was not in the power of the House of Assembly to do more than adopt temporary measures, and those which passed that body, whatever may be their merits, seemed to me so pregnant with evil, should the expectations of the Assembly on which they were founded be disappointed, that I have felt it my duty to contend with present inconvenience, and to lay the whole financial question before Her Majesty's Government; and in the mean time to reserve the Bills for the signification of Her Majesty's pleasure thereon.

5. The public debt of this Province, which your Lordship will find stated in Table (B.), and which involves an expenditure in interest nearly equal to the whole revenues of the colony, has been occasioned, as your Lordship will find noticed in the Earl of Durham's Report, principally by attempts to connect the magnificent inland waters of the Province with the sea, by means of canals, which, if completed, would open a line of inland navigation scarcely equalled in the world. These canals were supposed not only to promise immense advantages to

the trade and agriculture of the province, but to offer a prospect of great accession to the public finances.

6. The expectation of a rapid realization of these advantages, will at once explain to your Lordship the reason why the prudent course of making a provision for the interest of borrowed money from funds immediately available, was not adopted at each successive advance into debt. The prospects, it must be acknowledged, were sufficiently alluring; but nothing could be more plain, than that a postponement of the completion of the public works, a disappointment as to their profitable results, or a suspension of public credit, must leave the financial concerns of the province exposed to embarrassments of the most serious nature; in short, that the Government must want pecuniary means for its support, or that the public creditor must forego the interest which ought to arise from his investment.

7. These causes have unfortunately co-operated to produce the present difficulties. The distrust of British capitalists in American securities generally affected the provincial credit. This prevented the acquirement of a sufficient sum to complete the public works, and, of necessity, prevented their becoming profitable. The evil has been aggravated by the internal and frontier troubles of the Provinces; and the canals having been commenced on a scale calculated upon the wants and interests of a rapidly increasing population, and for an improving commerce, an immediate adequate return could scarcely be expected on those parts of the line of communication actually brought into operation, under circumstances of a complete cessation of immigration, and a great commercial depression.

8. The Welland Canal, which overcomes the difference of elevation between Lakes Ontario and Erie, was commenced by a private company with very inadequate means. It was originally intended for the navigation of ordinary canal boats, but the dimensions of the canal were afterwards increased, so as to allow of the passage of the schooners which compose the British and American sailing marine of the lakes. This increase of dimensions in the Welland, was expected to become profitable by means of the American western trade on the lakes, even then important, but which has since increased enormously. The passage of schooners through the Welland, enables vessels conveying freight from and towards the New York market to substitute, without breaking bulk, above 120 miles of open lake navigation for the expensive and tedious navigation of the Erie canal; of which, in effect, Oswego, on Lake Ontario, is thus to a certain degree made the western debouchure, instead of Buffalo, on Lake Erie.

9. The Welland Canal has been so far completed as to be now actually in operation, as it has been for several years. But, partly from want of judgment, and partly from want of funds, the locks have been constructed of timber, and the work requires a yearly expenditure in repairs more than equal to the whole receipts for tolls.

10. The private stockholders of the Welland Canal Company have expended on the work, 117,000*l.*, the British Government, 73,000*l.*, and Lower Canada, 25,000 *l.* Besides these sums, 275,000*l.* have been expended on the work, which belong to the public debt of this Province, making a total of 490,000*l.*

11. By order of the Assembly, an estimate has been made of the sum which would be required to reconstruct the locks of stone, and render the work permanent; the amount is estimated at 300,000 *l.*, which, from the reputation of the engineers, and the knowledge which has now been acquired of all the difficulties and expenses of the undertaking, I believe to be as nearly correct as such calculations can ever be expected to be.

12. The present expense of repairs on the canal amounts, on an average, to 16,000 *l.* per annum, the expense of management to 3,000 *l.* = 19,000 *l.* But, if the projected improvement takes place, the whole expense of management and repairs would not be over 5,000 *l.* per annum, which difference of yearly expenditure would argue in favour of the new expenditure, even if the necessity of it were not apparent from the danger and inconvenience of continually patching and preserving a decaying work of the dimensions and importance of this canal.

13. The tolls received upon the Welland have been steadily on the increase; for the year 1838 the tolls and rents of water-works amounted to 11,000 *l.*; and  
since

since the opening of the navigation this year, the increase has been altogether unprecedented ; and it is considered that 25,000 *l.* per annum would be realized were the work made permanent, and that this would be an increasing income.

14. Apart from calculations of profit, it is proper to consider the Welland Canal as it affects the safety of the western portions of the Province, in case it should require an armed defence, or the effect which the defensibility of the south-western frontier may have in the preservation of peaceable relations with the neighbouring country. For these purposes I conceive the Welland Canal to be absolutely indispensable ; and it may be a question worthy of serious consideration, whether it would not be for the interest of the Imperial Government to take the whole work into its own hands and management, in which case it would be necessary to redeem so much of the provincial debt as is involved in the undertaking, and to purchase the investments of the private stockholder.

15. This measure would ensure the completion of the canal, and relieve the Province from a considerable portion of its present debt, and from the necessity of incurring a considerable amount in addition ; but should it not be thought fit to make the Welland Canal a national work, another plan of relief may be adopted by the advance of a sufficient sum to complete the canal, and buy out the shares of the private stockholders.

16. I should mention here, that since the commencement of the Welland Canal, steam-boats have, to a great extent, but without displacing the sailing vessels, been employed on the lakes. The number engaged in the American trade, centring at present in Buffalo, is very great ; and if the canal were increased in its dimensions so as to permit the passage of these vessels into Lake Ontario, it is believed that the utility and prospect of profit of the work would be materially advanced, as well as its capability of adding to the defence of the Province. But this would cause a further outlay of 250,000 *l.*, and, after the best consideration I can give the subject, I am not disposed to recommend the measure.

17. The Rideau Canal is a great military work, connecting Lake Ontario with the waters of the Ottawa. It was constructed at an expense to the British Government of upwards of a million sterling, and its projection was, I am informed, partly occasioned by the cession to the United States of Barnhart's Island in the Saint Lawrence, which left the navigable channel of that river within American territory.

18. This canal is a noble work ; it is made of a size to admit the navigation of steam-boats of a small class ; its utility is, however, contracted for want of suitable connecting links of canal below its debouchure at Bytown, and between that place and the mouth of the Ottawa.

19. The Grenville Canal, constructed by the British Government, and navigable only for small boats, occupies one of the parts of this line of navigation ; and a private company own one lock at the rapids of St. Anne, so that the Rideau line of navigation is imperfect in a most material part. The enlargement of the Grenville Canal, and the improvement of the navigation at St. Anne's, ought most unquestionably to be completed to the same size as the Rideau, or that great work cannot become available to its full extent for military or mercantile purposes.

20. Were this part of the Ottawa navigation, which is required as adjunct to the Rideau, completed, the steam-boats, which could then ascend the Ottawa from Lachine, and proceed by means of the Rideau to Lake Ontario, could descend the Saint Lawrence, and thus perform a circuit of navigation assisted by the stream of this great river ; this would no doubt increase the utility of the Rideau navigation immensely, and be sufficient for all the trade of the colony for many years to come.

21. The Saint Lawrence Canal, on which so great a proportion of the sum of which the public debt consists has been expended, was intended as a part of a chain of inland navigation, projected on a scale sufficient to admit the passage of large steam-boats and sea-going vessels of a limited draft of water ; a portion of the work is nearly completed, but it cannot be available without the addition of very expensive works on the Saint Lawrence, both in Lower and Upper Canada.

22. It is maintained, and perhaps upon good grounds, by the friends of this undertaking, that it would tend to divert a considerable portion of the import trade to the Western States, which now passes through New York to Montreal and Quebec, and that many of the exports of these states would find egress by the same channel. It is also expected that a profitable trade might be opened on the Canadian lakes, in the way of building sea-going vessels, which, being loaded with staves or other produce of Western Canada, might proceed by way of the canal to Quebec, and thence to the West Indies or to Europe; and it is further relied upon, that if this navigation were available, British goods would be extensively supplied to all the American towns and villages bordering on the Saint Lawrence, the Lakes and the "far west." These projects, and others, may be quite reasonable, and their success would unquestionably add greatly to the commercial prosperity of both Provinces; but it strikes me that the undertaking was imprudent in the state of our finances, and the prospect of return too remote to be ventured upon, without at least a sure provision for the payment of interest on the debt incurred in the construction of the canals, until the profitable part of the scheme should be realized. Moreover, this work is much exposed, and in the event of war can scarcely be available for military purposes, and therefore cannot supersede the necessity of the parallel line of navigation on the Rideau. Nevertheless, it cannot be questioned but that it is a noble undertaking, and ought to be completed.

23. I transmit to your Lordship herewith the reports \* of the finance committee of the Assembly, by which your Lordship will see the opinions of that body respecting the prospects of return from the public undertakings.

24. I acknowledge that my opinions regarding the perfect safety of the public creditor does not so much rest upon the expected return for investments in the canals, as upon the fact that, as compared with other countries, these colonies are almost untaxed, and that the whole revenue, if increased, is applicable for purposes of improvement.

25. The only means which the law leaves open to the local legislature of meeting the yearly expenditure, arise from internal excise and direct taxation.

26. The duties on imports are levied partly by Imperial and partly by Provincial Statutes; and the amount of these duties is at present so small, that I am satisfied a great part of the existing deficiency might be made up by a judicious increase on the duties levied at the port of Quebec. The whole share coming to this Province amounts, at present, to about 45,000 £. per annum; and if this sum were even doubled, the burden upon trade would be still inconsiderable as compared with that borne by the American States, and the interest on the whole debt of the Province, arising from loans for general public purposes, could at once be placed upon, and perfectly secured by those duties.

27. Their increase and appropriation for this purpose would immediately form a basis upon which the credit system of the Province could rest without any fear of the recurrence of financial embarrassments; and the addition I have proposed would allow of an augmentation to the debt sufficient to complete the Welland Canal and other essential works, and would, it seems to me, offer an opportunity for consolidation of the debt on such terms as would occasion a considerable reduction of the amount of interest.

28. This would be very materially facilitated by the guarantee of a new loan on the part of Her Majesty's Government; and this loan being secured, as I have stated, on a revenue received at the seaport by officers of the Government, would offer the best counter-security for the guarantee, with the easiest and most certain way of collecting the revenue.

29. Supposing the assent of Her Majesty's Government to be given, the remaining difficulty in the way has hitherto been the want of a port of entry and clearance for Upper Canada, and to overcome which the annexation of Montreal has been warmly advocated; but if there are insuperable objections to that measure (and I

am

---

\* These reports have not been received.

am sure I have daily experience that Upper Canada is large enough already to govern with promptitude and energy), I cannot help thinking that other schemes might be devised whereby the commercial revenue might be regulated, without involving the concerns of the Lower Province.

30. The main part of the debt being thus arranged, the expenses of the administration of Government, and the part of the loan which consists of advances for public works of local interest, would remain to be provided for from internal resources. This portion of the loan secured by the liability of the companies and their joint property, and by the liability of the districts to local assessments, so that I do not anticipate any public burden from this source.

31. The interest upon the general public debt being provided for, as I have proposed, by the duties on imports from the sea, would leave the revenues arising from tolls upon the great public works available for the purposes of the Government; and, although they may not furnish an amount in money equal to the expenditure in the way of interest occasioned by them, they would form very material additions to the internal revenue,—that interest being provided for elsewhere.

32. I am aware that my plan of charging the interest upon the public debt, against the revenues arising from taxation, does not precisely meet the views of the finance committee of the Assembly, as your Lordship will perceive by their Reports. They still adhere to the opinion that the public works, if completed, would pay for themselves; this proposition I do not pretend to controvert, and if they be right, so much the better; my objection to it arises from the fact that it involves the principle of paying interest out of the capital sum borrowed, in the anticipation of future revenue; and I apprehend that those who would have to advance the money would have serious objections to the plan.

33. It also involves the opportunity, resting in the Colonial Legislature, of increasing the public debt indefinitely, and by this means jeopardizing the interests of the public creditor, whose great security ought to be that the funds upon which he rests should not be alienated or diverted until his debt is discharged.

34. The system of borrowing money in this manner has been deprecated by Messrs. Baring, Brothers, & Co., the principal negociators of Upper Canada debentures in London. They properly claim to be made acquainted with all new loans, and to have an opportunity of passing their judgment upon the means proposed of meeting the interest.

35. I am not aware of any other manner of producing this result satisfactorily, and of offering tangible security to the old and new public creditor, than that of limiting the loans to be negociated to the power of the Province to meet the yearly interest from funds capable of being immediately realized.

36. If Her Majesty's Government should assist the province by a guarantee, or by a representation from authority, that this prudent system should for the future be pursued, it would have the best reasons for insisting upon its plan being consistently followed in the colony; and, it seems to me, that the honour of the empire, and the peace and prosperity of the Province, are so intimately connected with the observance of faith to the public creditor, that those points cannot with prudence be left to the discretion of the borrowing colony; which, impelled by the best motives of public good, and with the purpose of hastening the arrival of a period of great public prosperity, may, unconsciously, overlook the financial difficulties which a failure or postponement of the result of their sanguine expectations must inevitably produce.

37. It is painful to me to be obliged to represent to Her Majesty's Government the necessity of some interference to relieve the colony from its difficulties. I should not do so were there any means of procuring relief from internal operations, or were the evils to arise from the present state of affairs less serious, or inevitable.

38. The greatest mischief and inconvenience is now felt in the Province from the want of means to continue and perfect the internal communications of which the  
benefits

benefits are commencing to be sensibly felt. The people naturally look to the Government to devise ways and means for their local works; and individuals cannot readily see the general difficulties which interfere with particular and local interests. They chafe and fret when they find impediments in their way, and their discontents find an easy solution in resting the blame upon the Government. Laws are in existence authorizing the raising of money for making macadamized roads, and they are apt to think that the Government is in fault, because the money is not forthcoming. Comparisons are made with the States of America, where gigantic and expensive undertakings are carried through successfully by means of British capital; and a spirit of dissatisfaction arises, which must be put an end to before public affairs can be managed with popular approbation, or with satisfaction to Her Majesty's Government.

39. In the Report of the Finance Committee the following passage occurs:—

“It may be well to examine the description and extent of the security they (the States of America) offer to British capitalists, and then compare it with the description and extent of the security the Canadas can offer for similar investments.

“The old States, New York, Pennsylvania, &c. rely upon an internal revenue collected within the State to pay the interest on the capital borrowed during the construction of their various improvements, and after these works are in operation, in the progressive increase of tolls.

“The states of Indiana, Illinois, and those recently forced into existence rely on the sale of lands ceded by the general government to pay the interest during the construction; when those lands are sold they have the canals and improvements in their place.”

40. These are the principles which I wish to adopt, although the committee do not draw precisely the same conclusion. The land-granting system pursued in this province for so many years, and the number of outstanding claims for which the faith of Government is pledged, will, I fear, place this Province in the condition of one of the old States; and it appears to me the conclusion is inevitable, that, the means of paying interest pending the unproductiveness of the public works, must be derived from the same source as in the old States, namely, taxation.

41. A law was passed during the session of the Provincial Parliament before the last, authorizing the negotiation of a loan of 1,000,000*l.* for the purpose of consolidating the public debt; the new debentures to bear three per cent. interest. If this loan should, by the assistance of Her Majesty's Government, be negotiated on favourable terms, the credit of the Province would immediately rise; the outstanding debt could be redeemed as it falls due, or at the will of the public creditor; and the negotiation of the required sum placed on the most favourable footing.

42. I have not alluded in this despatch to the effect which the proposed union of the Provinces will have upon the finances of this portion of Canada; partly because I have no right to assume that such a measure will be carried into effect, and partly because the Lower Province will have full power in the Legislature to keep their own share of revenue; and there is a fearful arrearage of public outlay to be made up in that colony which will require all their resources before the country can be placed on an equality with the neighbouring States, or, even with this Province.

43. I subjoin some tabular statements, (A.), (B.), (C.), (D.) and (E.), which will the better enable your Lordship to understand some of the details of the subject on which I have written, and it remains for me briefly to state my reasons for reserving the bills transmitted for the signification of Her Majesty's pleasure thereon.

No. 1.

44. I have reserved the Bill authorizing the issue of bills of credit, because, unless some measures be adopted to restore the public credit, these bills would remain unpaid at the end of the year without any means of redeeming them. They must then become depreciated, and I need not explain to your Lordship the ruinous consequences of such an event upon the public prosperity and tranquillity of the  
the

## PUBLIC WORKS (CANADA).

19

the colony; were this measure ceded, the prospect of a return to cash payments would be at least more remote.

45. I have reserved the Bill authorizing the sale of debentures for certain purposes at the market price, because I think the propriety of the measure depends altogether upon the establishment of a system of credit for the colony on a sound and simple basis; and, although the delay is productive of much inconvenience, I am of opinion that this evil will be more than compensated by the adoption of a good system, and by the negotiation of these debentures in consonance with it.

No. 2.

46. I have reserved the Bill for the payment of claims arising out of the late troubles, because, as from the preamble it is expected that the charge will be ultimately borne by Her Majesty's Government, I think it would be improper in me to have assented to it under an implied pledge which I had no authority to give.

No. 3.

47. I have reserved the Bill for purchasing the interest of the private stockholders in the Welland, because, until I shall have seen the means of finishing the work made available, I do not think it just to the public creditor to add to the provincial debt for this purpose.

No. 4.

48. The Bill to equalize the value of gold and silver coins, from its nature, was necessarily reserved. It is intended by this measure to equalize the currency of the Province with that of the United States, and to enable the banks to use money on the same terms as in that country. Most serious inconveniences are felt from the want of such a measure; and until a provincial coinage shall be established, I believe it to be necessary to prevent the continual drain which the present inequality of value causes upon the specie in the Province, and to make foreign coins available for commercial purposes.

49. My principal object in this despatch is to put your Lordship in possession of information to show that the resources of this colony are much more than equal, if properly tried, to the public exigencies, and that the time for trying them is come. My plan may be faulty or imperfect, but if so, some other ought to be adopted; the resources of a rising and rapidly increasing community are in existence; how they are to be made available is one question, but their being capable of becoming so is another. The latter point is the one in which I feel the deepest interest.

50. In conclusion, I beg to refer your Lordship to the Earl of Durham's despatch, (No. 25) of the 16th of July 1838, in which, with reference to the public works of this Province, his Lordship strongly urges them upon the attention of Her Majesty's Government, "both as a means of restoring tranquillity to the Canadas, and of blessing the North American Provinces with a degree of prosperity which has never yet been afforded them;" and his Lordship then proceeds to ask "a grant of money to be issued on the same principles and securities as those which regulate the assistance given to harbours, railroads, canals, and other public works in England."

For Lord Durham's Despatch, 26 July 1838, No. 25, *vide* Correspondence relative to British North America; ordered to be printed February 1839, page 141.

In this recommendation I most cordially concur. As the whole debt was incurred before my succeeding to this government, I am in no measure personally responsible for the consequences; but it would gratify me beyond all expression, successfully to plead the cause of a fine race, who have been plunged into the deepest political and financial distress by a course of events most awfully calamitous.

I have, &c.

(signed) *Geo. Arthur.*

Enclosure 2, in No. 1.

(No. 1152.)

AN ACT to authorize the Purchase of the Private Stock in the WELLAND CANAL on the part of this Province, and for other purposes therein mentioned. Encl. 2, in No. 1.

This Bill reserved for the signification of Her Majesty's pleasure thereon, on Saturday the 11th day of May 1839.

R. A. Tucker, Provincial Secretary.

WHEREAS it is desirable to place under the exclusive control of the government of this Province the Welland Canal, and for that purpose to provide for the purchase from the private stockholders in that work the stock by them held, and which amounts to the sum of 117,800*l.*, be it therefore enacted by The Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Assembly of the Province of Upper Canada constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of Great Britain, intituled, "An Act to repeal certain parts of an Act passed in the 14th year of his Majesty's reign, intituled, 'An Act for making more effectual provision for the government of the Province of Quebec, in North America, and to make further provision for the Government of the said Province,'" and by the authority of the same, That from and after the passing of this Act, it shall and may be lawful for Her Majesty's Receiver-general, upon an order to that effect from the Lieutenant-governor of this Province, to issue such number of debentures as may be required to the several stockholders in the Welland Canal, for a sum equal to the amount of the stock held by him or them, which debentures shall be made redeemable in 20 years from their date, and shall bear an interest of two per cent. per annum on the amount for which they may be issued for the first two years, three per cent. for the third year, four per cent. for the fourth year, five per cent. for the fifth year, and six per cent. for the sixth and following years, and which interest, as well as the principal sum, shall be chargeable upon, and payable out of the public revenues of this Province.

2. And be it further enacted by the authority aforesaid, That whenever the tolls collected on the said canal shall annually amount to the sum of 30,000 *l.*, it shall be lawful for the Lieutenant-governor to authorize and direct the Receiver-general of the Province to issue other debentures to the original stockholders, or their legal representatives, for such sum as will

make

make up six per cent. interest upon the amount of stock by him subscribed and paid for, from the time the same shall have been actually paid in, up to the time of the issuing of the debentures in the first clause of this Act mentioned, which debentures shall be made payable in 20 years from the date thereof, and bear interest at the rate of six per cent., payable half-yearly out of the public revenues of the Province.

3. Provided always, and be it further enacted, by the authority aforesaid, That nothing herein contained shall be construed to compel any stockholder to accept debentures for the stock by him held as aforesaid, or, in case of refusal to take the same, to deprive him from being paid from the tolls and revenues of the said canal, according to the laws now existing having relation to the said canal.

4. And be it further enacted, by the authority aforesaid, That so soon as the stockholders owning two-thirds of the stock in the said canal shall have signified their acceptance of debentures in lieu of stock, as hereinbefore provided, so much of the eighth clause of an Act passed in the seventh year of the reign of his late Majesty King William the Fourth, intituled, "An Act for the permanent completion of the Welland Canal, and for other purposes therein mentioned," as authorizes the annual election of two directors by the private stockholders of the said Welland Canal Company, and as requires the election or appointment of more than three directors for the management of the stock, property, affairs and concerns of the said Welland Canal Company, be, and the same is hereby repealed, and that a majority of the three directors shall be a quorum for the transaction of business: Provided always, that the Lieutenant-governor shall have power and authority to appoint such directors, or any of them, annually at his discretion.

Commons House of Assembly, 6th day of May 1839.

*Allen N. Macnab*, Speaker.

Legislative Council Chamber, 9th day of May 1839.

*Jonas Jones*, Speaker.

I reserve this Bill for the signification of Her Majesty's pleasure thereon.

*George Arthur*, Lieutenant-governor.

COPY of a DESPATCH from the Right honourable *C. Poulett Thomson* to  
Lord *John Russell*.

No. 2.

Despatch from the  
Right hon. C.  
Poulett Thomson  
to Lord John  
Russell,  
11 March 1840

My Lord,

Government-house, Montreal, 11 March 1840.

I EXPECT to be able shortly to submit a detailed statement of the financial condition of both these provinces, with a view to enable your Lordship and Her Majesty's Government to consider how far some assistance may be afforded through the interference of the Imperial Parliament towards diminishing a part of the burthen which will rest upon the united province, and to assist in developing the resources of the country by continuing the public works now suspended.

But, as it is possible that some discussion may arise upon the subject of the public debt of both provinces during the progress of the Union Bill, I shall briefly state the situation of each in this respect, and furnish an approximate account, without waiting for the exact particulars, which cannot, so far as Upper Canada is concerned, be completed until some returns for which I have called are rendered.

The obligations incurred by these provinces must be classed under different heads. 1st. Debt incurred for provincial expenditure of a general nature. 2d. Debt incurred for public works on account of the province. 3d. Debt incurred by advances to private companies, for which they are responsible. 4th. Debt incurred for works for which the interest is leviable, under Acts of the Legislature, by local taxation.

In Lower Canada the only class of debt is one under the second head. Advances have been made to the extent of about 50,000*l.*, and authorized to the extent of about 45,000*l.* more, making a total of 95,000*l.* for public works, for which the province is liable, receiving, of course, the benefit of the tolls and proceeds in return.

In Upper Canada the debt incurred under the first head amounts to about 62,000*l.*, being for war losses, and a portion of the insurrection losses defrayed by the province. This, however, can scarcely be accounted as debt now due for these objects, because it might long ago have been discharged from the ordinary resources, if they had not been absorbed in the payment of interest accumulating on the debt contracted for public works, or advances under the other heads.

The amount advanced in Upper Canada under the second head is 704,000*l.*, and a further sum of 200,000*l.* has to be added to the charge for the interest upon the original advances, which has been paid by fresh loans. These works are the Welland and St. Lawrence canals, which have absorbed, with the interest, no less than 817,000*l.*, and the rest, works of the same, though of a less important character.

Under the third head there have been advanced to private companies a sum, with interest also due, amounting to 36,000*l.*

Under the fourth head there have been advanced for macadamized roads a sum, with interest, of 210,000*l.*, for which the districts through which they run are liable under an Act of the Legislature, directing the annual interest to be levied by local taxation.

The whole debt of Upper Canada may therefore be called about 1,200,000*l.* in currency, or 1,080,000*l.* sterling.

I have stated, in submitting my scheme for the Union, that the whole debt of each province must be united and charged upon the general revenue, because there will exist no separate fund after the Union in either Province. But it is necessary to, remark, that in looking at the Upper Canada debt, which, of course, forms the important feature, although so large a sum is necessarily transferred, and thus placed upon the united province, this amount is no measure of the charge which will really have to be defrayed annually.

The whole of the debt under the fourth class, namely 210,000*l.*, is only a contingent security given by the province. Under the Acts by which these works were authorized, the different districts were rendered liable through the district rate leviable on the inhabitants and lands for the payment of any deficiency of interest which might arise from the inadequacy of the tolls; a provision which had not yet been enforced, but which I have directed to be immediately acted upon. No annual charge can therefore fall upon the united province on account of this part of the debt.

The sum advanced under Class 3 is, in like manner, a mere security, although, of course, not so good, inasmuch as private companies only are responsible to the Government; but I have directed this to be enforced, and there can be no doubt that, as regards the greater part of this sum, which is, after all, a mere trifle, the security will be available.

Nearly the whole of the debt of Upper Canada, therefore, consists of the sums expended in principal and interest upon the two great canals and some other public works of general utility, of no less advantage to the Lower than to the Upper Province; and as these works cannot fail to produce a return when completed, which will, of course, be paid to the united revenue, the burthen which will really fall upon Lower Canada, notwithstanding the difference in the amount of the share of debt which it brings, must be considered as very trifling.

I have, &c.

(signed) *C. Poulett Thomson.*

—No. 3.—

(No. 129.)

COPY of a DESPATCH from the Right honourable *C. Poulett Thomson* to  
Lord *John Russell*.

My Lord,

Government House, Montreal, 27 June 1840.

I now transmit to you an account of the financial state of the two Canadas, and in order to bring the subject fully before you, I shall call your attention, first to the estimated income and expenditure of each province for the present year; secondly, to that of each in regard to the future, under their existing engagements; and lastly, to the state in which the finances of the united province will probably be found, should the Union Bill pass into a law, as proposed by me.

The account marked (A.)\* is the estimate of the revenue and expenditure of the present year, as prepared by the Inspector-general of Lower Canada. This return would show a probable deficiency in the revenue of about 9,000*l.*, exclusive of the debt of 20,000*l.* to the military chest. I do not, however, anticipate any inconvenience from this deficiency, as many of the services for which it is necessary to make

No. 3.

Despatch from the  
Right hon C.  
Poulett Thomson  
to Lord John  
Russell,  
27 June 1840.

---

\* Income and Expenditure of Lower Canada, for the year 1840.

make provision during the current year will not in reality be paid until after the commencement of the next financial year. In regard to the debt to the military chest, I trust that Her Majesty's Government will not object for the present to suspend its repayment. If this be permitted, I have every reason to expect that the revenue of the present year will be sufficient to meet all the charges upon it. I must also remark that I have not been able to provide this year for a sum of from 12,000*l.* to 15,000*l.* for indemnity to sufferers under the rebellion, which have been allowed under a commission named by my predecessor.

The account (A. a.)\* will show the estimated expenditure and the interest of debt in Upper Canada, to be provided during the present year, together with an estimate of the income likely to accrue.

From this account it will appear, that after providing for the payment of the dividends upon the debt due in London on the 1st of January 1841, which must of course be met by remittances in December, or by some other arrangement, there will remain a deficiency of 50,394*l.* Against this has to be set a debt from Messrs. Thomas Wilson & Co. of 61,021*l.*, of which, however, only a small part can be expected to be realized within that period, if indeed any dividend be made, although there is no reason to doubt that the whole will ultimately be paid.

To provide for this deficiency, the Legislature have voted a credit of 63,000*l.*, to be raised by the sale of debentures in London without limit as to price or rate of interest.

Thus you will perceive, that to complete the payments and fulfil the obligations of the province during this year, a sum of about 50,000*l.* must be raised, which can be effected only by the realization of the debt of Messrs. T. Wilson & Co., or by having recourse to the powers granted by the House of Assembly.

Of the first there is little probability. Although I entertain no doubt of the ultimate solvency of the house in question, and of the payment of the debt in full, it is not to be expected that this can be effected during the present year, and it will be necessary to have recourse to the other resource, if other means cannot be adopted.

But this would in my opinion be most objectionable. In the present state of the credit of Upper Canada, debentures to the extent required could not, most probably, if saleable at all, be disposed of for any thing more than 75 or 80 per cent., if bearing interest of 5 per cent., and only redeemable in a certain number of years; or, if redeemable at pleasure at par, probably it would be necessary to pay an interest of 8 or 9 per cent.

A fresh loan to this extent would add materially to the debt which must hereafter form the united debt of the province of Canada, and would, in addition to the injustice of thus saddling upon the united province an augmented burthen to that extent, impose one contracted upon the most disadvantageous terms to the borrower.

I would therefore earnestly press upon Her Majesty's Government the propriety of affording the means of avoiding this necessity, which it may do with no inconvenience, and without any risk worth speaking of.

This may be effected by the Treasury undertaking the advance of 50,000*l.* necessary to complete the balance required, and taking in security the transfer of the debt of Thomas Wilson & Co., to which would be added of course the security of the province. The advance would, as regards the British Treasury, be a purely temporary one, probably not remaining uncovered for more than a few months; but to the province it would be a matter of the greatest moment.

I next come to the financial condition of the two provinces under their present separate administration.

In Lower Canada the provincial debt already incurred, or which may probably be raised during the ensuing year, is comparatively insignificant. From the statement (B.) annexed to this despatch, it appears that the total interest both certain and probable, payable on this debt during the present year, will not exceed 4,007*l.* 12*s.*, and that in future years it will amount only to 6,769*l.*

With regard to the general expenses it is to be observed, that in Lower Canada, under the heavy burthens of the two last years, the revenue has been nearly equal to the expenditure. In future years it will be relieved of some of the heaviest charges now upon it, and will therefore afford a considerable surplus. Thus the expense of the police of Montreal and Quebec, now amounting to

12,900*l.*

---

\* Income and Expenditure of Upper Canada, for the year 1840.

12,900*l.* (but in future on a very reduced scale), will be borne by those cities respectively.

The expense of the rural police will be reduced from 20,000*l.* to 13,000*l.*; the charge for the Commissioners of Indemnity and for the sums awarded by them will cease to exist.

By the saving thus effected there will be a surplus, as exhibited in paper (C.), for next year of 16,891*l.*, and in future of a larger sum.

Paper (B. b.) will show the present debt of Upper Canada, both funded and due to London bankers, the periods at which each part of it is redeemable, and the annual charge for interest. To this amount are appended the charges for fresh debt which may be incurred in the present year under certain contingencies; which are, first, the above-mentioned sum of 63,000*l.* if not provided for as I have pointed out; next, a sum of 36,000*l.* voted for indemnity to sufferers during the rebellion, to which Bill the assent of the Crown is pledged under your Lordship's instructions to me, and which has only not been given, as it is to be hoped that Her Majesty's Government will accede to the Address of the House of Assembly, upon which I have already written to you, and consent to cause these indemnities to be paid from the imperial treasury: and lastly, an additional sum of (probably) 54,000*l.*, which must be raised for public works which would otherwise fall into decay. The whole amount of debt will then stand at 1,067,959*l.* certain, or, including these contingencies, at 1,220,959*l.*, and the certain and possible annual charges at 65,768*l.* 5*s.* 6*d.*

Paper (C. c.) will exhibit the total annual charge for the whole of these engagements, (subject to a pro ratâ diminution on the last items, if otherwise disposed of,) and the expenditure of the province according to the last estimates, which can scarcely admit of reduction, to the debtor side of the account; and to the creditor side, the probable income arising from taxation, and that arising or to be expected from advances on public works for which the districts are bound to provide by local taxation, or from advances to companies, or from other sources. This account will then exhibit an annual deficiency, under the present revenue, of 28,735*l.*

Lastly, I proceed to show the condition in which the finances of the province of Canada will stand after the union, supposing it to be completed upon the terms arranged in the Bill submitted to Parliament by your Lordship, and taken in the order in which they stand in the Bill. The items are given in paper (D.), and reference to the separate accounts.

#### EXPENDITURE.

##### 1. Expenses of collection.

These it is unnecessary here to specify, as the net revenue only is stated in the accompanying Returns.

##### 2. Interest of debt.

LOWER CANADA.—Now payable				-	-	-	£.4,753	
Payable in future				-	-	-	2,016	
								£.6,769
UPPER CANADA.—Now payable				-	-	-	56,837	
Payable in future				-	-	-	8,931	
								65,768

##### 3. Payments to the clergy.

Lower Canada				-	-	-	-	Nil.
Upper Canada				-	-	-	-	5,731

These payments are now made from the Crown revenues, but as those revenues will be taken credit for in the income, they will appear on both sides of the account.

##### 4. Charges for Civil List - - - - - 75,000

##### 5. Other charges now by law or usage payable.

Lower Canada				-	-	-	-	12,502
Upper Canada				-	-	-	-	20,978

##### 6. Annual votes for civil expenditure.

Lower Canada				-	-	-	-	64,369
Upper Canada				-	-	-	-	18,424

£.269,541

REVENUE.

LOWER CANADA.—	Ordinary Revenue	-	-	-	-	£. 107,075	£.
	Duties under 14th Geo. III., resumed					19,665	
	Crown Revenues	-	-	-	-	23,400	
	Without deducting charges thereon, £. 2,422.						
							150,140
UPPER CANADA.—	Ordinary Revenue	-	-	-	-	77,234	
	Duties under 14th Geo. III., resumed					15,286	
	Crown Revenues ceded	-	-	-	-	30,000	
	Without deducting charges thereon, £. 7,908.						
							122,520
							£. 272,660

Against this apparent surplus has to be set the amount of the contingent expenses of the Legislature in future years, which, looking to the past in either province, must be considerable. Whatever may be required for the continuation of the great public works of both provinces, for a general system of education, or for any other improvements, is wholly unprovided for in this statement of the expenditure; and, on the other hand, the receipts will, in 1842, be diminished by the cessation of payments from the Canada Company.

Your Lordship will thus at once perceive that assistance will be required from the mother country to place the finances of the united province in a satisfactory condition; and that the aid which I was authorized to promise in order to obtain the assent of the Upper Canada Legislature to the measure, if necessary, must hereafter be afforded.

I was not, it is true, under the necessity of making use of these powers, and I rejoice to think that I found the means of dispensing with them; at the same time one of the main arguments in favour of the Union in that province was felt to be the necessity of extricating the finances from the difficulty under which they laboured, and the confident hope that the Imperial Parliament would assist in doing so.

It will therefore be absolutely necessary that Her Majesty's Government should enable the Governor of the province of Canada to afford this relief when the Union is completed, and the financial settlement takes place; and I know of no better means than those originally proposed,—of guaranteeing a loan which would remove a considerable charge arising from the high rate of interest payable by the province on the debt already contracted, or which it would have to pay for raising fresh loans which may be required hereafter for great local improvements.

I shall have the opportunity, when I enter upon the consideration of these works, of explaining more fully the mode in which such a guarantee might be most advantageously afforded; and in what way, under the peculiar terms of the debt of Upper Canada, great part of which is not redeemable for some years, the relief in question can be best afforded to secure the interests of the province.

In the meantime I must urge upon the immediate attention of Her Majesty's Government the pressing point with regard to the deficiency in the Upper Canada revenue for this year, to meet the interest of the debt due in December, and to support its credit.

I have, &c.  
(signed) C. Poulett Thomson.

<i>The Revenues at the disposal of the Crown are :</i>						
Casual and Territorial Revenue - - - - -	5,400	-	-			
Net Proceeds of Crown Lands, after deducting expenses of collection and other Contingencies - - - - -	6,000	-	-			
Annual aid by Provincial Act, 35th Geo. III., out of the duties levied under that Act, towards defraying the expenses of the Administration of Justice, and the support of the Civil Government - - - - -	5,000	-	-			
Estimated amount of Duties on Tobacco, levied under Provincial Act, 41st Geo. III., permanently appropriated to the same purposes - - - - -	7,000	-	-			
Payments by the British American Land Company - - - - -	Nil.					
				23,400	-	-

NOTE.—In the years 1836 and 1837, in consequence of the regular supplies being withheld by the House of Assembly, a considerable proportion of the expenses of the Civil Government were, by directions from the Secretary of State for the Colonies, made payable out of the revenues at the disposal of the Crown ; but when the Land Company ceased paying up their instalments, these revenues fell short of the amount of expenditure to which they were directed to be applied.

On the suspension of the Constitution of this Province, it was considered as the more simple course to merge the Crown Revenues in the other funds, and from that general fund, the appropriations required for defraying all the expenses of Government (including these charges on the Crown Revenues) were made.

That course has been pursued up to the pressnt time.

Montreal, June 1840.

Joseph Cary,  
Inspector-General Public Accounts.

COPY of a DESPATCH from Lieutenant-Governor Sir George Arthur, to Lord John Russell.

My Lord, Government House, Toronto, 14 July 1840.

I HAVE the honour to transmit for your Lordship's information the accompanying papers, from which your Lordship will be put in possession of the steps which have been taken with a view of affording employment to the immigrants who are now arriving in the province, and of, at the same time, enabling the Commissioners of such of the public works in this province, as are likely to be most beneficial to the public, to continue their operations.

I have, &c.

(Confidential.)

No. 1.

Sir,

Government House, Montreal, 20 May 1840.

I HAVE the honour to transmit to your Excellency copies of the reports made to me by Mr. Killaly, the engineer, to whom I gave directions, previous to leaving Upper Canada, to examine into the state of several of the public works of that province, and to report upon the expenditure which, in his opinion, would be indispensably necessary to prevent their suffering during the present year, and until some settlement of the financial affairs of the province enabled the Government to come to a final determination respecting future proceedings with respect to them.

Besides the works upon which Mr. Killaly was specially desired to report, he has subjoined a statement upon the Welland Canal, which, however, I wish to treat separately, and shall therefore for the present exclude from consideration.

I advert therefore to the other works as enumerated in his list.

Mr. Killaly has stated the debts due by the different commissioners upon these works, for contracts already performed, and has added to them the sums which in his opinion appeared necessary as outlay during the present year.

With respect to the debts contracted, I am of opinion that the interference of the Government must depend, first, upon an examination into the authority by which they were contracted by the Commissioners, and next, if satisfaction be given on that point, upon the means which the Executive possesses under the authority of Parliament for assisting by the issue of debentures. Upon some of these works, authority, I believe, is given for the issue of certain sums by the sale of debentures, without limit as to interest or time, but there may be others in which no such authority is given, and where the aid needed could only be afforded by an arrangement that the debentures should be taken at par.

I would therefore suggest to your Excellency the propriety, with regard to the debts, of causing these particulars to be investigated, and then acting accordingly. It is undoubtedly desirable that the claims of the contractors should be paid, if possible, and I shall be glad to concur in its being done, if upon examination it be found just, as well as practicable, to do so.

The most important point, however, is the second reported upon by Mr. Killaly, namely, the assistance which it is indispensable to afford during the present year to any of these works. I have on former occasions stated my opinion, that we should not be justified in increasing the amount of the Upper Canada debt pending the union of the two provinces, with a view to carry on to their full extent the public works begun in that province, although authority may have been given by the local legislature for that purpose; but at the same time that it is our duty to provide for extreme cases, when either the total cessation of work might be attended with serious injury to the part already completed, or when the security for any just expenditure appear undesirable. I feel likewise, that, considering the amount of emigration to be expected during this season, it is most desirable that a total cessation of all works heretofore in progress should not take place.

I have accordingly gone over the report, and the papers Nos. 1 and 2, with Mr. Killaly, with great attention, and have come to the conclusion, after a detailed examination with him, that, although advances to all the works specified in his list would not be justifiable, certain advances are indispensable for some of them; the following is the result of our consideration of the matter:—

*Johnston Road.*—That it is not advisable to advance any thing at present.

*Kingston and Napanee Road.*—To advance 5,000*l.*

*Queenston, &c., Road.*—To advance nothing for the continuance of the work.

*West Toronto Road.*—No advance is proposed for the continuance of the works. The amount recommended is only the sum owing, which of course will be considered under the first head.

*North Toronto Road.*—To advance 7,000*l.* for new work.

*East Toronto Road.*—No advance to be made. Mr. Killaly, upon reconsideration, being of opinion that as Rouge-hill cannot be completed, it would be inexpedient to make any.

*Hamilton and Brantford Road.*—To advance the sum of 600*l.* as recommended.

*Dundas and Waterloo Road.*—To advance 5,000*l.* as recommended.

*Trent Navigation.*—To advance 5,000*l.*, which would complete Chisholm's Lock and put the

£.
5,000
7,000
600
5,000
5,000
<hr/> 22,600

the other works in repair, abandoning the lock at the mouth of the river, which Mr Killaly considers useless.

On these works therefore there would be an advance to be made, exclusive of the debts, if paid, of 22,600*l.*, which I would suggest should be out of the issue of debentures, if authorized by the Acts, the Receiver-general, or by an arrangement with the banks and the Commissioners that the debentures should be taken at par.

Before quitting the subject of the macadamized roads, I would, however, beg to call your Excellency's attention to the instructions which I gave verbally to the Attorney General, before my departure, for causing immediate steps to be taken for calling on the districts to make good the deficiency in interest due upon the provincial advances to them as recommended, and were taken credit for in the report of the Finance Committee of last session. I think it highly probable that the Commissioners may not be inclined to hasten what must be undoubtedly an unpopular work ; but it seems to me absolutely necessary that the powers given under the Acts should be enforced without any delay, and I would recommend that immediate steps should be taken by the proper authorities in the Government for so doing.

I now come to the consideration of the Welland Canal. For reasons I have already stated, I should be unwilling to authorize any advance to the Commissioners beyond what may be absolutely indispensable ; nor do I deem it advisable that works should be undertaken which would decide at this time the scale on which the canal is to be carried on, which would be done, if an outlay like that applied for by Mr. Merritt and the Commissioners were sanctioned ; still less should I consent to money being raised by the Commissioners on their own responsibility with some fresh bankers in London, such an operation would complicate still more the financial concerns of the province, which are already more than sufficiently involved. But with a view to enable the works to proceed rapidly next year, before which time, of course, a final decision must be taken as to the scale to be adopted, I should not refuse to advance such a sum as might enable the materials to be got out at this season of the year, with a view to their being worked up in the winter,—an object as I am told of great importance ; that I should consider a legitimate advance. It appears that a credit exists under the Act of 1839, sanctioned by the Queen, to the extent of 15,000*l.* to be raised by debentures ; and I am informed that by the advance of this sum the necessary preparations could be made ; I should therefore recommend that an advance of debentures to this extent should be permitted, under a clear understanding with the Commissioners that it was to be devoted to the preparation of materials.

I beg to submit these considerations to your Excellency, and to say that, if you concur in them, I shall be happy to see them carried into effect with as little delay as possible.

I have, &c.,  
(signed) C. Poulett Thomson.

His Excellency Sir Geo. Arthur.

(Confidential)No. 2.

Sir,Government House, Toronto, 20 June 1840.

I HAVE the honour to acknowledge the receipt of your Excellency's despatch of the 20th ult., upon the subject of the debts at present due by the different Commissioners of the Public Works for contracts already performed, and of the assistance which it is indispensable to afford to some of these works during the present year. I immediately brought the subject under the consideration of the Executive Council, and beg to forward to your Excellency a copy of the report on it which has been made by that board.

I have concurred in the view taken by the Council in preferring to raise the sum requisite for affording the assistance to the extent suggested in your Excellency's despatch, by loan, rather than by the issue of debentures. Under the present circumstances of the credit of the province, great embarrassment would ensue from a sale of debentures in this country ; and a sale, no doubt, even to the extent required for these advances, could only be effected upon very disadvantageous terms. On the other hand, the plan proposed will enable the Government to proceed with the contemplated works ; and sufficient time will be afforded to Her Majesty's Government, before the repayment of the loan will be required, to adopt measures for arranging the finances of the country.

In furtherance of the plan, I have taken steps to obtain, by loan from the banks, the sum of 40,000*l.* in four months ; 10,000*l.* in each of the ensuing months of July, August, September and October, to be repaid, with interest, at the rate of 6*l.* per cent. per annum, at the end of six months from the date of each advance. In this way, I hope to be able to carry out the suggestions of your Excellency, so far as regards the advances which have been recommended to be made during the present season, as they are indispensably necessary.

There is also at the disposal of the Government, at present, an additional sum of 2,000*l.*, which, having been realized by the sale of school lands, has been invested in debentures for the service of the Welland Canal. This sum will, therefore, be available in part payment of the 15,000*l.* appropriated to the Welland Canal.

With respect to the debts at present existing on account of public works, although it seems to be of the greatest importance that some arrangement should be made for their liquidation, yet the means of raising the funds must, in a very great degree, depend upon the general financial measures to be adopted.

I have

## PUBLIC WORKS (CANADA).

41

I have proceeded, in each individual case, to make an examination into the authority by which the debt has been contracted by the Commissioners, and the means possessed by the executive, under the authority of Parliament, for assisting them by the issue of debentures. When this examination is completed, I shall be able to consider each case upon its own merits.

The same objection, though perhaps not quite to the same extent, would seem to apply to the payment of these debts by the issue of debentures, as to the raising of money by that means for the purpose of proceeding with the works.

Steps have been taken for calling upon the districts to make good their several arrears of interest due upon the provincial advances; but no satisfactory conclusion has been arrived at. I am much afraid, as the law at present stands, that there will be great difficulty in obtaining pecuniary aid to the resources of the province by those means.

I propose to cause the directors of the Welland Canal Company to be informed that the Government have made arrangements to advance to them the sum of 15,000*l.*, by a payment of 5,000*l.* in each of the months of August, September and October, for the purpose merely of getting out and preparing the materials, so as to enable the works to be rapidly proceeded with next year; and the Government directors have also been instructed that the advance is to be applied to the preparation of the materials, and that nothing is to be done by which either the site of the canal, or the scale hereafter to be adopted, are to be compromised.

The Right hon. C. Poulett Thomson,  
&c. &c. &c.

I have, &c.  
(signed) Geo. Arthur.

## MEMORANDUM.

2 June 1840.

THE Lieutenant-Governor begs to lay before the Executive Council, for their information, the two accompanying despatches received from the Governor General upon the very important subject of immigration, and the means of employment to be afforded by public works, and will be glad to receive a communication of the sentiments of the Council upon the best means to be adopted for carrying into effect the recommendations of the Governor General.

20 &amp; 29 May 1840.

By command,  
(signed) S. B. Harrison.

## MINUTE transmitted to the Receiver-General.

In Council, 4 June 1840.

It is proposed by his Excellency the Lieutenant-Governor, for the consideration of the Executive Council—

1st. That a sum of money, of from 15,000*l.* to 35,000*l.*, should be raised for certain indispensable expenditure upon public works during the present season; the principal work upon which the outlay is considered of the greatest importance being the Welland Canal.

2d. The Act of the Provincial Parliament, 2 Vict., c. 72, authorizes a sale of debentures, without limitation of terms, for the works therein specified.

The Council desire your opinion of the effect of a sale of debentures under this Act, at present, upon the provincial credit; whether you think money can be raised in this manner, and at what rate, and whether you could prudently draw in anticipation of a sale, provided it should be ordered.

3d. Can you propose any plan by which a temporary advance can be obtained? Do you think the banks would make the advance, and upon what terms?

Receiver-General's Office, Toronto,  
5 June 1840.

Sir,

IN reply to the Minute in Council of the 4th instant, in relation to the raising of 35,000*l.* for certain indispensable expenditures upon public works during the present season, and requiring to know from me the effect of a sale of debentures under the Act of the Provincial Parliament, 2 Vict. c. 72, and whether money can be raised in London, and prudently drawn in anticipation of a sale of these debentures, or any plan by which a temporary advance can be obtained, I have the honour to report, for the information of the Honourable the Executive Council, that I consider the sale of debentures at this moment impracticable in London. From the last accounts from that city, debentures were only worth about 83*l.* for 100*l.* debenture. That Messrs. Baring, Brothers & Co. held, I think, about 44,000*l.* belonging to the province, and they state that no sales could be effected, and this rate was nominal. No debentures can be issued here payable in England, without previously obtaining the sanction of some house, where the interest and principal can be made payable on the face of the debentures. The objections made by Messrs. Baring, Brothers & Co. to a similar proceeding on the part of the Local Government, some years ago, are, I have no doubt, fresh in the recollection of the Honourable the Council. The injurious

effect

effect of it on the credit of the province, and the positive refusal of that house being made parties to transactions by using their house without permission. The houses to whom I have addressed myself on occasions for loans invariably recommend the practice adopted by other countries, of making contracts through agents appointed for that purpose, when reference can be had for information on the spot, and transactions at once made final. I have found myself from practice that this is the best mode, and gives confidence to speculators, and the public every advantage by inviting competition, and the agents exertions and information on subjects which could not be readily done by correspondence. I think that if the Council should direct debentures to be made and transmitted to such London house as they shall please to name, that no draft could be drawn upon the anticipation of sale without incurring great and heavy responsibility of having the drafts returned, to the great injury of the credit of the Government, together with a serious loss and disappointment to the parties; and should the drafts meet due honour, the banks knowing under what terms the drafts were drawn would give little or no premium on exchange for the same. Under all these circumstances I cannot recommend the issue of debentures payable in London. I am quite satisfied that debentures payable in this province at 6 per cent. cannot be sold at present.

I think that the casual and territorial revenue will be enabled to advance 10,000 *l.* currency, without any inconvenience, unless there are unusual demands on that fund, which I am not aware of. I have no doubt of being able to raise 20,000 *l.* through the banks, payable at 90 days, at the rate of 6 per cent. per annum, and perhaps at the expiration of that period a further time of 50 or 60 days more, which will afford the Government an opportunity before the payment becomes due, to negotiate such part or the whole of the amount, under the law of the 2 Vict. c. 72, on such terms as may be more favourable than at the present time, by which means the loans made as recommended I contemplate may be liquidated, and also to refund any advances from the casual and territorial revenue.

The enclosed is a return showing the amount of public monies in my hands on the 4th instant in the respective funds, and a summary of the casual and territorial revenue, amounting to 15,836 *l.* 6 *s.* 2 *d.*, and 1,083 *l.* 10 *s.* 1 *d.* on all the other funds.

I have, &c.

Executive Council Chamber, Toronto, Tuesday, 16 June 1840.

Present :

The Honourable ROBERT BALDWIN SULLIVAN, Presiding Councillor.  
" William Allan.  
" William Henry Draper.  
" Richard Alexander Tucker.

To His Excellency Sir George Arthur, K. C. H., Lieutenant-Governor of the Province of Upper Canada, &c. &c. &c.

May it please your Excellency,

THE Executive Council have carefully considered the minute transmitted by Mr. Secretary Harrison, with an accompanying despatch from his Excellency the Governor-General, on the subject of the Public Works in this province, and relating to the means of obtaining money for the purpose of proceeding with certain of them during this summer.

The attention of the Council is in the first place directed to the provincial statute passed in the session before the last, to which the Royal Assent was promulgated 30th January 1840, intituled, "An Act to afford further facilities to negotiate Debentures for the completion of Public Works."

By this Act it is provided, "That it shall and may be lawful for Her Majesty's Receiver-General, by and with the consent of the Lieutenant-Governor of this Province in Council, to sell and dispose of the public debentures of this province, now authorized by law to be issued, to the best advantage, in order to realize the several sums hereby appropriated during the present year, viz.—

2 June 1840.

20 May 1840.

	£.
" For finishing the St. Lawrence Canal - - - - -	50,000
" For building a Ship Lock at Dunnville, and providing Materials for the Welland Canal - - - - -	15,000
" For the Grand River Navigation, the sum of - - - - -	12,500
" For the Johnstown District Roads - - - - -	500
" For the Queenston and Grimsby Road - - - - -	10,555
" For the Road north of the City of Toronto - - - - -	9,000
" For the Road west of the City of Toronto - - - - -	7,000
" For the Road east of the City of Toronto - - - - -	4,000
" For the continuation of the Improvement of the River Trent - - -	12,000
" For the Credit Harbour - - - - -	750
" In all - - - £.	121,305 "

And, "That the amount of debentures required by this Act now authorized to be issued for the construction of the foregoing works, payable in this province, shall be made payable in England, any thing in any Act to the contrary notwithstanding."

Previously to the passing of this Act, money could not legally be raised, unless at the rate of interest mentioned in the Act, and the public bonds could not be sold under par. The object of the Legislature appears to be to relax this rule in favour of the public works mentioned in the Act, so that money might be obtained on the easiest terms which the state of the market would allow, should the operation be considered proper by the Governor in Council.

The state of the province, its internal disturbances and the foreign aggressions under which it suffered, the incomplete state of all the public works, the want of revenue arising therefrom, the want of provision of means to pay the interest upon the public debt, which it was originally supposed would have been met by the income arising from the public works, the absorption of the whole current revenues of the province in payment of interest, and in the expenses of the administration of Government, and the large sums still required annually for the construction of improvements far exceeding the original estimates, and the crisis in financial and monetary affairs in the United States, which affected the value of all American securities, combined to depreciate and render unsaleable the public debentures of the province.

When this state of affairs began to press upon the Government, and before these circumstances all united in rendering the raising money impracticable, many urgent applications were made to the Executive Government by the Commissioners employed on the public works, praying for money to be raised according to the provisions of the various Acts of the Provincial Parliament passed for that purpose, and representing in the strongest terms the loss that would accrue to the public were the works suddenly suspended, as well on account of the breach of contracts into which the Commissioners had entered, as from the dilapidations which the works would suffer if not placed in a state of preservation, if not of completion.

It being supposed, as it afterwards proved, impracticable to dispose of public debentures at the legal rate in England, and the failure of the house of Thomas Wilson & Co., of London, having deprived the Government of the use of the large sum in their hands, an Act of the Provincial Parliament was passed on the 11th July 1837, at a special session summoned for the consideration of urgent affairs relating to finance and banking operations, by which Act it was provided, that it should be lawful for the Lieutenant Governor of the

Province,

Province, by and with the advice of the Executive Council, to authorize the issue in the province of debentures, payable in London, to the amount which might be required for the purpose of making the several macadamized roads authorized by the Legislature, at the legal interest of 5 per cent., or if the payment was to be in the province, at the rate of 6 per cent. This Act also extended to provide for the repairs and completion of the Welland Canal, so far as the discharging the debts due, and the keeping the same in repair.

The effect of this Act was to make it the interest of the banking institutions in the province to offer for the debentures at par, by which means they had the advantage of the exchange on London, at the time very high, which was expected to cover any rate of depreciation at which the debentures might sell in London.

The Council are, however, informed, that a considerable sum in these debentures remain in the hands of the banks unsold to this day.

When the Receiver-general returned to this province, he having been absent in London at the time of the passing of the Act, he complained of the transaction as a losing one to the Government.

It appeared to be so at the time of passing the Act, and also at the time of the sale of the debentures to the banks, but the Parliament considered it absolutely necessary that money should be raised, and only gave this mode by which it could legally be done, unless debentures were saleable at par in the London market.

Upon the recommendation of the Receiver-general, and upon the exhibition of complaints on the part of the house of Baring, Brothers & Co., of the increase of the public debt without their being informed of the transaction, and particularly of their being made agents for the payment of the interest, without their previous consent, which in fact only the urgency of the case could justify, sales of debentures in the province were discontinued, and a sum of 60,000*l.* of public bonds were directed to be transmitted to London on account of the following works :

O. C. 3 Oct. 1837.

Welland Canal -	-	-	-	-	-	-	-	-	£. 40,000
Three York Roads -	-	-	-	-	-	-	-	-	9,000
Johnstown District Roads -	-	-	-	-	-	-	-	-	6,000
Queenston and Grimsby Roads -	-	-	-	-	-	-	-	-	5,000

the Receiver-general giving it as his opinion, that the proceeds might be immediately realized, by drawing against them. The Receiver-general, however, did not draw upon those proceeds, but advanced monies raised by the previous sale of debentures to the banks for other works, and particularly for the Trent Navigation, the sale for that purpose having been made to the commercial bank.

As the event proved, the not drawing upon the proceeds of the debentures transmitted to London was prudent and fortunate, as the amount has remained unsold in the hands of the agents, except in so far as they disposed of them under par, for the purpose of repaying themselves in part for their advances on account of the interest upon the public debt.

The banks having been partly induced to risk the purchase of debentures at par from a wish to forward public works in which their locality made them interested, complained of the appropriation of the money for other purposes, and the people interested in the completion of the works complained that the raising money by sale to banks, which they had induced the banks to negotiate, had not been available for the intended purposes.

Thus it is shown, that, in fact, the only means of raising money to meet the public exigencies at the time was the sale to the banks, and upon that depended, not only the demands for the works intended to be provided for by the sale, but also the disbursements intended to be provided for by means of the transmission of debentures to London.

At present, as has been above detailed, the debentures thus transmitted remain unsold in London.

The highest prices reported by the London agents of late has been 83 per cent. or 17 per cent. under par, and moreover, this price was stated to be merely nominal, or, in other words, it was supposed that the debentures would not maintain nearly that price were extensive sales attempted.

The London agents, Baring, Brothers & Co., and Glynn & Co. are stated to be considerably in advance for payments of interest upon the public debt.

Matters continuing in this condition since the year 1837, the public works have been suspended, and the necessity for further sums of money appears to be most pressing.

The only remedy proposed by the Legislature is a forced sale of the debentures, with the approval of the Lieutenant-Governor in Council ; and his Excellency the Governor-General seems willing to accede to this measure to the extent stated in the despatch before the Council.

The necessity of providing some immediate employment for the labouring population coming into the province, as well as the great public benefits which would accrue from the continuance of the works proposed to be provided for, form the inducements leading to his Excellency's favourable opinion of this plan.

The great increase of income from the Welland Canal realizing the expectations of its projectors as to the immense importance of the work, is a very strong reason for the immediate commencement of preparations to place the work in a permanent state of efficiency ; the continual dilapidations which the insufficiency of the present work causes, and the expensive repairs necessary to keep it open, make the canal unprofitable, and there is too much probability that it cannot long be continued in a state to be used, unless the locks shall be constructed in such a manner as to be permanent.

It

It is stated by persons who have warmly interested themselves in the Welland Canal, that its present prospects are so flattering that there would be no difficulty in disposing of debentures for the completion of that work upon its own credit, and prospects of being profitable.

The amounts proposed to be expended in the macadamized roads will, of course, ultimately be provided for by local taxation, if the tolls should be found insufficient. The roads are found to be of great and manifest public utility, and now that the benefits arising from them are experienced, little difficulty need be apprehended in meeting the necessary disbursements by local taxation, even if the tolls should be found insufficient for that purpose.

But when the Council contemplate the financial state of the province generally, the disappointments experienced in almost all calculations hitherto made of reimbursement from the works themselves, the great difficulty and even impossibility of meeting the interest upon the public debt, without a new system of financial arrangement and the imposition of new taxes, which the Legislature only can accomplish, they greatly apprehend the consequences of a forced sale of debentures for any purpose, until the general credit of the province shall be re-established; for its re-establishment, however, they look with the greatest confidence to the first session of the united Legislature; for if certain available and tangible means shall be provided to meet the interest upon the public debt, and if the prospects of reimbursements from the public works shall be regarded as a means of relief from taxation, rather than as a mode of meeting certain yearly demands, there can be no reason why the credit of these provinces should not stand fully as high as that of any part of America.

However encouraging this prospect may be to the Council, it cannot be expected, while a mere prospect, to affect the money market; but an attempt to force a sale of debentures may altogether fail under present circumstances, while it would appear to the holders of public securities to arise from a determination, by all means, to increase the public debt without the necessary provision for its repayment, either in principal or interest; and while those so interested would complain with much justice of the endangering and jeopardizing the debts due already by the increasing the public burthens without increasing the powers of bearing them, as well of the actual and immediate depreciation which a sale of new debentures at any price they would fetch would cause to the whole of the public securities, it appears to the Council that it would be unwise for any temporary purpose to incur the risk which would arise from such a measure of permanently injuring the credit of the province, and of rendering future important financial operations difficult or impracticable.

The Council thought it right on the submission of this matter to obtain the opinion of the Receiver-general on the subject, and accordingly addressed to him the minute hereto appended.

The Council feel disposed to concur in the opinion of the Receiver-general so far as to advise the obtaining an advance from the Provincial Banks in preference to a forced sale of debentures.

They advise this measure in the full confidence they have already expressed that the Legislature will provide certain means of meeting the interest upon the public debt at its next meeting, after which the debentures may be disposed of at their full value without any injurious effect upon the public credit. The extent of outlay to be made upon public works will be then ascertained, and the public creditor may calculate with certainty upon the security of his investments. If this confidence on the part of the Council should happen to be mistaken, the raising money by any means whatever will have been most unfortunate, but the same means of repaying the banks will still exist that are now proposed to be used for raising the money.

The Council are of opinion that the banks should be requested to make the requisite advances with the assurance of repayment within six months from the present time; the money is not wanted immediately, and it will require that time in all probability before a sale of debentures will be advisable. The banks will probably be influenced in making the advance by a desire to promote public undertakings which they approve of, and therefore it may be considered a good criterion from whence to judge of the policy of advancing a public work, the readiness of the several banks to loan the money, they knowing the respective purposes to which it is to be applied.

The Council therefore respectfully recommend, that the Receiver-general be authorized to procure from the banks of this province or of Lower Canada a temporary advance, to be repaid with interest at 6 per cent. for the following purposes:—

1st. For providing materials for the completion of the Welland Canal as a permanent work, the money to be expended strictly in providing these materials and in conveying them to the places where they will probably be required; nothing, however, to be done which would settle the dimensions of the canal, or make alterations necessary upon the final adoption of any dimensions	£.15,000
For continuing the macadamised road between Kingston and Napanee	5,000
North Toronto road	7,000
Hamilton and Brantford road	600
Dundas and Waterloo road	5,000
For the Trent Navigation, <i>i. e.</i> , for the completion of Chisholm's Rapids, and for the repair of other works, abandoning the lock at the mouth of the river	5,000
	<hr/>
	£.37,600

4 June 1840.

5 June 1840.

As regards these works of a merely local character, with which the general funds of the united province ought not ultimately to be charged, the Council are respectfully of opinion that the simple mode of charging the whole upon the separate districts by specific provisions, and by actually laying on local taxes to meet them, by authority of the united Legislature, will be the most practicable and easy mode of securing the payment of the interest and of relieving the general finances. The present provision by law for charging the arrears of interest upon the districts appears to be highly inconvenient. The Trustees or Commissioners are in the first place required to levy sufficient tolls to meet the yearly interest, and to discharge the principal sum borrowed in a certain number of years. Secondly, to pay over the tolls to the Receiver-general for that purpose. Thirdly, to apply for the levy of a local tax to meet the arrears. Fourthly, the laying on the tax is left to the discretion of the local authorities.

The following faults seem apparent on this system :—

1st. Much of the outlay is incurred, and interest becomes due, before any tolls can be levied, and long before they can amount to a sufficient sum for the purposes contemplated; consequently the interest is immediately and necessarily in arrear.

2d. The Receiver-General is bound by the debentures to meet the interest when it becomes due, although the Act pledges the province only after other means shall have failed. The public revenues are thus burdened with an expenditure not provided for.

3d. Should the Trustees who do not keep the public accounts omit to report the sum received not sufficient for the purpose, the Receiver-General, who first knows the fact of the insufficiency of the amounts received by him, has no authority to apply for the levy of a tax; and should the Magistrates in Quarter Sessions not think fit to decree a new assessment, the public finances suffer.

The Council are of opinion, that the law should specify how long the interest should be paid out of the principal borrowed, if at all; it should next specify when a rate should commence for the purpose of meeting the interest, and the Executive Government, whose business it is to see that the public finances are not burdened improperly, should state the amount of the rate.

The interest should be provided one year in advance; that is to say, there should be certain means provided within the year to meet the interest for the coming year, and the rate should cease for the coming year upon the Receiver-General reporting that he had a sufficient sum in his hands arising from tolls to meet the next year's interest, and the proper proportion of principal, as contemplated by the Act. Thus the money would be always forthcoming, and the continual recurrence of payments from the general funds of the province, or from the principal sum borrowed, would be avoided, and the local security would become immediately available and effective.

This plan may be illustrated by the following hypothesis :—

The inhabitants of a district are desirous to raise money upon the public security, or they have raised it in this manner for a macadamized road; the amount may be stated at 10,000*l*. Two years may be allowed without calculating upon the tolls, during which time the interest may be paid out of the principal borrowed.

If within these two years a sufficient sum should happen to be received for tolls to meet the full payment of the interest, and a proportion of the principal, say 933*l*. 6*s*. 8*d*., and that this sum should be in the hands of the Receiver-General, no rate need be levied for the third year, otherwise a rate should be levied by proclamation to meet the deficiency.

If within the third year a sufficient sum should be received to meet the interest and proportion of principal for the fourth year, no rate need be levied for the fourth year; but, if otherwise, a rate to meet the deficiency should be proclaimed.

And thus funds from the proper source would be provided in advance, and the public finances would not suffer, and the power of necessary action would be given to the executive officers in charge of the general treasury. Probably this plan may not be necessary, should districts borrow upon their own security, but it ought to be made to apply to all sums raised or to be raised under the present Acts, and indeed it is not probable that money will readily be raised upon local securities in England; and the necessity for a continuance of the general security may therefore become apparent, in which case the system of providing funds in advance will be the only safe plan of operation.

In the meantime the means given by the present law can be used so far as possible to relieve the public finances, but the Council apprehend that the results will be long protracted, and very unsatisfactory.

As respects the debts contracted by the Commissioners, and the authority upon which they were created, the Executive Council can say little more than that the Acts of Parliament authorizing the expenditure of money provided sets of officers, called Trustees or Commissioners, who upon their own responsibility, and at their own discretion, were authorized to carry on the works.

For the means of doing so the Commissioners were to depend upon money to be raised by loan at a certain rate of interest, and not on more disadvantageous terms than the sale of debentures for the full sum which they purported to secure.

The Commissioners calculating upon the certainty of procuring the money and with the authority of the Acts of Parliament merely, but without the funds actually in hand, entered into contracts, and incurred liabilities without the sanction of the Executive Government.

So soon as the financial difficulties began to appear, the Executive Government, at the same time that it disapproved of the creation of debts without the means in hand to discharge them,

them, used every means in its power to relieve the contractors and the Commissioners, and various advances were made for that purpose, provided for by sales of debentures, under the circumstances set forth in the commencement of this minute.

But the Commissioners were uniformly warned, upon every application, that the Government could not undertake to provide means for continuing the works, that the sums provided by extraordinary means must be considered the last that could be furnished, until the aspect of affairs altered for the better, and that no new liability should be incurred, without its being previously ascertained that the means of payment were already realized.

Such, in fact, was the authority for the incurring the debts now sought to be paid, and such was the course of the Government in consistently advising the Commissioners of the risk of erecting new liabilities; but still the Council find debts to be provided for, and the only expedient proposed is the issue to the contractors of Government debentures in lieu of money.

It is true, that many of the debts now due arise from the performance of contracts entered into by Commissioners at the commencement of the works, but even, with regard to these, the Council are of opinion, that it was imprudent in the Commissioners to anticipate so largely the realization of the funds intended to be provided by the Legislature. The Commissioners and the contractors had full means of forming opinions upon the probabilities which the state of the money market offered for the borrowing of money; and if they would go on creating debts upon the prospects offered, the Council do not think they have a right to call upon the Executive Government to use illegal or extraordinary means to relieve them from difficulties and embarrassment.

The Trent Navigation forms an exception to the general fact, for, in that case, a sum of 20,000*l.* was actually raised, but the money was used, not for the work for which it was raised, but to meet disbursements made on the credit of the debentures sent to England, and which now remain unsold; but, in this case, the whole proceeding was submitted to the Legislature, and provision was made for the raising 12,000*l.* for that work, by the sale of debentures to the best advantage.

The Council suppose the intention of the Legislature must have been to provide for the payment of debts incurred by the Commissioners, under the circumstances before mentioned; that is to say, the money was actually raised, and therefore the Commissioners were fully justified in incurring the liabilities; and it would follow, that no continuance of the work can properly or justly be provided for, without the discharge of the work incurred. Mr. Killaly reports a sum of 3,500*l.* due to contractors: were the intentions of the Legislature carried into effect by a forced sale of debentures to the amount of 12,000*l.*, this sum would be immediately paid.

The present proposal is to raise 5,000*l.* in this manner, for the work to be yet done.

Considering the sum necessary for the contemplated purpose, the Council are prepared to advise the addition of the sum of 3,500*l.* to the loan for this work, provided it can be raised by a temporary advance from the banks, as above proposed.

On the Kingston and Napanee Road, the debt amounts only to 150*l.*, and therefore no distinction need be made on the subject of the old debt or the new expenditure.

On the Queenston and Grimsby Road, a debt has been incurred of 1,250*l.*, for which the Council do not think the Government is called upon to use extraordinary means to provide.

The issue of debentures in lieu of money is contrary to the spirit and letter of the Acts of Parliament: money is required to be raised by the Receiver-General, and paid to the Commissioners; if debentures be issued in lieu of money, it will amount to the substitution of depreciated Government bonds in lieu of money; it will form a recognition of a debt by the Government, and its discharge in a medium which will not pay the amount of the debt, but which will be a legal discharge of it. The creditors who receive the debentures are probably much in need of money, and will have to realize at any sacrifice; if they lose much by the operation, a claim will immediately be founded for reimbursement, and moreover, the public securities will be depreciated even more than by a forced Government sale. The contractors and the Commissioners alike speculated upon the sale of debentures, and with their eyes open they contracted the debts, knowing the money was not realized. The Commissioners must therefore bear the blame of expenditure, which they had not the means of meeting, and the contractors await the time when money can be raised in the ordinary manner to pay them.

The same remarks will apply to the West Toronto Road, as well as to the roads to the north and east of the city; but in these cases, it is believed, advances have been made by the banks, and a temporary delay will not be productive of much inconvenience, and it is not at all probable that payment in debentures, payable in this province at par, would at present be accepted.

The same observations will probably be found to apply to all the other debts, in which cases the Council think the offer of debentures payable in the province in lieu of money would not only be inexpedient, but would also be unacceptable to the creditors.

The debt due by the Commissioners of the Welland Canal appears to have been incurred very advisedly and necessarily, but there appears no immediate necessity for its discharge, until means can be acquired in the ordinary manner.

The Executive Council conclude these observations by a general remark applicable to all expenditure of money for which the public finances are liable; that is to say, that the money should be expended by paid officers under the control of the Government for the impossibility of managing the finances of a country, when the power of expending money, and the burden of providing it, are placed in distinct and independent bodies, is demonstrated, as well in practice as it would seem to be in theory, upon all sound political argument; and

they therefore express the hope that, in place of the present mode, some general department of public works may be substituted, and that in merely local matters, the necessity of providing means may fall upon the same persons that have charge of the expenditure, or, at least, that the latter should be under the complete control of the former as to the amounts for which they incur liabilities.

All which is respectfully submitted.

No. 3.

Sir,  
Government House, Toronto, 30 June 1840.  
With reference to the subject of the advances made to the public works of this province, I have the honour to inform your Excellency that I have completed the arrangement with the bank of Upper Canada for the loan of 40,000 £., to which I alluded in my despatch of the 20th instant.

I have accordingly communicated to the Commissioners of each of the public works designated in your Excellency's despatch of the 20th ult., the determination of the Government to make an advance to them to the extent specified in that recommendation.

With a view to show at one glance the course adopted, I have caused the accompanying schedule to be prepared, which I forward for your Excellency's information.

In making this communication to the different boards, I adopted in each case the recommendation of Mr. Killaly's report, both with respect to the amount of appropriation to the work, and to the conditions and restrictions under which the expenditure was to take place.

With regard to the Trent and Inland Waters Navigation, I adopted the terms of your Excellency's despatch of the 18th instant, and made the communication to each of the Commissioners accordingly.

I impressed upon the Commissioners the necessity of economy in the management of the money placed at their disposal by the Government, and required that reports of their proceedings in the disposition of it should from time to time be furnished to the Government, as might be necessary.

I am in hopes that these measures will, as far as the defective constitution of such boards for the outlay of public money will permit, be efficient to insure such an expenditure as will effect the specific objects in view. With regard to the Welland Canal expenditure, I have no doubt whatever that the instructions of the Executive Government will be pursued in the expenditure of the money appropriated for that service.

I have, &c.

The Right hon. C. Poulett Thompson, (signed) *Geo. Arthur.*  
&c. &c. &c.

MEMORANDUM as to the Appropriation of MONEY for PUBLIC WORKS.

There will be at the disposal of the Government the following Sums, at the following periods; viz.

	£.	£.
July - - - - -	10,000	
August - - - - -	10,000	
September - - - - -	10,000	
October - - - - -	10,000	
		40,000

From these are to be paid,—

	£.	
Welland Canal - - -	13,000	
Kingston and Napanee Road - -	5,000	
North Toronto ditto - -	7,000	
Hamilton and Brantford ditto -	600	
Dundas and Waterloo ditto -	5,000	
Commissioners for the Improve- ment of the Navigation of the Inland Waters of the New Castle District - - -	4,000	
Trent Navigation - - -	1,000

23 June 1840.

No. 4.

(Confidential.)

Sir,

Castle St. Lewis, Quebec, 30 June 1840.

IN reply to your despatch of the 20th June, I beg to inform your Excellency that I quite concur in the propriety of adopting the course recommended by the Executive Council, and approved by yourself, for raising the sums required for the assistance of the public works of the province, referred to in my despatch of the 20th May, by loans from the banks.

With regard to the arrears due to contractors on obligations contracted by the Commissioners, I am of opinion that a payment in debentures at par of such of them as may be finally admitted would be quite sufficient to satisfy the justice of the case, and care may be taken to prevent any demand being hereafter made for difference (should there be any) between the par and the market price they may obtain, by making the receipt of these debentures at par a condition of the interference of the executive at all.

I have, &c.

(signed) C. Poulett Thomson.

His Excellency Sir George Arthur, K.C.B.

COPY of a DESPATCH from Lord *Sydenham* to Lord *John Russell*.

My Lord,

Government House, Montreal, 22 February 1841.

No. 5.

Despatch from  
Lord Sydenham to  
Lord John Russell,  
22 February 1841.

THE time is now approaching when it will become necessary for me to explain the extent of assistance towards the financial concerns of this province, which the Imperial Parliament may, in its wisdom and generosity, think fit to afford. On the opening of the United Legislature, I am bound to make a statement to this effect, and it is, besides, indispensably required with a view to the arrangements which I shall be called upon to submit for the preservation of the public credit of the province, and the continuation of the great public works by which its prosperity can alone be assured.

In my despatch of the 27th June last, No. 129, I furnished a full and detailed statement of the financial situation of each province, as well as an estimate of the position which the finances of the united province would probably present after the union. The only variation upon that estimate which the experience of what has since occurred offers is, that, on the one hand, the revenues of the two provinces have increased, and, in my opinion, may be therefore calculated as likely to produce 10,000*l.* or 15,000*l.* a year more than I then reckoned upon, even under the present system of taxation, and on the other, the debt of Upper Canada has been increased by about 100,000*l.* by the assent which Her Majesty has been advised to give to the Upper Canada Act for buying out the private shareholders of the Welland Canal; and that of Lower Canada has been augmented by the loans authorized to be raised within that province, for different public works to the extent of 26,000*l.* In this last case, however, the tolls to be received will most undoubtedly cover, and eventually pay off, the sums borrowed, and the province does nothing more than lend its credit for the transaction, though I regret to say that, even with that double security, the funds can only be raised at an interest of from six to eight per cent., and, consequently, at a heavy sacrifice.

Her Majesty's Government have, therefore, the whole state of our finances distinctly before them. The total of debt may be stated at 1,325,000*l.* Colonial sterling, or 1,226,000*l.* British sterling.

That the province of Canada possesses the most ample means of paying not merely the interest, but of refunding the principal of this debt, there can be no doubt whatever, and I do not think it necessary to call upon the generosity of the mother country to expend a single shilling, although it would be easy to show that even if Great Britain were to place at the disposal of the provincial government a sum equal to the whole amount of its debt, as a free gift, it would be a wise economy, on its part, for the Imperial Treasury can only obtain relief from the heavy expenditure which it is now annually called upon to incur within the province, equal nearly each year to that amount through the settlement of the domestic affairs of the colony, and by securing its prosperity, and the entire developement of its natural resources.

But the assistance of the mother country is indispensable to enable Canada either to support its present burthens, or advance in that career which may render them light hereafter.

Nearly all the Canadian debt has been contracted for public works, which are begun but not completed, from which, when completed, a revenue will be derived, but which, at the same time, can only be rendered thus productive by fresh expenditure. The province is sinking, therefore, under the weight of engagements which it can only meet by fresh outlay, whilst that very present inability to meet its engagements, by destroying its credit, prevents it from obtaining the means for this expenditure, through which it can alone extricate itself permanently from its difficulties.

I can furnish no stronger illustration of this state of things than the Welland Canal. The total outlay upon this work has been about 400,000*l.* currency, and I regret to say that it has been most improvidently and unwisely expended, owing to the wretched system which has been heretofore followed, both with regard to the money grants, and to the construction of public works, by assistance from public funds. The tolls, however, of this canal, thus imperfectly made, which were, in the year 1838, about 6,000*l.*, and in 1839, about 12,000*l.*, have last year amounted to 24,000*l.*, and would, I entertain not the slightest doubt, amount to between 40,000*l.*

and 50,000*l.* next year, if the canal could be kept open, and to a far larger amount hereafter. But unless a very considerable sum can be raised, equal almost to that already expended, this great work must inevitably go to ruin, and this undertaking, which is now the joint property of the province and of the Imperial Government, and might be made, by fresh expenditure wisely conducted, amply to repay all that has been expended on it, will be irretrievably lost. It would be idle, however, for the Canadian Government to attempt, unassisted, to obtain the necessary funds. Its credit is unhappily so low, that it cannot hope to do so; and even if it could find capitalists willing to undertake the operation, an exorbitant rate of interest of eight or ten per cent., or an enormous sacrifice of capital, by the sale of debentures under par, would destroy nearly all chance of its succeeding, in a commercial point of view.

I have given this canal as one instance, but the same may be shown to be the condition of nearly all the works for which the debt of this province has been contracted. They are either in themselves incomplete, and consequently a dead weight, or rendered useless by the absence of other improvements necessary to make them productive.

It is in the power of Parliament alone, therefore, to afford the necessary assistance. What is required is such aid as shall at one and the same time diminish the annual charge upon the provincial treasury for debt already incurred, and by raising the credit of the province, enable it to obtain the additional funds required to make its fresh expenditure productive; and I am satisfied that this may be done without the expenditure of a single shilling, and with perfect security.

The plan which I was formerly authorized to propose, namely, the guarantee of a loan for Canada to the extent of 1,500,000*l.*, would effectually secure both these ends.

I should propose, therefore, that the Treasury should be authorized to raise a loan to that amount—the proceeds to be applied, first, to the liquidation at par of the Canadian debt, and the residue for the completion of such public works as might be deemed expedient.

This debt to be made a first charge upon Canadian revenues, before all other debt, if any afterwards be contracted by the Province, and to be specially provided for as such by the Canadian Legislature. All tolls and other securities which had been mortgaged to the province as security for the present debt to be made over in the same way. The Canadian stockholders to be compelled to receive their money at par, or new stock, at a price proportionate to it.

No portion of the fund applicable to public works to be expended on any work which was not wholly and absolutely under the direction of the Executive Government, whether private shareholders had or had not any interest in the undertaking.

The advantage of this plan is twofold: first, by at once paying off the present stockholders, the province would be relieved from an annual charge upon the whole debt of nearly two per cent., inasmuch as the rate of interest now paid is about  $5\frac{3}{4}$  per cent., whilst under the guarantee of Great Britain, the sum could probably be raised at  $3\frac{3}{4}$ ; and next, that by these means the stockholders could not be able to derive the unfair advantage they would otherwise acquire from the greatly increased marketable value which their stock would undoubtedly obtain, if the credit of Canada generally were materially raised through the assistance in any other way of the British Government—an advantage they could have no right to.

The stockholders have, it is true, a right, as will be found set forth in paper (B. b.) of my despatch of the 27th June, not to be paid off before certain fixed periods, varying from 1842 to 1860; but, on the other hand, their stock is not now worth more than 75*l.* or 80*l.* for the five per cent. and 85*l.* to 90*l.* for the six per cent. if it be saleable at all, and, unless the Imperial Government interferes, will never again probably be worth par. They will therefore be amply compensated for this compulsion, though against the terms of their bargain. Indeed, if Her Majesty's Government consent to propose this plan, I entertain little doubt that the Chancellor of the Exchequer may not consider it unjust to affix even a lower rate than par for the repayment of the five per cent. stock.

With regard, too, to the residue of the loan after redemption of the debt, the plan which I suggest offers no less advantage, both to the Imperial Treasury and to the Province. I have already stated that fresh outlay is indispensable in order to  
render

render the public works productive. The employment, therefore, of this portion of the whole loan for this purpose, affords additional security that the whole, both interest and capital, will be repaid by the Province, and, at the same time, by so greatly enhancing the credit of the Province, any further sums it may be found necessary to raise, in order fully to complete the works, will be attainable at a low rate of interest, even upon provincial security alone.

This is the mode which, without entering further into details, I would venture humbly to suggest, as the best by which the assurances I was authorized to give, that pecuniary relief would be proposed to Parliament, may be fulfilled. It may indeed be contended there that the guarantee of a colonial debt is impolitic. Upon this point, however, your Lordship and Her Majesty's ministers will of course be prepared with a ready answer; but I may be permitted to remark, that, if I know any thing of the feelings of the British population of Canada, the generosity of the mother country will bind them to it more than ever; and if the opportunity I have now had of studying this country has not been wholly thrown away, I am convinced that it is by such assistance, leading to so great practical results in the increase of the wealth and commerce of the province and of the comforts of its inhabitants, that Great Britain may make the colony less of a burthen, and far more a benefit to her, than it has ever before been.

I have, &c.

(No. 282.)

COPY of a DESPATCH from Lord *John Russell* to Lord *Sydenham*.

My Lord,

Downing-street, 11 January 1841.

IMMEDIATELY after the receipt of your Lordship's despatch, No. 129, of the 27th of June, relating to the financial condition of Upper and Lower Canada, I entered into communication with the Lords Commissioners of the Treasury on the subject. I inclose, for your Lordship's information, a copy of the letter which I wrote upon that occasion. In answer to that reference, the Lords of the Treasury represent to me that they are unable to take any proceedings for granting financial assistance to the Canadian treasury until they shall be in possession of the explanation promised in your despatch, as to the mode in which it would be most advantageous, with reference to the peculiar debt of Upper Canada, that relief should be afforded. I must therefore beg your Lordship to proceed directly to state your views to me in detail, in order that I may communicate them to the Treasury for the further deliberation of their Lordships.

I have, &c.

(signed) *J. Russell.*

Enclosure in No. 6.

My Lords.

Downing-street, 24 July 1840.

I HAVE the honour to transmit for your Lordships' early and serious consideration the accompanying copy of a despatch, with enclosures, from the Governor-general of British North America, containing an account of the present and the expected financial condition of the provinces of Upper and Lower Canada.

At the same time I have to state, that with respect to the immediate loan of 50,000 *l.*, which the Governor-General earnestly solicits Her Majesty's Government to grant for the relief of the Upper Province, I am not aware that your Lordships have any power to grant it, and I cannot advise an application to Parliament for such partial assistance.

Your Lordships should be apprised that Her Majesty's Government have always had it in contemplation to support the credit of Canada, by guaranteeing the Upper Canada debt. Previously to quitting this country, the Governor-general was informed by Her Majesty's confidential advisers of this intention, and was left at liberty to announce it, if he had thought it necessary, in Canada. Although Mr. Thomson abstained from making such an announcement, and Her Majesty's Government therefore stand unpledged and uncommitted,

Despatch from  
Lord John Russell  
to Lord Sydenham,  
11 January 1841.

24 July 1840.

Encl. in No. 6.

No. 129, 27 June  
1840.

high motives of public policy render the proposal of such assistance to the finances of Canada scarcely less imperative on the Government than it would have been had a solemn engagement been entered into on the part of the Crown.

The utmost extent to which the ministers of the Crown can proceed is to promise to recommend to Parliament, in the next session, such a guarantee of the actual debt of Canada, as may enable the legislature to reduce the interest now payable to a lower rate.

I would consequently wish your Lordships to consider in what manner this guarantee can most properly be effected. When apprised of your Lordships' views upon the subject, I propose to instruct the Governor-general to announce to the Assembly of the United Province the intentions of the Crown to ask the concurrence of Parliament in effecting this important object, in the manner which your Lordships shall deem most advisable.

The Lords Commissioners  
of Her Majesty's Treasury.

I have, &c.

COPY of a DESPATCH from Lord *Sydenham* to Lord *John Russell*.

Government House, Montreal,  
25 February 1841.

My Lord,

By the messenger who arrived this morning, I have had the honour of receiving your Lordship's despatch (No. 282), of the 11th January.

On the 22d instant I anticipated your wishes, as conveyed to me in this despatch, by explaining the manner in which I ventured to think that Her Majesty's Government could best afford the assistance to the finances of this province, which I was authorized to hold out an expectation of their receiving. I can add but little to what I had then the honour to submit, but I avail myself of the return of the messenger to make one or two remarks, in consequence of what I find in your Lordship's letter to the Lords of the Treasury.

The plan which I have submitted, implies the guarantee of a loan to the extent of 1,500,000 *l.*, which exceeds by a sum of between 200,000 *l.* or 300,000 *l.*, the total debt of the province. I took this amount, because it was that to which I was authorized to go by the communication to which your Lordship refers, but I should not have done so if I was not satisfied that it is most desirable upon other grounds that the assistance to be rendered by the Imperial Government, should not be limited by simply effecting a reduction in the annual charge for the interest of the debt of Canada, but that it is expedient in the interest both of the province and of the mother country (if the latter interfere at all) to go beyond this.

I have already explained that the debt of this province having been contracted nearly altogether for public works, which are now incomplete, and consequently unproductive, is in fact either a dead weight upon the revenue of the country, or a profitable investment of capital, exactly according to the means which may be at the command of the provincial government. If no means can be found to finish these works, either by an advance of money, or by so improving the credit of the province as to enable it to borrow in the market at a rate of interest which is not exorbitantly high, they must go to ruin, remain unproductive of any revenue, and in that case the annual charge for interest is as much a dead weight upon the income of the country as the interest of the national debt in England, the capital of which has been expended in armaments. The interference of Parliament, by affording its guarantee for this debt, would, under this supposition, do no more than reduce the annual charge upon the provincial revenue. The capital already invested could not be rendered productive, and although the province would undoubtedly be a gainer by the saving of interest, the advantage to it would stop there, whilst the security to the mother country for the repayment of interest and principal would be limited to the ordinary resources of the colony, unaided by any return from the works for which the original debt had been contracted.

On the other hand, however, if means are found through the assistance of Parliament, not only to effect the saving of interest on the debt already contracted, but to aid in rendering productive the works on which the capital which they represent has been expended, the annual charge on the provincial funds is rendered  
light,

light, and perhaps may be altogether removed, and the security to the Imperial Treasury in the same ratio is improved, and repayment rendered certain.

It is with this view that I so strongly recommend Parliament to go in its guarantee to the extent of the sum I have named, by which the double purpose will be served, and its own security stand in a far better position than it would otherwise do.

I would further remark, with reference to an expression in your Lordship's letter to the Treasury, that my earnest hope is, that whatever arrangement is effected with the consent of Parliament, will be made in England. Here we are in no condition to effect a transaction of this magnitude or of this nature. The plan which I have had the honour of submitting is based upon this conviction; let Parliament decide upon the terms on which it will consent to afford its guarantee for a fixed sum; let it fix the conditions on which the present creditors of the province shall receive back their capital or take fresh stock under the imperial guarantee; let it declare the stipulations under which it will permit the surplus of the loan which remains after the liquidation of the debt, to be appropriated in the province, that is, for public works solely under the responsibility of the Executive; let it affix the conditions which it deems advisable for its own security as to the mortgage of the provincial revenues and of the tolls, and let this arrangement, thus defined and regulated, be offered for the acceptance of the Provincial Legislature.

For this I have provided, in the plan which I had the honour to submit.

There only remains one point on which it occurs to me that it may be desirable to add any thing; in the plan which I have given, the main principle consists in the compulsory repayment of their capital to the stockholders, notwithstanding the engagement entered upon with them that repayment should not be made for 15 or 16 years. On this it may be asserted that it is a violation of their contract, and therefore unjust to these parties.

That it breaks through the contract is of course undeniable, but it is as impossible to deny that the arrangement, compulsory as it is, affords the most unexpected advantages to them, and if it were possible, as it is not, to propose it for their acceptance or refusal, is such as not one of them would reject.

There is no other mode by which Parliament could afford its assistance with advantage to the province or justice to itself; and the creditors of Canada must be content, if this course should not be adopted, with the security they have at present. Hitherto, by continued loans, and with infinite difficulty, the interest upon the Upper Canada debt has been paid, but in spite of this, what is the marketable value of these securities at the present time? If saleable at all, the five per cent. stock may be worth 75 or 80; the six per cent. 85 or 90. For the moderate loans required in this province, where to the security of the revenue is superadded that of the tolls on the canal or the turnpike-road for which the money is required, I am even now daily compelled to authorize the payment of an interest of seven and seven-and-a-half per cent. The Montreal Harbour Bonds, the best security in America, because the actual tolls receivable must inevitably pay both capital and interest, sell at this moment at 90 for six per cent. debentures. It seems to me, then, perfectly idle to suppose that more than a full measure of justice will not be given to the creditors of the province under the arrangement I have suggested; not one can receive less than he advanced, for the stock has never been above par, at or under which it was taken, whilst at present no one can obtain within 15 or 20 per cent. of that amount for it, or, if this arrangement be not effected, ever probably hope to get more.

Your Lordship will, I hope, forgive my entering so much at length into these details, but the extreme anxiety which I feel to be furnished with the decision of Her Majesty's Government before the opening of the Legislature, and the conviction to which I have arrived, after the best consideration, that no other plan is possible, must plead my excuse.

I have, &c.

(signed) *Sydenham.*

(No. 369.)

COPY of a DESPATCH from Lord *John Russell* to Lord *Sydenham*.

My Lord,

Downing-street, 3 May 1841.

No. 8.

Despatch from  
Lord John Russell  
to Lord Sydenham,  
3 May 1841.

THE despatches which I have received from you on the general state of the province of Canada, the reports with which you have furnished me on several important subjects, and the approaching meeting of the Council and Assembly of the United Province, have induced me to explain to you at this time the views which Her Majesty's Government entertain on the topics most interesting to the welfare of Canada.

In any measures that may be adopted, it must be taken for granted that Her Majesty persists in the determination to maintain at all hazards, Her Royal authority in Canada. Neither the honour of Her Majesty's Crown, nor the support due to Her loyal subjects in British North America, nor the provident care of the interests of the empire at large, would permit any deviation from this fixed principle of British policy.

At the same time Her Majesty's advisers are not insensible to the difficulties imposed upon them in carrying into execution the purpose of the Crown. A province bordered by an open frontier of more than a thousand miles, approached with ease at all times by the citizens of a neighbouring and powerful state, separated from England not only by the ocean but by the rigours of climate and season, must be maintained by a judicious preparation for defence in time of peace, and a vigorous exertion of the resources of the empire in time of war, or not at all. To trifle with the fortunes of men whose lives and properties are freely devoted to the service of England, or to encourage foreign aggression by neglect or apathy, would be far worse than the spontaneous surrender of these important possessions of the Crown. The Canadians might in such a case incur no risk, no blood need be shed, and the treasures of the empire might be spared. The other course would be cruel to a brave people, and unbecoming the character of the country.

But, as I have already said, we have no alternative. We have only to consider the means of binding Canada more firmly to this country, of developing her resources, of strengthening her British population, of defending her territory, and of supporting and encouraging the loyal spirit of her people.

In this spirit, then, I shall touch upon the principal topics connected with these views:—

## 1. FINANCE.

You have stated the debt of the United Province to amount to 1,226,000 *l.*, and with the sum required to complete public works necessary for the free passage between the western portion of the province, the St. Lawrence and the sea, to about 1,500,000 *l.*

The Queen's Government coincide in your views of the expediency of making such an arrangement as may employ the credit of this country for the benefit of the finances of Canada, and have given their best consideration to the plan proposed in your despatches. They are of opinion that such an arrangement, if it can be carried into effect, with the consent of the creditors, would be in every way desirable, but they feel that the objections to a Bill, compelling parties to receive payment of their money in breach of agreements entered into with them by competent authority, are insuperable.

Her Majesty's Government are ready to give any assistance in conformity with your proposal, which does not appear to them inconsistent with good faith. They are ready to propose to Parliament to guarantee a loan which may be required for public works (under the restrictions suggested by you), for the repayment of such part of the debt as may be now redeemable, or may be held by creditors, who shall declare themselves willing to accept reasonable terms.

With regard to this latter sum, it appears to the Government most expedient that you should fix such terms as you may consider sufficient to induce the creditors to accept the proposed equivalent (not of course exceeding 100% for every nominal 100 *l.* lent); that you should make known such tender in such way as may appear to you most advisable, giving the holders sufficient notice and information, and fixing a given day before which the willingness of the parties to accept such offer should be sent in.

To

To do this an Act of the Canada Legislature will be necessary, and when that is obtained the subsequent arrangements might be made; or through some party deputed on the part of the Canadas to this country with full instructions.

It may, perhaps, be also expedient at the same time by law to enable trustees, &c. to account, as in cases where the interest of loans are received in this country. Upon receiving the information of the assent of the parties accepting the terms proposed, the necessary means may be taken in this country to raise the requisite funds; and it may be expedient that you should fix the day for the paying off such assenting creditors and other claims at a time when the Parliament of this country is sitting; for should it be necessary to have recourse to a loan, such a measure has always been considered open to objection during the prorogation of Parliament.

## 2. DEFENCE.

I have perused with great interest the enclosures in your despatch of 24th December, containing reports from Lieutenant-general Sir Richard Jackson, and Colonel Oldfield, the commanding officer of engineers, on this subject.

The question is one of so much importance, that I was not satisfied with referring your despatch to the Master-general and Board of Ordnance, but I also asked the opinion of the Commander-in-Chief, and requested him to consult the Duke of Wellington, whose high authority on every military subject is in this instance of peculiar weight, from the attention he has for many years given to this matter, both on political and on military grounds. Their opinions are transmitted with this despatch.

Her Majesty's Government agree in opinion with Lord Hill and Sir Richard Jackson, that "no dependence upon the decided superiority of our troops, and arrangements made for defence connected with them, should lead us to neglect the construction and completion of permanent works calculated for the protection of the points of most importance to us."

They likewise concur in his Lordship's opinion, that in the event of the construction of these or any other works, a large effective regular force, and a militia, registered and enrolled, but not called from their districts, except in case of invasion, will be indispensable.

But it cannot be reasonably expected that works on a large scale should be undertaken without reference to the great expense to be incurred.

I have therefore to inform you, that the Government are prepared to state their opinion that, beyond the ordinary estimates of the year, 100,000*l.* should yearly be applied for the defence of Canada. At present, this sum is nearly absorbed in the maintenance of the militia and volunteers. But by a more economical plan this expense might be greatly diminished, and a great portion of the sum of 100,000*l.* left for the improvement of military communications, and the erection or repair of fortifications.

You will hear further from me on this point when I have more fully considered the various plans proposed.

## 3. EMIGRATION.

I have read with great interest your despatches on this subject, and I agree with you in opinion that it would not be wise for this country to engage to convey emigrants to Canada at the public expense. But neither can I agree that this country ought to pledge itself indefinitely to the expense of maintaining the emigrants in Canada till they are able to obtain employment.

I quite concur, however, in the sense you entertain of the importance of the object.

It is a hardship to Canada that she should be obliged to maintain the pauper emigrants from the United Kingdom, who arrive in a state of destitution and disease. But this object was formerly provided for by the imposition of the emigrant tax, and I think the renewal of this tax should be recommended to the Legislature of Canada.

I have recommended to the Treasury that the expense thus incurred by the emigrant should, in consideration of the great political advantages likely to flow from emigration to Canada, be defrayed by this country.

Supposing a tax of 5*s.* a-head, 32,000 emigrants might be freed from the tax for 8,000*l.* This is a sum which I think Parliament might be asked to vote for so important an object. The tax might then be paid in Canada, not by the captain

of the passenger ship, but by the Commissary general, on proper vouchers of the number of emigrants landed.

In this case, the only emigrants paid for must be those whose fitness for emigration had been previously attested by an emigration agent in this country.

The emigrant tax would then act as a check, and very properly so, on those who could not obtain the attestation required.

I have now adverted to the three principal topics to which I have called the attention of the Queen's confidential servants. There are many others of great importance to the welfare of Canada, but upon which I am anxious to receive your reports before proceeding further.

Of this kind are the engagements of the land companies, and the future disposal of the Crown lands.

The means of communication for commercial purposes within the British territory, through the whole length of Canada, must always be a matter of the highest interest, both to Canada and to this country. But it seems to me that with a legislature in Canada disposed to co-operate with the Queen and the Parliament of the United Kingdom in developing her vast and unexplored resources, there is every hope that we shall behold the prosperity of that noble province augment every year, and add more and more to the strength and stability of the empire.

(signed) I have, &c.

COPY of a DESPATCH from Lord *Sydenham* to Lord *John Russell*.

No. 9.

Despatch from  
Lord *Sydenham* to  
Lord *John Russell*,  
6 May 1841.

My Lord,

Government House, Montreal, 6 May 1841.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch of the 26th March, No. 344, enclosing a Memorial addressed to you by the three Canadian Land Companies, and by other persons connected with Canada, respecting the advancement of agriculture and commerce, and the completion of the great public works in this province. Your Lordship adds a statement of the views entertained by the memorialists on these subjects, as explained to you at an interview.

The proposition of the memorialists seems to be (so far as it is possible to affix a meaning to words so extremely vague and indistinct) to raise and advance as a loan the money necessary for the completion of various works, and for the introduction and settlement of emigrants on the faith of the revenue arising from the sale of land and timber, the execution of the works being as heretofore left with the Local Government, but due security being provided by law for their speedy completion, and for the appropriation of the land revenue to the payment of the interest on the loan.

Passing over the legal objections to this proposition, which at once occur, and which were stated by your Lordship to the memorialists, I must observe that, even with the explanation contained in your despatch, the scheme is presented in so intangible a shape, that it is difficult to know in what manner to reply to it.

There can be no question about the importance to this country of obtaining a very considerable loan, and in so far I approve of the memorialists' views; but in every other respect they appear to me impracticable. The land revenue of both Canadas, deducting the payments of the Canada Company, which will cease next year, and those from the British American Company, which will never be renewed, is very inconsiderable, and is already pledged as part of the consolidated fund towards the existing debt. If, as the memorialists assume, the consolidated fund will pay the charges on it, leaving a surplus to the amount of the land revenue, the province will be able, and no doubt will be disposed, to borrow in the London money market to the full amount which can be obtained by such surplus; and in that case the security of the consolidated fund, including the land revenue, will be far better and more easily negotiable than the security of the land revenue, without the consolidated fund. If the consolidated fund be not adequate to the charges

For Lord John  
Russell's Despatch,  
26 March 1841,  
No. 344, *vide*  
Papers ordered by  
the House of  
Commons to be  
printed, 23 Sept.  
1841, No. 49.

charges on it without the land revenue, it would be a breach of faith to withdraw that revenue from the security of the present creditors, and the scheme must consequently fall to the ground. In this view, therefore, I think the proposition impracticable.

Again, the memorialists, while they would leave to the Executive Government the execution of the public works, propose to stipulate for some legal provision for their completion, &c. What is the nature of this provision does not appear; but if it be intended, as I suppose it must be, to prescribe any particular manner in which, or any particular time within which, the works in question should be completed, I think it decidedly objectionable.

The Local Government and Legislature are far more intimately acquainted with and interested in the works in question than any set of gentlemen residing in London, the majority of whom, probably, have never crossed the Atlantic. Errors were no doubt committed some years ago, in the commencement of one or two of the principal public works; but those very errors will be the safeguard against similar mistakes hereafter, more especially since the establishment of the Board of Works, and since the Union Act has placed in the hands of the Government the initiation of money votes. It is my intention to submit to the Legislature, at their next meeting, a plan for the promotion of all the principal works in this country; and the decision on the measures to be adopted may properly be left to them without the interference of the companies in question. And there is this further and conclusive objection to their proposal: that, were a loan raised on the understanding that legal provision should be made for the completion of certain works in a prescribed manner, the law which might be passed on the subject would take the form of a contract, and become irrevocable afterwards, liowever much the circumstances of the country might alter.

These are some of the objections to the proposal which occur to me most readily. I abstain from following them up, because at the present moment the matter cannot be brought to any practical result. I have already put your Lordship fully in possession of the state of the finances of Canada, and have pointed out the course which should, I think, be adopted. It will be one of the earliest and most important duties of the Legislature on its meeting to take up the same subject.

If the propositions which I have submitted to your Lordship be approved by Her Majesty's Government, the finances and credit of Canada will at once be put on such a footing as to enable her to borrow with ease in the London market the funds necessary to complete her public works. Even should those propositions not be adopted (which I should be very reluctant to anticipate), I have no doubt that the establishment of the union, and the restoration of public confidence in this province, will raise its credit sufficiently to enable it to procure funds. But, as a general principle, I should dissuade the raising of money clogged by any stipulations of an unusual nature, or which do not properly enter into monetary transactions, however advantageous such an arrangement might at first sight appear. If the resources of Canada flourish, as I expect they will, its credit will be good, and it will borrow easily; if they be not, I doubt whether any stipulations or legal enactments in regard to public works, &c., will induce English capitalists to come forward with loans.

At the same time, however, as I consider it my duty to weigh any and every scheme which may be offered by which there is a possibility of this province being benefited, I shall be quite ready, in case these companies delegate to any person power to explain their views, and also empower him to treat with the Government of Canada upon the subject, to give the best consideration in my power to what he may propose, and assist in any arrangement which may be really useful.

I have, &c.  
(signed) *Sydenham.*

(No. 113.)

EXTRACT of a DESPATCH from Lord *Sydenham* to Lord *John Russell*,  
dated Government House, Kingston, 28 August 1841.

No. 10.

Extract Despatch  
from Lord Syden-  
ham to Lord  
John Russell,  
28 August 1841.

MY duty consists in taking care that whatever works may be undertaken or expenditure incurred, sufficient provision shall be made for defraying their cost, and upholding the credit of the colony, and further in affording all the information in my power as to the best system to be pursued as regards both the execution of the works themselves, and the acquirement of the funds for their completion.

I have accordingly transmitted to the House of Assembly a Message upon this subject, together with a Report from the President of the Board of Works, of which I enclose a copy; by which I have placed before Parliament and the country the best information I possess as to the works which are likely to prove most advantageous, and a scheme for defraying their cost.

It is not in my power to say whether the whole or what part of these improvements will be adopted this session; nor is it my wish to influence the decision of Parliament upon the matter. But whatever may be determined upon, I shall of course take care, acting upon the principles I have propounded, that no expense shall be incurred, for which ample security by increased revenue shall not be afforded.

20 August 1841.

---

Enclosure in No. 10.

Encl. in No. 10.

MESSAGE from his Excellency the Governor-general to the Legislative Assembly of the Province of Canada, on the subject of Public Improvements which it may be desirable to carry into effect within the said Province.—(Kingston, 20th August 1841.)

SYDENHAM.

IN pursuance of the declaration contained in his Speech from the Throne, the Governor-general solicits the attention of the House of Assembly to the public improvements which it may be desirable to carry into effect within the province, and to the means by which those works may be safely and successfully undertaken.

It has appeared to the Governor-general of great importance that Parliament as well as the Executive should have distinctly brought before them, in one general plan, the whole of the different works which are demanded by the public voice, and appear likely to tend to the increase of trade and to the advantage of the country. Such works as the Legislature shall decide upon adopting may thus be conducted upon one uniform system, having reference as well to each particular work as to the whole, and great advantage will result both as regards their execution, and in making provision for the funds necessary for the undertaking.

The Governor-general accordingly directed a Report to be prepared upon the subject by the President of the Board of Works, and that department having now been established by law for the whole province, he transmits this document for the consideration of the House of Assembly.

This Report will be found to embrace all the great improvements which appear at all desirable for some time to come, or that afford promise of rendering a return for the capital to be expended upon them:—the completion of the Welland Canal; the opening the communication between Kingston and Montreal by the St. Lawrence for schooners and steamboats; the improvement of Lake St. Peter, and the navigation between Quebec and Montreal for vessels of large burthen, opening the River Richelieu so as to perfect the navigation through that river by the Chambly Canal; the construction of slides for timber and other works on the Ottawa; the improvement of the inland waters of the Newcastle district; the construction of a port and light-houses in Lake Erie, and the improvement of Burlington Bay Harbour; the establishment or improvement of great lines of road from Quebec to Amherstburgh and Port Sarnia, from Toronto to Lake Huron, and between Quebec and the Eastern Townships, and the improvement of the Metis Road, and of the communications near the Bay of Chaleurs.

The total cost of all these works thus enumerated would involve an expenditure of about 1,470,000 *l.* Provincial Sterling, to be spread over a period of five years necessary for their completion.

Whether the whole or any part of these works shall be decided on by Parliament, it is clear that in the present financial state of the province, whatever is required for their construction must be provided by drawing on the public credit.

The statement of the provincial receipts and expenditure submitted to Parliament, although exhibiting, after the payment of the charges for the public service, a considerable surplus

surplus in proportion to the revenue, affords nothing from which, as capital, the costs of works of any importance can be defrayed.

Parliament must therefore provide the means for raising the capital required for the execution of these public works which it may determine to adopt, and at the same time afford such security as may be necessary for the annual interest upon the money to be borrowed, as well as for the gradual extinction of the debt, until the works themselves become productive.

If the whole of the works specified in the report are determined upon, the charge for interest upon the total sum required, calculated at the rate of interest usual in this province, would be between 80,000 £. and 90,000 £., a charge which it would be difficult to impose at once upon the country.

Means however exist by which such an increase of the charge upon the revenue of the province may be materially reduced, whilst the capital itself may notwithstanding be provided.

The reduction of the interest of the public debt through the assistance to be afforded by the Imperial Parliament, would probably reduce the present charges upon the provincial revenue by a sum of between 15,000 £. and 20,000 £. per annum, which will thus become available as security for any fresh loan.

There will remain, after effecting this conversion, a surplus of from 250,000 £. to 300,000 £. still further to be raised under the Imperial guarantee at a low rate of interest, by which an additional saving will be effected of about 6,000 £. a year.

A very considerable amount of the capital required might be raised, without any charge whatever for interest, by the assumption by the province of the issue of paper payable on demand, which is now enjoyed by private banks or by individuals, without their being subjected to any charge whatever in return for the power thus accorded to them by the State. If that power were resumed to the fullest extent, a capital representing a revenue of not less than 35,000 £. a year might be provided. But even under such an arrangement as would afford great advantages to the various banks at present issuing paper, as a compensation for their being in future deprived of that power, a revenue of not less than 15,000 £. or 20,000 £. might be safely relied on.

The union of the two provinces has now placed within the control of the Parliament the regulation of the Customs duties, which under the separate Legislatures was attended with so much difficulty, and a wise and prudent re-adjustment of some of these duties will render the revenue far more productive than at present, and easily furnish, without any injury to the trade of the country or any pressure on the people, what may be further required to provide for the remaining charge.

There is also one of the works to which, although great importance is justly attached to it, it will, in the opinion of the Governor-general, be just, as well as possible, to affix a condition by which the annual charge above submitted for the whole may be diminished. The navigation of the St. Lawrence involves the expenditure of nearly one-half of the whole sum calculated on. That work is undoubtedly highly desirable, but it scarcely justifies so great an expenditure at present, unless some diminution of the annual charge for interest upon the sum to be raised can be obtained. Nor is such a diminution to be un hoped for. Many capitalists in England are interested in the promotion of this work, and especially in seeing the communication between Lake St. Louis and Lake St. Francis established on the southern side of the River St. Lawrence. The Governor-general has reason to expect that assistance will be afforded upon this condition, and he would not therefore recommend that this undertaking should be sanctioned, unless, as a condition, the greater part of the capital required for it can be raised at a low rate of interest, not much exceeding that which the province would have to support for such part of its debt as will be guaranteed by England.

Entertaining these opinions, the Governor-general has therefore directed measures to be submitted to the House of Assembly embodying them, which he recommends to their favourable consideration.

However large the expenditure may appear, to which the improvements recommended by the Board of Works will amount, the Governor-general feels that it is his duty, looking to their vast importance, to submit them to the judgment of the country, and a measure will therefore be presented to the House, which comprises the whole of them.

If they are undertaken, it is no less the bounden duty of Parliament and of the Executive Government to take care that means sufficient for their completion are provided, and that the credit of the province shall be sustained in any engagements which are rendered necessary for raising funds for that purpose. He has therefore directed that, simultaneously with the proposal for the works themselves, measures should be submitted to the Assembly for the conversion of the debt, for the establishment of a bank, and for the regulation of the customs, and he desires to express his anxious wish to concur with the Assembly in whatever decision they may arrive at by which objects of such importance to the welfare of the province may be obtained consistently with that due regard to the interests of the people, to public credit, and to the maintenance of engagements without which it would be alike unjust and impolitic to attempt to carry them into execution.

Kingston, 20th August 1841.

MEMORANDA respecting various Public Works heretofore in progress, or projected in the province of Canada; showing the ultimate cost of their completion, and the amount of the appropriations proposed to be apportioned thereto, for the several years respectively.— Prepared and submitted for the consideration of his Excellency the Governor-general.

*The Welland Canal.*

Of those works which are indispensably and immediately necessary to the advancement of the general interests of the country at large, and from which the prospective revenue may be safely calculated upon to pay the interest on the expenditure, the Welland Canal unquestionably stands foremost.

Upon this work, about 491,777 *l.* has been expended from time to time upon its construction, and as the locks, the most important part of the work, had been formed with perishable materials, the outlay upon annual repairs has been necessarily very heavy; notwithstanding which, the locks are now in a most dangerous and ruinous state. Of this sum, about 117,800 *l.* in stock is held by private individuals, for the purchasing out of which, and thereby placing the work entirely in the hands of the province, a Bill is now before the Parliament.

After a very careful consideration and revisal of the several estimates furnished by the various engineers, the completion of this work, in a permanent and fully sufficient manner, with cut stone locks of 120 feet in length, 26 feet wide, and 8 feet 6 inches depth of water on the sills, together with the required weirs, waste-gates, stone aqueduct over the Chippawa, a steam-boat lock, and a capacious and safe harbour at each of the terminations, widening of the deep cut, widening and deepening of the feeder throughout, I estimate at 450,000 *l.*

Of debentures authorized by a late Act of the Provincial Parliament to be issued for this work, about 180,000 *l.* remain undisposed of, leaving a balance of 270,000 *l.* to be further sanctioned and provided, for the ultimate full completion of the work.

It is no doubt in the recollection of his Excellency that the completion of the canal on the full scale upon which a portion of the St. Lawrence navigation was proceeded with, has been strongly urged upon the attention of Government. The chief arguments used, being the benefit of enabling Atlantic steamers, with cargoes, to proceed to the Upper Lakes, and the advantage which would be obtained in time of war, from having the power of concentrating our naval forces upon either lake, as might be required. The subscriber is of opinion that the scale referred to, viz., locks 56 feet wide, 180 feet long, and 10 feet draft of water, is quite unsuited for sea-borne steamers, and unnecessary for those well suited to the lakes, and to the commerce of the country; and that even if this scale were adopted, at enormous cost, transshipment from the sea to the lake vessels would, notwithstanding, always take place at Quebec or Montreal. In a military point of view, no doubt the second proposed advantage would be great, but being quite beyond the means of the province, the work as necessary for the trade of the country has been alone estimated for. The large lock which is proposed at each end would allow (in case of danger) of the steamers being brought up many miles inland.

From the very unsafe and precarious state of the canal, it would be of the utmost consequence to have the works commenced forthwith, if possible.

As the foregoing total estimate of 450,000 *l.* includes the sum of 35,000 *l.* for an outer harbour at Port Dalhousie, and 20,000 *l.* for one at Port Colborne, which harbours will be available to Her Majesty's vessels and others upon the lakes, independent of the canal, the entire cost of completing the latter may be set down at 400,000 *l.* The most prudent rate of expending this estimate, I consider to be as follows:—

From the present to the 1st April 1842	-	-	-	£. 50,000
Thence to 1st April 1843	-	-	-	150,000
Thence to 1st April 1844	-	-	-	150,000
Thence to 1st April 1845	-	-	-	100,000

*St. Lawrence Navigation.*

From Lake Erie to Tide-water, after passing the Welland, the next portion of the route which will require an outlay when the other improvements more immediately called for on the river below it are completed, is the part between Prescott and Dickinson's Landing, a distance of about 40 miles, in which the collective falls at a few points amount to about 22½ feet, to overcome which, by the necessary locks, &c., would require about 150,000 *l.*; but as the down-stream carriage upon this part of the river is safe and facile, and tug-boats can (although with difficulty) bring up light barges, it is considered unnecessary in the present state of the navigation generally to incur any outlay thereon.

*Long Sault, or Cornwall Canal.*

The improvement of this reach of the river St. Lawrence, in length about 11½ miles, and in which there is a fall of 48 feet, was estimated at 216,343 *l.* and was commenced in 1833–34. Shortly after operations commenced, it is stated, that from the increase on the prices of provisions, and other causes, the Commissioners considered themselves justified in adding very largely to the contract rates, in some instances, as much as 30 per cent. Under these increased

increased rates the works have been continued from that time, without reference to any fluctuation in the price of provisions.

The accounts rendered by the Commissioners up to 1st January 1839, show an expenditure of 354,203*l.* 2*s.* 1*d.* to that date, exclusive of some outstanding claims. I have had a minute and careful estimate made by Mr. Keefer, engineer to the Board, within the last month, from which it appears that the sum of 43,867*l.* is required to open the canal to the trade, and a further sum of 13,804*l.* for sundry small works, lock-houses, &c., making in all an amount of 57,671*l.* 6*s.* necessary for the full completion of the entire of the Cornwall Canal.

Although the advantages to be derived from the improvement of this portion of the navigation would of necessity be very circumscribed, until that between Lake St. Francis and Lake St. Louis was also perfected, yet in favour of the immediate finishing of the Cornwall Canal it may be justly urged:—

First.—That it would enable the river forwarders to have their barges towed up by steam from the Côteau du Lac to Kingston, by which a saving in time of two days would be made.

Secondly.—To avoid the cost of tracking up the Long Sault Rapids, which during the past year, attending this very limited trade, was 3,000*l.*

Thirdly.—The passenger trade would be much benefited by it.

Fourthly.—Some return beyond the cost of maintaining the establishment of lock-keepers, &c., would be obtained from the large sum already expended, which, until this canal is completed, must remain a caput mortuum.

#### *Improvements required between Lake St. Francis and Lake St. Louis.*

The Côteau, the Cedars, and the Cascades Rapids, between these two lakes, present most formidable difficulties to the dragging up of a small light barge with but 15 or 20 tons of cargo. To vessels of any size they are wholly insurmountable. The construction of the necessary locks and canals to overcome these difficulties, Mr. Keefer estimates at 255,900*l.*; and I have every reason to believe the work can be done for that sum.

#### *Lachine Canal.*

The only remaining barrier, after the foregoing, to the free passage of lake-going vessels between Quebec and Lake Huron, is the Lachine Canal; the necessary enlargement of which would cost, by Mr. Keefer's estimate, 225,300*l.*

#### *Lake St. Peter.*

The improvement of Lake St. Peter for deeply-laden sea-going vessels is a subject also of very great importance, and has occupied the serious consideration of the Board of Trade of Montreal, who have petitioned the Parliament for an appropriation to fit out the necessary establishment of Dredging Vessels, &c., and they propose a tonnage upon the vessels trading to the port, to pay the interest on the outlay.

The Governor-general will perceive that this proposed appropriation is inserted among the Estimates—see Appendix; but it is very desirable that a sum, say 1,000*l.* should be at once made available to make some alterations to the steamer belonging to the Harbour Commissioners, so as to have the nature of this work fully and practically tested, prior to any large expense being entered into.

#### *General Observations upon the foregoing.*

The necessity of involving the province in the cost of forming a second water communication with Tide-water, has been for a long time the subject of dispute and argument with many. Among the number of those who doubted the prudence of it, I was one until latterly; but the vastly increasing trade, doubling almost annually, and the conviction upon my mind, after mature consideration, that the lowering of freight consequent upon affording additional facilities, together with the productiveness of the Western countries, which are only now coming into operation, will increase still further this trade to an almost inconceivable extent, have convinced me that a second and more facile outlet is called for. Besides the transport being confined to the Rideau, the navigation of which depends upon the stability of dams of great height (in one case 60 feet), should any injury arise to one of these dams (as was apprehended last spring), either through accident or malice, the effects of it would be ruinous to half the commercial interests of the country.

I am decidedly of opinion, that the scale upon which the Cornwall Canal was undertaken was unsuited to the means of the province, and was not absolutely necessary for the greatest increase of trade, which the most sanguine may look forward to, and that a schooner navigation combined with a system of tug-boats would have answered every commercial purpose; but now, from the large expenditure already incurred upon the central portion, the little required to complete it, and the comparatively small saving that might be effected upon what remains to be done, by adopting the schooner scale, I am led to conclude that the best and wisest course will be to open the St. Lawrence throughout from Montreal to Lake Ontario for steam-boats and schooners,—not upon the full size of the Cornwall Canal, but on a scale sufficiently large to admit a powerful class of steamers or tug-boats to pass.

The estimates submitted herewith are based upon the principle of locks being adopted, length 175 feet, breadth 40 feet, and 8 feet 6 inches depth of water, but as some time from the present period will, under any circumstances, elapse before the actual building of locks is commenced, the question will in all probability be fully decided as to the power and suitableness of the several modes recently proposed for the propelling of vessels, and this decision will naturally govern the dimensions of the locks, and may seriously tend to a diminution of expenditure.

*River Richelieu.*

Upon the completion of the works of the Chambly Canal now rapidly advancing, the only impediments to an uninterrupted navigation between the River St. Lawrence at Sorel, and the head of Lake Champlain, a distance of about 180 miles, will be presented by the fords near St. Ours, St. Denis, and Belœil.

To remove these obstructions, by means of dredging and clearing the channel of rocks, the Legislature of Lower Canada appropriated a sum equal to about 7,650*l.* of which 4,525*l.* remain unexpended. The outlay incurred under this appropriation has effected nothing, and I am of opinion that the erection of a steam-boat lock, and a dam of moderate height, say 4 or 5 feet over low water, at or near St. Ours, is the most certain mode of obtaining the object in view, and the value of the water power which would be created by the dam, in the midst of a productive country, heretofore without mills, would yield a considerable return towards defraying the interest on the money expended.

The cost of the works is estimated by Mr. Keefer at 21,000*l.*

*River Ottawa.*

The improvement of the navigation of this river is a measure which has been for a long time strongly advocated, principally by those interested in that district of country. The project embraced the full completion of an uninterrupted navigation from the St. Lawrence by the Ottawa, Lake Nipissing, and French River to Lake Huron. The sum of 3,000*l.* was appropriated some time ago to defray the expense of a survey, on which about 1,500*l.* have been expended, but the information as yet obtained, is not at all of such a nature as to hazard an estimate of what the cost of the undertaking would be, and in my judgment this navigation is not required in the present state of the country: in saying so, I would not be understood to mean, that obstacles ought to be opposed by the Government to the project, in case the parties interested should be inclined to proceed in it upon their own resources; on the contrary, arrangements might be made mutually advantageous to them and to the interests of the province.

The improvement on the Ottawa included in this estimate (see Appendix) relates solely to the lumber trade: to afford facilities to which, by the construction of suitable slides at those places where they are most required, and to reconstruct the bridges at Bytown, it is proposed to appropriate the sum of 28,000*l.*

It will be deserving of consideration whether the property in those slides which are now in the hands of private Companies, should not be resumed by the province, remunerating the proprietors according to the terms of their charters.

The propriety of making such an appropriation will be seen, when the considerable revenue derived from this source is borne in mind, and that, notwithstanding the large amounts heretofore received from it by the country, no public money has yet been granted towards affording to this trade that assistance which its present state and prospects show to be so necessary.

*Burlington Bay Canal.*

The dangerous and dilapidated state of this very important work renders it necessary that steps be immediately taken to repair or rather wholly reconstruct it in a substantial and permanent manner. Such is its present ruinous condition, that it cannot be repaired effectually; and a few hours of a heavy blow from the east or south-east might very reasonably be expected to close it up altogether; the consequence of which would be most serious to the mercantile interests of Hamilton and Dundas, and to the extensive and highly productive country of which these ports are the outlets.

However advisable it may be for the purpose of obtaining still water, and have the entrance commanded from the land, to locate this work northward of the existing passage, yet the placing of it so much in shore, as has been lately proposed, I consider unadvisable: by so doing, sail vessels would be prevented from getting out many days during the season, and in making for it, if they did not succeed at once in getting in, would unavoidably be driven aground. The best position for the work, I conceive, is not far from the original natural outlet.

*Improvement of the River Trent and Inland Waters of the Newcastle District.*

The persisting in these works as heretofore contemplated would, as appears by the estimates, involve the province in an expenditure of about 620,000*l.* but from the rates upon which those estimates are based, I am of opinion that 200,000*l.* or 300,000*l.* in addition to that sum, would be required to effect the object.

The line of this intended water communication from the Bay of Quinté to Nottawassaga Bay, with upwards of 820 feet of lockage, a proposed depth of five feet water, continued through a series of lakes and currents, and in many cases extremely circuitous, is in my judgment quite unsuited to the principal purpose for which it was originally recommended, namely, the line by which the produce of the Western States would be sent down to Tide-

water.

water. The second argument advanced for its formation was the facility it would afford for the transport of the agricultural and other produce of the inland townships to market; and, thirdly, the advantages to be reaped by the lumberers; the two latter, I consider, can be obtained sufficiently, more immediately and at infinitely less cost, by the erection of two or three locks to connect the long existing reaches or natural navigation, by the construction of two or three cross roads from them to the nearest ports on Lake Ontario, and, finally, by the formation of slides at the places where they may be required. A farmer or merchant at the head of Rice Lake is within 12 or 14 miles of the harbours of Port Hope and Cobourg, on Lake Ontario, to which he could have facile access afforded him by an outlay of about 10,000 *l.* or 12,000 *l.*, whereas to get the same produce to Lake Ontario by the proposed navigation would require a previous expenditure on it, even according to the estimate of 233,447 *l.*, and the distance to be travelled would be about 80 miles. As to the lumber trade, I believe a very moderate sum expended on slides would effect quite as much as is necessary; indeed, I find in the original Report a passage recommending slides, "which cost comparatively little, and much better suit the purpose for heavy timber than lockage."

From the foregoing general grounds of objection, I cannot recommend the continuing of the expenditure as contemplated, upon this navigation, but I most readily admit the necessity of assisting and developing the resources of that fine district of country, which I would do, by immediately affording to it the advantages to be derived from works of the nature I have suggested; to accomplish the whole of which would cost about 50,000 *l.*

#### *Harbours and Light-Houses on Lake Ontario and Lake Erie.*

There is no expenditure more called for, and from which the benefits to be derived would be more immediately serviceable to the country, than the outlay which is required to construct or complete some harbours on the lakes. Many of those on Lake Ontario are in a very inefficient and incomplete state. On Lake Erie there literally, at this moment, is not one into which a vessel can run or remain in with safety.

The state of the light-houses on Lake Erie is equally bad; that which had been at the end of Long Point, the most important station on the lake was prostrated long since. Others have not been lighted for a considerable time. The natural consequence of all which is, that we have not now one steam-boat on this lake, and the difficulty and cost of inducing shipowners to risk their vessels into the ruins of what were constructed as harbours, is so great, as almost to put a stop to the shipping of the produce of the country.

The sum of 74,000 *l.* has been set down in the estimates, after much consideration and calculation, as sufficient to remove general and well-grounded complaints on this head.

It is intended that those harbours, where nature has offered most advantages, be completed and rendered such as they ought to be. That the present light-houses be put into an efficient state, and others erected where necessary; but as the propriety of constructing some harbours, by the Admiralty, is now under the consideration of that department, it is conceived best at the present moment to appeal to the Legislature to admit the principle, and sanction the appropriation, but not to decide finally on the particular harbours, until the decision of the Admiralty is known, which should of course govern the selection, and thereby save provincial funds.

The foregoing, it is hoped, will sufficiently explain to His Excellency the general principles upon which the appropriations for the several very important works in the first Class, (see Appendix), are based and applied for.

#### SECOND CLASS.

The works in Class Second are of a different character; they consist of main lines of internal communications, the opening or improving of which, it is believed, would conduce so much to the general advancement of the country, as fully to justify the expenditure, although the direct revenue to be derived from them, for many years, is not likely to meet the interest.

##### *Bay of Chaleurs Road.*

This line of communication along the north side of the Bay of Chaleurs, from Percé Point to the head of the Bay, a distance of 140 miles, is interrupted in two places by portions of the road which are so little formed, as to be almost impassable (one from Little Pabos to Port Daniel, the other from the Little Nouvelle to the Indian Mission, in all about 48 miles).

These portions being improved, and the Metis or Kempt Road (from Point aux Snelles, on the River St. Lawrence, to the head of the Bay of Chaleurs) better opened; the entire of Gaspé east and south, and of New Brunswick east and north, would be approachable from the St. Lawrence with facility, as New Brunswick middle and west, is by the Temiscouata Road.

##### *The Gosford Road.*

Under this head is embraced the completion of the main line leading directly from Quebec through St. Giles, Ste. Croix, Inverness, &c. to Sherbrooke, at present but partially open, and not available in summer. It passes through the large tract of good settlement land belonging to the Crown; and will curtail the line of travel between Quebec and Sherbrooke by more than 50 miles.

*The Main Northern Road from Lake Ontario at Toronto to Lake Huron.*

The opening of this Road efficiently throughout is considered highly desirable, and strongly recommended ; but the portion here more immediately referred to, is from the termination of that undertaken by the district at the Holland Landing to Barrie ; which it is proposed to drain, form and plank, and establish toll bars thereon ; from thence to Penetanguishine, it is intended to improve. By this and the expenditure of moderate sums upon one or two of the principal branches leading into the main road, and also upon the Cold Water Portage Road ; the entire of the fertile district to the North, West and South of Lake Simcoe, would be afforded the advantages of a good communication with the market and harbour of Toronto.

*The Main Province Road from Quebec to Amherstburg and Port Sarnia.*

Unquestionably beneficial as it would be to have the main Province Road properly opened and established throughout, yet such an undertaking, in the present state of the country, is altogether beyond its resources. Under this head, therefore, is embraced the improvement of those portions only, along which the advantages of water carriage are not afforded, viz. from the Cascades to the Province line, and from Brantford to London ; these portions it is proposed to properly form and macadamize or plank, and establish toll-bars thereon ; the revenue from which would be quite equal to meet the interest of the outlay. From London westward it is intended for the present only to open, drain, trunk, and form ; raising and bridging where necessary.

The building of the several bridges over the large rivers between Quebec and Montreal, the crossing of which, at certain seasons, is very dangerous, and attended with loss of life, is also calculated for.

THIRD CLASS—(See Appendix)

Consists of the several lines of roads which have been already undertaken by the respective districts, and upon which large sums have been expended ; but from their unfinished state, they are, to a great extent, unproductive. The object in introducing them into the Appendix is to bring the matter before the attention of the Legislature, and to show the amount required to finish them. Their completion will properly belong to the different districts, and can be effected under the superintendence of the district surveyors.

*Hamilton H. Killaly.*

Board of Works, 12th August 1841.

Appendix.

ESTIMATES of the TOTAL COST of constructing and completing certain PUBLIC WORKS in the Province of Canada ; showing, also, the Amounts of Appropriations proposed to be apportioned thereto, for the several Years respectively, in case the prosecution of these Works should be decided upon.

FIRST CLASS :—Consisting of those Works of purely a national character, and which are indispensable to the advancement of the Commercial and Agricultural Interests of the Country at large, and from which the prospective Revenue may be calculated upon, with certainty, to pay the Interest of the necessary Expenditure.

	Total Estimate.	Amount of proposed Appropriations for the Years				
		1842.	1843.	1844.	1845.	1846.
	£.	£.	£.	£.	£.	£.
The Welland Canal - - - - -	450,000	150,000	150,000	150,000		
The St. Lawrence Navigation ; viz.						
Prescott to Dickenson's Landing - -	151,312	-	-	51,312	100,000	
Dickenson's Landing to Lake St. Francis -	57,670	45,000	12,670			
Lake St. Francis to Lake St. Louis - -	255,900	-	55,900	100,000	100,000	
Lachine Canal - - - - -	225,300	-	55,300	60,000	60,000	50,000
Lake St. Peter - - - - -	60,000	20,000	10,000	10,000	10,000	10,000
River Richelieu - - - - -	21,000	15,000	6,000			
River Ottawa, to build Bridges and construct Slides - - - - -	28,000	14,000	14,000			
Burlington Bay Canal - - - - -	45,000	30,000	15,000			
Internal Waters of the Newcastle District, construction of Slides, Locks, and some Roads leading thereto - - - - -	50,000	20,000	20,000	10,000		
Harbours and Light-houses on Lakes Ontario and Erie, and Roads leading thereto - -	74,000	34,000	40,000			
£.	1,418,182	328,000	378,870	381,312	270,000	60,000

PUBLIC WORKS (CANADA).

67

SECOND CLASS :—Consists principally of those Works connected with the Improvement of the Main Inland Communications of the Country by Roads; these, however loudly called for, and quite as necessary to the development of the resources of the Country in time of peace as those embraced in Class First, and of the utmost importance to its protection in case of war, cannot generally be relied upon as likely, for many years, to produce a direct Revenue sufficient to pay the Interest upon the requisite Outlay.

	Total Estimate.	Amount of proposed Appropriations for the Years		
		1842.	1843.	1844.
	£.	£.	£.	£.
Bay of Chaleurs Road, to moderately improve about 50 miles, now all but impassable, between Percé Point and the Indian Mission, and portion of the Métis or Kempt Road - - - - -	15,000	10,000	5,000	
Gosford Road, opening a communication between Quebec and the Townships, through the Government Block of Land, and shortening the Road between that City and Sherbrooke more than 50 miles -	10,000	5,000	5,000	
Main Northern Road from Lake Ontario at Toronto to Lake Huron, continuing and perfecting from the termination of the portion already undertaken by the District of Barrie, establishing Toll-bars thereon, and improving sundry parts thence to Penetanguishine and on the Cold Water Portage - - - - -	30,000	10,000	10,000	10,000
Main Province Road, Quebec to Amherstburg and Port Sarnia, to build certain Bridges between Montreal and Quebec, and to improve those portions of the line along which the River or Lakes are not available for the transport of the Mails, &c.; viz. To macadamize or otherwise improve that portion between the Cascades and the Province Line, and establish Toll-bars thereon	17,000	10,000	7,000	
To macadamize or otherwise complete that portion from the termination of the part already undertaken by the District at Brantford to London, and establish Tolls thereon - - -	55,000	20,000	20,000	15,000
To drain, trunk, form and otherwise improve thence to Port Sarnia	15,000	10,000	5,000	
To drain, trunk, form and otherwise improve from London to Chatham, Sandwich and Amherstburg - - - - -	36,000	15,000	15,000	6,000
Building of Bridges - - - - -	34,000	17,000	17,000	
£.	212,000	97,000	84,000	31,000

From the items of which the First Class is principally composed, it will be perceived that the necessity of opening fully our main water communications to the ocean, with a view to develop the resources of the country, and increasing its commerce and revenue, is considered indispensable, and forms the basis of the proposed appropriations. Most of the works embraced in the Second Class consists of branches leading to the main trunks formed by those in Class One, and are recommended upon the principle that it is wise legislation to leave no cause of regret to the inhabitants of the interior, in consequence of large canal expenditure or front improvements, by affording them frequent and facile access thereto, and thereby diffusing, as generally as possible, the benefits of those improvements.

Board of Works, Kingston,  
12th August 1841.

Hamilton H. Killaly, Chairman.

THIRD CLASS :—Embraces those Lines of Roads already undertaken by and at the Cost of the respective Districts, and which are in different stages of forwardness, but from their unfinished state are, in some cases, unavailable and unproductive.

	Total Estimate.	Amount for the Years		
		1842.	1843.	
	£.	£.	£.	
Queenston and Grimsby Road	42,500 *	25,000	17,500	* This exceeds the sum appropriated by former Act by about 29,888 <i>l</i> .
Kingston and Napanee Road -	6,000 †	6,000	-	† This exceeds the sum appropriated by former Act by about 2,100 <i>l</i> .
Toronto Road, North - -	25,000	12,500	12,500	
Toronto Road, East - -	7,777 ‡	5,000	2,777	‡ Being balance of appropriation by former Act.
Toronto Road, West - -	9,078 §	6,000	3,078	§ Being balance of appropriation by former Act.
Hamilton and Bradford -	9,000	9,000	-	This exceeds appropriation by former Act about 9,000 <i>l</i> .
Dundas and Waterloo - -	10,000 ¶	10,000	-	¶ This exceeds appropriation by former Act about 2,000 <i>l</i> .
£.	109,355	73,500	35,855

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart.,  
G. C. B., to Lord *Stanley*.

Government House, Kingston,  
14 January 1842.

No. 11.  
Despatch from  
Sir C. Bagot to  
Lord Stanley,  
14 January 1842.

Page 4.

My Lord,

YOUR Lordship is of course aware that in consequence of Lord Sydenham's representations relative to the financial state of Canada, Her Majesty's late Government had promised to apply to Parliament to guarantee a loan to the amount of 1,500,000*l.* for the redemption of the debt of this province, and the completion of certain public works. This intention was communicated by Lord Sydenham to the Legislature in his speech at the opening of the Session, and was by them made the foundation of an Act, the 4th & 5th Vict., c. 33; that Act is already before your Lordship for the signification of Her Majesty's pleasure thereon.

The circumstances which led to the retirement of Her Majesty's late Ministers, prevented their redeeming the pledge given in their name to the people of Canada, but your Lordship will readily believe with how much anxiety its redemption is looked for from Her Majesty's present Government; the announcement of those liberal intentions produced throughout the great body of the people a feeling of deep gratitude, and a confidence in the determination of Great Britain to maintain the connexion between herself and this province, and these sentiments will be strengthened and confirmed in proportion to the promptitude with which the matter is now taken up by Her Majesty's Government. It is from this conviction that I feel it my duty to make this the first subject of communication with your Lordship after my assumption of the Government of Canada.

It is not necessary that I should enter into any further statement respecting the finances of Canada, or the grounds which justify the determination of Her Majesty's late Government. Those questions have been exhausted in the despatches of my predecessor; and the pledge having been given and acted on by the legislature of this province, it only remains to provide for its being carried into effect.

The Act of the provincial legislature, after reciting the promise of Her Majesty's Government, authorizes the Governor to appoint such person or persons as he may think most fit to negotiate the loan, from which the legislature would seem to have contemplated that an agent would be sent from this country. I should accordingly have proceeded immediately to act on this authority; but after fully considering the matter, and making every inquiry in my power, I am satisfied that it would be very advisable, if possible, to avoid this course, and to conduct the negotiation under the immediate sanction of the Lords Commissioners of the Treasury. There is, on the one hand, scarcely any person in this country sufficiently known in the London Money Market to conduct so extensive a transaction with advantage, while the expense of sending him home, and maintaining him there during the negotiation, would be considerable. On the other hand, the loan, if effected under the immediate authority of the Lords of the Treasury, would necessarily be obtained under the most advantageous terms possible for the province, while any person who might be selected by their Lordships to conduct it, would bring to the task an experience and intimate knowledge of parties, which it would be useless to look for here. The people of this country moreover would, I am sure, see in their Lordships undertaking this duty, the anxiety of Her Majesty's Government to act towards this province in a spirit of justice, and would appreciate to its full extent the boon conferred on them. If in consequence of the fourth clause of the statute, it be necessary that the person by whom the negotiation is concluded, should hold a direct authority from the Governor of Canada, I could of course give such an authority to the individual whom the Lords of the Treasury might select.

Under these circumstances, and considering that as the loan is to be guaranteed by Great Britain, she is as much interested as this province in its successful negotiation, I trust that the Lords of the Treasury will not refuse to undertake this business. It would be for their Lordships to determine whether it should be managed by a member of their own department, or only under their authority and control; and although such a transaction would be beside the ordinary course of business, yet as the circumstances out of which it has arisen, and the position of  
this

this province are of no ordinary character, they would, I think, justify an extraordinary mode of proceeding, and one which, even if irregular, is so clearly for the public advantage.

I would beg to urge this matter on your Lordship's earliest and most earnest attention, as one by which our success in this province may be much affected, and on which it will be necessary that I should be able to make a communication to the legislature at their first meeting.

I have, &c.

(signed) *Charles Bagot.*

(No. 112.)

COPY of a DESPATCH from Lord Stanley to the Right honourable Sir Charles Bagot, Bart., G. C. B.

No. 12.  
Despatch from  
Lord Stanley to  
Sir C. Bagot,  
2 April 1842.

Sir,

Downing-street, 2 April 1842.

AMONG the Acts of the late Session of the Canadian Legislature, there are none which have been more anxiously considered by Her Majesty's Government, than those numbered respectively 28 and 33, and intituled, (No. 28), "An Act to appropriate certain Sums of Money for Public Improvement in this Province, and for the Purposes therein mentioned;" (No. 33), "An Act to facilitate the Negotiation of a Loan in England, and for other Purposes therein mentioned."

Page 1.

Page 4.

The objects contemplated by these Acts of relieving the finances and improving the credit of Canada, and, at the same time, of developing, by measures of extensive internal improvement, the vast natural resources of the province, are viewed by Her Majesty's Government with hardly less of interest than by the Legislature and people of the Province; and every consideration of good faith and of policy would lead Her Majesty's Government scrupulously to fulfil, to their utmost extent, the pledges of assistance held forth by their predecessors in office, and communicated to the Legislature of Canada by Lord Sydenham; and also to aid in the accomplishment of the objects sought to be attained by the Acts now under consideration.

I may add, that Her Majesty's Government are aware that these Acts were framed and submitted to the Legislature with the concurrence and sanction of the late Governor-General; and that it is therefore peculiarly desirable that they should so be dealt with, as to lead to no inconvenience to the province, and no disappointment of expectations justly entertained.

It is with these views that Her Majesty's Government have entered upon the consideration of the advice which it is their duty to tender to Her Majesty respecting the two Acts in question. And I proceed to communicate to you, for the information of the Legislature, the course which it has been deemed right to take, and the reasons by which that course has been suggested. In order, however, to place the matter fully before you, it is necessary that I should recapitulate the principal facts of the case.

In considering the question then pending, of the union of the provinces of Upper and Lower Canada, Lord Sydenham could not omit from his view the financial condition of the United Province, and in bringing the subject officially under the notice of the Home Government, on the 27th of June 1840, he suggested that on the completion of the union, measures should be taken for "guaranteeing a loan, which would remove a considerable charge, arising from the high rate of interest payable by the province on the debt already contracted, or which it would have to pay for raising fresh loans which may be required hereafter for great local improvements."

Page 23.

On the 24th of the following month, my predecessor, in a letter to the Treasury, states as follows:

Page 53.

"Your Lordships should be apprised that Her Majesty's Government have always had it in contemplation to support the credit of Canada, by guaranteeing the Upper Canada debt.

"Previously to quitting this country, the Governor-General was informed by Her Majesty's confidential advisers of this intention, and was left at liberty to announce it, if he thought it necessary, in Canada.

"Although Mr. Thomson abstained from making such an announcement, and Her Majesty's Government therefore stand unpledged and uncommitted, high motives of public policy render the proposal of such assistance to the finances of Canada scarcely less imperative on the Government than it would have been, had a solemn engagement been entered into on the part of the Crown.

"The utmost extent to which the Ministers of the Crown can proceed, is to promise to recommend to Parliament, in the next Session, such a guarantee of the actual debt of Canada as may enable the Legislature to reduce the interest now payable to a lower rate."

Lord Sydenham explained his view of the mode in which it would be advisable to render the proposed assistance, in two despatches, dated the 22d and 25th February 1841.

He states that nearly all the Canadian debt had been contracted for public works, begun, but not completed, from which, when completed, a revenue would be derived, but which, at the same time, could only be rendered productive by fresh expenditure.

The province was therefore represented by him as "sinking under the weight of engagements which it can only meet by fresh outlay."

And he mentions, in illustration of his meaning, the case of the Welland Canal, upon which £.400,000 (the real amount appears from the Report of the Canadian Board of Works to be £.491,777) had been laid out. The tolls on this Canal, in the preceding year, amounted to £.24,000, and would, "without the slightest doubt," amount to between £.40,000 and £.50,000 in each year, if the Canal could be kept open, "and to a far larger amount hereafter;" but in order to secure this advantage, a further outlay, "equal, almost, to that already expended," is required, and without this further outlay "this great work must inevitably go to ruin."

"If no means can be found," his Lordship remarks in the subsequent despatch, "to finish these works, either by an advance of money, or by so improving the credit of the province as to enable it to borrow in the market at a rate of interest not exorbitantly high, they must go to ruin and remain unproductive of any revenue, and in that case the annual charge for interest, (on the debt contracted for the purpose of executing these works), is as much a dead weight upon the income of the country as the interest of the National Debt in England."

The interference of Parliament, therefore, he adds, to be really useful, must not only go to the extent of reducing the rate of interest on the debt already contracted, but must also furnish the additional funds required to make the past expenditure productive by the completion of the works.

The plan proposed by him for the accomplishment of this double object is, that the British "Treasury should be authorized to raise a loan to the amount of a million and a half, the proceeds to be applied, first, to the liquidation, at *par*, of the Canadian debt, and the residue for the completion of such public works as might be deemed expedient.

"The debt to be made a first charge upon Canadian revenues before all other debt, if any afterwards be contracted by the province, and to be specially provided for as such by the Canadian Legislature.

"All tolls or other securities which had been mortgaged to the province as security for the present debt, to be made over in the same way. The Canadian stockholders to be compelled to receive their money at *par*, or new stock at a price proportionate to it.

"No portion of the fund applicable to public works to be expended on any work which was not wholly and absolutely under the direction of the Executive Government, whether private stockholders had or had not any interest in the undertaking."

By following this course, Lord Sydenham observed, the two-fold object would be accomplished, of relieving the province from an annual charge upon the whole debt of nearly Two per cent., and of preventing the stockholders from obtaining the unfair advantage which they would otherwise acquire from the greatly increased marketable value which their stock would undoubtedly obtain if the credit of Canada generally were materially raised through the assistance of the British Government.

To these despatches Lord John Russell returned the following answer, dated the 3d of May 1841 :

“ You have stated the debt of the United Province to amount to 1,226,000*l.*, and, with the sum required to complete public works necessary for the free passage between the western portion of the province, the St. Lawrence and the sea, to about 1,500,000*l.*

“ The Queen’s Government coincide in your views of the expediency of making such an arrangement as may employ the credit of this country for the benefit of the finances of Canada, and have given their best consideration to the plan proposed in your despatches.

“ They are of opinion that such an arrangement, if carried into effect, with the consent of the creditors, would be in every way desirable ; but they feel that the objections to a Bill compelling parties to receive payment of their money in breach of agreements entered into with them by competent authority, are insuperable.

“ Her Majesty’s Government are ready to give any assistance, in conformity with your proposal, which does not appear to them inconsistent with good faith. They are ready to propose to Parliament to guarantee a loan which may be required for public works (under the restrictions suggested by you) for the repayment of such part of the debt as may be now redeemable, or may be held by creditors, who shall declare themselves willing to accept reasonable terms.

“ With regard to this latter sum, it appears to the Government most expedient that you should fix such terms as you may consider sufficient to induce the creditors to accept the proposed equivalent (not of course exceeding 100*l.* for every nominal 100*l.* lent), that you should make known such tender in such way as may appear to you most advisable, giving the holders sufficient notice and information, and fixing a given day before which the willingness of the parties to accept such offer should be sent in.

“ To do this, an Act of the Canada Legislature will be necessary ; and when that is obtained, the subsequent arrangements might be made, or through some party deputed on the part of the Canadas to this country, with full instructions.

“ Upon receiving the information of the assent of the parties accepting the terms proposed, the necessary means may be taken in this country to raise the requisite funds ; and it may be expedient that you should fix the day for paying off such assenting creditors, and other claims, at a time when the Parliament of this country is sitting ; for should it be necessary to have recourse to a loan, such a measure has always been considered open to objection during the prorogation of Parliament.”

The subject was then laid by Lord Sydenham before the Canadian legislature, and the following is an extract of his speech upon that occasion :

“ Many subjects of deep importance to the future welfare of the province demand your early attention, upon some of which I have directed bills to be prepared, which will be submitted for your consideration.

“ Amongst them, first in importance at the present juncture of affairs, is the adoption of measures for developing the resources of the province by well considered and extensive public works.

“ The rapid settlement of the country, the value of every man’s property within it, the advancement of his future fortunes, are deeply affected by this question.

“ The improvement of the navigation from the shores of Lake Erie and Lake Huron to the ocean, the establishment of new internal communications in the inland districts, are works requiring a great outlay, but promising commensurate returns. To undertake them successfully, large funds will undoubtedly be required, and the financial condition of the province, as it stands at present, would seem to forbid the attempt. But I have the satisfaction of informing you, that I have received authority from Her Majesty’s Government, to state that they are prepared to call on the Imperial Parliament to afford their assistance towards these important undertakings.

“ In the full belief that peace and tranquillity will be happily re-established in this province, under the constitution, settled by Parliament ; and that nothing but a relief from its most pressing difficulties is wanting to its rapid advancement to prosperity, they will propose to Parliament, by affording the guarantee of the Imperial Treasury, for a loan to the extent of no less than 1,500,000*l.* sterling, to aid the province, for the double purpose of diminishing the pressure of the interest on the public debt, and of enabling it to proceed with those public undertakings

whose progress during the last few years has been arrested by the financial difficulties.

“ I shall direct a measure to be submitted to you, embracing a plan for this purpose, and I shall lay before you, for your information, and that of the people of Canada, extracts from the despatches which convey to me this most gratifying assurance.”

From these documents, it will appear that the object which Her Majesty's Government had in view in 1841, was to render such assistance to Canada as might enable the United Province to improve its financial position, and to advance the most necessary public works; and it was supposed that both these objects might adequately be effected by guaranteeing a loan to the United Province of 1,500,000.

The financial arrangements, however, actually proposed by Lord Sydenham to the Canadian Legislature, and adopted by them, is very different from this.

That arrangement, it is true, has for its basis the guaranteed loan of 1,500,000*l.* but there is added to this a further loan of 1,659,689*l.*, which is proposed to be raised exclusively for the execution of public works, making a total proposed debt of 3,159,682*l.*

Her Majesty's Government have given to this financial project, and the acts by which it is proposed to carry it into effect, their most deliberate and anxious consideration; and the result of that consideration has been to impress upon them a very strong conviction that the measures, if acted upon in their present form, far from relieving, would have the effect of seriously embarrassing the finances of the province, while they are happy to believe that, by the adoption of a different mode of applying the credit of the mother country, substantial relief may be afforded, and the great objects contemplated by the two Acts now before me, and recited in the Preamble to No. 33, may be as speedily, and more advantageously and economically effected.

The existing Canadian debt is stated by Lord Sydenham at 1,226,000*l.*, and the annual interest at 72,537*l.*; to pay off this debt, and to carry on certain public works, it is proposed to raise, under the guarantee of the British Government, a sum of 1,500,000*l.*, the interest upon which, at four per cent., will amount annually to 60,000*l.*

There would thus, no doubt, be a reduction of interest payable by Canada, to the amount of about 12,000*l.* a year, besides a sum applicable to public purposes of about 274,000*l.*

On the other hand, it appears, by a subsequent letter from Lord Sydenham, that the debt of the province has been since increased by a sum of 100,000*l.* for the purchase of shares in the Welland Canal, and 26,000*l.* authorized to be raised in East Canada for public works.

Setting these last-mentioned sums apart, Lord Sydenham calculated the surplus income of the province at 3,119*l.*, to which would have to be added the interest on the present debt, which would be paid off, amounting to 72,537*l.*, making in all 75,656*l.* to meet the interest on the substituted debt of 1,500,000*l.*, at four per cent., or 60,000*l.*; and the interest at five per cent. on the additional loan of 1,678,682*l.* or nearly 84,000*l.*, in all 144,000*l.*, leaving an annual deficit, exceeding 68,000*l.*

Lord Sydenham seems to have been fully aware that this second loan would be a severe trial to the finances of the province; and in his message to the Legislative Assembly, dated the 20th of August 1841, on the subject of the proposed public works, he alludes to the following, as means by which the burden of this additional charge might be considerably lightened.

1st. A reduction of interest to the extent of between 15,000*l.* and 20,000*l.* a year on the existing debt, to be effected by the guaranteed loan.

2d. The surplus on the guaranteed loan, after providing what is required to pay off the existing debt, by means of which Lord Sydenham calculated that a further saving of interest might be effected of about 6,000*l.* a year.

3d. The assumption by the province of the issue of paper payable on demand, which is now enjoyed by private bankers or by individuals.

4th. A wise and prudent re-adjustment of the custom duties, which the union of the two provinces has now placed within the control of the Legislature.

The

The reduction of interest on the existing Canadian debt, which is the first of these four items, has been already allowed for to the extent of 12,000*l.* in calculating the probable deficit.

The surplus on the guaranteed loan would certainly be an important fund; but the policy of borrowing 274,000*l.* more than is required, in order to enable new obligations to be contracted, is at least questionable.

The third resource calculated upon can now be of no effect, because Lord Sydenham, finding that he should be unable to carry his plan for the exclusive assumption of the issue of paper by the Provincial Government, prudently abandoned it, and an Act has been passed instead, confirming the privileges enjoyed by the Banks.

The fourth item, therefore, is the only one on which any reliance can be placed for a set-off to the new charge which would be imposed upon the province by having to provide for the interest of the additional loan. There is reason to expect that the recent revision of the Canadian custom system will be productive of an increase of revenue; but the result of this measure is, as yet, much too uncertain to render it safe to contract a load of debt, which, unless the measure should be completely successful, would entail the most serious consequences on the province.

These calculations, moreover, are founded on two suppositions, both of which appear to be open to grave doubt: 1st. That all the existing creditors will consent to be paid off; and 2d. That the additional loan can be raised on the credit of the province, at a rate of interest not exceeding five per cent. Unless these propositions can be established, the result to the province will be even more unfavourable than I have hitherto assumed it to be. Now, it appears obvious, with regard to the first, that in the event of the British Government guaranteeing the public debt of Canada, the stockholders will have no inducement to accept (and, unless willing, cannot be compelled to accept) a lower rate of interest than they have now a right to claim; and that the debentures, which are now, perhaps, nominally at 75 or 80, will immediately rise to par, and will, to that extent, augment the actual debt of the province; and as to the second point, if the existing debt of Canada has been contracted at a rate of interest varying from six to eight per cent., when it was a first charge upon the revenues, it is difficult to understand how a fresh loan can be raised on the credit of the province at five per cent., when the finances shall have been charged with an additional burthen of 1,500,000*l.* in the shape of debt to the mother country.

These combined considerations have led my colleagues and myself to the conclusion, that, consistently with our duty and with the interest of Canada itself, it will not be possible for us to advise Her Majesty to assent to the two Acts which are now under consideration; and it devolves therefore upon me to instruct you to take the earliest opportunity of bringing the whole subject, fully and unreservedly, under the review of the Provincial Legislature.

You will state to them that they and Her Majesty's Government can have in view but one and the same object, that, namely, of applying the credit of the mother country to the promised amount of 1,500,000*l.* in such a manner as most effectually, most economically, and most beneficially to the province, shall conduce to the maintenance of public credit, and to the promotion of those great undertakings of internal improvement, which may ultimately make an ample return for the original outlay, but upon which, unassisted, the province could not safely enter.

In pursuance of this view, I am to acquaint you that Her Majesty's Government are of opinion that it would be inexpedient to interpose the credit of this country between the province and the creditors under the existing debt; and that it is more for the advantage of the province that the aid to be rendered should be applied exclusively to the promotion of the great works intended to be undertaken, than to effecting any reduction in the interest of the debt as it stands at present. Her Majesty's Government are not unaware that by thus advancing their credit upon a secondary rather than on a first security, they are incurring a greater pecuniary risk than was contemplated by Lord Sydenham, but they are willing to incur this risk for the purpose of maintaining to its fullest extent the pledge given in the name of the British Government, and at the same time avoiding

the probable inconvenience to the financial affairs of Canada, which they cannot but anticipate from a literal compliance with Lord Sydenham's engagements as interpreted by the two Acts of the Canadian Legislature, assented to by him the day before his death.

You will acquaint the Provincial Parliament that although Her Majesty's Government may entertain reasonable doubts as to the sufficiency of the estimated surplus, even after the augmentation which may be expected from the new customs duties, to provide for the interest of the two Loans proposed to be contracted, they do not doubt that the Provincial Revenue thus augmented, will enable the local Legislature to enter, if unencumbered with other obligations, into negotiations with the creditors under the existing debt, and either to continue during the terms of their respective engagements the present rate of interest, or to extinguish the debt by mutual agreement before the period stipulated under the present engagement, on far more favourable terms than the British Government could do, if they were to become responsible for the amount. That Her Majesty's Government therefore do not propose to interfere with the existing debt; but that with the view of furthering the important objects contemplated by the Act numbered 28, they propose to pledge the credit of this country to a sum not exceeding 1,500,000 *l.* to be advanced to the province from time to time in such proportions as may be required at 4 per cent., and with a provision to be made for a sinking fund at the rate of not less than 5 per cent. per annum of the principal, to be secured in the first instance upon the tolls of the works to be undertaken, and taking as a collateral security the ordinary revenues of the province, the charge to rank next in order to the obligations now by law permanently attaching to the consolidated fund.

It remains to be considered what are the public works towards the accomplishment of which it would be most desirable that the credit of this country should be applied; and I apprehend that there can be no doubt, as to the principle to be applied, in selecting such as partake least of a local, and most of a general character, as tend most to the extension of the great lines of communication, and the promotion of trade and intercourse rather than such as tend more to the immediate local advantage of particular districts. These last are objects perhaps for aid from the Provincial Treasury, but primarily to be promoted by local exertion. The former are objects of colonial, and I may even add, of national interest and importance.

Foremost among them stands the improvement of the navigation of the St. Lawrence; this mighty stream, with its chain of lakes and its tributary rivers, forms the great natural highway of Canada, and not only of Canada, but also of a great portion of the United States, and of very extensive tracts of unoccupied fertile country, belonging both to ourselves and our neighbours, which will form flourishing states and provinces in the time of our children and grandchildren.

To throw this great highway completely open, by means of substantial and permanent public works, would be an undertaking worthy of British enterprise, and one which, although chiefly and primarily essential to the advancement of Canada, would probably, both in a commercial and political point of view, not be without its advantage to the mother country.

The steps which have been already taken for this purpose have fully established the practicability of the plan; but they have likewise proved that it cannot be properly or economically accomplished by desultory and comparatively unskilled efforts, or without a more effective system of superintendence than has yet been applied to the undertaking.

The cost of the works on the direct line of the navigation of the St. Lawrence and the lakes, as estimated by the Canada Board of Works, is 1,200,182*l.*

Besides which, the following objects are properly included by the Canadian Board of Works in the first class of public works:

Harbours and lighthouses on Lakes Ontario and Erie, and roads leading thereto, 74,000*l.*

Burlington Bay Canal, the object of which is to keep open a natural inlet of Lake Ontario, stretching towards the important towns of Hamilton and London, 45,000*l.*

River Ottawa, to build bridges and construct slides, 28,000*l.*

Improvement

Improvement of the navigation of the River Richelieu, 21,000*l*.

All which public works, taken together, amount to 1,368,182 *l*.

I do not pretend to say that the above are the works to which the aid of the mother country ought to be exclusively directed ; but they appear to comprehend those which may emphatically be called national, and are most properly included in the first class, enumerated by the Board of Public Works, which forms the basis of the Public Works Act. That report, however, divides works proposed to be executed into three heads, the second of which consists of what are called main trunk roads. I do not at all question the propriety of a public expenditure for objects of this description, and in authorizing you to state to the Provincial Parliament, that Her Majesty's Government will be prepared to sanction a loan of 1,500,000*l*. for the improvement of the public communications in Canada, whether by land or water, you will understand that the Legislature will exercise a discretion as to the works to be undertaken, so that the improvement of the St. Lawrence and the Lakes be the first object, and that the total amount to be raised on British credit do not exceed the stipulated sum of 1,500,000*l*.

As Her Majesty's Government have no wish to derive any profit from this advance of the capital and credit of this country, provision may be made in the Act which it will be necessary to introduce for vesting the works in the Provincial Parliament, whenever the original outlay shall have been repaid ; and the province should be entitled out of the accruing proceeds, or otherwise, to pay off, from time to time, such portion of the debt as they may deem expedient, over and above the stipulated interest and sinking fund. The amount of tolls, whether on water communication or on roads made at the expense of the public, must of course be left to the discretion of the Local Legislature.

It can hardly be doubted that works so extensive, and calculated to produce such important results, ought to be superintended by the best professional assistance which it is possible to obtain. Her Majesty's Government entertain no doubt of the anxious desire of the Canadian Board of Works to discharge with fidelity the arduous duties which will devolve upon them ; but I can as little doubt the anxiety which they must feel to have associated with them, in such a trust, the best professional assistance which it is in the power of the mother country to furnish. It is therefore my intention, in anticipation of the acquiescence, which I cannot for a moment doubt, of the Colonial Legislature in the general arrangements suggested by Her Majesty's Government, to send over an officer of engineers, whom, as Her Majesty's Commissioner, I trust the Legislature will have no difficulty in associating with the Board of Works in the superintendence of the works to be undertaken, and whose experience may probably enable the undertakings to be conducted with the efficiency and economy which must be alike the interest of the colony and of this country.

You will communicate this despatch to the Provincial Parliament at their meeting ; and I trust that by laying before them thus fully and unreservedly the whole of the motives by which Her Majesty's confidential servants have been actuated in advising Her Majesty to suspend, for the present, the signification of Her pleasure upon the Acts to which I have referred, you will be enabled to convince them that the only object which they have in view is to apply the promised aid of the credit of this country in such a manner as shall be most advantageous and most economical for the province, and most conducive to the early development of those great resources which it possesses, and the extension of which cannot but tend to strengthen the bonds of affectionate connexion between Canada and Great Britain.

I trust that, with the assistance of those whose advice you can command in the province, you will have no difficulty in submitting to the Legislature such a measure as will carry out the views which I have indicated in this despatch.

I have, &c.

Despatch from  
Sir Charles Bagot  
to Lord Stanley,  
28 April 1842.

EXTRACT of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart.  
G. C. B. to Lord *Stanley*.

Government House, Kingston,  
28 April 1842.

Page 69.

YOUR Lordship's despatch of the 2d instant, No. 112, on the subject of the guarantee by the Home Government of a loan in aid of the resources of this province, reached me at Toronto on the 24th instant. The importance of the subject, and the little time which I have yet had for considering it, must prevent my expressing any decided opinion respecting the change at the present moment. As far as I can see, however, it is nearly if not quite as advantageous to the province as the arrangement proposed by Lord Sydenham; though to the mother country it is of course less so, inasmuch as the guarantee which they offer will no longer be secured as a primary charge on the provincial revenue.

There are, however, one or two points in your despatch to which I feel it my duty to call your Lordship's early attention. You direct me to lay your despatch before the Legislature at its next meeting; and you observe, that I am to understand that the Legislature will exercise a discretion as to the works to be undertaken, so that the improvement of the St. Lawrence and the Lakes be the first object. I would submit for your Lordship's consideration whether it would not be advisable to modify this instruction.

\* \* \* \* \*

There was at this time no officer within the province responsible for the estimates and plans of such improvements; and accordingly committees of the Assembly used to be appointed, composed of unprofessional persons, by whom the estimates and plans submitted to the House were revised and altered. It is well known that under this system many works were commenced on notoriously insufficient estimates, in the certainty that when the first outlay had been incurred, the province would not allow it to be altogether thrown away, but would grant the additional sums necessary to carry on the work. This was the case especially with the Welland and St. Lawrence Canals, on which a large portion of the debt of Upper Canada has been expended.

When Lord Sydenham arrived in Canada, he found a Board of Works established in the Lower Province under an ordinance of the special council, the chairman of which was a Montreal lawyer, and the members gentlemen engaged in commercial pursuits: in Upper Canada no such body existed at all. Early in 1840 he proceeded to reorganise the Lower Canada Board, and appointed as its chairman Mr. Killaly, a civil engineer, formerly employed under the Board of Works in Ireland, and selected as its subordinate officers individuals who had received a professional education. By an Act passed during the last session of the Legislature, this Board was entrusted with the duty of preparing all estimates and plans for public works within the entire province, and with the application of all monies voted for them by the Legislature. The system of irresponsible committees formerly prevailing in Upper Canada was thus got rid of, and a guarantee afforded that no work should be proposed to the Legislature except with an authentic estimate of its entire probable cost, and with a security for the due application of any sum that might be voted by them for it.

\* \* \* \* \*

It may no doubt be said that the clause of the Union Act by which the initiation of money votes is reserved to the Government, and the provisions of the Board of Works Act to which I have before referred, would enable the Government to resist any such irregular proceedings; but I would beg your Lordship only to consider what would be the pressure on the local Executive if it could be plausibly represented that they were using their legal powers to resist not only the provincial Legislature, but the Home Government, by whom the money was to be raised. Such a resistance would end in defeat, and in the most extreme unpopularity.

Under all these circumstances, I would request your Lordship's permission, instead of laying before the House your despatch *in extenso*, to lay before it only so much as explains the nature of and reasons for the change in the scheme proposed by Lord Sydenham; leaving to the Government to propose, on its own responsibility,

responsibility, and in conformity with English usage, the scheme of works to be proceeded with.

The other point on which I think it necessary to make some remarks, is the appointment of an engineer officer as Commissioner on the part of Her Majesty's Government to superintend the execution of the works. I have already mentioned that the present chairman of the Board of Works is a professional gentleman formerly employed under the Board of Works in Ireland, and I enclose herewith a copy of a communication which he has addressed to me upon this subject. I transmit this paper, because I fear that some misapprehension may exist in England, in regard to the present composition of the Board. Of course as Her Majesty's Government provide the funds with which the public works are to be conducted, it is but reasonable that they should have a share in the management of it, if so desired. To such an appointment Mr. Killaly would not I am sure object, but it would be highly desirable that the person to be selected should be a civil and not a military engineer. The rules of the military service render officers of the royal engineers responsible to their own immediate superiors, and to no one else; they correspond only through them, and receive their instructions in the same course. Where employed on civil works, this system inevitably produces delay and confusion, and not unfrequently collisions of authority. In every instance, I believe, in which civil and military engineers have been placed on the same works in this province, and the instances are not infrequent, these inconveniences have arisen. If, however, your Lordship would select a civil engineer to co-operate with the Board of Works as Her Majesty's Commissioner, I do not apprehend that any difficulty need exist; none I am sure would be made by Mr. Killaly. But I apprehend that the Legislature would view with some dislike the appointment of a military man, the rules of whose profession, as they know from experience, would prevent them from requiring from him that full information which they would at once obtain from a civilian.

---

Enclosure in No. 13.

Sir,

Kingston, Board of Works Office,  
28 April 1842.

Encl. in No. 13.

I TAKE the liberty of making a few remarks connected with the proceedings and organization of the Board of Works of this province, which strike me as being necessary to correct a misapprehension that (from portions of the despatches your Excellency laid before Council yesterday) appears to exist in England respecting that department.

Upon Lord Sydenham's arrival in Canada, he found a Board of Works established in the Eastern portion of it, the chairman of which was a lawyer, and the other members gentlemen engaged in mercantile pursuits. Under their control and direction were the several works then being carried on. In the Western section (formerly Upper Canada) the management of public expenditure for such purposes was in the hands of several Commissioners, named from time to time by the Parliament for the respective works; the appointment of these Commissioners, the amount of appropriations entrusted to them, the objects on which they were to be expended, were all, in fact, dependent on Parliamentary influence, and too often regulated by political cabal, all of which gave rise to a system which, for profitless outlay of public money, could only be compared to the abuse of the grand jury presentment system which existed in Ireland prior to the formation of the Board of Works under Colonel Burgoyne in that country.

Lord Sydenham's first step was to recognise the Board of Works of Lower Canada, and upon the Union Act being passed, to extend its powers to the province at large. Pending the general establishment of the Board, and previous to the meeting of Parliament, I prepared, by order of the Governor, detailed memoranda respecting all the works of every description, either in progress or in contemplation, amounting to about ten millions of pounds. I had no difficulty in pointing out the inadequacy of the means of the province to those undertakings; the impropriety of many of them; the expediency of abandoning (at least for some years) others upon which very great outlay would be necessary, and of substituting those which, although involving comparatively but little cost, would fully meet the wants of the country, not only for the present, but for a long period to come.

Upon these memoranda were chiefly based the principles of the Appropriation Bill passed last session, and by them was governed the general estimate of all works then proposed to be undertaken, amounting to about one million and a half.

My being appointed to the highly responsible office of chairman of the Board of Works upon its reorganization, I presume was owing to the fact of my having exercised the profession of civil engineer for nearly 20 years previous to my coming to this country; to my full acquaintance with all the great works of Britain; my knowledge of this country and its wants,

wants, acquired during a residence of eight years in it ; to the position I hold in public estimation, evinced by my return as a member of the Assembly ; but above all, to letters of recommendation from Lord Stanley to Sir John Colborne, from General Burgoyne, and the Irish Board of Works, under whom I had been extensively employed, and prior to the establishment of which I had the honor of being largely and confidentially employed by the Irish government for many years.

Until the last year or two the province laboured under a great dearth of engineering skill, the natural consequence of the system already alluded to, and the effects of which are but too evident from the present dilapidated state of most of the public works ; but since the establishment of this Board professional men of high standing, chiefly from England and Scotland, have settled in the country, who have most creditable testimonials as to their capabilities from the late Mr. Telford, Messrs. Brunel, Walker, and others of the most eminent men in England ; and under whose immediate superintendence all public works are now carried on ; the detailed plans and construction of which will bear comparison safely with the most celebrated in Europe.

I would not have your Excellency infer that I am in the slightest degree indisposed to act in concert with any person that the Imperial Government may think fit to send out either as commissioner or engineer ; but I am free to confess that in the former capacity I see much political difficulty, which it is not necessary to enter upon now, it having been stated by several of the Council yesterday. I foresee no embarrassment likely to be created by the appointment of an engineer to the Board, selected at home ; the gentleman at present filling that office could be placed upon some of the works, for the management of which his practice and acquirements perfectly qualify him ; but it may not be unnecessary to remark that the peculiar severity of the frost of this province, the nature of the materials, rates of labour and work, &c. &c. render it more than desirable that a professional man, however competent he may be, should, in order to practise or advise in Canada, with credit to himself and safety to the public interest, have had previous acquaintance with it, or with a country under similar circumstances.

To His Excellency Sir C. Bagot,  
&c. &c. &c.

I have, &c.  
(signed) *Hamilton H. Killaly.*

Despatch from  
Sir C. Bagot  
to Lord Stanley.  
6 May 1842.

— No. 14. —

(No. 101.)

EXTRACT of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart.  
G. C. B. to Lord *Stanley*.

Government House, Kingston,  
6 May 1842.

SINCE I addressed your Lordship on the 28th ultimo relative to the course which Her Majesty's Government have decided to pursue in respect to the Acts passed by the Legislature of this province during their last session, for raising a loan and for carrying on public improvements, the subject has, I need hardly observe, engaged my most serious attention. As further reflection has convinced me that it would be much more advantageous to this province that the scheme proposed by the late Governor-general, and approved by the two Houses of the Legislature should not be interfered with, and that the difference between that scheme and what Her Majesty's present Government announce their intention to bring forward, is not essential, I feel it my duty to explain to your Lordship the grounds of that opinion, in the hope that my despatch may yet be in time to obtain from Her Majesty's Government a reconsideration of the subject. In performing this duty, it will be convenient that I should first address myself to the objections urged in your Lordship's despatch against the scheme embodied in the two Acts now under consideration.

Your Lordship, after recapitulating the correspondence between Lord Sydenham and Lord John Russell on the subject of the loan, and adverting to Lord Sydenham's message to the Legislature of the 20th August, proceeds as follows : "From these documents it would appear, that the object which Her Majesty's Government had in view in 1841, was to render such assistance to Canada as might enable the United Province to improve its financial position, and to advance the most necessary public works ; and it was supposed that both these objects might adequately be effected by guaranteeing a loan to the United Province of 1,500,000*l.* The financial arrangement, however, actually proposed by Lord Sydenham to the Canadian Legislature, and adopted by them, is very different from this. That arrangement has, it is true, for its basis, the guaranteed loan of 1,500,000*l.*, but there is added to this a further loan of 1,659,682*l.*, which is proposed to be raised exclusively for the execution of public works ; making a total proposed debt of 3,159,682*l.*"

If

If I rightly interpret these words, your Lordship here assumes that Her Majesty's former Government expected that, beyond the surplus arising on the loan of 1,500,000*l.* after paying off the debt, no immediate outlay would be required on public works. It is, of course, impossible for me to say whether this assumption be correct; but I feel convinced that it was not Lord Sydenham's own meaning, and that in his opinion there was no discrepancy between the arrangement which he always advocated, and to which he supposed himself to have obtained the consent of the Government, and that which he proposed to the provincial Legislature. In his despatch to Lord John Russell, of the 22d February 1841, he describes in the following terms the objects of the loan:—"What is required," he says, "is such aid as shall at one and at the same time diminish the annual charge upon the provincial treasury for debt already incurred, and, by raising the credit of the province, enable it to obtain the additional funds required to make its fresh expenditure productive." And, again, he observes, that the loan, by so greatly enhancing the credit of the province, any further sums it may be found necessary to raise, in order fully to complete the works, will be obtainable at a low rate of interest, even upon provincial security alone;" while, in illustrating the bad effects of the existing embarrassments, and the manner in which the loan should be applied to relieve them, he adduces as an example the Welland Canal, which he states would require an expenditure of 400,000*l.* (more than the whole surplus of the loan) to keep it open. But if any doubt could exist on the subject, it would be removed by adverting to the course adopted by him in communicating to the House of Assembly Lord J. Russell's despatch of the 3d May 1841. Feeling, apparently, that the first sentence of the portion of that despatch headed "Finance" might, when separated from the previous correspondence, seem to imply that the residue of the 1,500,000*l.* was considered as all that would be required for public works, his Lordship, in sending that despatch to the Legislature, added, in a note to the first paragraph, the words: "In addition to what can be raised by the province;" thus showing, in the most unequivocal manner, his own interpretation of the correspondence. It is only necessary to add, that the slightest reference to the works to be completed would have shown that a sum of 274,000*l.* would be altogether inadequate; nor would the Legislature have accepted the guarantee, had it been coupled with a condition that no fresh loans should be raised.

Page 51.

The next objection is, that Lord Sydenham's estimate of the means of meeting the interest upon the fresh debt is erroneous. Your Lordship observes that the existing Canadian debt is stated at 1,226,000*l.*, bearing an annual interest of 72,537*l.*; that to pay off this, and carry on certain public works, it is proposed to raise 1,500,000*l.*, the interest of which at 4 per cent. will be 60,000*l.*, and that there would thus be a reduction of interest of only 12,000*l.* a year, and that the interest on the new loan at 5 per cent. would amount to 84,000*l.*, making in all an annual interest of 144,000*l.*, and leaving an annual deficit on the existing revenue of upwards of 68,000*l.* It appears to me that these calculations are not altogether correct. The interest upon the existing debt of 1,226,000*l.* at 4 per cent. would amount to 49,040*l.*, being a saving of 23,497*l.* as compared with the present interest. There would then remain a sum of 274,000*l.* British sterling, equal to 295,920*l.* provincial sterling, raised at an interest of 4 per cent., or 11,836*l.*, to be applied to the purposes for which the new loan was intended, which, assuming the estimates in the Act, c. 28, to be correct, would leave only the sum of 1,363,762*l.* of that loan to be raised at 5 per cent., or 68,188*l.* a year. The interest, then, on the whole debt would stand thus:—

	£.	s.	d.
Interest on Debt paid off - - - - -	49,040	-	-
Ditto on portion of new Debt, at 4 per cent. - -	11,836	-	-
Ditto on new Debt, at 5 per cent. - - - - -	68,188	-	-
TOTAL - - - - -	£. 129,064	-	-

making the total deficiency upon the revenue, supposing it to remain as estimated by Lord Sydenham, 53,408*l.*

The direct means by which Lord Sydenham proposed to meet this increased were the establishment of a bank of issue, and the readjustment of the customs

customs duties. The first of these measures did not, it is true, meet with the concurrence of the Assembly; but in lieu of it they imposed, by the Act 4 & 5 Vict. c. 29, a duty of 1 per cent. on the notes and bills in circulation by private banks, by which, assuming the circulation only to remain as it was at that date, and not to increase, an annual revenue of upwards of 10,000*l.* a year would be created. By the second, it was calculated that a revenue of 70,000*l.* a year would be obtained; and considering that Canada is almost entirely an untaxed country; that its population is daily and hourly increasing, and that the high rate of wages enables the great bulk of the lower orders to consume a much larger proportion of imported luxuries than are consumed by the same class in older countries, it is scarcely possible to believe that such an increase may not be depended on; and even if the increase did not arise, yet, as the loan was to be raised on the responsibility of the Governor, in proportion as it was required, it would be in his power at any time to arrest the issue of fresh debentures until the means of paying the interest upon them should be provided. It is, moreover, to be observed, that the tolls and other revenues directly arising from these works are in this calculation altogether set aside; though experience shows that, as far as the more frequented roads and bridges are concerned, the tolls are sufficient, not only to make repairs and pay the interest, but to afford a very considerable profit.

But your Lordship observes, that Lord Sydenham's calculations are founded on two suppositions, both of which appear to be open to grave doubt. First, that all the existing creditors will consent to be paid off; second, that the additional loan can be raised on the credit of the province at a rate of interest not exceeding 5 per cent. In respect to the first of these suppositions, I would observe that, as the residue of the loan was to be applied to public works, the arrangement contemplated by the Act would approach to that which Her Majesty's Government have now announced their intention to propose, in exact proportion as the existing creditors refused to be paid off; so that if the whole of those creditors should so refuse, the plan contemplated by the Act, and that sanctioned by your Lordship, would be exactly identical. With respect to the second supposition, any opinion must of course be conjectural; but considering that in 1835 the province of Upper Canada, at a time when it was already burdened with a considerable debt; when it was without the power of increasing its revenue by direct taxation, and when its political position was certainly not more favourable than that of the United Province at the present moment, was able to raise a sum of 400,000 *l.* in the London market at 5 per cent., and to sell its debentures at a premium, it does not seem unreasonable to expect that United Canada might have been able to conclude an equally favourable bargain after its revenues have been relieved by the generosity of the mother country, and after it had established its financial character by showing in its revision of its customs duties, and in other measures, a determination to accompany the raising of fresh loans with a certain provision to meet the interest upon them.

Page 76.

Having thus noticed the objections urged by your Lordship against the scheme proposed by Lord Sydenham, and carried out in the Acts now under consideration, I proceed to advert to the arrangement which Her Majesty's Government desire to substitute in its place. In my despatch of the 28th ultimo, I expressed my opinion that this arrangement was "nearly if not quite as advantageous to the province as the arrangement proposed by Lord Sydenham." To a great extent I continue to adhere to this opinion; that is, I think that if the course now proposed had been adopted by Her Majesty's Government, and had been offered to the Assembly in the first instance, it would have been, to the full, as advantageous as that which was actually adopted. But the difference of the circumstances under which it is now brought forward, makes a most essential distinction between the two plans.

\* \* \* \* \*

But even if this embarrassment were obviated, a much greater and more fatal difficulty exists in the delay which the reconsideration of the matter by the Provincial and Imperial Legislatures must involve. On my arrival in Canada, the first and most popular duty which I undertook, was the putting into operation the public works which had received the sanction of the Legislature. In the addresses which I have from time to time transmitted to your Lordship, you will find ample proof of the approbation with which this course

course has been viewed by all classes and all parties. I enclose a list of those works, with a report of the operations now in progress upon them, and a general estimate of their cost during the present year. The money necessary up to the present time, has been advanced by the banks on the faith of the Acts passed during the last session; but if the decision of Her Majesty's Government in this matter be persisted in, and the settlement of the provincial finances postponed until another meeting of the Imperial Parliament, these works must be at once arrested; the contracts which have been made must be abandoned, the money advanced by the banks must be repaid, and a state of confusion, disappointment and distress which it is impossible to exaggerate must be produced throughout the country. Add to this, that on the faith of these works unusually large bodies of emigrants are resorting to Canada, not from the mother country only, but from all parts of the United States. Already several thousands have arrived from the latter quarter, and every account leads us to expect that the number of emigrants this year will be greater than any year since 1832. By the sudden suspension of the public works, all these people would be left without employment, and no relief which private benevolence or public contributions can afford, would prevent their being reduced to the utmost destitution. But in such a state of things your Lordship will readily conjecture with what feelings the people of this country would regard the government by whose immediate action so much distress had been brought about. To men in this position, no explanation would prove that a breach of faith had not been committed. Considering the difficulties with which under any circumstances the Government will have to contend during the approaching session, I cannot but regard the disappointment which will follow the temporary suspension of the public works with the greatest alarm. It would be impossible for me to meet my first Parliament under more unfavourable auspices, than with an empty exchequer and a starving population.

Some portion of these evil effects might, no doubt, be obviated by an advance from the British Treasury of the sum necessary to go on with the works now in progress until the subject shall again have been submitted to the Provincial and Imperial Parliaments, such advance to be hereafter repaid out of the loan to be raised under the British guarantee. If, therefore, Her Majesty's Government should, after considering this despatch, continue to adhere to their decision in regard to the loan and Public Works Act, I most earnestly entreat your Lordship to urge upon them in the strongest manner the advance of such a sum as will enable us to continue the public works during the present year.

But I will not despair that Her Majesty's Government may reconsider the course which they have announced their intention to pursue. If there were any great and self-evident advantage to be obtained by the alteration, it might be reasonable to expect that the country would acquiesce in the momentary inconvenience for the sake of the permanent benefit. But after frequently and earnestly considering the subject, I am compelled to acknowledge that I do not perceive any vital difference between the operation of the two plans. By that embodied in the Acts, the province would have become liable to the British Treasury for 60,000*l.* a year as a first charge, and to private capitalists for 70,000*l.* a year, for the fresh loan, as a second charge. By the scheme of Her Majesty's present Government, these charges will continue to exist, although their order will be reversed. The risk to the Imperial Treasury under the latter is, it is true, much greater, because, under it, there is but secondary security; and there is, moreover, an absolute pledge to increase the provincial debt by 1,500,000*l.*, whether the yearly revenues of the province should or should not be equal to the payment of the interest. Under the first plan, if the old debt had been paid off, there would have been primary security for the whole guaranteed debt, and the surplus beyond what would redeem the old debt would have been more than sufficient for the present season; and next year, when the new loan would begin to be negotiated, it would be under the favourable circumstance of an ascertained revenue, beyond the current wants of the country, equal to the payment of interest on the new loan, as it would be gradually increased. If some of the present public creditors should refuse the redemption of the debt, then the surplus of the guaranteed loan would be greater, and the time would be postponed for borrowing on the provincial credit, and so on in proportion as the redemption of the old debt was refused.

refused. Again, although the present plan will enable the province to raise the money necessary for its public works at a low rate of interest, yet it leaves the provincial revenue burthened with the high rate of interest now payable upon the existing debt; so that, in this respect, no advantage is gained. It is true that the Canada debentures, now at 75 or 80 per cent., might probably, under the former scheme, have risen to par; but as those debentures were originally sold, none of them below par, and some of them at a premium, the Government has no right to expect to make a profit in their redemption.

The result to which, after the most anxious deliberation, I came in respect to the financial unimportance of the alteration, is so different from that which Her Majesty's Government appear to entertain, that I express my opinion upon it with much hesitation, fearing that I may have overlooked some important considerations which had occurred to your Lordship and your colleagues. Upon the political bearings of the question I feel more competent to speak, and these I wish particularly to urge upon your Lordship's consideration. If, in the preceding pages, I express myself at any time more strongly than the circumstances would seem to warrant, I beg your Lordship to believe that I do so solely under an urgent sense of the obligation imposed upon me, not to conceal from your Lordship any circumstances which I consider essential, nor to impair their weight by my manner of stating them. When I compare the enthusiasm with which the offers of Her Majesty's late Government were received by the people of this province with the distrust and disappointment which will follow any interference with those offers, I feel that nothing but a clear, palpable, and inevitable necessity can justify such a step. I cannot convince myself that such a necessity exists; and, in this persuasion, I should be wanting in my duty to your Lordship, and to the office which I have the honour to fill, if I were not to entreat your Lordship to reconsider the matter, and to satisfy yourself that you have no alternative before you adopt a course which will inevitably produce great discontent in this province.

Enclosure in No. 14.

Encl. in No. 14. SCHEDULE of the PUBLIC WORKS now in progress in CANADA, by Order of the Governor-general and Council, showing the Operations now being proceeded with thereon, together with a general Estimate of the Sums which will be required to meet the Expenditure during the present Year, and the further Sums which will be necessary for their Completion.

WORKS.	Sums required to meet Expenditure this Year, on the portion of Work now in Progress or under Contract.	OBSERVATIONS AND EXPLANATIONS.
St. LAWRENCE NAVIGATION,—viz.	£. s. d.	
Cornwall, or Long Sault Canal.	40,000 - -	- - The works generally are being proceeded with so as to ensure the opening of this portion of the St. Lawrence navigation to the trade this year. The balance, as per estimate, required to fully complete it next season is 17,500 £.
La Chine Canal - -	3,000 - -	- - Work in progress; substituting turning bridges for the fixed ones, so as to permit the passage of steamers, &c. It will be perceived that the works now in hands on this part of the navigation are merely to meet the present wants of the trade. But in addition to this, the Board are of opinion that the works upon the several portions of the St. Lawrence should go on simultaneously, so that the full benefit of the outlay might at once be had. With this view they recommend that provision be made towards the enlargement of this portion of the line, the sum to provide for which this year would be 10,000 £.

## PUBLIC WORKS (CANADA).

83

WORKS.	Sums required to meet Expenditure this Year, on the portion of Work now in Progress or under Contract.	OBSERVATIONS AND EXPLANATIONS.
St. LAWRENCE NAVIGATION— <i>continued.</i>		
	£. s. d.	
The Canal from the Coteau to the Cascade.	500 - -	- - This sum is to cover cost of surveys, estimates, &c. The Board would strongly recommend that some progress with the works of this section should be authorized this year, so that it may be completed in 1844, no work having been yet commenced on it. Several lines have been explored for its route, chiefly on the north side of the river, to which the Board of Works, conceiving there was much objection as to difficulty of construction and expense, have had the line, formerly selected by Mr. Stevenson, on the south side of the river, carefully re-surveyed by a competent engineer. The result of the survey fully confirms the view the Board had taken of it, the line being in every respect preferable to that on the north side, and the work can be executed at a very reduced cost. An objection has been raised by some in a military view to having it on the south side, to which the Board do not attribute any weight, more especially as the Cornwall portion of the navigation (nearly completed) is within musket-shot of the American territory, as will necessarily be other portions of the general line also; whereas this portion, as proposed, is about 20 miles from the frontier.
Lake St. Peter - -	18,000 - -	- - Work in progress, the more efficient lighting and marking the channels, preparing the steam dredge, discharging scows, apparatus for removing boulders, &c. The balance of the sum estimated to cover the cost of this improvement is 40,500 £., half of which would be required in 1843, and the remainder in 1844.
Welland Canal - -	25,000 - -	- - Work in progress, increasing the capacity of the main feeder, so as to render the supply of water commensurate with the increasing trade, deepening sundry portions of the line, dredging the entrance of the canal, excavating the lateral branch to the Grand River Harbour. The balance of the sum estimated to cover the cost of the full completion of this work is 400,000 £., the expenditure of which should be divided between the years 1843 and 1844, but the Board most urgently recommend that, instead of the operations being confined to the work now in progress, a further sum of 20,000 £. be provided to procure materials this year for the reconstruction of the decayed locks.
MAIN ROAD from East to West through the Province,—viz.		
Bridges over the river be- tween Quebec & Montreal.	13,500 - -	- - All the principal bridges of this communication have been destroyed. The piers and abutments of some stand, and can be secured and rendered available if promptly attended to. The Board recommend that 13,500 £. be provided for that purpose, and to procure materials this season, that the bridges may be all completed next year, balance of estimate then required for which would be 20,500 £.
Improvement of the Section from the Cascades to the Glengarry Line.	150 - -	- - This sum is to cover the cost of marking out, and other preliminary arrangements. This section should be drained and formed generally during the present season (cost 3,500 £.), so that it may be completed and tollgates established thereon next year. Balance of estimate in full, 11,350 £.
Section from Brantford to London.	12,000 - -	- - General draining and forming. The balance of estimate to complete this section next year is 43,000 £.
Port Sarnia Road - -	9,500 - -	- - General draining and forming. The balance of the estimate to complete this section next year is 5,500 £.
From London to Chatham, Sandwich, & Amherst- burg.	10,000 - -	- - General draining and forming. The balance of the estimate to complete this section next year is 26,000 £.
Hamilton and Port Dover Road (a main Road from Lake Ontario to Erie).	10,500 - -	- - General chopping, grubbing, draining, and forming. Building bridge over the Grand River. Balance of full estimate required next year, 19,500 £.

WORKS.	Sums required to meet Expenditure this Year, on the portion of Work now in Progress or under Contract.	OBSERVATIONS AND EXPLANATIONS.
MAIN ROAD, &c.— <i>continued.</i>	£. s. d.	
Main N. Road from Lake Ontario to Huron.	8,000 - -	- - General draining and forming. Balance of full estimate required next year, 22,000 l.
Gosford Road, by a main line of communication from Quebec to the Eastern Townships.	6,000 - -	- - The materials for the bridges are being provided, and the works generally of this important line proceeding. Balance in full to complete it next season, 4,000 l.
Bay of Chaleurs Road, by which and the Kempt Road the communication will be opened with the St. Lawrence from the tract of country north and west of the Bay of Chaleurs.	7,500 - -	- - The works of this line are being proceeded with generally.
Direct Road from the St. Lawrence to the Ottawa.	1,500 - -	- - The works of this line are being proceeded with generally.
Lighthouses and Harbours on the Lakes and Roads made thereto.	40,000 - -	- - Materials are being provided and preparations making for these important works at Long Point, Gull Island, The Rondeau, Port Stanley, Port Burwell, Catfish Creek, Port Dover, Windsor, Cobourg. Balance of estimate to complete it, l.
Improvement of the Newcastle District.	15,000 - -	- - The general draining and forming of the Road from Lake Scugog to Lake Ontario, from Rice Lake to Lake Ontario, completion of locks and dam on the Trent, the works of which are far advanced; construction of slides for the assistance of the lumber trade, &c. Balance of appropriation made for present outlay in this section, 35,000 l.
Construction of Bridges, Slides, and Roads in the Ottawa section.	14,000 - -	- - General preparations. Balance of appropriation for present outlay, 14,000 l.
Completion of the Navigation of the River Richelieu from Lake Champlain to the St. Lawrence.	16,000 - -	- - Works of the Chambly Canal approaching to completion; preparations for the lock and dam at St. Ours, on the Richelieu. Balance of estimate to complete the navigation, 17,000 l.
Burlington Bay Canal -	15,000 - -	- - Materials advertised for, and general preparations making for the prosecution of this very necessary work. Balance of estimate to complete it, 30,000 l.
Repairs of the Chaudiere Bridge (Quebec).	500 - -	- - The approaches of this bridge require immediate repair.

From the foregoing will be deduced that the sum required this year to carry on the several works as proposed, and portions of which are in progress, amounts to 265,650 l. Halifax currency, of which sum the actual contracts entered into amount to 110,000 l.; but as most of these contracts will very shortly be completed, restricting the expenditure to them would be tantamount to a stopping of the works.

Board of Works Office,  
12 May 1842.

(No. 190.)

EXTRACT of a DESPATCH from Lord *Stanley* to the Right hon. Sir *Charles Bagot*, Bart. G.C.B.

Downing-street, 2 July 1842.

No. 15.  
Despatch from  
Lord Stanley  
to Sir C. Bagot.  
2 July 1842.

I HAVE received your despatches, No. 90, of the 28th April, and No. 101, of the 6th May last, in both of which you discuss the arrangements proposed in my despatch (No. 112) of the 2d April, for carrying into effect the pledge given by the late Lord Sydenham to the Canadian legislature, regarding the guarantee by the British Treasury of a loan to be raised for the benefit of the province of Canada.

Pages 69, 76, and  
78.

In the first of those despatches you stated your impression to be that the arrangement proposed by me would be "nearly, if not quite, as advantageous to the province as that proposed by Lord Sydenham, though to the mother country it would be less so, inasmuch as the guarantee which they offer would no longer be secured as a primary charge on the provincial revenue." In the second despatch, however, you state that "as further reflection had convinced you that it would be much more advantageous to the province that the scheme proposed by the late Governor-general and approved by the two houses of the legislature should not be interfered with, and that the difference between that scheme and what Her Majesty's present Government announced their intention to bring forward is not essential, you felt it your duty to explain to me the grounds of that opinion, in the hope that your despatch might yet be in time to obtain from Her Majesty's Government a reconsideration of the subject." You then proceed, in the first place, to remark upon a passage of my despatch, intimating that Her Majesty's late Government had not anticipated the application to public works of more than the balance of the proposed loan of 1,500,000*l.* remaining after paying off the existing debt; in the next, you comment upon my calculations as to the amount of interest which would be chargeable on the province under Lord Sydenham's arrangement; and, lastly, you press strongly upon my notice the inconveniences which you apprehend would result from my proposed abandonment of that arrangement.

To these topics I will advert in their order.

With regard to the first, whatever may have been the views of Her Majesty's Government at home, I freely admit that Lord Sydenham appears always to have contemplated an outlay on public works far beyond the amount of any balance which could remain out of the proposed loan of 1,500,000*l.* after providing for the existing Canadian debt. Whether or not Her Majesty's late Government took the same view it is unnecessary now to inquire, there being no intention, on the part of Her Majesty's present Government, of insisting upon such view being carried out in practice; but, in giving effect to the ulterior measures which were brought under the consideration of the legislature by Lord Sydenham, it is the duty of Her Majesty's advisers to suggest at least every precaution which in their judgment may tend to diminish the risk of endangering, by the extent of the contemplated operation, the great object of improving the credit of the province, for which primarily the assistance of this country was proposed to be given.

This consideration leads me to the second topic of your despatch; viz. the apparent discrepancy between our calculations as to the amount of interest which would be chargeable upon the province in the event of the Royal Assent being given to the two Acts now under discussion; and I am happy to find, by your despatch of the 6th of May, that this discrepancy is apparent rather than real, and capable of an easy explanation. The Act No. 28 having provided for the raising of a sum of 1,659,682*l.* for public works, in addition to the loan of 1,500,000*l.* provided for by the Act No. 33, I had assumed it to be the intention of the Canadian legislature that each of those sums should be raised in full, and that the balance remaining out of the 1,500,000*l.* (estimated at 295,920*l.* currency on 274,000*l.* sterling), after providing for the existing debt, was intended to be laid out in public works, in addition to the 1,659,682*l.* proposed to be raised under Act No. 28. I now find, that in that assumption I misunderstood your intentions. You explain that, although the sum which I had named

Page 1.

Page 4.

is authorized to be raised by the two Acts, it is intended that the amount of debentures to be issued under the Public Works Act should be diminished by the surplus of 295,920*l.* currency, or 274,000*l.* sterling under the Loan Act,

In order to make the two calculations correspond, the following steps must be gone through.

Aggregate of the appropriations in Act, No. 28 - - - - - 1,678,682*l.*

Deduct,

1st, 295,920*l.* Canadian currency, the estimated surplus of the sum to be advanced by this country under the Act, No. 33; and  
2nd, 19,000*l.*, the sum in which the aggregate of the appropriations in Act, No. 28, exceeds the sum granted by that Act.

After making these deductions, there remains the sum of 1,363,762*l.*, the interest on which, at 5 per cent. is 68,188*l.*; the sum to which Sir C. Bagot states that the annual interest on the loan to be raised under the Act, No. 28, will be reduced.

which being raised at four per cent., or 11,836*l.*, will reduce to 68,188*l.* the interest on the new debt at five per cent.; which, if the whole sum had been raised as I calculated, would have amounted to 83,934*l.* It must be observed, that although the sum named at the commencement of the Act No. 28 is, as above stated, 1,659,682*l.*, the aggregate of the sums granted in detail for each work amounts to 1,678,682*l.*, the interest upon which, at five per cent., amounts, as above, to 83,934*l.*

I receive with satisfaction this explanation of the intentions of the Canadian executive, which, if strictly adhered to, as I trust they will be, will, to a certain degree, diminish the apprehensions which I cannot but entertain as to the charge about to be imposed on the revenues of Canada.

Page 69.

I now proceed to the third and most important portion of your last communication to me. I think I do not misrepresent your views in assuming you to admit that the arrangement proposed by me in my despatch of the 2d April, No. 112, would be, in principle, equally beneficial to the province with that of Lord Sydenham (though less advantageous to Great Britain); but to object to its now being carried into effect on account of the inconveniences which you anticipate as likely to ensue from disturbing the settlement made by the Act No. 28 of the difficult question, what shall be the public works to be undertaken by the province, in addition to the still greater practical evil, which you fear may be the consequence, of your being obliged to suspend some of those works now actually in progress.

From these apprehensions, whatever be the arrangement ultimately adopted, I am happy to believe that I shall have no difficulty in relieving you. In my despatch of the 2d April, I certainly proceeded on the supposition that a new Act would be passed by the Canadian legislature on the subject of the public works. Such a course, however, is by no means a necessary consequence of my proposal. You will perceive that the list of works enumerated by me in that despatch as deserving of the first consideration from the legislature (involving an estimated expenditure of nearly 1,400,000*l.*), is taken from that Act; and though I may entertain doubts of the expediency of including some of the remainder of the works there provided for, as not being of sufficiently general utility to merit being undertaken by the province at large, still as they have received the sanction of the provincial legislature, I do not feel called upon on that account to advise Her Majesty to disallow the Act. On the contrary, as it provides for that for which, under whatever arrangement adopted, provision must be made; namely, the enumeration of the public works to be undertaken, and the raising of a loan to furnish the funds for carrying them on. And as the question, whether that loan is to be raised under guarantee from the mother country, or solely on the credit of the province, though a material, is a distinct one, the uncertainty upon which (the mode of raising the loan being left to the executive government) need not oppose any obstacle to the confirmation of that Act, I do not hesitate to empower you to proceed under it as about to be confirmed; although, in case I may have overlooked any considerations which require to be attended to, I shall delay advising Her Majesty to take the formal steps necessary for that purpose, until after I shall have received your answer to this despatch.

Having thus, as I hope, rendered it impossible that any embarrassment should be experienced by your government, in consequence of the suspension of Her Majesty's formal decision on the Public Works Act, and of the signification of Her pleasure on the Loan Act; while I am not prepared to say that Her Majesty's Government are determined upon adhering, in opposition to your opinion and the sense of the province, to the views explained in my former despatch of April the 2d, I am bound to state to you that those views remain unaltered, as to the comparative advantages of my proposal and that of Lord Sydenham, for the purpose of accomplishing economically, certainly, and beneficially to the province, the objects sought to be obtained.

According to Lord Sydenham's arrangement, the execution of the public works of every description is made mainly to depend upon funds to be raised upon

upon the sole responsibility of the Canadian government. If the cost of the local works should, in many instances, exceed the estimate, or if, in consequence of the priority given to the loan of 1,500,000*l.*, and of the general management of Canadian finance, the credit of the province should not continue to be such as to enable it to raise the whole of the second loan of 1,678,682*l.* at five per cent., funds might be wanting to complete those great works, with a view to which mainly the assistance of this country was originally given. And I am compelled to acknowledge, although, as you truly remark, any opinion on such a subject can only be conjectural, that, when I find in Lord Sydenham's despatch of the 22d February 1841, that the sum necessary for a work in Lower Canada, of which the tolls were represented to be an ample security for the amount, could only be raised on the double security of those tolls and the credit of the province, at a rate of interest of from six to eight per cent., I entertain serious apprehensions as to the practicability of carrying into effect the objects of the Public Works Act, by sums raised on the provincial security only within the terms authorized by that Act. You will of course understand that you are not authorized in any case to issue the provincial debentures below par; such a step would be, in fact, a violation of the spirit, if not of the letter, of the provincial Act, which limits the rate of interest to five per cent.

Page 51.

It is, I hope, equally unnecessary that I should caution you against sanctioning any vague estimates, or excess of outlay, under the expectation of a further advance of the credit of the mother country beyond that which has been so liberally afforded; and although it is no doubt true, that in the exercise of the discretion vested in you by the Public Works Act, you might abstain from issuing debentures beyond the means of the province to bear the charge, yet this step on your part, or the inability to raise the money at the prescribed rate of interest, might leave unfinished the most important works, and thus frustrate the object contemplated by the British Government.

In order to guard against the possibility of such a result, and to secure the application of the liberal assistance of this country in the most direct manner to the benefit of the province, it is proposed by my arrangement that the existing Canadian debt should remain a first charge upon the revenue of the province, and should be paid off, as it became due, from the produce of the current revenue, and that the 1,500,000*l.* to be raised under the guarantee of this country should be applied directly to the execution of the public works, beginning with those which have for their object the opening of the navigation of the St. Lawrence and the lakes. Under this arrangement, the credit of the province would be strengthened by the continuance of the priority of the present debt, and by the prospect of early repayment at or before the expiration of the existing bonds. The province would not have to appear at all as a borrower in the general market; and the public debt of Canada (in addition to the existing debt, which would be gradually paid off as funds became available for the purpose,) would be limited to the sum appropriated for the completion of the public works, of which there would be at least 1,500,000*l.* raised, at a rate of interest not exceeding four per cent. This arrangement no doubt would require this country to give up its priority of claim upon the provincial revenue. But Her Majesty's Government willingly consented to make this sacrifice, because they felt convinced that this arrangement was more conducive to the financial prosperity of Canada than that proposed to be adopted under the two Acts; and that, setting aside higher considerations, priority of claim upon the provincial revenue was an inferior security to that derived from the prosperity of the province.

EXTRACT of a DESPATCH from Lord *Stanley* to the Right hon. Sir *Charles Bagot*, Bart. G.C.B.

Downing-street, 2 July 1842.

IN your despatch of the 28th of April you advert to the necessity of appointing an engineer officer as commissioner on the part of Her Majesty's Government, to superintend the execution of the works which may be undertaken, and

595.

No. 16.

Despatch from  
Lord Stanley  
to Sir C. Bagot.  
2 July 1842.

Page 76.

and point out the reasons which induce you to prefer a civil to a military engineer.

On this subject I have only to observe, that if provision be made by the legislature for the payment of such an officer (which I agree with you would be very desirable), Her Majesty's Government would have no preference for a military over a civil engineer, nor any wish on the subject but to procure the services of the most competent person who could be engaged for this purpose.

No. 17.  
Despatch from  
Sir C. Bagot to  
Lord Stanley.  
9 July 1842.

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*,  
Bart. G.C.B. to Lord *Stanley*.

Government House, Quebec,  
19 July 1842.

My Lord,

IN deciding on the steps to be taken during the present season for carrying on the public works, which had received the sanction of the legislature, and more especially those for completing the navigation of the St. Lawrence, to which Her Majesty's Government attach no less importance than the people of this province, my attention has been strongly drawn to the necessity of at once commencing the canal which is to form the communication between Lakes St. Francis and St. Louis. When the Cornwall Canal shall have been completed, which will probably be in the course of the present, or early in the next season, the rapids between these two lakes will form the only interruption to the navigation from Lake Huron to the sea. Other parts of that navigation will still require improvement; but the cedars and cascades rapids will then be the only obstruction, which would compel the transhipment of heavy goods, and the employment of land-carriage, or the use of the circuitous route by the Ottawa and Rideau.

It is evidently, therefore, of great importance, with a view to render the large expenditure on other parts of the St. Lawrence immediately productive, that this short obstruction should be overcome as soon as possible, and I have accordingly decided on at once commencing the work. I was further induced to this decision by the great influx of emigrants at the beginning of the season, and the impossibility of finding employment for them in the neighbourhood of Montreal, without having recourse to such an undertaking.

The question then arose as to the side of the river on which the canal should be dug. The north side offered the plausible advantage of being better protected in the event of war; the south promised much greater facilities in the execution, with a very reduced expense both in the original construction and the annual maintenance.

The economical advantages of the two routes may be best presented to view in the following table; viz.

							North.		South.
Length of canal in miles	-	-	-	-	-	-	15	-	12
Depth of excavation, in feet	-	-	-	-	-	-	9½	-	6
Number of bridges	-	-	-	-	-	-	7	-	3
Ditto - aqueducts	-	-	-	-	-	-	3	-	2

which latter on the south side will be only 10 feet in width, while those on the north will be about 50 feet span. The nature of the excavation will be nearly the same on both sides, viz. clay, except for less than a mile at the lower entrance, which, on both sides, will be rock. The canal, for half its length on the north side, would be in a deep ravine, the banks of which at one part are 60 feet high, and subject of course to all the land floods and the drainage of the adjacent country, which, occasioning great deposit, would involve the expense of clearing the canal out every year; while that on the south side, except immediately at the upper and lower entrances, is a flat table land, the excavation just about sufficient to make the banks.

Under

Under these circumstances, and after having before me the Report of an eminent civil engineer, and the opinion of the Chairman of the Board of Works, I decided on making the canal on the south side, and operations for that purpose have already been commenced. By the intervention of the agents of the Beauharnois Company, who have of course a strong interest in the work, the land necessary for its execution has been given up gratuitously, and funds have been advanced for the first expenses. The final arrangement as to the terms on which these funds are to be advanced, must await the decision of Her Majesty's Government as to the Loan Act.

It was not to be expected that a measure in which so many had a direct interest could be decided without much discussion, or without opposition from those whose interests would have been promoted by an opposite course. Accordingly, soon after my decision became known a meeting was called of the inhabitants of Coteau du Lac, on the north shore, by whom an address was presented to me, of which, and of my answer, I enclose copies. I afterwards received a similar address from the county of Glengarry, of which, and of my answer, I also annex copies.

The principal points put forward by the objectors are, first, that by reason of the shallowness of the water, the dangerous rocks, an almost constant surf, and a want of anchorage, no available or safe navigation can be established on the south shore: and, secondly, that from the proximity to the United States, the canal would be liable to be seized by the Americans in time of war; that if so seized, it would assist them to invest the city of Montreal, and enable them to cut off the communication between Upper and Lower Canada.

To the first objection it is sufficient to answer that, while it is maintained solely by gentlemen who have not had the advantage of professional education or experience as engineers, and whose personal wishes and interests may be supposed to be not altogether inactive in the matter, it is contradicted by engineers of great experience and scientific acquirements, who being strangers to the country can have no local bias. The latter officers, moreover, in their representations to the Government, act under a responsibility of the most serious kind, a responsibility which involves not only their immediate credit, but their future advancement. I could not, therefore, on this point put the vague assertions of the objectors into competition with the Reports of the engineers.

In respect to the second objection, the question involved in it is one of policy, on which there was no difficulty in forming an opinion. *Cæteris paribus*, I should probably have myself selected the north shore, for the reason stated in this address; but when the great additional expense on that side is taken into account, there is no sufficient advantage to compensate for it. Assuming Canada to be invaded from the United States by the line of Lake Champlain, the battle will have to be fought on the south shore of the St. Lawrence. Any force which could drive Her Majesty's troops across the river would have little difficulty in getting possession of Montreal. But in such a case the canal in question would afford the invaders no advantages or facilities of any kind. It would never be used for the transport of troops or stores to Montreal, because such troops or stores could be sent down the rapids, which are perfectly navigable downwards, with much greater ease and quickness. It would not be used for ascending vessels, because it would be much more easy to communicate with the States by the Richelieu and Lake Champlain. It would not affect the communication between Upper and Lower Canada, because that is secured by the Ottawa and Rideau, which in case of war must always be the line of communication. It would be subject, if taken, to be injured or destroyed; but in the improbable event of our being driven from the south shore, the canals on the north would be scarcely more secure. They would of course be the object of attack, and it would be impossible to protect them from a force which it is assumed would have been powerful enough to drive the British army across the river.

After fully weighing these considerations, it appeared to me that there was no sufficient ground to justify me in incurring the larger expense where the lesser would be equally advantageous. I could not convince myself that with one incomparable military communication, established by the munificence of Great Britain, I was bound to attach a similar character to the minor communications destined for commercial purposes. I have been supported in this view by the entire acquiescence in my decision of the inhabitants of every section of

No. 1.

No. 2.

the province, except those whose addresses I enclose. The mercantile bodies of Montreal and Quebec are as much interested in the success of this navigation as any other parties in the province, yet I have not received a single remonstrance or objection from any one of them; and with the exception of the old Quebec Gazette, none even of the papers of this section of the province have complained of the decision. I therefore feel justified in believing that the opposition may be attributed to the natural bias produced in every man's judgment by a strong personal interest.

I have desired the chairman of the Board of Works to furnish me with a copy of the engineer's report on the south shore line, to be forwarded to your Lordship; but I fear that I shall not receive it in time to accompany this despatch.

I have, &c.

Enclosure 1, in No. 17.

Encl. 1, in No. 17. To His Excellency the Right honourable Sir *Charles Bagot*, G. C. B. Governor-General of the Province of Canada, &c. &c. &c.

May it please your Excellency,

THE undersigned, the chairman and committee, duly named and appointed at a public meeting of the county of Vaudreuil, held this day at Coteau du Lac, beg leave most respectfully to approach your Excellency, to express their unfeigned regret in learning that it is your Excellency's intention to assent to the junction of Lakes St. François and St. Louis, by the construction of a canal on the south shore of the River St. Lawrence.

That from the personal knowledge of the committee, as well as the majority of those who deputed them, they can assure your Excellency that no available, practicable, or safe navigation can be found on the south shore to communicate with the projected canal.

That the shallowness of the water, the dangerous rocks, the almost constant surf, the want of anchorage and safe harbourage, on the south shore are familiar and notorious to every navigator of the River St. Lawrence.

That apart from the difficulties of a navigation so beset with natural dangers, they cannot view without alarm the expenditure of so large a sum, in such near proximity with the American territory, without offering their most earnest remonstrance against a risk, which no obstacles or difference of cost on the north shore render it expedient or necessary to incur.

That in the event of hostilities with the United States, the first object of that power would be to secure the possession of the canal, the more easily to transport their army and munitions of war, thereby the more speedily to invest the city of Montreal.

That by the possession of the canal, the more easily acquired by its land and water proximity to the American frontier, the enemy would command both lakes, and at once cut off all communication between the upper and lower parts of the Province, whether by the River St. Lawrence or the Rideau Canal.

That in communicating the apprehensions entertained by the county of the contingent danger of the selected route, they should ill discharge the duty entrusted to them if that apprehension could be misinterpreted into a doubt of the power of the Crown to maintain the integrity of the empire, or to shield with its protection the meanest of its subjects; but although such a confidence is a ground of congratulation to them as forming part of that empire so capable of defending every inch of its soil, or avenging its violation, it does not appear as any ground for courting danger in the selection of a locality of easy approach and acknowledged risk in preference to one unencumbered with any such obstacles.

That sensible of the impolicy and danger of placing the canal on the south shore, the Parliament of Lower Canada, in granting the funds for the survey and plans for the improvement of the navigation between these two lakes, restricted that inquiry and survey by exacting that the survey should be between La Chine and the province line of Upper Canada on the north shore.

That the north shore presents the most obvious facilities for the construction of a canal connecting the two lakes, by cutting in a straight line from the upper lake to the rear of the church at the Cedars, a distance of eight miles, through an easy soil, principally of clay and sand; there it falls into a deep ravine, forming a natural and deep canal from the rear of that village to Lake St. Louis, within about ten acres of the Cascades.

That if there is a possibility of the canal being, as they assert, inaccessible or dangerous in its approach, whether from the want of water anchorage, depth of water, set of the current, or the prevailing winds, the outlay will be both inexpedient and unproductive; to be hereafter abandoned or only made available by the imposition of great additional burthens on the people to remedy the defect, by the formation of harbours and breakwaters, at an expense perhaps exceeding the original cost of the canal.

That the undersigned therefore most respectfully beg leave to submit to your Excellency the propriety of ordering a nautical survey of the harbours and approaches of the contemplated canal by officers of the Royal Navy, as competent and disinterested persons, as the only

## PUBLIC WORKS (CANADA).

## ANSWER.

Gentlemen,

I HAVE considered with much attention the arguments which you urge against the construction on the south shore of the St. Lawrence of the canal which is to connect the lakes St. Francis and St. Lewis.

In respect to the physical difficulties on which you insist, I can assure you that, previously to adopting my decision, I had had before me the report of a competent engineer, totally unconnected with this province, and therefore free from all local bias. From his report, confirmed by the opinion of the Chairman of the Board of Works, I gather that a canal can be made both more cheaply and more easily on the south than on the north shore, and that you are mistaken in your estimate of the physical obstructions to such a work. Incompetent myself to pronounce an opinion on a question of this nature, I must rely, and I do so with confidence, on the representations I receive from those whose professional reputation is involved in the correctness of their statements, and who can have no personal motive to mislead me.

With respect, however, to the political considerations adduced by you, I feel no such difficulty. Should hostilities unfortunately arise between Great Britain and the United States, it would be the duty of the government of this province to protect Her Majesty's subjects living on the south no less than those on the north shore of the St. Lawrence, and the whole power of Great Britain would be put forth to do so. I cannot contemplate the possibility that Her Majesty's troops might be driven from the south side of the St. Lawrence; but even were such a misfortune to occur, the communication between Upper and Lower Canada by the Rideau Canal would still remain open, and the enemy would derive no greater facilities for his operations by possession of the canal now in question. The munificence of Great Britain has provided the Rideau line of communication as a defence in time of war, and so long as that remains open, the intercourse, between the upper and lower parts of the St. Lawrence cannot be cut off.

Under these circumstances I must decline to interfere with the decision already taken in this matter. I cannot consent to impose on the province the unnecessary additional expense of making the canal on the north side, with a view to future possible hostilities; nor do I see any reason for delaying the commencement of the work till the meeting of the Legislature, whereby we should lose the whole of the present season.

Enclosure 2, in No. 17.

To His Excellency the Right hon. Sir *Charles Bagot*, G. C. B. Governor General of the Province of Canada, &c. &c. &c.

Encl. 2, in No. 17.

May it please your Excellency,

WE, the undersigned chairman and committee, appointed at a public meeting of the county of Glengarry, held this day at Williamstown, beg leave most respectfully to express our unfeigned regret on learning that it is your Excellency's intention to effect the junction of Lakes St. Francis and St. Lewis, by constructing a canal on the south shore of the St. Lawrence.

From the personal knowledge of the committee, as well as of a great majority of those who have deputed us, we can assure your Excellency that no available or practicable navigation can be found on the south shore, by which a safe communication can be obtained with the projected canal.

The shallowness of the water, the many dangerous rocks, the almost constant surf, the

want of anchorage, and a total absence of any safe harbour on the south shore at the western extremity of the proposed canal, are insurmountable obstacles to its adoption.

We cannot view the expenditure of so large a sum, so near the American territory, without offering our respectful remonstrance against so unnecessary a risk, which no obstacles or difference of cost on the north side renders it expedient to incur.

In the event of hostilities with the United States, the first object of that power would be to secure the possession of the canal, and thus facilitate the invasion of the city of Montreal.

With the possession of this canal, so easily acquired by its proximity to the American frontier, the enemy would command both lakes, and at once cut off all communication between the upper and lower parts of the province, not only by the route of the River St. Lawrence, but also by that of the Rideau Canal. The danger of this is too apparent to need further comment.

The impolicy and danger of placing the canal on the south shore were apparent to the Parliament of the late province of Lower Canada; and in granting funds for the survey and plans for the improvement of the navigation between these two lakes, they restricted the survey to the north shore.

From the reason we assigned we are decidedly of opinion, that the contemplated route must be abandoned, or else great additional burthens must be imposed on the people to remedy the defects by the formation of harbours and breakwaters, and by deepening the bed of the river at an expense exceeding the original cost of the canal.

To guard against this certain loss we would most respectfully submit to your Excellency the wisdom of ordering a nautical survey of the approaches to the intended route to be made by competent persons, assisted by officers of the navy and experienced pilots, as the only safe mode prior to its adoption, or that it may please your Excellency to postpone the measure until the opinion of the Provincial Legislature can be obtained.

We have, &c.

(signed) *John M'Gillivray*, Chairman.

<i>James M'Donald.</i>	
<i>Alexander M'Kensie, J. P.</i>	

#### ANSWER.

Gentlemen,

THE arguments which you urge against the construction of the canal between lakes St. Francis and St. Louis, on the southern shore of the St. Lawrence, have already been brought under my notice by the address from certain inhabitants of Coteau du Lac and its vicinity.

In respect to the physical difficulties on which you insist, I can assure you that, previously to adopting my decision, I had had before me the report of a competent engineer totally unconnected with this province, and therefore free from all local bias. From his report, confirmed by the opinion of the Chairman of the Board of Works, I gather that a canal can be made both more cheaply and more easily on the south than on the north shore, and that the obstructions to the approaches to which you advert, and for the examination of which you suggest a nautical survey by officers of the navy, assisted by experienced pilots, do not really exist. Incompetent myself to pronounce, an opinion on a question of this nature, I must rely, and I do so with confidence, on the representations made to me by those whose professional reputation is involved in their correctness, and who can have no personal motive to mislead me; and I feel assured that when the Legislature shall have before them the grounds on which I have proceeded, they will be satisfied that I have taken every necessary precaution before commencing this work, so important to the future commerce of the country.

With respect to the political considerations adduced by you, I feel no difficulty in forming my opinion. Should hostilities unfortunately arise between Great Britain and the United States, it would be the duty of the Government of this province to protect Her Majesty's subjects living on the south no less than those on the north shore of the St. Lawrence, and the whole power of Great Britain would be put forth to do so. I cannot contemplate the possibility that Her Majesty's troops might be driven from the south side of the St. Lawrence; but even were such a misfortune to occur, the communication between Upper and Lower Canada by the Rideau Canal would still remain open, and the enemy would derive no additional facilities for his operations by possession of the canal now in question. The munificence of Great Britain having provided the Rideau line of communication as a defence in time of war, and so long as that remains open the intercourse between the Upper and Lower parts of the St. Lawrence being secured, I cannot consent to impose on the province the unnecessary additional expense of constructing a second canal in the same section of the province with reference to the possibility of future military operations in its neighbourhood; nor do I see any reason for delaying the commencement of the work till after the meeting of the legislature, whereby the whole of the present season would be lost.

COPY of a DESPATCH from Lord *Stanley* to the Right Honourable Sir  
*Charles Bagot*, Bart., G. C. B.

No. 18.

Despatch from  
Lord Stanley  
to Sir C. Bagot,  
26 Aug. 1842.

Sir,

Downing-street, 26 August 1842.

I HAVE had the honour to receive your despatch of the 19th of July, on the subject of the canal between Lakes St. Francis and St. Lewis.

I am glad to have received this exposition of your views on a subject which has given rise to inquiries on the part of persons in this country interested in the progress of the public works in Canada, and which I have hitherto not had the means of satisfying; and I shall also be glad to receive the report of the civil engineer, which you promise me.

I observe that your despatch does not state the amount of saving in expense which will be effected by making the canal on the south side of the St. Lawrence, instead of on the north. Probably the report of the engineer will supply this omission. I confess that it is not without regret that I assent to the sacrifice of the military advantages which would have resulted from carrying the canal on the north bank; but I am bound to admit that, on the grounds stated by you, the inconvenience will be considerably less than would at first sight appear; and on the whole, after due consideration of the reasons which have influenced you in making your selection, and adverting to the local knowledge requisite in a case of this description, I am disposed to leave the decision of the question in your hands.

I have, &c.  
(signed) *Stanley*.

*P. S.* 2 September.—Since the above was written, I have received your subsequent despatch of the 6th August, No. 165, enclosing a report from the President of the Board of Works on the subject. The evidence which it furnishes fully justifies the conclusion previously adopted by me.

## — No. 19. —

(No. 162.)

COPY of a DESPATCH from the Right hon. Sir *Charles Bagot*, Bart., G. C. B.,  
to Lord *Stanley*.

No. 19.

Despatch from  
Sir C. Bagot to  
Lord Stanley,  
26 July 1842.

My Lord,

Government House, Quebec,  
26 July 1842.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch of the 2d instant, No. 190, explaining the decision to which Her Majesty's Government have come in regard to the Public Works and Loan Acts of the last session, in consequence of the representations contained in my despatches to your Lordship of the 28th April and 6th May last.

I learn with very sincere satisfaction that Her Majesty's Government have decided on not re-opening in the Provincial Legislature the question as to the works to which the public resources should be first made available. I rejoice at this, because I am convinced that the decision come to last session was as free from local biases and sectional interests as can possibly be expected in a popular body, while it left out none of those more important works in which the future prosperity of the country is involved. It would not indeed be difficult, if it were necessary, to show that the apparently minor works included in the Act are of essential importance to the opening and settlement of the country, while they are far beyond the unassisted means of the several districts in which they are situated. But it is unnecessary for me at present to enter on that discussion.

The most serious embarrassment, however, anticipated in my despatch of the 6th May, arose from the fact, that "the money necessary up to that date had been advanced by the banks, on the faith of the Acts passed last Session;" but

595.

that,

Page 85.

that, should "the settlement of the provincial finances be postponed until another meeting of Parliament, the works must be at once arrested, the contracts which have been made must be abandoned, the money advanced by the banks must be repaid, and a state of confusion, disappointment, and distress, which it is impossible to exaggerate, must be produced throughout the country." From this embarrassment your Lordship expresses your satisfaction at being able to relieve me; and with that view, you empower me to proceed under the Public Works Act, as about to be confirmed, although you postpone taking the formal steps for its confirmation until you shall have received my answer to your despatch. But, retaining your opinion as to the relative advantages of the schemes proposed by Her Majesty's late and present Government, you direct me to bring each of those schemes under the consideration of the Provincial Legislature, leaving to them the decision as to which shall be ultimately adopted.

Page 78.

For the discretion thus entrusted to me I have to tender my acknowledgments; but there is one omission in the arrangement to which I must solicit your attention. The stoppage of the public works adverted to in my despatch of the 6th May, I expected to arise from the failure of funds, rather than from the disallowance of the Act 4th & 5th Victoria, c. 28. It was therefore against the delay in regard to the Loan Act that I particularly desired to remonstrate, as in fact the pivot on which the whole arrangement turned. But your Lordship appears to consider that the authority to proceed with the public works, is all that is required; and you omit entirely all notice of the means by which funds for those works are to be procured. It is true that the Public Works Act contains an authority to the Government to issue debentures to the extent therein specified; but I need not point out that that authority is necessarily coupled with the guarantee of the loan in England; that it was based upon it, and is inoperative without it.

Your Lordship has truly observed that I should not be justified in issuing the debentures authorised by this Act under par, or at a higher interest than 5 per cent. Had an Act been already passed by the British Parliament to guarantee the existing debt of Canada, and by that means both to relieve her finances by the diminution of interest, and to improve her credit by showing the confidence of the Imperial Legislature in her solvency, I have no doubt that the money might have been obtained on those terms. But without such a guarantee, with her finances still incumbered by the heavy interest of the old debt, and her credit not unaffected by the delay which has taken place in respect to the guarantee, such a transaction would be altogether hopeless. In the meantime, the banks who have advanced the money on the understanding that it would not be required for any lengthened period, are becoming impatient to be paid, and I am utterly without the means of discharging their claims. I trust therefore that your Lordship will, at your earliest convenience, inform me in what way this difficulty is to be overcome.

The course pointed out in my despatch of the 6th May was the advance by the Imperial Treasury of the sum necessary to carry on the public works during the present year; and this would appear to be almost the only way in which the assistance of the British Treasury, in the present stage of the matter, could be given. The guarantee of a loan to the amount required, which under other circumstances would appear the most convenient course for the British Treasury, would in fact anticipate the decision of the Legislature on the question which it is desired to submit to them; and although, as I have before stated, I do not look upon the two plans, abstractedly considered, as differing much from each other, yet as Her Majesty's Government have determined that the choice between them should be left to the Provincial Legislature, it is right that those bodies should have the opportunity of considering them unfettered by any previous proceedings. The advance from the British Treasury, whatever might be the decision of the Legislature, would be very temporary. If they should adhere to the original plan, it would be repaid out of the proceeds of the debentures issued under the existing Public Works' Act; if they should prefer the new plan, out of the proceeds to be raised under the Act which must then be passed to appropriate the guarantee of Great Britain towards the works.

In respect to the other topics adverted to in your despatch, it seems hardly necessary for me to detain your Lordship. I need scarcely say that I shall endeavour

endeavour to act up to your caution regarding the sufficiency of the estimates of any works that may be in contemplation: indeed, the Act by which the Board of Works is constituted and entrusted with the superintendence of such undertakings, appears to be an effectual guarantee against laxity on this point. I shall also, of course, strictly observe the provisions of the law in respect to the amount to be appropriated to each of the several works, and the rate at which that amount is to be raised; and I shall continue to endeavour, as I have hitherto done, to secure the priority of those works which are of more general rather than of comparatively local importance. Upon the argument respecting the two plans of employing the British guarantee, it is unnecessary for me to enter, as the question is no longer one for my decision; but I must observe that that part of the scheme which contemplates the creation of a sinking fund of 5 per cent. per annum for the redemption of the debt, if it be insisted on immediately and while the works are still unfinished, and therefore altogether unproductive, will press most severely and I fear injuriously on the resources of the province. It would be equal, in the first instance, to the payment of 9 per cent. instead of 4, on the whole sum raised; and although the effect of such a pressure would be gradually to diminish and eventually to wipe out the annual interest, it would be almost insupportable at first. The annexation of this condition would probably induce the Legislature to prefer the former scheme, of which it formed no part.

I am much obliged for your Lordship's suggestion in respect to the mode of bringing the matter before the Legislature. I am inclined to think that it would be more consonant to the practice of this country that an address should be presented to me by the House, requesting communication of the correspondence. Upon that point, however, it is unnecessary for me to adopt any immediate decision.

I have, &c.  
(signed) *Charles Bagot.*

— No. 20. —

(No. 240.)

COPY of a DESPATCH from Lord *Stanley* to the Right honourable Sir  
*Charles Bagot*, Bart. G.C.B.

Sir,

Downing-street, 1 September 1842.

I HAVE to acknowledge the receipt of your despatch (No. 162) of the 26th July, in reply to mine of the 2d of that month (No. 190) communicating to you the decision of Her Majesty's Government with regard to the Public Works and Loan Acts passed by the Legislature of Canada in their last session.

With regard to your proposal that the Imperial Treasury should advance a sufficient sum in anticipation of the new loan, to enable you to discharge the claims on the provincial governments arising out of the works which have been commenced this year by your authority, I enclose for your information a copy of the correspondence which has passed between my department and the Board of Treasury on the subject.

I have, &c.  
(signed) *Stanley.*

---

Enclosure 1, in No. 20.

Sir,

Downing-street, 15 August 1842.

WITH reference to your letter of the 17th June last, I am directed by Lord Stanley to transmit to you the enclosed copy of a despatch from the Governor of Canada respecting the decision of Her Majesty's Government on the subject of the loan of 1,500,000 *l.* to be raised for the service of that province under the guarantee of the Imperial Parliament; and I am to request that you would, in laying this despatch before the Lords Commissioners of the Treasury, call their Lordships' immediate attention to the application made by Sir Charles Bagot for an advance from the British Treasury of a sum of money to enable him to liquidate claims arising out of the public works which he had authorised to be commenced this year.

C. E. Trevelyan, Esq.

I have, &c.  
(signed) *G. W. Hope.*

No. 20.  
Despatch from  
Lord Stanley to  
Sir C. Bagot,  
1 Sept. 1842.

Pages 85 & 93.

Col. Off. 15 Aug.  
Treasury, 23.

Encl. 1, in No. 20.

## Enclosure 2, in No. 20.

Encl. 2, in No. 20. Sir, Treasury Chambers, 23 August 1842.

IN reply to your letter of the 15th instant, respecting the loan of 1,500,000*l.* to be raised for the service of Canada, under the guarantee of the Imperial Parliament, I am directed by the Lords Commissioners of Her Majesty's Treasury to request that you will state to Lord Stanley that my Lords having adverted to that part of the despatch of the Governor-general of Canada which recommends an advance from the British Treasury of the sums necessary to carry on the public works of that province during the interval which must elapse before the final decision of the Canadian Legislature as to the loan can be ascertained, they have only to observe, that as Parliament has neither given any authority to my Lords to sanction such an advance, nor provided the funds from which it could be made, my Lords have no power of meeting the views of the Governor-general in this respect. But my Lords do not anticipate from this inability on their part the inconveniences which the Governor-general was led to apprehend at the time when his despatch was written.

The Governor-general could not then have been aware that the authority of Parliament had been obtained for the guarantee of a loan of 1,500,000*l.* for the service of the province.

Whatever uncertainty therefore might have previously existed as to the determination of the Imperial Legislature on this point, or whatever might be the mode in which the Legislature of Canada might prefer to raise such a loan, there could, after the passing of the Act 5 & 6 Vict. c. 118, be no longer a doubt of a loan to that amount receiving the guarantee of Her Majesty's Government.

The effect of this legislative proceeding on the credit of the province could not but be most advantageous; and my Lords apprehend that the additional security thus afforded that the funds necessary for the execution of the public works already commenced would be ultimately provided by a loan under the guarantee of Great Britain, would greatly diminish if not altogether allay the anxieties of those who had made large advances to the colonial government.

G. W. Hope, Esq.

I am, &c.  
(signed) C. E. Trevelyan.

## — No. 21. —

(No. 165.)

No. 21.  
Despatch from  
Sir C. Bagot to  
Lord Stanley,  
6 August 1842.

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart., G.C.B., to Lord *Stanley*.

My Lord,

Government House, Montreal, 6 August 1842.

WITH reference to my despatch to your Lordship of the 19th ultimo, I have the honour to transmit to your Lordship herewith a copy of the Report made to me by the Chairman of the Board of Works, as to the relative advantages of constructing the canal between lakes St. Francis and St. Louis, on the north or south shore of the St. Lawrence. I trust that the statements contained in this Report will convince your Lordship of the propriety of my decision to undertake that work on the south side.

I have adopted what appeared to me to be the necessary precautions to prevent misunderstandings between the inhabitants of the country through which the canal will run, and the labourers employed on the work.

I have, &c.  
(signed) *Charles Bagot*.

## Enclosure in No. 21.

Encl. in No. 21.

Sir, Montreal, 1 August 1842.

I HAVE the honour to acknowledge, through you, the protest or remonstrance forwarded to His Excellency the Governor-general by Mr. Simpson, against what he states to be "the recently selected line" of the St. Lawrence Canal. The general tour of inspection on which I have been engaged for some time has prevented my receiving that document until within the last day or two. I now hasten to lay before you such facts and information connected with the matter as will, I trust, fully satisfy his Excellency that the opinion of Council upon which he has acted in giving his sanction to the proposed canal being constructed on the south side of the river was not adopted without full and mature consideration; that my departmental report, upon which principally the Council founded that opinion, was not made without due examination and abundant and well-ascertained data; and, finally, that in acting upon that report, the Council was but carrying out the plan as estimated

mated for, and submitted to, and approved of by the Legislature. No expression of disapproval of the south side was used in the House, as I understood, but it did strongly express its disinclination to have the completion of any portion of the navigation of the St. Lawrence deferred for or contingent upon the procuring of a loan from any private company.

The selection of the most eligible route for this canal has received a great deal of attention, professional and otherwise, for a long time. It is more than 20 years ago, I understand, since the first survey was instituted; and there have been in all 10 surveys made from that time to the present, of which the following is an abstract:—

1. The first was made about 20 years ago by a French engineer, who having generally examined both sides of the river, located the work on the south side. This gentleman's report I have not been able to obtain, but the result of it, as stated, I have had from highly respectable authority.

2. The second was made in 1833 on the north side, by Mr. Mills, under the direction of the then commissioners, among whom were Messrs. Harwood and De Beaujeu, the seigniors of the properties adjoining, and through which it was proposed to run the canal. This line entered the river from "McDonald's Point," near Mr. Simpson's house. It was to be maintained partly in the river and partly by artificial cuts, and terminated at the foot of the Cascades: the estimate 235,782*l*. The objections to this line are strongly and fairly set forth in the reports of Messrs. Baird and Stevenson, and are, in my judgment, insuperable. Its entrance is represented to be obstructed by shoals, and being on the lee shore of Lake St. Francis, with the much prevailing south-west wind blowing on, sailing craft frequently could not get out, when they could, without difficulty, leave the opposite side. Of this line (about 14½ miles in length,) nearly eight miles are in the river, having in places a velocity of five miles an hour, and there are three parts of canal alternating with two of river. The canal portions are principally effected by cutting across projecting points, and by building locks; and in sundry parts, in order to avoid deep cutting into the high banks of the river, which are here composed of a sleechy clay, with veins of sand, and are very much given to slide, it was intended to form the canal by moles or dams to an extent of about 13,000 feet in length, and in some cases in very deep water and in rapid currents. The foundations of all the locks, as well as those of the dams, are under the immediate influence of the river, and the difficulties of construction generally on this line would be so great, that I am confident it could not be effected for the estimate. In this opinion I am joined by Colonel Philpotts, who estimates it at little less than 500,000 *l*. and who I have every reason to believe selected it as the best the north side afforded, with reluctance.

3. The third survey was also made by Mr. Mills on the north side, commencing and ending at the same points respectively, as No. 2: the estimate for this route is 324,943*l*. This line Mr. Mills himself did not recommend; and among other practicable objections, is liable to that of having the whole of the lockage (82 feet) combined in one spot.

4. The fourth survey was made again on the north side by Mr. Mills. Starting from the same point as Nos. 2 and 3, but crossing through the seigniories of Messrs. Harwood and de Beaujeu, it terminated at the lake of the two mountains, near the village of Vaudreuil, about a quarter of a mile from Mr. Harwood's house. Mr. Mills's estimate for this line was 442,762*l*., and it also was not recommended by that gentleman.

5. The fifth survey was made by Mr. Stevenson in 1833, on the south shore, passing through the seignior of Beauharnois—the estimate 224,444*l*. In speaking of this route, Mr. Stevenson says, "The whole of this line, taken together, therefore presents perhaps one of the most advantageous that can be imagined; the excavation is comparatively easy, and the greater part of it extremely so: no embankments required but what may be made up from the proceeds of the excavation; no large culverts necessary." In reporting on this line, Mr. Baird (an engineer of considerable experience, and who was employed on the works of the Rideau), states, "In all the course of my experience in practical engineering I never traced a more eligible line for the same distance—the formation, quality (with little exception), and direction, being every thing that could be wished."

This is the line with some trifling improvements, now being executed. It will be constructed on the scale adopted for 255,000 *l*.; but in drawing a comparison between it on the same scale, and the cost of that on the north side, which Mr. Harwood states to be the cheapest, viz. 389,932*l*., the estimate for No. 5 (the one adopted), should be taken at 285,000*l*.

6. The sixth survey was made in 1835 by Mr. Baird. Mr. Baird also gives the preference to the south side, and in his report fully corroborates Mr. Stevenson's survey (No. 5) and report; but Mr. Baird was disposed to go still more south, so as to adopt part of the river St. Louis, and terminate at Beauharnois village.

7. The seventh survey was that made on the south side by Mr. Keefer in March last, resulting in the full confirmation of No. 5.

8. The eighth survey was made in April last by Mr. Tate, and sustains equally with Messrs. Baird and Keefer, Mr. Stevenson's survey and report No. 5.

9. The ninth survey consisted of the marking out of the line (No. 5) for execution, in the course of which more favourable features developed themselves daily.

10. The tenth survey was made lately by Mr. Keefer, of the line pointed out by Mr. Harwood on the north side, as being "the cheapest, and one not previously explored."

All these several lines of levels, in the Board's possession, taken from the year 1833 to the present, and crossing the country in all directions; the information derived from their engineer, who is intimately acquainted with the locality, especially on the north side, having

been at the time Mr. Mills's assistant in the surveys; the very satisfactory nature of the documents of Mr. Stevenson in favour of the canal on the south side; the full corroboration of those documents by Messrs. Baird, Keefer, and Tate, together with my whole general acquaintance with the country, and nature of the strata, fully convinced me long since that the south side was the proper site upon which the canal should be constructed. This conviction is daily more and more confirmed by the result of the several steps now being taken in making out the whole of the work for execution, as well as by the actual excavation which is rapidly being advanced, there being about 700 men at work for some time. This opinion I stated in a report to Lord Sydenham two years ago; but the memoranda also which I furnished to that nobleman previous to last session, and which were laid before the House of Assembly, and printed by its order, and upon which the appropriations agreed to by that body were made, distinctly refer to the canal being made on the south side, and must, therefore, satisfactorily refute the assertion in Mr. Simpson's letter as to "the line being recently selected."

Notwithstanding all these sources of positive information to which I have referred, and my perfect conviction, founded thereon, that the country was sufficiently examined, seeing the continued interested mis-statements and misrepresentations which appeared in the public papers, and that Mr. Harwood had stated publicly, and in print, that "there was yet another line unexplored on the north side, and which, he was certain, could be executed at less cost than any other;" in order to set that point at rest, the engineer to the Board was directed to proceed to Vaudreuil, and having got Mr. Harwood to point out this line to him, to proceed to take the levels of it, so as to be enabled to form a comparative estimate of its cost. This duty has been effectively performed by Mr. Keefer; but as I do not consider it necessary to inflict upon His Excellency the wading through a mass of professional minutiae, I will confine myself to making three extracts from Mr. Keefer's report, viz. :—

"The water in the bay at the debouchement of the river Quinchien, where Mr. Harwood's line terminates, and for a quarter of a mile all round it, will not average more than six feet water. I consider it necessary, therefore, to allow for a bank, or mole being continued about 200 feet from the shore, down to the point where Mr. Mills's line (No. 3) enters, (a distance of 3,700 feet); this bank should raise the water in the basin formed by it about six feet. Total length of Mr. Harwood's line  $15\frac{1}{4}$  miles. It is, therefore,  $\frac{5}{8}$ ths of a mile longer than Mr. Mills's, and three miles and a quarter longer than that on the south side." Again,

"The accompanying plan will at once convince you that Mr. Harwood has discovered nothing worthy the serious attention of Government, nor has he pointed out any favourable feature in the country that was not fully considered in the surveys that have been already made." Finally, "It would therefore appear, that the cost of the route proposed by Mr. Harwood would exceed that of Mr. Mills's inland route by about one-fifth (and would therefore amount to 389,932/). This I imagine is sufficient to show that it would be a fruitless task to go any further into details, or to spend any more time in making more elaborate examinations. The north side of the St. Lawrence between the Lakes was thoroughly examined by Mr. Mills in 1833; and in that duty I assisted him, and made out all his plans. From the intimate knowledge I have thus acquired of that part of the country, I feel a good degree of assurance in expressing the opinion, that no line on the north side can be found to equal in economy, in facility of navigation, or in freedom from the disturbing causes of flood and ice, the route intended to be pursued on the south side."

His Excellency, in his reply to the Vaudreuil address, has so fully exposed the insufficiency of military and political reasons adduced by the opponents of the canal on the south side, I feel it only remains for me to notice the assertion of Mr. Simpson, that "water cannot be found at the entrance and exit of the depth contemplated in the canal; consequently vessels which the canal would be capable of bearing, will be incapable of getting in our out."

Now, first, as regards the proposed entrance to the canal from Lake St. Louis, Mr. Stevenson thus speaks :

"It commences in a cove above M'Pherson's Point, in the south branch of the river, about half a mile below the upper end of Grande Ile, where the bank is low, and 10 feet of water is found at 150 feet from the shore."

On the same point Mr. Baird says :

"The first duty became the ascertaining of the most eligible points of departure from the lakes for the depth of water required (nine feet on the Mitro Cile), with a due regard to the distance between these points. These requisites I found to exist in Lake St. Francis, at or near the commencement of the south channel at B. and H. respectively, the former having been fixed on by Mr. Stevenson on his survey as the most eligible, and in which I perfectly coincide."

On the same point Mr. Tate, who was sent by the Board to take levels, soundings, &c. preparatory to the commencement of the work, thus speaks :—

"At the foot of Lake St. Francis, a point on the south-eastern side, extending from the shore of Hungry Bay, called Grosse Point, forms one side of a small bay called Chartier's Bay, which is the mouth of the South Channel, or of that portion of the river which runs between the Grande Ile and the mainland of Beauharnois. The other side of this bay is formed by an island called 'Ile aux Chats,' or 'Clarke's Island.' Upon considering the capabilities of this bay as a harbour or entrance to a canal, it will appear to be sheltered by Grosse Point from the prevailing wind, which is south-west, as well as from the surf and swell of Hungry Bay, from which it is quite distinct and separate. It has an entrance of sufficient extent and depth of water, in the whole breadth of which, about 1,188 yards, there are two shoals of small extent, upon one of which is a rock with but five feet over it.

There

There is every facility for removing these shoals if necessary ; but from the fact of there being three entrances of from 600 to 1,200 feet in width each, and with a depth of water varying from 12 to 20 feet, it may be deemed sufficient to place buoys over them.

" Pursuing the channel down, there is a fine reach, extending a mile and a quarter, with a good clay bottom, and sheltered from the winds ; the current does not exceed two miles an hour, and there are 10 feet of water at 120 feet from the shore. Here, therefore, is a safe and good anchorage, from Chartier's Bay to a point called M'Pherson's Point, a distance of two miles and five chains. This harbour, then, fully comes up to the standard of an unexceptionable entrance."

The elaborate chart of Mr. Thompson, a hydrographer of deservedly high standing, fully sustains the foregoing description of Mr. Tate.

With respect to the entrance from Lake St. Louis, Mr. Stevenson thus speaks :—

" Having examined very minutely the coast of Lake St. Louis, from the harbour at Beauharnois village, up to the foot of the Rapids, a distance of about two miles, and found more than sufficient water for any vessel plying on the lakes, with a clear coast and smooth bottom ; and near the foot of the Rapids, I found a little cove at the landing of one Couvillon, offering the most convenient spot wherein to construct the entrance to a canal of this description."

The opinion of Mr. Tate on this position is as follows :—

" The position of this point, called Couvillon's Landing, affording as it does a sufficient depth of water at a distance of 132 feet from the shore, and being in a cove between two ridges of rock, is likewise rendered further desirable for a debouchement from being at the upper end of an eddy, which extends nearly from St. Louis Point ; a very favourable feature, and one which will be calculated to assist the navigation up to the canal in a material degree."

Mr. Tate concludes his report with the following general observations :—

Considering the distance between the two levels of water in the lakes, and the extent of the fall which has to be overcome, it appears as if nature had, in a singular degree, made compensation for the great impediments in the watercourse, by affording on the land by its side unusual facilities for establishing at a moderate cost an efficient and permanent artificial navigation. The fall of the land very closely accompanies the fall in the water. The watercourses crossing the line are unimportant, and there are no gullies of any consequence. The soil is of a kind to render cutting easy, and for the last 79 chains the line passes occasionally on a bed of sandstone rock, which rock, long used for dwelling-houses in the neighbourhood, appears to stand the climate well, and will, I have every reason to believe, produce from the excavation a sufficient quantity of good backing stone for the masonry of the locks, whilst the refuse of it will be most convenient for the construction of the piers at the entrance to the canal."

Mr. Keefer also describes Couvillon's Landing as a suitable and the fittest spot to select for the entrance. The deep water he finds to run in close to the shore, as described by the other gentlemen. The eddy near the shore being auxiliary to vessels beating up in scant winds, and the outer current equally so in beating down, and the construction of two moderate piers on the ridges of rock on each side of the deep channel, one to serve as a wharf or landing, the other to afford shelter from a wind blowing up the lake, will completely afford all the necessary convenience and accommodation.

I have thus, without noticing the various anonymous misstatements which have been circulated, confined myself simply to giving the facts and the essence of the several reports made from time to time since 1833.

I feel sanguine that they will fully satisfy his Excellency upon the subject, and, I trust, will, when known, remove from the public mind any false impressions which may have been made upon it. As deeply connected with the quiet and satisfactory progress of the work to which the foregoing relates, I would take the liberty of offering a few suggestions for the consideration of his Excellency, and the adoption of which I would respectfully urge upon his Excellency's serious attention, as tending, in my humble opinion, materially to prevent collision upon the works of this canal between the different races which it must be expected will necessarily be congregated there, and which collision might lead to deplorable consequences.

The peculiar circumstances of this work seem to me to require some peculiar arrangements on the part of the government. An extensive public work is for the first time undertaken, through a district entirely settled and inhabited by Canadians of French origin. A large temporary population of strangers will be introduced and brought into immediate contact with the settled inhabitants, and with whom the difference of language will not only be a bar to friendly intercourse, but it may too reasonably be apprehended that those strangers, whether labourers, contractors, or officers of Government, will, from being ignorant of the language, usages, and peculiar feelings of the people, be likely to give them offence, or do them wrong unintentionally. With respect to this point, it unfortunately happens that there is no capable engineer of French Canadian origin, but I have taken all the precaution in my power, by appointing two junior assistants of that race, and by the selection of a paymaster and accountant who understand the people and language. It is further to be feared that petty trespasses, such as the pilfering of the gardens of the habitants, &c. &c. may frequently be committed, and engender irritation and hostility.

To guard against these evils which I apprehend, as well as to render the first commencement of extensive public works popular with the habitants, a few steps appear to me advisable to be taken.

1st. Although I conceive that to ensure economy and certainty in the execution of public works of this description, general competition and the contract system founded thereon is absolutely necessary, I think that a certain portion of the line, say three or four miles, ought to be laid off in small contracts. These I propose to apportion among the residents at a valuation of the engineer, and thereby by giving a large portion of the habitans employment on their own account, lessen the probability of collision. As this course is directly departmental, I shall not hesitate to take the responsibility of acting on it, although in so doing I am sure to encounter further attack and obloquy.

The second point I consider to be the having an Irish Roman-catholic clergyman resident for the time being near the work, who from his acquaintance with the language and habits of that class, which, judging from the extensive emigration, will be in large numbers on the work, can exercise the salutary influence over them that such clergy are admitted to possess.

3dly. It would be of importance to have a French Canadian gentleman, perfectly conversant with the English language, upon the line generally, to attend at the payments and explain between the parties, and who would give his whole time to keeping peace and promoting a friendly feeling, and to the arrangement of petty differences. He should be in the commission of the peace. The respectable remuneration for the services of these two gentlemen I consider can be borne from the estimate for the work.

4thly. It would be necessary to have a few of the steadiest of the police force close to the work, to prevent petty trespasses and the other little causes alluded to as likely to create bad feeling.

5thly. Finally, in consideration of the circumstances which have recently taken place upon the Cornwall and Welland Canals, I think it would be necessary to have, not on the work, but in the neighbourhood of it, a party of military, (the regular force I would much prefer). Such arrangements being made, I entertain strong hopes that the direct interference of the latter would not be required.

Should his Excellency, upon consideration, be pleased to adopt these suggestions, or any of them, he can easily have them carried into effect.

T. W. C. Murdoch, Esq.  
Chief Secretary, &c. &c. &c.

I have, &c.

(No. 211.)

No. 22.  
Despatch from  
Sir C. Bagot to  
Lord Stanley,  
10 October 1842.

COPY of a DESPATCH from the Right hon. Sir *Charles Bagot*, Bart. G.C.B.  
to Lord *Stanley*.

My Lord,

Government House, Kingston, 10 Oct. 1842.

HAVING brought before my Executive Council the purport of your Lordship's several despatches, relative to the Acts No. 28 and 33 of last session, for the advancement of public works in Canada, and the negotiation of a loan under the guarantee of the Imperial Parliament, they were unanimous in agreeing with me that it would be expedient to adopt the views of Her Majesty's Government, as propounded in your despatch of the 2d July, and to bring the question in the shape proposed by your Lordship before the provincial Legislature.

Accordingly, I availed myself of the latitude which your Lordship had allowed me, and communicated the views of Her Majesty's Government in a message (of which I enclose a copy), adopting very nearly, though not in juxtaposition, the words of your Lordship's despatches; and I instructed my Council to introduce at the same time a Bill framed upon those views.

The result has proved perfectly satisfactory. The House of Assembly acquiesced readily in all the suggested provisions; and I have the honour of transmitting herewith the bill in question, which has passed the Legislative Council, received my assent, and only awaits Her Majesty's confirmation to become a law.

The first clause applies the proceeds of the loan to the public works specified in the Act of last session, No. 28, as far as the amount will suffice; the Government retaining, as under that Act, the power of selecting the works which should first be executed.

The second clause, after providing for a sinking fund, not exceeding five per cent. per annum, and the order of charging the debt upon the revenue, enacts that the loan shall be raised by any persons to be appointed by Her Majesty, or by the Governor-general. It is my desire, as already expressed to your Lordship, that the negotiation should be effected by the Lords of the Treasury,  
or

For Act 6 Vict.  
c. 8, vide p. 11.

or any person deputed by them : I have therefore to request that your Lordship will move Her Majesty to be graciously pleased to appoint, under this clause, such persons as to Her Majesty may seem fit to negotiate the loan.

The third clause enacts, among other things, that the sinking fund shall be managed in such manner as shall be agreed upon when the loan shall be negotiated, or shall be left to the discretion of the Governor.

As the question of the amount of the proposed sinking fund is one of serious importance, and I propose to address your Lordship upon it by the next mail, I would suggest that no agreement should be made respecting it, at least in the first debentures to be raised, except that these and all future debentures (if such be the form adopted, and under the circumstances, it appears the best, as the Act of the Imperial Parliament does not provide for the case of terminable annuities) should be granted with a clause to enable the province to redeem them after six months' notice.

The remaining clauses call for no comment, being merely formal or explanatory.

It only remains for me, therefore, to recommend this Act, and No. 28 of the last provincial session, for Her Majesty's sanction, and to request that the Lords of the Treasury will raise by debenture, or otherwise, as they may deem expedient, the sum of 200,000 *l.*, of which 107,045 *l.* is to be applied to the payment of the bills which I have drawn on their Lordships, and the remainder to be transmitted to the account of the receiver-general of this province, or, preferably, be held to meet such bills as I may draw after being apprised of the money having been raised.

I have, &c.  
(signed) *Charles Bagot.*

#### Enclosure in No. 22.

CHARLES BAGOT,

THE Governor General, in conformity with the intention expressed in his Speech at the opening of the Session, and in compliance with the desire of Her Majesty's Secretary of State for the Colonies, makes the following communication to the House of Assembly, upon the subject of the Acts, cap. 28 and 33 of last Session, relating to Public Works and the proposed Loan.

Encl. in No. 22.

His Excellency is instructed by the Secretary of State to assure the people of Canada, through their representatives in the House of Assembly, that the objects contemplated in the above Acts, of relieving the finances and improving the credit of Canada, and at the same time of developing by measures of extensive internal improvement the vast natural resources of the province, are viewed by Her Majesty's Government with hardly less of interest, than by the Legislature and people of the province; and every consideration of good faith, and of policy, would lead Her Majesty's Government scrupulously to fulfil to their utmost extent the pledges of assistance held forth by their predecessors in office, and communicated to the Legislature of Canada by Lord Sydenham, and also to aid in the accomplishment of the objects sought to be obtained by the Acts now under consideration.

Her Majesty's Government have given to the financial project proposed to be carried into effect by the Acts in question their most deliberate and anxious consideration, and the result of that consideration has been to impress upon them a very strong conviction, that with the view of most effectually and most economically benefiting the province, and conducing to the maintenance of public credit, and to the promotion of those great undertakings of internal improvement which may ultimately make an ample return for the original outlay, but upon which, unassisted, the province could not safely enter, it would be inexpedient to interpose the credit of the mother country between the province and the creditors under the existing debt; and that it would be more for the advantage of the province that the aid to be rendered should be applied exclusively to the promotion of the intended public works.

According to the arrangement proposed by Lord Sydenham, and the Acts under consideration, the execution of the public works of every description is made mainly to depend upon funds to be raised upon the sole responsibility of the Canadian government. If the cost of the local works should, in many instances, exceed the estimate, or if, in consequence of the priority given to the loan of 1,500,000 *l.* and of the general management of Canadian finance, the credit of the province should not continue to be such as to enable it to raise the whole of the second loan of 1,678,682 *l.* at 5 per cent., funds might be wanting to complete those great works, with a view to which mainly the assistance of Great Britain was originally given; and her Majesty's Government is compelled to acknowledge that where it appears that the sum necessary for a work in Lower Canada, of which the tolls were represented to be an ample security for the amount, could only be raised on the double security of those tolls, and the credit of the province at a rate of interest of from 6 to 8 per cent., they cannot but entertain serious apprehensions as to the practicability of carrying into effect the objects of the Public Works Act by sums raised on the provincial security only, within

the terms authorized by that Act. It will of course be understood that there is no authority in any case to issue the provincial debentures below par; such a step would be, in fact, a violation of the spirit, if not of the letter, of the provincial Act, which limits the rate of interest at 5 per cent.

Her Majesty's Government hopes it is equally unnecessary to offer a caution against any vague estimates, or excess of outlay being sanctioned, under the expectation of a further advance of the credit of the mother country beyond that which has been so liberally afforded, and, although it is no doubt true, that, in the exercise of the discretion vested in the governor by the Public Works Act, he might abstain from issuing debentures beyond the means of the province to bear the charge, yet this step on his part, on the inability to raise the money, at the prescribed rate of interest, might leave unfinished the most important works, and thus frustrate the objects contemplated by the British Government.

In order to guard against the possibility of such a result, and to secure the application of the assistance of Great Britain in the most direct manner, to the benefit of the province, it is proposed by Her Majesty's Government, that the existing Canadian debt should remain a first charge upon the revenue of the province, and should be paid off, as it became due, from the produce of the current revenue, and that the 1,500,000*l.* to be raised under the guarantee of the Imperial Parliament, should be applied directly to the execution of the public works enumerated in the Act already referred to.

Under this arrangement the credit of the province would be strengthened by the continuance of the priority of the present debt, and by the prospect of early repayment at or before the expiration of the existing bonds. The local legislature, thus unencumbered with other obligations, would be enabled to enter into negotiations with the creditors under the existing debt, and either to continue during the terms of their respective engagements, the present rate of interest, or to extinguish the debt by mutual agreement, before the period stipulated under the present engagement, on far more favourable terms than the British Government could do if they were to become responsible for the amount. By this course, also, the public debt of Canada, in addition to the existing debt, which would be gradually paid off as funds became available for the purpose, would be limited to the sum appropriated for the completion of the public works, of which there would be, at least, 1,500,000*l.*, raised at a rate of interest not exceeding 4 per cent.

This arrangement, no doubt, would require Great Britain to give up her security of priority of claim upon the consolidated provincial revenue, that is to say, the payment of the new loan of 1,500,000*l.* would become chargeable after the payment of the existing debt, instead of becoming the first charge, by the extinction of that debt, as first proposed. But Her Majesty's Government willingly consent to make this sacrifice, because they feel convinced that this arrangement is more conducive to the financial prosperity of Canada than that propose to be adopted under the two Acts, and that setting aside higher considerations, priority of claim upon the provincial revenue is an inferior security to that derived from the prosperity of the province.

Her Majesty's Government, therefore, do not propose to interfere with the existing debt; but with the view of furthering the important objects contemplated by the Act numbered 28, they propose to pledge the credit of Great Britain to a sum not exceeding 1,500,000*l.*, to be raised by the province at a rate of interest not exceeding 4 per cent., under the guarantee of the Imperial Parliament, and with a provision to be made for a sinking fund at the rate of not less than 5 per cent. per annum of the principal, to be secured in the first instance upon the tolls of the works to be undertaken, the ordinary revenues of the province being pledged as a collateral security, and the charges to rank next in order to the obligations now by law permanently attaching to the Consolidated Fund.

Government House, Kingston,  
28 September 1842.

— No. 23. —

(No. 308.)

COPY of a DESPATCH from Lord *Stanley* to the Right hon. Sir *C. Bagot*,  
Bart. G.C.B.

Sir,

Downing-street, 30 Dec. 1842.

(No. 103.)

Page 11.

I HAVE received your despatch, No. 211, of the 10th of Oct. last, transmitting the copy of a Bill, which has been subsequently passed into an Act, by the legislature of Canada, for authorising the raising, by way of loan in England, the sum of £1,500,000, for the construction and completion of certain public works in that province.

This Act having been passed in conformity with the instructions contained in my former despatches, Her Majesty in Council was pleased, on the 10th inst., to give Her assent to it in the manner prescribed by the Act of Parliament, 5 & 6 Vic., c. 118; and I transmit herewith the order so passed by the Queen in Council.

I am

No. 23.  
Despatch from  
Lord Stanley to  
Sir C. Bagot,  
30 December 1842.

I am awaiting the further communication promised in your despatch, relating to the sinking fund to be provided for the redemption of this debt; and in the meantime I have had under my consideration your suggestion, that the debentures to be issued should be rendered liable to redemption at any time at six months' notice.

The great object which Her Majesty's Government have in view in conducting the negotiation of this loan on behalf of the province, is to obtain the greatest possible advantage for Canada.

It has been thought necessary, therefore, that the debentures should be presented to the public in a form calculated to make them a desirable investment; and we are satisfied that that would be more effectually obtained by specifying a period before which the debentures in question should not be redeemable, and by making that period sufficiently distant to give a character of permanence to the security.

Her Majesty's Government have, therefore, fixed twenty years as the period during which the debentures, now about to be issued at the rate of four per cent., should be irredeemable; believing, from all the information which we can procure, that a larger sum would be offered for a debenture of such description and duration than could be obtained on any other similar security.

On the other hand, we do not apprehend that the province would have the means previous to 1863, of redeeming the debt now about to be incurred. The five per cent. and six per cent. debt of the province, amounting to a sum of above 1,200,000 *l.*, is redeemable at various antecedent periods, terminating in 1860, and would be undoubtedly the first debt to which the means of redemption at the disposal of the province would be applied.

For these reasons, we have therefore considered that the power to redeem the new debentures at six months' notice, while it would affect materially their market value, could not be exercised with advantage, if at all, within the period which has been specified.

We have also deemed it inexpedient to make any precise stipulations as to the sinking fund, which shall be annually provided for their redemption; that being rather a question to be settled between this country and the province on a joint consideration of what is due to the provincial resources on the one hand, and to the security of this country on the other.

For, whilst we felt that we had a right to claim the establishment and regular maintenance of a sinking fund for the extinction, within a reasonable period, of the debt, of which we have guaranteed the interest, we are equally sensible that its annual amount ought not be such as to cripple the resources of the province, or so to aggravate the burthen of the debt as to induce financial distress, or serious embarrassment.

Her Majesty's Government, therefore, willingly defer, until the receipt of the further communication promised in your despatch, the discussion of the amount of the sinking fund, and of the regulations under which it should be placed, in order to ensure its due and regular application.

I am, &c.  
(signed) *Stanley.*

---

— No. 24. —

(No. 309.)

COPY of a DESPATCH from Lord *Stanley* to the Right hon. Sir *C. Bagot*,  
Bart. G.C.B.

Sir,

Downing-street, 3 January 1843.

In my despatch, No. 308, of the 30th ultimo, I announced to you that the Queen had been pleased to assent to the Act of the legislature of Canada, authorizing a loan to the extent of 1,500,000 *l.*, to be raised in this country on account of the province.

I have now to acquaint you that Her Majesty has further been pleased to appoint the Lords of the Treasury to negotiate that loan on behalf of the province.

A notice, the copy of which I enclose, having been accordingly issued to the public, the bidding for the loan took place on the 16th ultimo. The result was,

595.

No. 24.  
Despatch from  
Lord Stanley,  
to Sir C. Bagot,  
3 January 1843.

was, that bonds to the amount of 300,000*l.* were disposed of at the following rates :

<i>£.</i>	<i>£.</i>	<i>s.</i>	<i>d.</i>		<i>£.</i>	<i>s.</i>	<i>d.</i>
5,000	at 110	2	6	producing	5,506	5	—
295,000	at 108	—	—	„	318,600	—	—
Making a Total of				- -	<i>£.</i> 324,106	5	—

Directions have been given that this sum, as it is paid into the bank, shall be carried to the account of the province of Canada, and be applied to meet such bills as have been already, or may be hereafter, drawn upon the Lords of the Treasury by your order.

Her Majesty's Government having deemed it advisable to make the interest of these bonds payable at regular periods at the Bank of England, it is essentially necessary that the remittances by the province of Canada to the Bank of England, of the sums necessary to pay the half-yearly interest, should be made at periods sufficiently early to meet each payment, I must, therefore, enjoin you to observe the utmost punctuality in this respect, as upon it will materially depend the character of the province, and the power of advantageously raising the remainder of the loan.

Her Majesty's Government are further of opinion, that immediate measures should be taken for investing half yearly, at the time when the interest is payable, as large an amount of sinking fund as the means of the province may be able to maintain; and they conceive that it would be most for the general advantage that a sum of 5*l.* per cent. at the least should be annually provided to pay the joint interest and sinking fund. I have, therefore, to instruct you to make the requisite arrangements for the purpose as soon as practicable.

The terms on which the Bank of England have undertaken to pay the interest on these bonds are, that they shall receive a commission at the rate of one half per cent. on the amount of dividends paid, exclusive of the expense which has been already, or may be hereafter, incurred in the preparation of the bonds, which will be defrayed out of the produce of the loan, and of which an account will be duly transmitted to you.

In compliance with your suggestion, orders will be given to the Bank to invest, from time to time, in Exchequer Bills, any sums which they may hold on account of the province of Canada.

I have, &c.  
(signed) Stanley.

Enclosure in No. 24.

Treasury Chambers, Whitehall, 12 December 1842.

Encl. in No. 24.

WHEREAS by an Act passed in the sixth year of Her Majesty's reign, intituled, "An Act for guaranteeing the payment of Interest on a loan of 1,500,000*l.* to be raised by the Province of Canada," Her Majesty was empowered to guarantee the payment of the interest on any loan, to an amount not exceeding 1,500,000*l.*, which might be raised for the service of the province of Canada under an Act to be passed by the legislature of the said province, in the manner and under the conditions in the said Act mentioned.

And whereas by an Act of the legislature of the province of Canada, intituled, "An Act to authorise the raising, by way of Loan, in England, the sum of 1,500,000*l.* sterling, for the construction and completion of certain Public Works in Canada," Her Majesty is empowered to appoint any person to raise and borrow, with the guarantee aforesaid, the said sum of 1,500,000*l.*

And whereas Her Majesty has been pleased by warrant to appoint any three or more of the Commissioners of Her Majesty's Treasury to borrow by debentures such sums as may from time to time be required for the service of the said province, not exceeding in the whole the said sum of 1,500,000*l.*

This is to give notice that the Lords Commissioners of Her Majesty's Treasury will be ready to dispose of debentures or bonds to the amount of 300,000*l.*, and that tenders for the purchase of the same, addressed to the Secretary to the Treasury, with the words "Tender for Canada Debentures," written on the outside, will be received at the Treasury between the hours of 12 and 2, on Friday the 16th December.

The tenders must state at length the sums proposed to be paid for each 100*l.* contained in the debentures, with the name and address of the party.

No tenders will be accepted for any sum less than 5,000*l.*

The bonds will be redeemable at the expiration of 20 years from the 1st January 1843, and will bear interest until redeemed, at the rate of 4 per cent. per annum, payable half-yearly at the Bank of England, on the 1st day of July and the 1st day of January.

The

The bonds will be made out in such sums of not less than 500 *l.* each, as may be required by the purchasers.

One half of the sum tendered and accepted will be payable at the Bank of England on Thursday the 22d instant, when a scrip receipt will be given for the same to the party; and on the payment of the other half, on or before Monday the 9th of January 1843, the debentures will be delivered.

The tenders will be opened in the presence of the governor and the deputy governor of the Bank of England; and previously to the opening of the tenders, the Lords Commissioners of Her Majesty's Treasury will place in the hands of the governor and deputy governor of the Bank of England a sealed paper, containing the lowest price per cent. which their Lordships would feel that they should be justified in receiving for the debentures.

The tenders will be all opened at the same time, when a list will be made of them, and preference will be given successively to the highest tenders above the price in the sealed paper; and if such tenders should in their aggregate exceed the amount of 300,000 *l.*, the excess above that amount will be struck off the least advantageous of those tenders.

In case of equality of tenders in respect of the premium per cent., and their amounting together to more than the sum required, the amount of debentures will be divided in proportion to such tenders.

Notice will be given to the parties whose tenders are accepted, and they will be requested to attend at the Treasury at an appointed time, to sign the contracts for the debentures.

I certify that this is a true Copy.

Treasury Chambers,  
2 January 1843.

(No. 213.)

EXTRACT of a DESPATCH from the Right hon. Sir *Charles Bagot*, Bart. to Lord *Stanley*, dated Government-House, Kingston, 11 October 1842.

No. 25.  
Despatch from  
Sir C. Bagot to  
Lord Stanley,  
11 October 1842.

I HAVE the honour to transmit to your Lordship a copy of the Report of the Select Committee upon the Beauharnois Canal, between the lakes St. Francis and St. Louis.

The evidence will not be printed for some time, and therefore I am unable myself to express an opinion upon the merits of the case as resulting from the present investigation; but when I find that, out of a committee avowedly appointed with a view to prove the inexpediency of the selection made, and consisting of seven members, four of them were compelled to acknowledge that, with ample time and opportunity of procuring what evidence they pleased, they could elicit none to invalidate the choice, while the other three allowed the report to pass, entering a dissent upon the grounds that the evidence in their judgment fully justified the selection of the line adopted; I cannot but believe and express my opinion that the superiority of the south side is fairly established, and that the Board of Works stands fully justified in its recommendation of that line.

When the evidence is printed, I shall lose no time in transmitting a copy of it to your Lordship.

Enclosure in No. 25.

THE Special Committee to whom were referred the Documents laid before the House, relating to the Beauharnois Canal, beg leave to Report:

Encl. in No. 25.

THAT your Committee, with a view to facilitate references to maps, plans, and documents, in the custody of the Board of Works, deemed it advisable to accept the use of a room in the department, placed at their disposal by the honourable Chairman, and in which the inquiry and deliberations of the Committee have been conducted.

That, after a most patient and careful investigation upon the important subject referred to them, your Committee find themselves unable to form any conclusive opinion, owing to the peculiar nature of the subject-matter to be inquired into, and to the contradictory statements both from practical and scientific men, whose evidence or opinions have been heard or referred to in the course of the inquiry.

Under these circumstances, and taking into consideration the termination of all the other business before the Legislature and the immediate prorogation that is to take place, your Committee have resolved to close their proceedings, and report the evidence and documents laid before them; and, without expressing any further opinion thereon, humbly submit the same.

Committee-room.

(signed) *G. Moffatt*,  
Chairman.

Tuesday evening, 5 o'clock, 11 October 1842.

The Committee again met.

Present: Messrs. Moffatt, Chairman; Simpson, Merritt, Cameron, Dunscomb, Parent, Sir A. Macnab.

The Hon. H. H. Killaly, Chairman Board of Works, appeared before the Committee, and handed in a statement in reply to the charges of Mr. Simpson and the evidence taken thereon. Mr. Parent, seconded by Mr. Simpson, the foregoing Report; which was carried.

Dissentient: Mr. Merritt, Mr. Dunscomb, Mr. Cameron.

Adjourned till 9 A.M. to-morrow.

(signed) *Alfred Todd*, Clerk Committee.

Despatch from  
Sir C. Bagot, to  
Lord Stanley,  
8 November 1842.

— No. 26. —

(No. 230.)

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart., G.C.B., to Lord *Stanley*.

Page 100.

My Lord,

Government House, Kingston, 8 November 1842.

WITH reference to my despatch of the 10th ultimo, No. 211, in which I stated my desire that the Lords Commissioners of Her Majesty's Treasury would undertake to raise the sum of 200,000*l.* for the use of the province, under the Acts passed by the imperial and provincial legislatures in their (respectively) last session, I have now, in consequence of being better informed as to the future necessities of the board of works, to request that the sum named may be increased to 300,000*l.*, which will meet the demands of the above board until the spring.

I have mentioned in a previous despatch that I hope soon to be able to furnish your Lordship with a report upon the progress of the public works; but I may now state, for your Lordship's satisfaction, that almost the whole of the sum now required will be applied to meeting the past or accruing expenditure on works connected with the Welland Canal, and the St. Lawrence navigation.

As the present operations on these works are being prosecuted with money borrowed from the banks, and the same inconveniences to the public, which I have mentioned on former occasions, are again arising rapidly, and will become earlier and more onerous on account of the increasing commercial depression in the province, I have to request that no time may be lost in raising the amount, and enabling me to draw for it in the manner which may seem most advantageous to the Lords of Her Majesty's Treasury.

I have, &c.

(signed) *Charles Bagot*.

— No. 27. —

(No. 244.)

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart., G.C.B., to Lord *Stanley*.

No. 27.

Despatch from  
Sir C. Bagot to  
Lord Stanley,  
11 December 1842.

My Lord,

Kingston, 11 December 1842.

I have the honour to transmit herewith, for your Lordship's information, a Report which I have received from the President of the Board of Works upon the progress of the public works carried on in this province during the past summer.

It will be satisfactory to Her Majesty's Government to learn, that the works on the line of the St. Lawrence navigation have been pushed forward with as much energy as the means at the command of the provincial government have permitted, and that one of the important canals between the lakes and Montreal has been completed.

The navigation is now open from Kingston to Coteau-du-Lac: the Beauharnois Canal will open the remainder of the line from the latter place to Montreal.

The proposed operations in Lake St. Peter and the canal near Prescott will complete the works on the St. Lawrence, which, with the Welland Canal, on which the works are also advancing rapidly, will complete the highway from the inner lakes to the Atlantic.

The Report furnishes likewise the information sought in your Lordship's despatch of the 8th August, No. 220, relative to the works in progress for the improvement of the lake navigation.

I have, &c.

(signed) *Charles Bagot*.

## Enclosure in No. 27.

Sir,

Board of Works, 8 December 1842.

I HAVE the honour to acquaint you, that the annual general Report and statement of expenditure upon all the public works under the control and direction of this department, is now being prepared, and will be completed prior to the next meeting of the Legislature. The accounts of the several works, made out in triplicate, will be closed up to the 31st of this month, that I may be enabled to have a uniform system adopted throughout the province.

Encl. in No. 27.

The severity of the season having now suspended nearly all our operations (except so far as relates to the procuring of materials), and pending the preparation of the documents referred to, I am induced, by the warm interest evinced by his Excellency the Governor-General in the advancement of these various improvements, to furnish you, for his information, with a short outline of what has been effected this year.

The attention of the Board has been especially directed to the advancement of the works necessary to the full completion of the entire line of the St. Lawrence navigation throughout; with this view contracts for the building of the whole of the locks of the Welland Canal have been entered into; the feeder to it enlarged, so as not only to ensure an ample supply of water, but also to serve as another entrance from Lake Erie, terminating at the mouth of the Grand River. The situation of this entrance is such as to enable the navigation to be opened from three to four weeks earlier in spring, thereby obtaining one trip of the Lake Craft before the navigation to Buffalo, &c. is opened, the advantage of which in tolls may be rated, in proportion to the *present* trade alone, at 5,000*l.* per annum. Several of the new locks will be completed next year, and the whole of the line will be ready the succeeding year, and all will be accomplished without interrupting the navigation.

The section of the St. Lawrence navigation, called the "Cornwall Canal," is completed. I had the satisfaction of having one of the finest steamers in the province passed through it last week.

The works of that portion of this navigation between Lake St. Francis and Lake St. Louis, called the "Beauharnois Canal," are advancing rapidly; three miles of it are nearly completed; the whole of the earth-work will probably be finished next year, and the masonry so much advanced as to ensure the entire being ready for navigation in the fall of 1844. The quarries have turned out very fine, and the section throughout even more favourable than I had anticipated; and, notwithstanding the excitement which interested parties succeeded in getting up against this line, it will prove to be one of the finest specimens of canal navigation in this or in any other country.

The enlargement of the part between Montreal and La Chine is also now being proceeded with; the portion in hands being chiefly through quarry, the works can be advantageously carried on during the winter, and will thereby afford employment to many of the immigrant labourers, who have necessarily been discharged during the suspension of the other works.

A very extensive and efficient dredge establishment will be prepared against the spring to remove several bars in the channel through Lake St. Peter, and will be available for its improvement generally, but to what extent it is impossible to calculate with certainty; it must depend on and be governed by the practical experience which will be obtained during the operations of next year.

The only other part of the St. Lawrence navigation requiring improvement is that between Prescott and Dickenson's Landing, in which about four locks, with short lengths of canal, will be required; the necessary survey, plans, &c. are now in hands, and no time will be lost in having the works of these portions also undertaken, so that the whole line may be completed simultaneously; until this is effected, no return or advantage can be derived from the previous expenditure, and much economy and facility in the management will be obtained by having the entire in progress together.

Connected with this most important work, are the harbours upon the lakes, towards the improvement of which also much has been done this season. The materials for the construction of the harbours at Rondeau, Port Burwell, Catfish Creek, Port Dover, the Grand River, Port Colborne, and Port Stanley, on Lake Erie, are being procured and delivered; and at the last-mentioned port considerable progress has been already made in the dredging and construction of the piers.

The better lighting of this lake has also occupied the attention of the Board, especially about Long Point, where two new lights will be established against the opening of the navigation.

The harbours about to be constructed, or improved, on Lake Ontario, and for which much preparation has been made are, Port Dalhousie, the canal at Burlington Bay, Windsor Harbour, and Cobourg Harbour.

The steam-boat lock and dam at St. Anne's, on the Ottawa, are also finished, and will be ready for the trade in spring. By this word, the past monopoly of the navigation of the Ottawa and Rideau is put an end to. The most formidable difficulties which presented themselves in the course of this work have been surmounted in a very creditable manner by the spirit and perseverance of the contractors.

The next work of importance is the Chambly canal, which had been commenced long since, but from certain difficulties which occurred, was suspended for some years. I have the satisfaction to announce to you the completion of this work also. By the navigation of Lake Champlain, the river Richelieu is opened with Quebec, Montreal, &c. In extreme low water a shoal or bar in the river Richelieu, near St. Ours, would prove an

obstacle

obstacle to deep vessels ; to obviate which, preparations are now being made towards the construction of a lock and dam there, which will fully complete this fine line of navigation.

In addition to the foregoing works of primary importance, a very considerable progress has been made in the various other improvements embraced in the estimates of last year. Several large bridges upon the main line of road have been completed, and the others so much advanced as to insure their completion next year.

The works on the various lines of main roads in the western section of the province, necessary to the development of its resources, and the conveyance of its products to market, the Port Dover and Hamilton Road, the Lancaster Road, the Gosford Road, the Gaspé Road, have been put under contract, and much progress made thereon, several of them being more than half completed ; and in the Newcastle district, the lock at Whitlas Rapids, on the Otonabee river, has been finished, and that at Crooks' Rapid nearly so, by which about 50 miles of internal navigation will be effected, opening up several back townships of excellent land, and communicating with harbours on Lake Ontario by a short portage road of about 12 miles.

The number of men employed on the works, when in full operation, exceeded 6,000, which accounts for there being no pressure felt from the unusual number of immigrants this year.

The low price of provisions has enabled the Board to set the works on very advantageous terms.

The foregoing summary will, I trust, satisfy his Excellency that a vast deal has been effected this year ; much more indeed than could reasonably have been calculated upon from the very advanced period of the season, when we received our authority to proceed ; and I am happy to say, that in no case have our estimates been exceeded for the completion of the respective works, but in some a considerable balance remains unexpended. The cost of management will, when the accounts are furnished, prove to be unprecedentedly low.

I have, &c.

Rawson W. Rawson, Esq.  
Chief Secretary, &c.

*Charles Bagot*, Bart., G.C.B.

Sir,

Downing-street, 14 January 1843.

I HAVE received your despatch of the 11th December, No. 244, enclosing a Report of the President of the Board of Works upon the progress of the Public Works in Canada during the past summer ; and I have much satisfaction in learning from this account that the public works in the province have made such considerable progress, and that the aid which has been afforded by the mother country has been so judiciously applied.

to Lord *Stanley*.

My Lord,

Government House, Kingston, 18 January 1843.

I HAVE the honour to transmit to your Lordship, with reference to the several despatches which I have addressed to you upon the subject of the Beauharnois Canal, a copy (in duplicate) of the printed Report of the Select Committee of the House of Assembly, which sat during the last session upon that subject, together with the evidence taken by them.

This document appears to me fully to justify the selection of the south side for the construction of this canal, and the experience which has been since gained in the prosecution of these works strongly corroborates the choice.

I have, &c.

## Enclosure in No. 29.

## R E P O R T.

THE Special Committee to which were referred the copy of the Estimate made by Mr. Samuel Keefer, Civil Engineer, dated 19th June 1841, of the probable Cost of constructing a Canal for Steam-boats between Lake St. Francis and Lake St. Louis, laid before the Legislative Assembly on the 20th September 1842; the Petition of G. Beaudet, and others, of the County of Vaudreuil, and the Message of His Excellency, the Governor-general, of the 30th September 1842, relative to the appointment of a Military Engineer, to inspect, report, or superintend the construction of the St. Lawrence Canal; with power to report from time to time, have the honour to Report:

Encl. in No. 29.

THAT your Committee, with a view to facilitate references to Maps, Plans, and Documents, in the custody of the Board of Works, deemed it advisable to accept the use of a room in the Department, placed at their disposal by the Honourable Chairman, and in which the inquiry and deliberations of the Committee have been conducted.

That after a most patient and careful investigation upon the important subject referred to them, your Committee find themselves unable to form any conclusive opinion, owing to the peculiar nature of the subject-matter to be inquired into, and to the contradictory statements, both from the practical and scientific men whose evidence or opinions have been heard or referred to in the course of the inquiry.

Under these circumstances, and taking into consideration the termination of all the other business before the Legislature, and the immediate prorogation that is to take place, your Committee have resolved to close their proceedings, and report the evidence and documents laid before them; and without expressing any further opinion thereon, humbly submit the same.

G. Moffatt,  
Chairman.

12 October 1842.

## MINUTES OF EVIDENCE.

The Honourable GEORGE MOFFATT, Esq. in the Chair.

*Saturday, 24th September, 1842.*

*William Stewart, Esquire, called in; and Examined.*

1. STATE your residence, and profession, and whether you have any interest for or against the Beauharnois Canal?—I am a merchant at Bytown. I have no interest whatever, for or against the canal.

2. Are you acquainted with the south shore of Lake St. Francis, namely, that part opposite to the steam-boat landing at Coteau du Lac?—I am generally, but not particularly acquainted with it, having been frequently up and down it in boats before steam-boats were introduced.

3. Have you been 30 or 40 times down the St. Lawrence?—I do not think I have.

4. Will you state, as near as you can, how often you have been up and down the St. Lawrence?—12 or 15 times.

5. Do you know M<sup>r</sup>Pherson's Point, below Isle aux Chats, or Cushing's Island?—No, not particularly.

6. Are you acquainted with Hungry Bay?—Yes, I have been on that shore once or twice.

7. Do you think Hungry Bay affords good anchorage for vessels going down the St. Lawrence; if so, why?—My impression is, that when the wind is down the river, a heavy sea, with surf, blows down that way, therefore it does not always afford safe anchorage.

8. Would you think a raft safe within seven or eight miles from Isle aux Chats, on the south side, the wind blowing north or north-west?—I should hardly think it safe, as rafts have great difficulty, when blown into that shore, in getting out again; but I have never accompanied a raft myself down that part of the river.

9. Can rafts blown into Hungry Bay get out without a steam-boat or a strong south wind?—I should think not without waiting for a favourable wind; pilots are generally very careful to avoid being blown into Hungry Bay.

10. Is it not at all times considered dangerous for a raft to get into Hungry Bay?—I think it is.

11. Have you passed down the channel between Chartier's Point and Isle aux Chats, and if so, describe it?—I have not sufficient knowledge of the channel of the river to give any information on that point.

12. Do you know Hungry Bay; that is, personally; and do you think it would afford good shelter for vessels in the event of high winds?—I am generally, but not thoroughly, acquainted with it; when the wind blows down the river I should think it would not afford good shelter.

13. Have you a knowledge of the north side of Lake St. Francis, particularly that part of it at which the steam-boats now arrive and depart?—I have only a general knowledge of it, so far as have acquired by going up and down it repeatedly.

14. Are you of opinion that the Rideau Canal is sufficient for all the purposes of trade in this province for some years to come, and the making a canal between St. Louis and St. Francis lakes a needless expenditure of public money?—In the present commercial state of the country, with a good navigation downwards, I think it is.

*Jacques, an Indian Pilot, called in; and Examined.*

*Answer to Question 1.*—I live at Cocknawaga, and am a steam-boat pilot; I have been 20 years a pilot.

15. Do you know Isle aux Chats, and that part of the river?—Yes.

16. Can boats go down the channel between Isle aux Chats and the main shore, on the south side?—Boats can pass down, but not barges.

17. How large a barge can you take down that channel?—A batteau containing about 200 barrels of flour.

18. Is there good anchorage or safe harbourage within seven miles of Isle aux Chats, on the south side?—With a light wind a raft may ride there, but a strong wind would break it to pieces; the nature of the anchorage is such that six or seven years ago we could not get up our anchor, and the chain broke.

19. Do you know M'Pherson's Point, below Isle aux Chats?—Yes.

20. Supposing M'Pherson's Point the mouth of a canal, could you take a barge carrying 1,400 or 1,500 barrels of flour into it?—I would not undertake to do it.

21. Do you think it possible to take such a barge in without endangering the crew and cargo?—It is not from the danger of going down, but a barge would run aground before she arrived there.

22. Could you take an empty barge into M'Pherson's Point, on a dark night?—I could not; I would rather take a barge carrying 1,500 barrels down the north side than an empty barge on that side.

23. Could an empty barge get into Lake St. Francis from M'Pherson's Point, if the wind were contrary?—It would not be possible.

24. Could a vessel stay with safety at M'Pherson's Point, heavily laden, during a wind down the river?—It could not, as the waves coming in from the lake are stronger than the rapid.

25. Were you the pilot selected to take the first steam-boat from Upper Canada to Lower Canada, and through what channel did you go?—I was; I took the steam-boat "Lord Sydenham" from Prescott to Montreal, and I passed down the north channel by Coteau du Lac.

26. Why did you go by the north channel?—Because there is no passage on the south for a boat of that size.

27. Can you inform the Committee what is the depth of water on the shoals lying between Chartier's Point and Isle aux Chats?—In some places it is deep, in others not two feet.

28. Can a barge drawing five feet water go down the south side?—A vessel of three feet draught might pass down, but not one drawing five feet.

29. Are you well acquainted with the lower end of Lake St. Francis, on the north side of the lake, particularly near the place where the steam-boats now arrive and depart?—Yes.

30. Is there a sufficient depth of water within seven or eight miles of the place, and good anchorage?—There is plenty of water and an excellent bottom for anchorage.

31. Can boats and rafts arrive downwards at the Point, and boats proceed upwards at all hours of the night?—Yes, at any hour of the night.

32. Is the anchorage much exposed, and have you heard of any boats or rafts being wrecked in that vicinity?—The anchorage is good; I never heard of any vessels being wrecked there except rafts which were without anchors.

*Wednesday, 28th September 1842.*

THE Chairman laid before the Committee copies of certain correspondence between his Excellency the Governor-general and the Secretary of State for the Colonies, respecting the Beauharnois Canal, which he had received from his Excellency's Secretary.—(Appendix, No. 16.)

*William Roebuck, Esquire, called in; and Examined.*

*Answer to Question 1.*—I reside at Coteau du Lac, and am Superintendent of Pilots, and Salvage Agent for the St. Lawrence Inland Marine Assurance Company; I was educated at Woolwich as an engineer, and was draftsman to Lord Dalhousie for five years, I have no interest for or against the Beauharnois Canal.

33. Do you know the south shore near Hungry Bay, between M'Pherson's Point and seven miles above?—I do.

34. State your opinion as to the anchorage, and whether that shore affords a safe harbour for vessels lying there?—There is no anchorage; the harbour may be good, but there is no getting into it.

35. How deep a draught of water can be found between Hungry Bay and M'Pherson's Point, and what description of barge could navigate it?—I have frequently sounded it, but never found more than 8½ feet draught of water; where the channel is marked 690 feet wide on the plan, the difficulty is over; the real width of the channel above is not over 100 feet. It must be a very light barge to navigate it, not drawing over three feet water.

36. Could a vessel entering the river, within three miles of M'Pherson's Point, in case of the shift of the wind, anchor and remain in safety in any part of Hungry Bay?—A vessel cannot anchor in safety above the shoals.

37. Could an ordinary vessel, loaded or unloaded, get from M'Pherson's Point to the lake, unassisted by a tug-boat, unless in an easterly gale?—Certainly not, with her usual complement of men.

38. Could any complement of men, in a fresh wind from the west, south, or north point, of the compass,

compass, get a barge up, loaded or unloaded, from M'Pherson's Point to the Lake St. Francis?—They could not.

39. Can a barge from the west enter at M'Pherson's Point after or before daylight?—It would be impossible.

40. Could a barge drawing five feet find a passage to M'Pherson's Point, from the west?—I think not.

41. Could a barge go from the steam-boat landing at Coteau du Lac, across to M'Pherson's Point in ordinary wind?—No; it might with an east wind.

42. What is the set of the current, and what are the prevailing winds on the St. Lawrence; describe what you know on that subject?—The set of the current is from the south shore towards the northern entrance; it divides some distance above Coteau du Lac, and by far the greater part passes on the north side. The prevailing winds are from the west and north-west, with occasional southing.

43. Which would you call the lea shore of Lake St. Francis?—Hungry Bay.

44. Are there any dangers in going between Hungry Bay and M'Pherson's Point; and if so, in what do they consist?—There are great dangers, viz. from violent winds, a whole rake of 40 miles of lake; it is the most boisterous place on the River St. Lawrence; the surf running, when a northwest wind blows, a quarter of the height of the trees on Grosse Point, shoal water, rocky bottom, no anchorage, and a crooked channel.

45. How many channels are there for barges or rafts from Hungry Bay to M'Pherson's Point; and what sized boats or rafts (of what draught) could be navigated between those places?—For rafts or boats drawing three feet water there are two channels.

46. Are there three channels, of from 600 to 1,200 feet, on the south side, entering to M'Pherson's Point, of from 12 to 20 feet depth?—No, decidedly not.

47. Do you know any place on the St. Lawrence more dangerous than Hungry Bay and the vicinity of M'Pherson's Point, with relation to anchorage, harbourage, and heavy winds, from any point on the compass?—No place on the St. Lawrence is so bad in a gale of wind, except, perhaps, Lake St. Peter.

48. Will you look at the chart of the south channel, and say whether it is, in your opinion, correct; and if not so, in what respect do you consider it incorrect?—In the lower part of the channel, nearest to Isle aux Chats, it is incorrectly stated both in width and depth; the width of the channel being only 100 feet, with a depth of eight feet and a half, taken when the water was six inches higher than it is at present. The upper part of the channel is also incorrectly laid down, both in width and depth. Between Grosse Point and Isle aux Chats, there exist shoals, not laid down in the plan, which would prevent boats taking a direct course into the channel. I consider the plan incomplete, inasmuch as it does not lay down the set of the current. The depth of water on the centre shoal is stated to be much greater than it really is; I could get out of a boat and walk on the shoal for nearly half the length of it; the width and depth of water in the southernmost channel is also much less than therein stated.

49. By your channel of eight feet and a half, do you mean a practicable channel for barges propelled by wind or oars?—No, decidedly not; by a practicable channel, I mean a channel sufficient to correspond with a canal.

50. What is the depth of the practicable channel between Grosse Point and M'Pherson's Point?—Three feet.

51. Do you know the steam-boat landing, and Asslin's Wharf, at Coteau du Lac?—Perfectly well.

52. Can vessels get into Asslin's or the steam-boat landing at any hour of the night with perfect safety?—Generally, but in extreme cases it might be necessary to cast anchor.

53. Does the north shore afford good anchorage and safe harbourage?—Perfectly good anchorage is to be found all the way down from M'Laughlan's Point, above 30 miles above the landing place.

54. Should a strong wind from the east or west arise while vessels are lying at Asslin's or the Steam-boat Wharf, would either one or the other endanger the boat?—Never, with proper care.

55. How long have you been acquainted with the navigation of the river St. Lawrence?—Since the spring of 1823. I have been frequently down in boats, rafts, and canoes, on both sides of the river.

56. Is it possible, without an enormous expense, to make a channel by artificial means between Chartier's Point and Isle aux Chats?—It is not.

57. Did the committee understand you to say that, after you were inside of Chartier's Point, the surf would have no injurious effect?—Yes, a boat would there be beyond the force of the surf.

58. You state that you found no more than  $8\frac{1}{2}$  feet water in the channel laid down. Can you inform the committee whether this  $8\frac{1}{2}$  feet water was from rocks or shoals; and if rocks, of what extent; and if shoals, of what composed?—I should think it consisted of immense boulders, with loose stones.

59. Did you intend the committee to understand that there was a safe harbour and anchorage between Chartier's Point and M'Pherson's Point?—I do not know what the anchorage is, but a boat may be tied to a tree on the shore.

60. What is the reason that an anchor will not hold in the vicinity of, or above the shoals?—Because it is rocky bottom, and also from the immense swell and surf, and the violence of the winds.

61. Why could not a boat drawing five feet water find a channel up, when you say there is  $8\frac{1}{2}$  feet water?—Because the channel is so crooked and difficult to keep, and the sets of current so likely to drift a boat on to the shoals, either from loss of headway or making leeway; therefore I have chosen this light draught in case I should touch any point of the shoals; a boat of so small a size as to draw but three feet could be commanded better by the poles of the men, than a heavy packet like those suited to the present size of the canal.

62. Are you aware whether the height of water is affected by the winds, or not; if so, to what extent?—The height of water is affected by the winds; an east wind will lower the water in the rapids, and will raise the lake; when this wind shall abate there will be a rise in the rapids, corresponding with the fall. I surveyed the channel between Isle aux Chats and Grosse Point twice during a slight east wind.

63. Do you consider the eastern entrance to the canal as eligible for the purpose, that is, affording good entrance, good exit, shelter and anchorage?—To my personal knowledge it is unexceptionable, and I wish the other terminus was as good.

64. Would the placing the canal on the south side instead of the north, injure the value of property on the latter side; that is to say, at and in the neighbourhood of Coteau du Lac?—I think not; if I owned a farm there, I would give a large sum of money rather than have the canal pass through it; I should think it would lower its value 50 per cent.

65. Are you aware of the effect the making of the canal has had on the value of property at Cornwall?—I have no positive knowledge about it.

66. Would the placing the canal on the south side seriously affect the emoluments of the office of Mr. Simpson, the collector at Coteau du Lac?—I think it would not, for if the intercourse were removed to the other side, the collector would be removed with it.

67. Would the completion of the canal affect the interest of your brother, who is a pilot at Coteau du Lac?—I think not.

68. Can you give the committee any other information of the relative advantages of the two sides for the junction of the two lakes by a canal?—Pilots, as good as are now used for the Cedar Rapids, must be found to meet the boats a long distance up, on the south side, and conduct them through this intricate entrance to the canal. This will be dangerous at all times, and always inconvenient and expensive; dangerous from the surf, and want of good anchorage for the barges; inconvenient, from the uncertainty of the arrivals of boats; and expensive, from the necessary small craft, and hands to go to the boat having ever to be on the alert, and at wages which must come out of the merchant or forwarders, as at Quebec or other seaports. Most of all the men now employed on the river are well acquainted with the north side, and hardly any with the south, therefore much loss will occur before the necessary knowledge is obtained. The depth of water by the map of the Board of Works, now in their room, is not as much as is to be in the canal; and all must know that from 18 to 24 inches, at least, must be allowed for the plunge of the boat in a heavy wind; all this is ready at hand on the north side. On reflection, from having passed down on foot, to the contemplated entrances, the current is exceedingly swift by them, and boats would be apt to run past, as they do now at Lachine, where more damage is done getting into the canal than in all the route down, except at the Cedars. Nothing of this kind would happen at Coteau du Lac, the water being smooth, and without current of any consequence at the mouth of the canal at M'Intyre's Bay.

Should rafts arrive at the usual place of anchorage before descending the rapids, and a contrary wind spring up, they could still go down in the north canal, whereas no steamer ever could tow them to the mouth of the south canal; this would often take place in the fall, when rafts had been badly strained, and this alone would be a considerable source of revenue. On the north side there is a ravine, extending, as per plan of Mr. W. R. Casey,  $5\frac{1}{2}$  miles, which, by nature, forms a fine line if not a natural canal. I am aware that the south side presents, on the land, many facilities, but I have to learn that there is enough there to counterbalance this natural cut. Some objections have been urged to this line, as being the watercourse of a large tract of country, and that it would gradually fill up; but it is of so much greater depth than needed, that it will take a series of years before it could be filled so as to infringe upon the depth of water needed; and all superfluous or waste water can be carried away by means of aprons or slides, without injury to the works. It has been the custom to deride the military point of view that this canal should be run in, but since having read the despatch of the colonial secretary, I hope I may touch upon this without the usual taunts. Looking at it, therefore, in this light, the north shore presents incalculable advantages. In time of war, it would require a large army for the defence of the one on the south shore, and thereby paralyze a body of forces that would have to remain on the defensive, instead of being able to co-operate with the rest of the army in active service against the enemy. I am aware of the answer of his Excellency Sir Charles Bagot to the Vaudreuil address; but this kind and parental promise, however pleasing to our feelings, experience has taught us to know is not at all times feasible. In all the troubles of the late unfortunate times, no body of men ever crossed the St. Lawrence and returned with impunity; but whoever committed invasion or excesses on the south side of this river, generally escaped without punishment; added to this, so rapid a river as the St. Lawrence is, at all points of this canal, it becomes a strong defence of itself—boats could not be collected, or men assembled for its attack, without our knowledge; on the other hand any body of hunters or good woodsmen could be told to rendezvous at any point on the line of canal most assailable, commit what damage they thought proper, and return before daylight through the woods. I can pick out, from Ogdeensburgh to the line of this canal, from 200 to 300 capable of doing this. The canal being in the hands of an enemy, could enable him to assemble, concentrate and organize, any force of troops and flotilla, for an attack on Montreal, or to gain the command of the Lake St. Louis, and thereby cut off all communication with the Rideau, unless we had the naval ascendancy on that lake; whereas without a canal, no boat could descend the river without being subject to a fire all along the line of the river, as nothing like an armament can go down the south side from the dreadful rapids. On the north side there is always a fort at Coteau du Lac, containing troops for its defence, already built, without the expense of erecting one on the south. In saying this, let me not be understood that a canal on the north side would be any defence, but that on the south side it would weaken instead of strengthening our means.

*Hubert Sauve, dit La Plant, a Pilot, called in; and Examined.*

*Answer to Question No. 1.*—I live at Coteau du Lac. I have been for 23 years a pilot between Montreal and Cornwall; but my principal employment is between Cornwall and Coteau du Lac. I have no interest in the Beauharnois Canal.

*Ans. to Q. 15.*—Yes.

*Ans. to Q. 16.*—I think not, especially during the prevalence of certain winds.

*Ans. to Q. 17.*—I would not undertake to conduct a barge down drawing four feet.

*Ans. to Q. 18.*—No, on account of there being no shelter against prevailing winds.

*Ans. to Q. 19.*—Yes.

*Ans. to Q. 20.*—No.

*Ans. to Q. 21.*—No. I would not risk it.

*Ans. to Q. 22.*—No craft of any kind, however small, could safely go down at night.

*Ans.*

*Ans. to Q. 23.*—No, not at all.

*Ans. to Q. 24.*—Yes; Point M'Pherson is not very bad.

*Ans. to Q. 27.*—The depth of water is from eight to one foot and a half from Chartier's Point to the upper end of Isle aux Chats; there are holes of greater depth.

*Ans. to Q. 28.*—No, on account of the crooked direction of the channel, the force of the current, and the violence of the wind.

*Ans. to Q. 29.*—Yes, I know it intimately well.

*Ans. to Q. 30.*—Yes, there is a sufficiency of water, and excellent anchorage near the shore.

*Ans. to Q. 31.*—Yes, it is of every day occurrence.

*Ans. to Q. 32.*—The anchorage is good, and I never heard of any vessel or raft being wrecked there.

*Ques. 70.* Have you ever taken down barges through the rapid from Coteau du Lac to Lachine?—Before I was employed as a steam-boat pilot, I took down several batteaux and rafts.

71. Were you on board the steamer Neptune when she took the troops over to Beauharnois in 1838, and did she get aground at M'Pherson's Point or near it?—I was on board the Neptune: our intention was to go to M'Pherson's Point, but we could not get down there, I made two trips on that occasion; during the first the weather was rather calm; in the second I anchored the boat between Grosse Point and Chartier's Point; and while the troops were being landed, which occupied some time, a strong wind arose, and the anchor drifted, carrying the boat upon the shoals between Chartier's Point and Isle aux Chats, where she drifted from shoal to shoal; and while I was there a barge employed on the occasion was wrecked on the same shoals.

72. What water did she draw?—Three feet.

73. Why, if you desired to go to M'Pherson's Point, did you go into the bay, near Grosse Point, instead of following the raft or batteau channel?—There is no channel there for boats or rafts, that is, on the south side.

74. What is the direction of the current between Grosse Point and Isle aux Chats?—It takes a northerly direction.

Captain *Ashahel Whipple*, called in; and Examined.

*Answer to Question No. 1.*—I am proprietor of steam-boats and stages between Dickenson's Landing and Montreal; I reside in the latter place; I have no interest in the canal, but my business is altogether on the north shore.

*Ans. to Q. 33.*—I am tolerably well acquainted with it, having frequently landed there from a small boat.

*Ans. to Q. 34.*—I think that part of the lake is most exposed; it is very sandy, and shoal about the shore.

*Ans. to Q. 35.*—I think that, without deepening, it could not be navigated by a vessel drawing more than six or seven feet water; a vessel of that draught might accomplish it by following the deep water, but the channel is very crooked.

*Ans. to Q. 36.*—I think the anchorage is not good, and it is not sheltered; the bottom is sandy.

*Ans. to Q. 37.*—I think not.

*Ans. to Q. 38.*—I think not, unless the boat was so light that they could pole her up in-shore.

*Ans. to Q. 39.*—Perhaps not safely, without the assistance of a lighthouse.

*Ans. to Q. 40.*—I am not aware that it could.

*Ans. to Q. 41.*—I doubt it; the current is so strong that it is as much as a steam-boat can do to get across.

*Ans. to Q. 42.*—The current sets to the north; the prevailing winds are west, south-west, and north-west.

*Ans. to Q. 43.*—The south side.

*Ans. to Q. 46.*—I am not aware that there are three such channels, but I think there are not.

*Ans. to Q. 47.*—I think it is the most exposed part on that end of the lake.

*Ans. to Q. 48.*—I think there is a shoal above those on the plan, which is not laid down.

*Ans. to Q. 49.*—I do not conceive that there is, at present, a practicable channel.

*Ans. to Q. 51.*—Yes.

*Ans. to Q. 52.*—Steam-boats can come in at all hours of the night, but sailing craft depend on the wind.

*Ans. to Q. 53.*—It is.

*Ans. to Q. 54.*—No, not at all; it is sheltered from the east.

*Ans. to Q. 59.*—I do not think the anchorage very good, but below the shoals it is sheltered.

*Ans. to Q. 64.*—I am not aware that it will make much difference in the value of property.

*Ans. to Q. 65.*—I do not think the value of property has increased there in consequence of the canal, except at the entrance and exit.

*Ques. 75.* Do you own any real estate on the north shore, at Coteau du Lac, or between that place and the Cascades?—None, except a wharf and eight or nine acres of land.

76. Would the completion of the canal affect staging from the Cascades to Coteau du Lac?—I am not aware that it would.

77. Do you know of any of the rafts (to which you have alluded as being in Hungry Bay) having been broken up and wrecked by the winds?—I know that there have been a great number since I have been acquainted with that part of the lake.

78. Do you know what the shoals and points in the current opposite Isle aux Chats are composed of?—The shoals are rocky.

Dr. *John Joseph Loy*, called in; and Examined.

*Answer to Question No. 1.*—I reside at Coteau du Lac, where I have lived upwards of ten years as a practising physician. I have no interest either for or against the Beauharnois Canal.

*Ans. to Q. 33.*—Yes.

*Ans. to Q. 34.*—I am no engineer, and am not acquainted with the bottom; but I do not think the anchorage from Grosse Point above to be good, on account of the violence of the winds.

*Ans. to Q. 35.*—I do not think a barge carrying 200 barrels of flour could find a safe passage, as the channel is very crooked and the shoals almost lap each other.

*Ans. to Q. 36.*—By no means.

*Ans. to Q. 37.*—It could not; I was there myself about three weeks ago, in a small boat with four oars, and we were unable to row against the current, and had to pull in to the shore and tow the boat.

*Ans. to Q. 39.*—I should not think so; it would be a hazardous undertaking.

*Ans. to Q. 41.*—I do not think a heavy barge could do it, unassisted by a steamer.

*Ans. to Q. 42.*—The current sets in a northerly direction from Grosse Point towards Isle aux Chats; the prevailing winds are north-west and south-west.

*Ans. to Q. 43.*—The north shore.

*Ans. to Q. 44.*—I think I have already answered this question. The current is very crooked, and the shoals numerous; there is a shoal, not on the plan, which is right across the lower end of the channel, of five feet water, more or less; I did not sound this part of the channel, but I could see the rocks very plain.

*Ans. to Q. 45.*—The rafts which pass down that part of the river are principally of cord wood, and do not draw over three to three and a half feet water. I conceive there are only two channels.

*Ans. to Q. 46.*—No.

*Ans. to Q. 47.*—I do not; I consider it the most dangerous on the lake.

*Ans. to Q. 48.*—I have already pointed out the incorrectness of the chart in regard to the south channel, which I believe to be no channel at all; there are also shoals which are not mentioned, both above and below those laid down.

*Ans. to Q. 51.*—I do.

*Ans. to Q. 52.*—Since I have resided at Coteau du Lac they have come in at all hours of the night.

*Ans. to Q. 53.*—It does, below Point Moliere, Point M'Gee, and Point au Foine.

*Ans. to Q. 54.*—No, they are sheltered there.

*Ques. 79.* What is the rate of the current, in the quickest place, between Hungry Bay and M'Pherson's Point?—I consider the strongest part of the current to be at the lower end of Isle aux Chats; and have already stated that a boat with four oars could not stem it. I should suppose it to be upwards of three miles per hour.

*Ans. to Q. 64.*—I think not.

*Ans. to Q. 71.*—I was not on board of her, but I was in a boat in tow of her; the steamer grounded above Chartier's Point.

*Ans. to Q. 72.*—I cannot.

*Ques. 80.* Do you think a vessel with good anchors could ride in safety anywhere within three miles west of Grosse Point, on the south side, in ordinary gales of wind?—I think it would be dangerous to do so, on account of the heavy swells.

81. Are rafts frequently wrecked in that lake?—Yes: there was one wrecked a short time ago above Grosse Point, on the south shore.

82. Do you think if lights were placed on Grosse Point, Cat Island, or M'Pherson's Point, that boats could enter the south channel in the night?—I think not.

83. What do you think is generally the difference of time in the breaking up of the bourdage ice on the north and the south side (Coteau du Lac and Beauharnois) in the spring, and in the formation of the ice in the fall?—The channel on the north side is generally open later in the fall, and earlier in the spring than that on the south: I do not know what is the difference of time, but it is not great.

*Ans. to Q. 75.*—I own one quarter of an acre at Coteau du Lac.

Thursday, 29th September, 1842.

Mr. Allan Perry, called in; and Examined.

*Answer to Question 1.*—I have resided for upwards of 40 years at Coteau du Lac. I am a farmer and boat pilot. I have no interest for or against the canal.

*Ans. to Q. 33.*—Yes, I am acquainted with that part of the lake, having been up and down several times.

*Ans. to Q. 34.*—Vessels may anchor there in calm weather, but in a gale of wind it is almost impossible.

*Ans. to Q. 36.*—Not with safety.

*Ans. to Q. 38.*—No, they cannot.

*Ans. to Q. 39.*—It cannot.

*Ans. to Q. 40.*—It might, in calm weather, by following the crooks of the channel among the shoals, but in a high wind it would be impossible.

*Ans. to Q. 42.*—Towards Chartier's, or Knight's Point, on the Beauharnois shore. The prevailing winds are south-west, north, and north-west.

*Ans. to Q. 43.*—The south shore.

*Ans. to Q. 46.*—No, they cannot be found.

*Ans. to Q. 51.*—I do.

*Ans. to Q. 52.*—It has been done frequently.

*Ans. to Q. 53.*—It does.

*Ans. to Q. 54.*—Not in the least.

*Ans. to Q. 59.*—Below the shoals a boat may anchor, but the current is strong.

*Ans. to Q. 78.*—Rocky shoals.

*Ans. to Q. 62.*—An east wind will lower the rapids five or six inches, and a west wind will raise them.

*Ans. to Q. 60.*—Because of the heavy winds and bad anchorage.

*Ans. to Q. 75.*—I do; I have a farm there.

*Ans. to Q. 72.*—Probably from eight to ten miles per hour, off Chartier's Point, running northerly. I have poled a canoe up, but I do not think I could paddle her.

*Ans. to Q. 83.*—The navigation is open about three weeks later in the fall, and a fortnight earlier in the spring, on the north side than on the south.

## PUBLIC WORKS (CANADA).

115

Mr. *Joseph Asslin*, called in; and Examined.

*Answer to Question 1.*—I was born at Coteau du Lac, and have resided there all my life; I am 28 years of age. I have no interest for or against the canal.

*Ans. to Q. 33.*—I know it pretty well.

*Ans. to Q. 34.*—There is no good anchorage or harbourage.

*Ans. to Q. 36.*—It is impossible.

*Ans. to Q. 38.*—A light canoe, with seven or eight men, might paddle up; I have often paddled up a small canoe, with four men.

*Ans. to Q. 42.*—Were a boat set adrift at Grosse Point, it would pass between Isle aux Chat's and Chartier's Point. The prevailing winds are north, north-west, and south-west.

*Ans. to Q. 46.*—Not to my knowledge.

*Ques. 84.* Do you own the wharf and property known as Asslin's wharf, at Coteau du Lac?—I do.

85. Can you tell the committee why it is that all your neighbours are so opposed to the canal being on the south side?—Because they are opposed to a misapplication of public money.

Mr. *Robert M<sup>c</sup>Intyre*, called in; and Examined.

*Answer to Question 1.*—I have lived for the last 11 years at Coteau du Lac, and have been engaged in lumbering and farming. I have no interest in the construction of the canal on the south side, but would wish, both on public and private grounds, to have it on the north shore.

*Ans. to Q. 33.*—I do.

*Ans. to Q. 34.*—From Grosse Point downwards there is no safe anchorage; above Grosse Point there may be anchorage, but it is very much exposed to the rake of the lake, bottom sandy; below Grosse Point the general character of the bottom is rocky.

*Ans. to Q. 36.*—I should think it would be very much exposed, and in great danger.

*Ans. to Q. 39.*—It is quite out of the question.

*Ans. to Q. 43.*—The north shore, because the prevailing winds are northerly; I have been frequently obliged to lie on the north shore for shelter, for fear of being blown into the dangers of the south.

*Ans. to Q. 46.*—I do not think there is *one* channel, and I doubt whether the whole width, between Isle aux Chats and the main land, would amount to so much.

*Ans. to Q. 48.*—There is a shoal, below those down on the plan, which is not laid down; there is another above, between Grosse Point and Isle aux Chats, of great size, running northerly, also omitted; I have frequently sounded it, and found little over three feet water.

*Ans. to Q. 51.*—I do.

*Ans. to Q. 52.*—They come in at all hours of the night.

*Ans. to Q. 53.*—It does.

*Ans. to Q. 54.*—No.

*Ans. to Q. 82.*—I should consider it almost impossible to do it, even in day-time, with a fair wind; two out of twenty-five vessels could not get in with any wind.

*Ques. 86.* Is it practicable to remove the obstructions at present existing in those channels?—It might be done, at a large outlay.

87. Have you had any opportunity of estimating the expense of removing those obstructions?—I have not.

88. If so, what, in your opinion, would be the cost of deepening the channel to nine feet water?—(Inapplicable.)

*Ans. to Q. 75.*—I own property at Coteau du Lac.

*Ans. to Q. 78.*—Large rocks.

*Ans. to Q. 79.*—I consider the quickest part of the rapid to be opposite the upper end of Grand Island, where the current is full three miles per hour, perhaps four.

Friday, 30th September, 1842.

W. R. Casey, Esq., Civil Engineer, called in; and Examined.

*Ans. to Q. 1.*—I reside at New York, and have practised as a Civil Engineer for the last 12 years.

*Ans. to Ques. 43.*—The south or east side. I speak from experience acquired on the south side of the St. Lawrence, at Laprairie, in 1834, 1835 and 1836.

*Ques. 89.* Can a good route be obtained by keeping on the table land to the Cascades?—There can; a very good route.

90. Having seen the documents from the Board of Works relating to this canal, are you prepared to give any opinion as to the comparative cost on the two sides?—I have examined all the documents at present before the Committee, and see nothing in them to warrant the assumption, that an equally efficient canal can be made cheaper on the south side than on the north.

91. Have you any remarks to offer, or suggestions to make, for the information of the Committee, on any of the documents furnished by the Board of Works?—In Despatch No. 157, from the Governor-general to Lord Stanley, there is a comparison of the two routes, in which he states the length of canal on the north side at 15 miles, and that on the south at 12 miles. I object to this statement; because the canal on the south side, though the shortest, terminates at the foot of a strong current, while the canal on the north side terminates in the comparatively still water of Lake St. Francis. The despatch states, further, that the aqueducts on the south side will be only 10 feet in width, while those on the north will be 50; my opinion is, that the width of those on the north side will only require to be 15 feet. It is also stated in the despatch, that the excavation on both sides is clay, with the exception of nearly a mile of rock at the lower entrance; and

further, that there is a ravine extending nearly half the length of the northern route; whereas the fact is, that if the ravine route on the north side be taken, the rock is avoided, except the rock under water, which is common to the termination of all the routes. With reference to the wash of the ravine, the canal will require cleaning out 10 times oftener than the ravine, owing to the great additional depth and width.

92. Have you examined the western terminus of the canal, between Isle aux Chats and the main shore?—I have examined it, but not thoroughly.

93. To what extent, and with what result?—In examining the channel indicated by the buoys, on the south side, I searched for a shoal place, and found the shoalest to be nine feet water.

94. Does it form a practicable entrance for vessels which can navigate the canal?—It does not; in the canal there is nine feet in the sill, and 10 feet in depth; in the river, the depth should be 11 feet in the channel to correspond.

95. Can the shoals be easily removed?—I think not; but I cannot speak decidedly, as I have not thoroughly examined it. I do not think that removing the shoals is the proper way of improving the navigation, but that the canal should be carried to some point several miles higher up; by removing the obstructions, the current would be increased.

96. Could vessels get in or out of the canal on the south side, without the assistance of tug-boats, or fair winds?—Not with the ordinary crew.

97. Do you consider a knowledge of the depth of water at the termini indispensable, before deciding on the route of the canal?—Most decidedly; because on that hinges the length of the canal, and on that again, the cost.

98. Which side of the river affords the greater facility for navigation?—The north side, at the lower end of Lake St. Francis, on account of the better channels, and also from being on the windward side.

99. Would a wind necessary to take a vessel into either entrance be favourable for the departure of that vessel from the canal on the south side?—I should think it would.

100. If steam-boats are necessary to the Beauharnois side, what is the objection to the river plan recommended by Mr. Mills?—The difficulty of construction, on account of much under-water work, is the only objection that I am aware of.

101. How many rivers are there on the north side, and how wide, and how are they to be crossed?—There are three rivers, viz. the River De l'Isle, the River Rouge, and the River à la Graisse; the first must be crossed by a dam; the two others may be crossed by culverts, or aqueducts.

102. Are there rivers of equal extent on the south side?—I cannot answer that question at present.

103. What was the nature of the shoals you examined between Isle aux Chats and Chartier's Point?—Stoney, covered with large boulders; the bottom I suppose to be rock, from its appearance at Isle aux Chats.

*Ans. to Q. 48.*—I believe the north channel to be stated correctly, but I know nothing of the others; the soundings, as far as I examined on the north channel, near Isle aux Chats, I found also correct; but I could not state positively as to the correctness of the plan without an examination which would occupy three weeks.

*Ques. 104.* Will the southernmost channel make a good entrance to the canal?—If the plan be correct, it will make a good entrance for vessels drawing eight feet water.

105. Will a north wind be a leading wind outwards from the terminus of the canal, through the southernmost passage?—A good sailing vessel, with a strong wind can go out.

106. Will you state to the committee your opinion of the relative merits of the eastern termini on both sides of the Lake St. Louis, touching the expense of making the entrance, and the period of formation and breaking up of the ice?—Of that I have no knowledge, personally.

107. Are you acquainted with the country between Lakes St. Francis and St. Louis; if so, state generally your opinion of the comparative engineering merits of the two sides, with a view to the connexion of those lakes by a canal?—I am well acquainted with the land on the north side, and have a general acquaintance with the ground on the south side. The north side admits of river and inland routes; the south side of inland routes only. Admitting the 12 miles of canal on the south side to be 50,000*l.* cheaper than the 15 miles of canal on the north side, there must be deducted from this sum the cost of the works between the canal and the lake. I have already declined giving any estimate of the cost of these works; but it is easy to show that it cannot be much less than 40,000*l.* supposing the channel free from rock. The expenses, repairs and renewals of a tug-boat would not be less than 1,500*l.* per annum, or five per cent. on a capital of 30,000*l.* to which must be added the 5,000*l.* for removing the shoals, in all 35,000*l.* Two miles of the

per mile.  
£. 7,700  
-     -     -  
£. 7,326  
£. 15,026

\* 123,200 c. yds. embankment, at 1*s.* 3*d.*  
19,536     "     wall,     at 7*s.* 6*d.*

ordinary tow-path, 15 feet high, with slope wall on both sides, will cost at least 30,000*l.*\*; and adding 5,000*l.* as above, we have 35,000*l.* besides the additional cost of towing against the current, an objection which increases with the business. If the bed of the river to be excavated be solid rock, the difference will be in favour of the north side; but whether rock or not, I feel very safe in repeating the opinion, that judging from the information now before me, I see nothing to warrant the assumption that an equally efficient canal can be made more cheaply on the south than on the northside.

Mr. Joachin Wattier, dit Lanoix, called in; and Examined.

*Ans. to Q. 1.*—I am a merchant, residing at Coteau du Lac, and have no interest for or against the canal.

*Ques. 108.* Would the same wind that takes a vessel in the canal, take her out?—There is no wind which will take a vessel into the canal that will not take her out.

109. On which side of the river does the ice form earliest, and last longest?—At the western extremity there is no difference; if the eastern termination of the canal is conducted to Point à Faucilles, it is at that point the navigation is opened earliest in the spring.

110. If

## PUBLIC WORKS (CANADA).

117

110. If there were a canal completed on the south side, and you were conducting a boat down from Cornwall to Montreal, what course would you take down the lake, and how near Coteau du Lac would you necessarily have to go?—There is no necessity for a vessel going down the river to pass within a mile and a half of Coteau du Lac, but it is necessary in passing Knight's Point, to give it a wide berth as it extends two and a half or three miles up the lake; and since the establishment of the navigation of the St. Lawrence, boats and rafts have not attempted to go down the south channel, and any carried into that channel have been generally given up as lost.

*Monday, 3d October, 1842.*

Mr. William Bowron, called in; and Examined.

*Ans. to Ques. 1.*—I have lived for the last 20 years at Huntingdon, and am a farmer and miller. I have no particular interest as to the location of the canal.

*Ques. 111.* Are you particularly acquainted with the south shore at the lower end of Lake St. Francis, and have you ever gone down the channel between Isle aux Chats and the main land?—I am very well acquainted with the shores, but I never went down the channel between Isle aux Chats and the main land.

112. What is the prevailing wind in that neighbourhood during the summer season?—Generally down the stream, or south-west.

113. Do you know the channel to the western entrance of the canal; and do you consider it a good practicable entrance for all the purposes of the canal?—I cannot state from personal knowledge.

114. Would the winds, from a quarter serving vessels or boats up and down the lakes, also serve boats passing through the canal?—I should think they would; the canal is almost in a line with the channel of the river and the lake.

115. Will you state to the Committee the difference of time in the formation and breaking up of the ice on the north and south sides of the river, at both entrances of the canal?—I cannot state from personal information.

116. Will you state to the Committee the probable effect on the value of land, on either side of the St. Lawrence, that the canal may pass; that is, in its immediate neighbourhood?—I think it would enhance the value of land at the entrance and terminus of the canal materially, more particularly at the western entrance; I think that a lot at present worth 100 *l.* would then be worth 1,000 *l.*

*Tuesday, 4th October, 1842.*

Mr. W. R. Casey, again called in; and Examined.

117. You have informed the Committee that, in order to obtain a good entrance to the canal, on the south side of the St. Lawrence, it must be carried into slack water; would a dam placed across the channel, at M'Pherson's Point, effect that object; if so, what would, in your opinion, be the cost of the same?—With reference to the effect of the proposed dams, I have to observe, that the additional depth of water thereby secured would be greater at the mouth of the canal, where least, if at all required, and least at the shoals ahead of the inclined plane, were most wanted. The removal of the shoals would be still necessary; and as the river falls fast below M'Pherson's Point, "the head and fall" of the dam, or rather dyke (for no water must pass over,) would be greatly increased, several, perhaps many feet, thus requiring additional caution in the construction. Assuming the dimensions to be 2,500 feet in length, and average height 15 feet, the cost would range from 20,000 *l.* to 40,000 *l.*, according to the style of the work, difficulties encountered, &c. To this must be added the cost of removing the shoals. On the other hand, the depth of water on the shoals would be somewhat increased, and the quantity of excavation correspondingly reduced; a narrower channel, without current, would answer the purpose, turns would be less objectionable; and unless the current, which now sets northward from Knight's Point, should be materially increased, the effect would be every way advantageous. Taking, however, into consideration that the cost would equal, if not exceed, that of a canal, that the advantages to the trade would be less, and that there is always some risk with such dykes, I am only confirmed in my previous opinion.

118. Would a tow-path from M'Pherson's Point, in your opinion, obviate the disadvantage of the entrance being placed there; and if so, what would be the probable cost thereof, and the yearly expense of towage into slack water?—A tow-path could scarcely be carried above Chartier's Point; hence it would only be of partial benefit. I am unable to answer the second part of the question.

119. What would, in your opinion, be the probable expense of continuing the canal to a point in the lake, which would afford a good entrance?—I cannot answer that question.

120. If the canal were continued to that point, would the entrance, with reference to depth of water, anchorage, and harbourage, be as good as may be obtained on the north shore, at or near the present Steam-boat wharf?

Upon the above question being put, Mr. Casey answered it in part, but was desired by the Committee to take it with him and consider it; to which course of proceeding Mr. Dunscombe (a Member of the Committee) objected, and desired that his objection might be recorded. The answer was subsequently given in writing, as follows:—

This is already answered, in as far as I feel myself warranted in giving my opinion.

*Charles De Witt, Esq. called in; and Examined.*

*Answer to Question 1.*—I have resided for the last two years at Godmanchester, and have been engaged in navigating Lake St. Louis since 1833. I am not aware that I have any interest in the canal, except as regards the public welfare.

*Ans. to Q. 2.*—I am.

*Ans. to Q. 5.*—I do.

*Ans. to Q. 9.*—They can in calm weather, or with a favourable wind.

*Ans. to Q. 11.*—I have passed up and down repeatedly in a log canoe drawing from three to six inches water; I do not know the exact depth of water, but I never remarked any shoal in the channel that would obstruct the navigation; I have always kept close in to Knight's Point.

*Ans. to Q. 16.*—I believe so; I have been down myself in a canoe, and from the observations I took, and the apparent depth of the water, I think that there would be no difficulty in passing down.

*Ans. to Q. 18.*—I cannot say.

*Ans. to Q. 20.*—I think so.

*Ans. to Q. 21.*—I think it is.

*Ans. to Q. 24.*—I believe it could.

*Ans. to Q. 27.*—I cannot say.

*Ans. to Q. 28.*—I believe that a barge drawing more than five feet could do so; but I have never taken the soundings myself.

*Ans. to Q. 29.*—Not particularly.

*Ans. to Q. 34.*—With some winds the harbourage would be good, but with a south, or south-west wind, it would be exposed.

*Ans. to Q. 37.*—It could, with an east, or north-east wind.

*Ans. to Q. 43.*—The lee shore depends on which way the wind blows; the prevailing wind being south-west, I consider the north to be the lee shore.

*Ans. to Q. 112.*—Answered in the preceding reply.

*Ans. to Q. 48.*—As far as I am able to judge, it is nearly correct.

*Ans. to Q. 63.*—I think it is a good deal exposed to a north-east wind; the entrance is good.

*Ans. to Q. 64.*—I think it might, but cannot say exactly.

*Ans. to Q. 76.*—I do not know but it would, but cannot say precisely.

*Ans. to Q. 83.*—I think there is very little difference between Coteau du Lac and Beauharnois in that respect, but at the east entrance, at the Cascades, the navigation is open two or three weeks longer on the Beauharnois side in the fall, and opens two or three weeks earlier in the spring.

*Ans. to Q. 104.*—I should think it would.

*Ans. to Q. 108.*—Certainly.

*Ans. to Q. 113.*—I do.

*Ans. to Q. 114.*—I should think they would.

*Ans. to Q. 116.*—I think some parts would be benefited, whilst others would be injured.

Wednesday, 5th October, 1842.

*Hubert Sauve, dit La Plant, again called in; and Examined.*

*Answer to Question 110.*—From Cornwall to Grosse Point, a vessel can come down in a direct line.

*Ques. 121.* Would the shoal which is not laid down at the upper end of the channel prevent you getting into the south channel?—No; by coming to Grosse Point the shoal is avoided.

*George Cranford, Esq. called in; and Examined.*

*Answer to Question 1.*—I live at Cornwall, and am a contractor on the public works. I have no interest in the canal.

*Ques. 122.* Have you ever examined the route of the Beauharnois Canal?—I have examined the land route.

123. Have you ever made any calculations as to the practicability and expense of deepening and preparing a channel from Grosse Point to M'Pherson's Point, with ten feet water; and if so, can you inform the Committee of your views, and the amount of such probable expense?—The only calculations I made were from the plan of Mr. Rubidge; assuming the quantities in the engineer's report to be correct, and adding 100 yards of excavation for contingencies, I was induced to make a calculation by an old friend who is also a contractor, and who had applied to me to join him in undertaking to deepen the channel, he having the apparatus necessary for the purpose. I consider that the channel could be increased to 300 feet in width and 10 in depth for 7,000 £, provided there be no solid rock; and I would undertake in that case to do it for that sum.

124. Have you any idea of the comparative expense of lockage on the north or south shore, at Beauharnois and Coteau du Lac?—There are five locks at the lower end of the southern route which will be in rock, and one in clay; supposing the same number to be required on the north side, and all in clay, the locks on the south would yet be cheaper, because on that side the backing stone would be on the spot, which would cause a saving of at least 1,000 £ a lock. I think also that an additional 1,000 £ will be saved by having the locks located in rock instead of clay, which will prevent the necessity of having any work at the bottom of the lock.

125. Are you related to any of the persons employed under the Board of Works, and if so, to whom?—Mr. Keefer, the engineer, is my son-in-law.

126. Are you a contractor under the Board of Works, and if so, where?—I am a contractor on the canal at St. Ann's, and at Cornwall; the former is by contract, and the latter under a new arrangement based on an old contract.

127. Have you any work contracted for unfinished, or if finished, not yet received by the Board of Works?—I have, finished and unfinished, and none of it yet received by the Board of Works.

128. You say you could remove the shoals provided they are not of solid rock; do you know of what the foundation of Isle aux Chats is composed?—I do not.

*Thomas A. Begley, Esq. Secretary to the Board of Works, called in; and Examined.*

*Answer to Question 1.*—I am living at Kingston; am secretary to the Board of Works, and have been so ever since the union of the Canadas.

*Ques. 129.* Are the daily proceedings of the Board of Works entered in the minutes?—The Board have no daily meetings, the president being sometimes absent for a month.

130. Are

130. Are the proceedings of the Board entered in a book?—There are proceedings entered in a minute-book.

131. Are the decisions of the Board on each separate work entered, with the reasons for such decisions?—Not always.

132. Produce the book in which the entries or proceedings of the Board of Works are entered. (*Witness produced the minute-book, instructions book, and reports.*)

133. Inform the committee what surveys and estimates were before the Board when it came to the resolution of placing the canal on the south side of the river?—The Board of Works could not resolve to place the canal where the chose; they could only recommend: (See 4 & 5 Vict. cap. 38, sec. 14.) It was the duty of the executive to determine, and the Board to act on the authority received. The surveys and estimates in possession of the Board of Works, previous to their recommending the construction of the canal to connect Lake St. Francis with Lake St. Louis, on the south side of the river, were

Messrs. Stevenson's and Trudeau's, of the south side, } Received in October 1839.  
Mr. Baird's, of the south side - - - - - }

Mr. Mill's, of the north side, in the Journals of the Assembly.

Colonel Phillpotts', received in 1841.

Mr. Tate's, of the south side - - - - - } Received in the winter and

Mr. Keefer's, of the north and south sides - - - } spring of 1842.

Mr. Thompson's charts of survey - - - - - } Received in November 1840.  
Mr. La Rue's - ditto - ditto - - - - - }

The Board likewise acquired a great deal of information verbally from Mr. Keefer; that gentleman having become intimately acquainted with the north side while assisting Mr. Mills in his surveys.

134. Show the committee the entry of the proceedings of the Board when they determined to adopt the line on the south side of the river?—I am not aware that there are any entries in the books of the Board except instructions.

135. Are entries made in the books without your knowledge?—No.

136. Are minutes made of the meetings and proceedings of the Board; and if so, will you lay before the committee an extract of the entries which relate to the adoption of the south side of the St. Lawrence in place of the north, for the canal to avoid the rapids between lakes St. Francis and St. Louis?—I am not aware that the Board of works ever contemplated making a canal on the north side of the St. Lawrence to avoid the rapids alluded to, since the question was first referred to them on the 12th October 1839; from the information from time to time acquired, they always considered the south side the best and least expensive route; but neither at the time nor since their determination to finally recommend the canal, has there been any minute recorded of a meeting of the Board for the purpose referred to.

Mr. W. R. Casey, again called in; and Examined.

137. Did you run your level over the line marked on the plan?—I did; the line in the ravine is winding, and I did not take the courses by the compass.

138. Did you take soundings in M'Intyre's Bay, and from thence out into the lake; if so, where is the chart?—I sounded out for about 400 feet, and found 10 feet water. I made no chart.

139. Did you examine the soil, and did you discover any rock?—I examined the soil by means of the ravines and wells, and found rock at French's Rift, about a mile and a half from the steam-boat landing at Coteau du Lac; I also found rock in the ravine, about a mile from the Ottawa.

140. Did you take soundings about the mouth of the Quinchean; and if so, where are they?—I did not.

141. Where do you terminate the canal on the Ottawa River?—At the Military Locks near the steam-boat landing.

142. How much excavation is there under water, and what portion of it is rock?—I cannot answer that question.

143. Do you construct any works to defend your river bank against the ice and current in the Ottawa?—Yes; I allowed for a protection-wall in the estimate.

144. What length of reach have you from the mouth of the Quinchean to the end of the canal, and what sum have you set down for pumping it?—Four thousand feet. I have allowed 7,400 £. for the embankment and protection-wall, from the locks to the mouth of the ravine. I have not estimated for the coffer-dam and pumping, but consider that the expense will be the same on both sides.

145. Did you take the bearings of the ravine, and is it laid down in your plan from them?—I did not.

146. Did you make any allowance for waste weirs in your estimate?—I did not, supposing them the same on both sides.

147. Where is your guard lock?—At M'Intyre's Bay.

148. Why did you leave out the calculations for waste-weirs, ditching, grubbing and clearing, fencing, toll-collector's houses, lock-houses, bridge-houses, damages, or compensation for bridges?—Because I supposed that, with the exception of the damages, they could not materially differ. I can give no opinion as to the amount of damages to property on either side. I did not attempt to make an estimate of the whole of the works; it would take three months to do so.

Charles Manuel, Esq. called in; and Examined.

Answer to Question 1.—I have resided for 26 years at Beauharnois, and am a surveyor. I have no interest in the canal.

Ans. to Q. 2.—I am.

Ans. to Q. 5.—I do.

Ans. to Q. 11.—I have, in a canoe. I went with Mr. Tate as an assistant, and expected to give evidence. I took soundings across direct from Chartier's Point to Isle aux Chats and other lines below.

below. I let my canoe drift with the current from the channel half way between Grosse Point and Isle aux Chats; it drifted into the south channel, and there I found the following soundings, viz.: 21, 19, 20, 15, 12, 11, 11, between the shoals; below the shoals, 21, 21, 30, 14. We sounded with a sounding line while the canoe was drifting.

*Ans. to Q. 16.*—Yes.

*Ans. to Q. 17.*—With a guide I could take a boat of any size through the battures.

*Ans. to Q. 24.*—Yes; the situation is sheltered by Isle aux Chats.

*Ans. to Q. 29.* Not particularly, having only been there two or three times, and having never sounded.

*Ans. to Q. 44.*—Vessels coming down the river leave Hungry Bay six miles to theright; they have no business near it.

*Ans. to Q. 48.*—I think the shoals are laid down larger than they really are; I would myself undertake to remove them.

*Ans. to Q. 59.*—Yes; the current is about two miles and a half an hour, from actual measurement, which I ascertained by putting a log of wood in the water, and measuring its speed on the land. The bottom is good.

*Ans. to Q. 63.*—It may be made very safe by art.

*Ans. to Q. 78.*—The head of the shoals consists of large boulders (not rock); then come smaller stones, and then sand.

*Ans. to Q. 83.*—With respect to the upper end of the canal, I can say nothing; at the lower end, the ice leaves Beauharnois in the spring 10 or 15 days earlier than the Cascades, and forms earlier at the Cascades in the fall.

*Ans. to Q. 98.*—Yes; they can pole up at any time.

*Ans. to Q. 104.*—Yes.

*Ans. to Q. 112.*—I cannot say.

*Ques. 149.* You state that you ascertained the depth of the channel by soundings; how often in a minute did you sound?—About every three English chains of 66 feet.

*150.* You state that barges can go down through the battures; did you ever see one go down?—I never saw one go down; but I have seen small wood barges on the south shore, old Durham boats.

*Ans. to Q. 128.*—I cannot say what the foundation is, but there are large boulders round the island.

*Resolved,* That the chairman do make application to the acting clerk of the Executive Council for extracts of any proceedings on the minute-book of the council, relating to the Beauharnois Canal.

*Pierre Le Duc, Senior, called in; and Examined.*

*Ans. to Ques. 1.*—I live at St. Timothy, opposite the cedars. I am a farmer, and have been a pilot 30 years. I have no interest respecting the canal.

*Ans. to Ques. 2.*—I am.

*Ans. to Ques. 5.*—I know it well.

*Ans. to Ques. 11.*—I pass them three or four times a week. I have taken several rafts down the river, from the upper part opposite Grosse Point, and from Hungry Bay, and went down the south channel; the last raft I took down only two or three weeks ago. I consider there is no more danger there during a storm, than in any other part. I have often been there with a raft in a strong wind. I was one of the party who sounded the shoals, and we in no place found less than  $8\frac{1}{2}$  feet water.

*Ques. 151.* Would you undertake tomorrow to take a steam-boat, drawing eight feet water, down the south channel, and be responsible for damages, if you wrecked it?—If the channel were marked with buoys, I would do so.

*Ans. to Q. 24.*—It can, being sheltered from wind by Isle aux Chats.

*Ques. 152.* You have said that you would take down a steam-boat, drawing eight feet; would you consider it equally safe for a vessel under sail, of the same draught?—I should, if the wind were favourable.

*Ans. to Q. 63.*—There could not be a better.

*Ans. to Q. 114.*—Of course.

*Ans. to Q. 83.*—The difference is three weeks in favour of the south shore, both in the spring and fall.

*Ques. 153.* Do you think a vessel could hold her anchors near, and within six miles of Grosse Point, on the south side, in a north, or north-west, or north-east wind, as well, and with as much safety, as a vessel could lie or hold her anchors on the north side in a south, south-east, or south-west wind?—I think a vessel could hold her anchors as well on one side as the other. I have staked rafts there myself in safety.

*Pierre Le Duc, Junior, called in; and Examined.*

*Ans. to Ques. 1.*—I am a farmer, and reside at St. Timothy; I am not a pilot, but have been employed by engineers on the river.

*Ans. to Q. 2.*—I am.

*Ans. to Q. 5.*—Yes.

*Ans. to Q. 11.*—I have passed down with canoes and rafts, and also in company with the engineers. I found, by sounding, 11 feet of water, an acre and a half from the shoal. I let a canoe float from the centre of the water, and it floated down the south channel; I there found no less than  $8\frac{1}{2}$  feet, and at other places lower down, from 11 to 20 feet. From what I know of the channel, I consider that it is good and safe for large barges; if the persons on board the steamer Neptune, when she grounded, had kept the channel, they could have gone down in safety.

*Ans. to Q. 17.*—I might take down a barge drawing eight feet water.

*Ans. to Q. 104.*—It could not be excelled.

*Ans. to Q. 114.*—Certainly.

*Ans. to Q. 63.*—Yes.

*Ans.*

*Ans. to Q. 24.—Yes.*

*Ans. to Q. 83.—*At the eastern entrance of the canal there is a difference in the breaking up of the ice of from 15 days to 3 weeks in favour of the south side; at the western, both sides are about equal; there is the same difference in the formation of the ice in the fall.

*Charles La Rocque, Esq. called in; and Examined.*

*Ans. to Ques. 1.—*I reside at Riviere St. Louis, near St. Timothy. I am a merchant, and have no interest in the Beauharnois Canal.

*Ans. to Q. 2.—Yes.*

*Ans. to Q. 5.—Yes.*

*Ans. to Q. 11.—*I have, in a barge, drawing four feet water, and I found it to be a practicable channel.

*Ans. to Q. 17.—*I cannot say, never having sounded.

*Ans. to Q. 104.—*From the appearance of the ripples on the water, I should think that a very eligible channel might be found there.

*Ans. to Q. 24.—Yes.*

*Ans. to Q. 63.—*It is a most excellent entrance.

*Ans. to Q. 83.—*I cannot speak respecting the western entrance; at the other extremity there is a difference of from 10 to 15 days in favour of the south side in the spring.

*Ans. to Q. 114.—*Certainly.

The chairman laid before the committee a letter which he had received from the acting clerk of the Executive Council, with a copy of a report of a committee thereof, relative to the extension of public improvements.—(Appendix, No. 24.)

Also, a letter which he had received from the Secretary of the Board of Works, respecting the detention of witnesses for cross-examination by the President of the Board.—(Appendix, No. 25.)

*Thursday, 6th October, 1842.*

*Solomon Y. Chesley, Esq. a Member of the House, called in; and Examined.*

*Ans. to Ques. 1.—*I am a Member of the Legislative Assembly for the town of Cornwall, where I have lived for 42 years.

*Ques. 154.* Have you personally examined the entrance to the Beauharnois Canal, between Grosse Point and Isle aux Chats; and if so, describe it?—I have, on two several occasions during the past summer. I found the channel exceedingly crooked, with a speed of current averaging, in my opinion, three miles an hour; I found in the mouth of it what I conceive to be seven distinct shoals, and innumerable large boulders on and between them. In that which was represented by the engineers as the middle channel, and indicated by buoys, I found an angle, bearing at least 40 degrees to the north, running over from above Chartier's Point, nearly in the direction of Isle aux Chats. There is a large shoal which appears to me to intersect the channel, and which is not laid down on Mr. Rubidge's plan.

155. Do you know how wide it is from Grosse Point to the shoal, which the committee understands you to say is not properly laid down?—As near as I could judge, I should think it to be about a mile across from Grosse Point to Isle aux Chats; the southern extremity of the shoal is about a third of a mile from Grosse Point; it may be more. I think it lies just where a boat would cross in coming down the lake to that arm of the river. I also consider the shoal exceedingly dangerous, from being hidden; and the strong current that sets in from Hungry Bay, together with the south-west wind, would render it very dangerous for a boat to get in; I do not, however, think that the prevailing wind; I think that part of the river the most exposed to the prevailing westerly winds of any under my knowledge. I found the southernmost point of the shoal the most shallow; in several places there was not more than three feet water.

*Ans. to Q. 48.—*I do not consider it correct; it does not represent all the shoals I found there. I found, in not less than 40 places, a depth not exceeding  $3\frac{1}{2}$  feet, while I see but two such places indicated on the plan. On the shoal intersecting the uppermost line of soundings, in place of eight feet, as marked thereon, I found a depth of water ranging from  $3\frac{1}{2}$  to 9 feet. Leading from Chartier's Point to the southernmost red line, I followed a shoal, in the shape of a crescent, on which I found  $3\frac{1}{2}$  feet in several places. In the centre channel I found a flat bottom, with  $8\frac{1}{2}$  feet water, as low down as the bend described in my former answer.

*Ques. 156.* You say you had no means of measuring distances; what means had you of taking the depth of water; had you a sounding line; if so, did you keep any note book of your soundings, and can you furnish it to the committee?—I took an iron bar, five-eighths of an inch square, marked in feet with white paint, with two wooden measures, 12 feet in length, also divided off into feet; the boat was under my own direction. The first time I took soundings we crossed the channel at five different points; the second time, the middle channel being then indicated by buoys, we went to the head, and followed it downwards; we landed on Isle aux Chats, and followed the deepest water we could find, upwards to the uppermost shoal on the north side of the channel indicated on the plan; we followed that shoal, taking soundings, crossed over to the middle shoal, and dropped down the channel.

157. Are you well acquainted with the north side of the lake, at and near the present steam-boat wharf; and if so, inform the committee what is the velocity of the current there, and whether, in other respects, it offers an easier and better access for the entrance of a canal than the south side of the river?—I know it well; at M'Donell's Bay it is nearly still water. I think it affords a free access in every respect; the entrance on the south side is not to be compared with it.

*Alexander M'Lean*, Esq. a Member of the House, appeared before the Committee, and stated as follows:

I visited the entrance to the canal once with Mr. Chesley, for the express purpose of forming an opinion myself; and the testimony of Mr. Chesley having been read to me, I concur generally in his statements, but he has been more minute than I have it in my power to be.

*Ques.* 158. Who accompanied you and Mr. Chesley, when you went with him to examine the entrance to the canal?—Captain Sterns, of the steam-boat, *La Plant*, the pilot, Mr. William Roebuck, Dr. Loy, Mr. Robert M'Intyre, and the boatmen.

*Thomas A. Begley*, Esq. again appeared before the Committee, and handed in the following documents, which he had prepared at their desire.

Extract from proceedings of Board of Works, on 13th December 1839.—(Appendix, No. 26.)

Report of Board of Works to his Excellency the Governor-general, relative to the Beauharnois Canal, 14th December 1839.—(Appendix, No. 27.)

Extract from a further Report of the Board on the same subject.—(Appendix, No. 28).

Extract from that part of the Report of the President of the Board of Works to the Governor and Council, dated 12th May 1842, relating to the Canal from the Coteau to the Cascades.—(Appendix, No. 29).

Extract from a Report of Colonel Phillpotts, Royal Engineers, respecting the location of the Canal, 24th October 1838.—(Appendix, No. 30).

*Mr. Begley*, further Examined.

*Ques.* 159. Produce the Departmental Report referred to in the report of the Chairman of the Board of Works, dated 1st August last?—I know of no other report than that which I have handed in this morning (marked 29.)

160. In the said report, reference is made to the sundry surveys and estimates, made by parties therein named; can you inform the committee whether the chairman himself has personally examined both sides of the river, with reference to the present undertaking; and if so, when?—I cannot say, as I do not accompany Mr. Killaly when he leaves town.

161. Are the extracts that you have laid on the table the only entries in your books of the proceedings of the Board on the Beauharnois Canal?—With those given in previously.

162. Will you state the names of the members of the Board of Works?—Messrs. Killaly, president, Harrison, and Davidson.

163. Will you refer to your books, and state how many meetings there have been of the Board, on the subject of the Beauharnois Canal?—I have already answered this question; no meetings are recorded.

164. Before any expenditure was made on the Beauharnois Canal, was the same submitted to the Board; and was there an order of the Board made before such expenditure was paid?—*(This question was rejected by the Committee as going beyond the powers entrusted to them.)*

165. Do you keep a book in which all the authorities for the payment of money on the Beauharnois Canal are entered?—*(Rejected, for the same reason as the foregoing.)*

*Samuel Keefer*, Esq. Civil Engineer, called in; and Examined.

*Ans. to Ques.* 1.—I am engineer to the Board of Works.

*Ques.* 166. Can you briefly point the items which constitute the great difference in you estimates for the south and north shore, for the canal at the lower end of Lake St. Francis?—I can; excavation, embankment, (particularly in the Ottawa river), waste-weirs, (none required on the south side), ditching and fencing, (the canal is three miles longer on the north side than the south), lock-houses, bridge-houses, damages for land, locks (which are more expensive on the north side than the south), coffer dams, (one more required on the north side than the south), protection wall for the bank in the Ottawa river; these are the chief items.

167. Will you state to the committee your opinion of the general accuracy of Mr. Thompson's chart, and how far you found the soundings and width of the river to be correct?—As regards the position of the middle shoal, Mr. Thompson's chart is correct, but I have not found the depth of water to correspond; Mr. Thompson's survey was made in 1839, when the water was high; my soundings were taken when the water was nearly at its lowest.

168. Can you state positively the rate of current from Grosse Point to M'Pherson's Point?—Not from my own measurement.

169. When did you give your opinion to the Board decidedly in favour of the adoption of the south side?—In February last.

170. In what respects do you think Mr. Casey's report is deficient?—Inasmuch as by his own confession he has not made a thorough survey, and he has not made up an estimate of the whole cost of the north side, without which I think it impossible to draw any fair comparison of the cost of the two sides; I do not think that even in the partial estimate which he has sent in, the quantities of excavation and embankment are sufficient, and I know his plan and section to be incorrect. *(Witness showed, by his own plan of 5th July last, that the bearings of the ravine on Mr. Casey's plan were incorrect.)* Mr. Casey makes no allusion to the difficulties to be surmounted in entering Lake St. Louis, the removal of which forms a very large item in my estimate. His report contains very little information on the subject under examination; his avowed object is to prove that the Board of Works is wrong in stating that the canal will cost 100,000 l. more on the north side than on the south; and this he undertakes to do without having examined both sides, as would obviously be necessary, and even without fully surveying and estimating the north side.

171. Are

171. Are you of opinion that he had the means of making an estimate from his reports which you have seen?—I am of opinion that he had not the means of doing so.

172. What is the difference of level between the two sides of the river, and why do you estimate for ten locks on the north side and only nine on the south?—The difference of level is only six inches, but from the peculiar nature of the ground on the north side it is necessary to have a lock entering into Lake St. Louis, of six feet lift, and another requires to be of nine feet lift; so that if the number of the locks was the same on the north as the south side, some of them would necessarily be over 11 feet lift, which I consider dangerous. The peculiarity of the ground alluded to is, that the water at the mouth of the Quinchean, and for a considerable distance down to Lake St. Louis, averages only from four to six feet in depth, and I conceive the best way of surmounting the difficulty here presented is by constructing a bank parallel with the shore, by which the water may be raised six feet; I resort to this mode to avoid excavation under water, and pumping a long reach of canal, which would otherwise be necessary. The embankment would be 3,700 feet in length.

173. What would be the saving in your estimate for the north side, if the ravine were adopted as part of the line?—I have made no estimate of that, but in my opinion, even if we were to use the ravine by damming it, the waste-weirs that we should have to construct, and which I conceive indispensable, would very nearly, if not quite equal the saving.

*Ans. to Q. 123.*—I have; it is embraced in my estimate, which is before you.

174. Could you obtain a slack-water navigation between M'Pherson's Point and Lake St. Francis by placing a dam below the Point, and another between Grand Isle and Isle aux Chats; and if so, what would be the probable expense?—Certainly; but I am unable to state the probable expense.

175. Would a tow-path from M'Pherson's Point, in your opinion, obviate the disadvantages of the entrance being placed there; and if so, what would be the probable cost thereof?—I conceive that the tow-path would entirely obviate the difficulties. A statement of the probable expense will be found in my estimate.

176. What would, in your opinion, be the probable expense of continuing the canal to a point in the lake which would afford a good entrance into slack water?—It would not cost far short of 20,000 *l*.

177. Do you think the termination which would there be obtained would be as good as the present?—It would be as good, but no better.

*Ans. to Q. 120.*—I conceive it would be better.

*Ques. 178.* Do you know anything of a shoal or a line from Grosse Point to Isle aux Chats, which is not laid down?—I do; there are shoals not laid down in the chart, because they do not interfere with the navigation.

179. Did you make the soundings which are marked upon Mr. Rubidge's plan, and can you vouch for their accuracy?—I did make them, and can vouch for their accuracy.

180. You state that the canal on the south side is three miles shorter than on the north; if, however, the south canal were continued to slack water; that is, to equal the comparatively still water of Lake St. Francis, what would then be the difference in the length?—One mile only in favour of the south side.

181. Would the additional two miles thus made be through rock, or through soft cutting?—I have not examined the soil, but in my opinion it would be chiefly earth and boulder stones.

182. What is the soil at M'Pherson's Point, where the canal now terminates?—Clay, with a few boulder stones.

183. Between your calculation of the excavation required, and that of Mr. Casey, there is a difference (on the north side) of a million of cubic yards; how does this difference arise?—It arises, in the first place, from Mr. Casey not cutting so deeply as I do. I perceive, on comparing his section with mine, taken in July last, that it does not show so much cutting. In the next place, from his making use of the ravine, by damming it, he avoids cutting; whereas I have continued my canal along the ravine, not descending into it, but cutting the canal in the edge of the bank, thereby obviating the necessity of having a waste-weir at each lock. Lastly, he takes no notice of the excavation under water, nor of the bank required at the lower end of the canal.

184. The plan you exhibit is dated 5th July 1842; how came it then that the south side was determined to be the proper route before this survey was made?—I do not know that I can answer respecting the decision of the Board of Works.

185. Could not all the locks on the north side be placed in the ravine and below it, if Mr. Casey's levels are correct?—Yes.

186. Why, then, will one additional lock be required on the north side?—I have answered that question already.

187. You state that a tow-path would be necessary from M'Pherson's Point to overcome the obstacles between that point and the lake; why then should not the canal on the north side terminate at the locks at Coteau du Lac, and a tow-path be made from the locks to the lake, and thus render the canal route shorter even on the north side than on the south?—Because the current on the north side exceeds that on the south a very great deal.

188. What is the velocity of the current between the government lock at Coteau du Lac and Lake St. Francis?—I have not actually ascertained the velocity of the current, but from appearance I believe it to be from four to seven miles an hour.

189. Are you aware that boats have for years been towed up from that lock to the lake?—I am.

*Friday, 7th October, 1842.*

The Honourable *R. M. Harwood*, called in; and Examined.

*Ans. to Ques. 1.*—I am Seigneur of Vandreuil, where I reside.

*Ques. 190.* Would your private interest be affected by a canal made on the north side, and if so, how?—The only way it could be affected would be to my disadvantage; in the first place, I hold no property on the whole line of the canal; the reason why I consider it would be to my disadvantage is this: that a canal cut on the plan recommended in Mr. Casey's survey would create an immense hydraulic power at the river De Lisle and River Rouge, which would be a power created in opposition to hydraulic works which I am now erecting at the Cascades, and would probably

over-glut the market for grue and offal. I conceive that the cutting of the canal will not increase the value of even village lots through which it passes. By saying that I hold no property on the whole line of the canal, I mean that I have no land in my possession bordering on the line of canal or dyke at the Cascades, for I consider the outlet would be in the deep water opposite the existing canal; and Government owns the land for 200 feet on each side of that canal; nor would there be anything gained by taking the canal lower down, for the ice is all gone away opposite the mouth of the Cascade Canal before any inland canal could be opened or free from ice and frost, either on the north or south: for what right have we to expect that these inland canals would be fit for use, going through earth excavations, before the Lachine Canal, or the Western Canal in the United States are open and are fit for use. Yet for many years I have noticed that the river is clear of ice, even through all the Lake of Two Mountains, and here at the Cascades, before any barge can go down the Lachine Canal, and, I believe, almost always before even boats can navigate the Western Canal.

191. Have you examined the official reports and surveys of the Board of Works, or their engineers, on the subject of the St. Lawrence Canal upon either the north or south shore, or both at or opposite Coteau du Lac?—I have this morning for the first time read over the official reports of Samuel Keefer, Esq., engineer of the Board of Works, of the probable cost of constructing a canal, both on the north and the south shore, dated "Office of the Board of Works, Kingston, 1st October 1842.

192. Did you doubt the correctness of a survey and report made under the authority of the Board of Works: if so, why?—I doubted the correctness of a survey and report made under the authority of the Board of Works, by Mr. Keefer, of the line for the canal on the north shore from Lake St. Francis, through the ravine to Lake St. Louis, from the perusal of a letter, dated 1st August 1842, of the Honourable Hamilton H. Killaly, president of the Board of Works, wherein he states that from Mr. Keefer's Report, the line of canal pointed out to him by me would cost one-fifth more, or 64,989*l.* more than Mr. Mills' estimate for his inland route.

193. Have you seen a letter dated 1st August 1842, from Hamilton H. Killaly, Esq., president of the Board of Works, forwarded to Mr. Simpson, of Coteau du Lac, regarding the Beauharnois Canal; are the statements in the same correct; if not, state in what particular?—I have seen such a letter, published in the Montreal Gazette of the 12th of August last, and I think that Mr. Killaly is in error when he states that "the first survey was made about 20 years ago by a French engineer, who, having generally examined both sides of the river, located the work on the south side;" for as far as I can learn, the survey alluded to was made by a Canadian surveyor, and not a French engineer; and that survey was at the expense of the seignior of Beauharnois, and confined to the south side. In Mr. Killaly's comments on Mr. Mills' river front plan, he states "the objections to the plan are strongly and fairly set forth in the reports of Messrs. Baird and Stevenson, and are, in my judgment, insuperable. Its entrance is represented to be obstructed by shoals, and being on the lee shore of Lake St. Francis." I think it incorrect to give the protective force of his opinion, as president of the Board of Works, by supposing the reports made by Mr. Stevenson and Mr. Baird to be perfectly correct with regard to shoals spoken of, when he must have known that both Mr. Baird's and Mr. Stevenson's were *ex parte* surveys, made many years ago at the expense of the proprietor of Beauharnois; and that Mr. Mills' was an authorised public survey, and that he represented the entrance to be good; and there is no doubt that there is a good entrance as stated by Mr. Mills. It is incorrect to call the north shore the "lee shore," when it is known that the winds that blow are mostly north, north-east, and north-west; south winds being generally moderate in that section of the country. It is incorrect to state, when speaking of Mr. Mills' inland route, that "this line Mr. Mills himself did not recommend, and, among other practical objections, is liable to having the whole of the lockage (eighty-two feet) combined in one spot;" when Mr. Mills, from his published report, places

"4 Locks 8 feet lift located separately;

3 „ 8 feet lift combined;

2 „ 8 feet lift combined;

1 „ 10 feet water-lock;"

And when it would not, from the level of the land, be possible to put all the locks combined into one spot, or within the compass of some miles, and when Mr. Mills did not recommend his inland route because he recommended his river route in preference, but expressing in the same report, that for an inland canal from lake to lake, he considers it the best to be found, and as preferable to one on the Beauharnois side; for in speaking of that side, Mr. Mills says, "I believe it to require a longer canal, and, although very feasible, yet possessing no advantages, and no extraordinary facilities to construction." It is not correct, nor consistent with the high calling of the president of the Board of Works, in drawing a comparison between the cost of a canal on the south side, then constructing, and the cost of a canal on the north side, to compare it with the route through the ravine, thereby showing a difference of 104,932*l.* in favour of the south side, supposing Mr. Keefer's estimate of that route to be correct (which Mr. Casey's survey and estimate proves to be most egregiously erroneous) when in the same letter Mr. Killaly states, that the route by the ravine will cost more than Mr. Mills' inland route on the north side by one-fifth, or 64,989*l.*; thereby showing that Mr. Mills' estimate or survey on the north, made by authority of the legislature, from still-water of Lake St. Francis to still-water of Lake St. Louis, would only cost 39,943*l.* more than the *ex parte* estimate on the south side by Mr. Stevenson, made by order of the seignior of Beauharnois, from strong currents below Lake St. Francis, to water that cannot be considered the still-water of Lake St. Louis. Mr. Killaly says that, "the seventh survey was made on the south side by Mr. Keefer in March last, resulting in the full confirmation of No. 5. The eighth survey was made in April last by Mr. Tate, and sustains, equally with Messrs. Baird and Keefer, Mr. Stevenson's Survey and Report, No. 5." It appears to me utterly impossible that any engineer could, at that season of the year, come to any conclusions, when the whole country was frozen up or covered with snow; much less that they could find out the particular line there run so many years ago by Mr. Stevenson, for Mr. Killaly to state that, "these surveys resulted in the full confirmation of No. 5. If Mr. Keefer's estimate (now before me), dated Kingston, 1st October, 1842, was made at that period, I am at a loss to know how he could ascertain whether he would find rock or earth to excavate, for I have made every inquiry, and no  
holes

holes were then sunk. If Mr. Tate was as far from being correct in his land survey as he, from Mr. Keefer's chart, is in his water survey, I cannot say how he could confirm Mr. Stevenson's survey, for Mr. Tate says that there are three entrances of from 600 to 1,200 feet in width each, and with a depth of water averaging from 12 to 20 feet; so Mr. Killaly's letter informs us, and is given by him as a full answer to our representation to the Governor-General, that there was no available entrance to the south side canal from Lake St. Francis.

194. Did you point out a line of canal to Mr. Keefer on the north side; and did Mr. Keefer run out the line of canal you so pointed out to him?—From the reiterated assurance I gave the Governor-General that the Board of Works had made no examination or survey on the north shore, and that there was a ravine that could be used to very great advantage, Mr. Keefer received orders to run out the line of canal that I would point out to him, as he informed me in a letter requesting me to meet him at Coteau du Lac. On the survey, it became impossible for me to decide whether it would be better to take advantage of certain low grounds running in the required direction, or to keep upon the higher land, unless I was permitted to know the difference of level between the lake water and the ground we were on, which difference Mr. Keefer refused to give me. I then gave him written instructions, as near as I can recollect, to the following effect: to leave the lake at good navigation, or near the steam-boat landing, and to run a line for a canal with the least excavation to the head of the great ravine, in the rear of the church of the Cedars, and from thence using the ravine to Lake St. Louis. From the report of Mr. Keefer of that survey, he either did not run the line with the least required excavation, or he must be very incorrect in his statement of the quantity of yards to be excavated; for, from not being satisfied with the report in Mr. Killaly's letter of the 1st August last, we employed Mr. Casey to run the survey, whose plan and estimate are in your possession, and Mr. Casey makes them to be more than one million of yards less to excavate than Mr. Keefer states: Mr. Keefer cannot, therefore, have correctly run out the line I pointed out to him, or such difference could not exist.

195. What is the nature of the ravine, and of the excavations, on the line as surveyed by Mr. Casey?—The ravine is one, as far as I have seen it, at each end, and in several places near the middle, peculiarly adapted to forming a canal, and of sufficient width for the plying of any steam-boat, without the same fear of injury to its banks as on an excavated canal; it gradually descends in level, as you will observe by Mr. Casey's plan. There is also but little water runs down this ravine, as is evident by the small and low bridge made to cross the water in it on the St. Antoine Road; and this is accounted for from there being another ravine, about a mile higher up, that intersects any land water coming from the interior. At the bottom of the ravine, on Mr. Robertson's farm, and on that adjoining, there is plenty of stone suitable at least for backing stones, and possibly even for building locks; and I feel confident that from River De Lisle down the whole excavation, on Mr. Casey's plan, will be nothing but sand and clay of the easiest kind for excavation, as is evident by the ditches sunk, and the several wells made by the inhabitants for water.

196. Did Colonel Phillpotts ever make any actual survey of the land on the north shore, to your knowledge, to enable him to conclude that, in estimating at little less than 500,000*l.* what Mr. Mills estimated at 235,782*l.*, he would select that route as the best the north shore afforded with reluctance?—I have no knowledge that Colonel Phillpotts ever made any actual survey of the land on the north shore, and I think he could not have done it without my hearing of it; indeed, but shortly before Colonel Phillpotts left this country, he called upon me, at Vaudreuil, and during dinner our conversation was chiefly upon the St. Lawrence improvements; and, as far as I can recollect, he was speaking in favour of Mr. Mills' river front canal, which I cannot reconcile with his opinion of the great cost of that route, which he is, by Mr. Killaly's letter, said to have expressed; had he then made any land survey, he would, I feel sure, have spoken of it; nor could any engineer survey that country inland, and not give it a vast preference over the river front, if thinking the river front plan to cost little less than 500,000*l.*

*John Davidson, Esquire, called in; and Examined.*

197. Are you a member of the Board of Works; and if so, when were you appointed?—I was Gazetted as such about the 14th December 1841.

198. What do you consider the duty of a member of the Board of Works?—To attend when summoned.

199. Will you state how often you have attended meetings of the Board on the subject of the Beauharnois Canal?—Never.

200. Have you ever been summoned to attend a meeting of the Board of Works on the subject of the Beauharnois Canal?—I have not; if any summons had been directed to me in June last, I could not have attended, having been absent at that time from Kingston.

201. Will you state how often you have attended meetings of the Board of Works, and who were present at such meetings?—I never attended any meeting of the Board. I was a member of the Board under the Ordinance of Lower Canada, before the union, and have been so ever since; but have never been officially summoned to a meeting of the Board.

202. Does the Act establishing the Board of Works require meetings of the Board; and if so, how many members form a quorum, and for what purposes are these meetings required?—If I had been called upon to take an active part in the business, I should have studied the Act; but never having done so, I know nothing of its provisions.

The Honourable *Hamilton H. Killaly*, appeared again before the Committee, and handed in the following documents:

Report of Mr. H. G. Thompson on survey of the River St. Lawrence, between Coteau a Coulange and Coteau du Lac, dated 22d Sept. 1836. (No. 31.)

Report of ditto on survey of south side of St. Lawrence, between Lakes St. Francis and St. Louis, dated 31st Dec. 1836. (No. 32.)

*William Roebuck, Esq.* again called in ; and Examined.

203. What is the strength of the current between the upper entrance of the canal at Coteau du Lac and the steam-boat wharf above?—The most rapid part of the current does not exceed four miles per hour ; there are many places where it is nearly still water for an upward boat.

204. What is the distance between these points and the depth of water at a convenient towing distance from the shore?—The distance from these points to the deep water does not exceed 100 feet, except in one instance, viz. on the shoal at M'Donald's Point; this could very easily be bridged over, as is already done on part of the route. The bays present the most difficult places, being further from the deep water, and consequently requiring a longer tow-line.

205. Does the north shore of the river, between these points, present as favourable features as the south side for constructing a tow-path, and what would be its cost?—If it were not for the difficulty at the entrance of the south shore, it would be the best side for a tow-path, as far as I have seen ; but, from a great part of one on the north side being already made, and the main road running for a distance on the side of the river, it becomes the most feasible side to put it on. I will contract to make one, fit for all upward navigation, from the fort to the smooth water of the lake, where the steamers can come and take the boats in tow, or where they do now sail from it, say to the present place of landing, for the sum of 3,000*l*.

*Ans. to Q. 173.*—I think so, if a sufficiently tight dam be constructed to raise the water, so as to turn it round Isle aux Chats.

*Ans. to Q. 175.*—In my opinion, it would not.

*Ans. to Q. 176.*—One-third more of excavation, independent of lockage.

*Ques. 206.* Do you think there is a shoal lying in a direct line from Grosse Point to the head of Isle aux Chats, which is not fully laid down on Mr. Rubidge's plan?—I do.

207. Would that shoal be at all in the way of boats passing directly down from Lake St. Francis by the south channel ; and can you say how far the southern limit of the shoal is from Grosse Point?—It would be in the way ; and to avoid it you must hug Grosse Point pretty close.

208. Do you think, if lights were placed on Grosse Point and M'Pherson's Point, that boats could enter the south channel in the night, if it were deepened, and the canal finished?—I do not.

*Ans to Q. 108.*—There are winds that would do it, but not the prevailing ones.

*William R. Casey, Esq.* being again called in, made the following remarks, in addition to his former evidence.

In looking over the estimates just submitted by the Board of Works, in order to answer a comprehensive question put to me some days before those documents were received, I perceive that the line on the north side, on which the Board base their estimate, by which they are enabled to show a difference of 100,000*l*. against that side, and by which a reluctant assent to the location of the canal on the south side has been wrung from the Right Honourable the Secretary for the Colonies, is far, very far, inferior to another line connecting the same points, and well known to the Board of Works.

By the "inland route," surveyed by directions of the commissioners, in 1833, for a canal 100 feet bottom, by 10 deep, one-sixth larger than the present canal, there are—

	CUBIC YARDS.
Excavation - - - - -	2,788,913
Embankment - - - - -	310,139
	3,099,052
Less one-sixth - - - - -	516,508
Total quantity by route of 1833 - - - - -	2,582,544
By the route of the Board of Works, there are—	
Excavation - - - - -	3,076,000
Embankment - - - - -	239,066
Total quantity by route of 1842 - - - - -	3,365,066
Do. do. do. 1833 - - - - -	2,582,544
Difference in favour of route of 1833 - - - - -	782,522
(N.B. See "Note" to Document 22.)	

This, at 1*s*. per yard, would amount to nearly 40,000*l*. ; but I pass this by at present. The entire investigation rests, and necessarily so, on the assumption, that the Board have, in their comparison, brought forward the best line on each side ; for there is no more justice in charging one line with difficulties, which it is known can be avoided, than in giving another line credit for facilities of which it is known it cannot avail itself. You will please observe, that I refer exclusively to surveys made by Government, in 1833 and 1842, the former of which are confirmed by my examinations of this year. The difference is sufficiently remarkable, both as to amount and direction, and I beg leave respectfully, but earnestly, to call your immediate attention to it.

*Saturday, 8th October 1842.*

The Honourable *S. B. Harrison*, a Member of the House, and Provincial Secretary for Canada West, called in ; and Examined.

*Ans. to Ques. 197.*—I am ; I was appointed about the 14th December 1841.  
*Ans. to Ques. 198.*—My idea of the Board of Works is, that it is the Executive Government. It was originally intended that the Board should be composed of the principal officers of the Government.

ment. The duties of each member of the Board are to give such information as lies in his power, relating to the general bearing of the works.

*Ques.* 209. Do you conceive that, as a member of the Board of Works, you are bound by the Act of Incorporation?—The Board of Works being a corporation, the individual members thereof are, of course, bound by the Act incorporating them.

*Ans. to Q. 199.*—I have attended no regular meetings of the Board on that subject.

*Ans. to Q. 200.*—I have not.

*Ques.* 210. Will you state how often you attended meetings of the Board of Works, and who were present at such meetings, and whether the subject of the Beauharnois Canal was at either meeting submitted to the Board?—I have attended no regular meetings; but I have frequently had conversations with the chairman on that and other subjects relating to the duties of the Board.

211. At the conversations you allude to, name the members that were present, and state if the plans, estimates, &c. were produced, and where these conversations took place?—The members present were generally the chairman and myself; other members of the government have also been present on some occasions, but I cannot positively state their names.

212. You state that Mr. Davidson is a member of the Board of Works; is he also a member of the Executive Council?—He is not.

213. Did you, as a member of the Board of Works, ever examine the several lines of canal, or did you ever attend with the president when the same was inspected?—I never attended, nor did I ever examine into the scientific part of the different improvements.

214. Did the Board report upon the line now adopted, and if so, were you present when that report was agreed upon by the Board?—The Board reported to the Council; but I was not present when the report was made.

215. Can you state what information the Board had before them when they adopted their report?—I cannot.

216. Can you inform the committee whether the commander of the forces had been consulted, with reference to the policy, in a military point of view, of placing the canal on the south side of the river?—I cannot.

217. Can you state the time when the report was submitted to the Governor-general?—I cannot.

218. If the discussions to which you have alluded, on the subject of the canal on the Beauharnois side, took place in the Executive Council, would not minutes be found on the books of that council?—No.

219. Has the provincial government obtained a loan from the city bank for the purpose of commencing the Beauharnois Canal?—It has.

220. Inform the committee the terms and conditions on which the loan was obtained?—I cannot say; the receiver-general will be able to furnish that information.

221. In the estimates for the public works accompanying the Governor-general's message, and submitted to the legislature last year, the expenditure on the St. Lawrence navigation, between Lake St. Francis and Lake St. Louis, was only to have commenced in the year 1843; state to the committee the reasons for commencing it a year sooner?—A strong pressure from emigration at Montreal; it being represented that money could be obtained from the city bank for the purpose, the immediate prosecution of the work was determined on, in order to give employment to the destitute emigrants.

222. From whom did this proposition come?—Through Mr. Secretary Daly.

223. Did you see Mr. Rubidge's chart, now shown you, before the determination to place the canal on the south side?—No.

*Ans. to Q. 202.*—The Act speaks for itself, but I believe not; the Board of Works has always been looked upon as a department of the government.

*Ques.* 224. Travelling expenses and disbursements are allowed by the Act to the members of the Board; have any such payments been made to you?—No, not as regards any work connected with the Board of Works.

*John W. Dunscomb, Esq. a Member of the Committee, Examined.*

225. Can you inform the committee who tendered the loan from the city bank of Montreal?—I did, on the part of the city bank.

226. Was the tender made by you in writing?—The tender was made by the cashier in writing.

227. To whom was the tender directed?—I believe to the receiver-general.

228. Are you a director of the city bank, and were you present when the loan was granted?—*Ycs.*

229. State the conditions fully on which the loan was made?—To be used as the public service might require, in constructing a canal to connect Lakes St. Francis and St. Louis, at an interest of six per cent; the money to be spent on the work, and taken out in the notes of the city bank.

230. Was the place or line of canal on which this money was to be expended, made the subject of conversation at the Board?—No.

231. Was there no other condition than those you have stated?—Not that I am aware of.

232. Could there be any condition attached to this loan without you being aware of it, as you state you were present at the Board when the loan was made?—I do not think there could; there was no other condition at any meeting at which I was present.

233. Was there any discussion before the Board as to the side of the St. Lawrence upon which the canal was to be made; and was there any condition imposed as to the location of the work?—Not any whatever.

234. Will you state the time this loan was made?—I think in the month of July.

235. Were you present at any meeting in Montreal before the Beauharnois line of canal was adopted?—I waited on the Governor-general with the Board of Trade with a petition from that body on the part of the trade of Montreal, to urge upon his Excellency the necessity for the immediate prosecution of the work, immediately after his Excellency's arrival there in the month of May last.

236. Was not the route of the canal determined to be on the south side before the proposition to advance the money was made by the city bank?—It was.

The Honourable *Dominick Daly*, a Member of the House, and Provincial Secretary for Canada, called in; and Examined.

237. Are you aware of the terms on which the loan of 20,000 *l.* was made by the city bank of Montreal to the government, and if so, state them?—I am not aware of the terms.

238. Will you state any information you possess with regard to that loan?—The proposition for the loan was made to me for the information of the government by Mr. Dunscomb; having very shortly after left for England, I know nothing further of the transaction.

239. Are you aware of any application having been previously made by the government to the city bank for that loan?—I am not.

The Honourable *John H. Dunn*, a Member of the House, and Receiver-general of the Province, called in; and Examined.

240. From whom did you receive the first intimation on the subject of a loan of 20,000 *l.* from the city bank of Montreal?—An authority from the government. (*Witness handed in a copy of a letter from C. H. Castle, Esq. cashier of the bank on the subject.*)—Appendix No. 34.

241. In the letter you have produced, dated Montreal, 16th June 1842, from Mr. Castle, he says "in pursuance of the understanding come to with you;" will you state what that understanding was?—It was an understanding that took place between Mr. Castle and Messrs. Harrison and Killaly, and not with me. I was invited by Mr. Harrison to meet Mr. Castle on the subject, but did not attend as there was no object for my going.

242. In acknowledging Mr. Castle's letter, did you notice that part of it wherein he says, "in pursuance of the understanding come to with you" for the purpose of carrying out the order of the government?—(*Witness handed in a copy of his letter to Mr. Castle in reply.*)—Appendix No. 33.

243. Had you any communication, verbally or otherwise, on the subject of the Beauharnois Canal, or the loan from the city bank, with Mr. Edward Gibbon Wakefield?—I never had any conversation with him on the subject, to the best of my recollection.

*Samuel Keefer*, Esq. again called in; and Examined.

244. Is there any peculiar difficulty in constructing a towing-path on the shore above the Cedars?—I will remark before answering this question, that something more than a towing-path will be required past Point au Diable, where the current runs from four to seven miles per hour, making it impossible to draw up large barges freighted. It appears to me therefore that a canal and lock through this point would be indispensable. There are other points in the river besides this, where the current is from three to five miles per hour, which it would be very desirable to avoid. At various places along this bank slides have taken place. These slides are caused by the springs which make their exit near the base of the bank. There are other places again where the water is deep close in shore, as for instance at the widow Taylor's, and below the River à la Grasse. In the first case the towing-path, when made, would be liable to be shoved into the river, or else covered over by the slides; and in the next, piling would have to be resorted to in order to prevent the newly formed bank from sliding into deep water. Where the towing-path is made round a point, it would have to be faced with a strong protection wall to secure it from abrasion by the current, and from the force of running ice.

245. What is the objection against piercing or making a solid wall below Pointe au Moulin to Pointe au Chinette, and then descend by a lock?—This work being intended to connect Mr. Mills' projected improvements at the Cedars and Cascades, it would have to be carried down to the Pointe à Coulonge. The objection to this plan is its cost. The cost of a solid wall would be enormous, because we cannot prepare a foundation for it at any reasonable expense, and the wall itself (being  $1\frac{1}{2}$  miles in length and founded in water at an average depth of 10 feet) would cost a great deal. A pier of timber cribs loaded with stones would be cheaper, but still it would cost five times as much as the same length of canal on the south side, taken where the cutting averages six feet in depth.

*John Jones*, Esq. called in; and Examined.

246. You were chairman of a commission appointed to superintend the survey of the St. Lawrence Canal, and had before you the plans of survey of Mr. Thompson and Mr. Mills; what was the opinion of yourself and colleagues as to the relative merits of the line of canal on the north and south sides of the river St. Lawrence?—By the Act 5th Will. 4, cap. 23, various portions of the lakes St. Louis and St. Francis and of the river St. Lawrence were directed to be surveyed under a commission, of which I was chairman. The survey was for the purpose of ascertaining the most eligible route for canal improvements on a scale corresponding with the canal and locks at Cornwall. The survey of the two lakes was to be confided to Mr. A. Larue, and that of the river to Mr. Henry G. Thompson; having found that both lakes had sufficient depth of water, the question next in importance was to ascertain the best route for connecting them. On the one hand, we had Mr. Mills' plans of a survey on the north side exhibiting three locations for the contemplated canal, with estimates and reports; on the other hand, we had Mr. Henry G. Thompson's plan of the south channel, also Messrs. Stevenson's and Baird's plans and estimates of a projected canal, as surveyed for the proprietor of Beauharnois; and after bestowing on these several documents every consideration, my colleagues and myself were of opinion, that the canal ought to be located on the north side for the following reasons: M'Donald's Point on the north side afforded a good site in the still water for the entrance of a canal, and admitted of a good harbour; our own survey had demonstrated the fact that six miles out of the whole distance of  $14\frac{1}{2}$  miles was on really good navigable water, with a margin offering great facilities for a tow-path; whereas no portion whatsoever of the south channel appeared susceptible of being used, and hence a continuous canal from lake to lake became necessary; the next point naturally looked to was Hungry Bay, as the only place at which a canal could enter the lake; and here again it was found from Larue's soundings, and other sources of information, that the depth of water was insufficient, consequently all idea of using the south side was abandoned.

Monday, 10th October, 1842.

David Thompson, Esq. again called in; and Examined.

247. Are you sufficiently acquainted with the country on both sides of the St. Lawrence between Lakes St. Francis and St. Louis, to enable you to state on which side the proposed canal for avoiding the rapids in that part of the river would be most advantageously placed, with reference to the cost, efficiency and security of the work?—Being a sworn surveyor, I consider myself as under oath, and as such shall answer. From early youth to the present, my whole life has been spent, with some intervals, in the survey and examination of this continent, from Lake St. Peter and Hudson's Bay to the Pacific Ocean. To an eye so long and deeply accustomed to the stratum of the formation of any section of country, it is not necessary that he should have the level always in his hand. From Lake St. Francis to Lake St. Louis, a distance of 14 miles and 54 chains, I have very often travelled over it. In the year 1833, Mr. Mills and myself were employed on the survey, &c. of a line of canal from Lake St. Francis to Lake St. Louis; Mr. Mills on the land and myself on the water, with mutual communications with each other, and confidence in each other. I have often calmly reflected on the capabilities of the north side and the south side becoming a public canal, its cost, its efficiency and security. The survey of 1833, was under the order of the high authority of the legislature of Lower Canada, and I am personally acquainted with no other survey. The survey of Mr. Mills, confirmed and approved by Mr. Wright, the celebrated engineer of the Erie Canal, is before me; and to your honourable committee I have to remark, that the view of the formation of a canal, from Lake St. Francis to Lake St. Louis, was then, 1833, founded upon the belief of those engineers, that steam-boats, for every purpose of passage or freight, would entirely supersede the use of all other kind of vessels. Time and experience has proved the contrary; therefore, the estimates they made for a navigation by steam-boats, of 6 $\frac{7}{8}$  miles in canal and 7 $\frac{5}{8}$  miles of river, of strong current for steam-boats, is a failure; as it is now acknowledged that, for vessels of 9 feet water, a continuous canal from Lake St. Francis to Lake St. Louis is required. Mr. Mills has divided the 14 miles and 54 chains into 5 sections, on which I shall be as brief as possible. The expense of section No. 1, 2 miles 67 $\frac{1}{2}$  chains, 2 locks, 69,210*l.* 4*s.* 6 $\frac{1}{2}$ *d.* currency; these two locks are of 17 feet lift. He remarks, "The river improvement, as is proposed, interferes with, and will destroy all the improvements which have been effected by the British Government." Section No. 2, from River Rouge to the Cedars, 6 miles. Of this section Mr. Mills says, "In this distance are three points that require notice: Pointe au Diable, the current, by repeated experiments, 6 $\frac{7}{10}$  miles per hour, for 452 feet; Pointe à Wattier, current 4 miles per hour; and Pointe à Biron, at 5 miles per hour." He considers this section well adapted for steam-boat navigation, and adds, "It is worthy of remark, that for nearly the whole length of this section the north bank is from 20 to 30 feet high, composed of clay, with some veins of sand, frequently sliding off in very large bodies, showing the destruction which would be consequent upon constructing a canal along near its foot, or upon the top and near its brow." For heavy loaded vessels, it is fully allowed by all parties, that a continuous canal for these 6 miles must be made; the cutting will be very deep; the expense, with one lock of 7 $\frac{60}{100}$  feet lift, amounts to 227,530*l.* 6*s.* 6*d.* currency. This part of the canal, for security, must pass behind the houses and barns, and separate the farms from them; and to the above sum must be added the purchase of the ground for six miles in length by 60 yards in width, from many individuals, a work of time and expense, and several bridges. Section No. 3, 1 mile and 57 chains, cutting across the Cedar Village, &c.; by Mr. Mills; the expense is 80,176*l.* 3*s.* 5*d.* currency. Section No. 4, from below Pointe à Moulin to Pointe Coulonge, a distance of 1 mile and 64 chains, with high ruinous banks, as section No. 2, and intended for steam-boat navigation, must be a canal of deep cutting, the expense of which will be 64,641*l.* 12*s.* currency, to which must be added the purchase of ground, and the bridges, &c. Section No. 5, beginning at Pointe à Coulonge and ending in Lake St. Louis, a distance of 2 miles 25 $\frac{1}{2}$  chains; by Mr. Mills; the expense 86,395*l.* 15*s.* 3*d.* currency. Hence, by Mr. Mills, sections Nos. 1, 3, and 5, 6 miles and 70 chains, at an expense of 235,782*l.* 3*s.* 2 $\frac{1}{2}$ *d.* currency. No estimate for the purchase of ground, &c. Sections No. 2 and No. 4, 7 miles and 64 chains, deep cutting, 292,171*l.* 18*s.* 6*d.* currency. Total, 527,954*l.* 1*s.* 8 $\frac{1}{2}$ *d.* currency. For sections Nos. 2 and 4, no estimate for the purchase of ground, &c. By Mr. Mills bringing sections Nos. 1 and 3 into the river, they occasion cutting to the depth of 30 feet on sections Nos. 2 and 4. By Mr. Mills, sections Nos. 1, 3, and 5, require 515,177 cubic yards of embankment in the river, exposed for 5 months to drift ice; therefore not secure nor efficient. But, throwing aside the fallacious view of steam-boat navigation for 7 miles, 64 chains, and from Lake St. Francis to Lake St. Louis make a continuous canal, without entering the river; the levels can be regulated to save half the deep cutting of sections Nos. 2 and 4. The estimate for the canal may then be:—

	£.	s.	d.
Sections Nos. 1, 3, and 5	235,782	3	2 $\frac{1}{2}$
Sections Nos. 2 and 4	152,221	8	2 $\frac{1}{2}$
	388,003	11	5
To this must be added the purchase of ground, 14 miles 54 chains in length, by 60 yards in width, equal to 404 square French arpents; taking into consideration the expense, arbitration, &c. of ground, each arpent will cost on an average 12 <i>l.</i> 10 <i>s.</i> currency	5,050	—	—
For 15 bridges, each about 1 mile distant from each other, at 1,500 <i>l.</i> per bridge	22,500	—	—
	£.	415,553	11 5cy.

I very much doubt if any contractors will take the different sections at the estimates. On the south side of the river the only objection is the entrance from Lake St. Francis, between Cat Island and the south shore, of which I made a survey and soundings in November 1839. The water was

was probably about three feet higher than now. By the plan before you, this entrance can be rendered safe at all times, and the improvement permanent. I have passed over most of the ground on the south shore, and always admired the easy construction of a canal, its security and efficiency; on that side it is free from embankments, and other chances of decay requiring frequent repairs. In my view, a canal on the south shore may be constructed, in a first-rate manner, under 240,000*l.* currency; but I have no practical data to go on.

248. Have you examined the bottom of the river in the channels between Grosse Point and Isle aux Chats, and if so, what kind of bottom is it?—The soundings show it to be rock *in situ*, or the ordinary rock of the country, with loose boulders on it.

249. Have you ascertained what quantity of rock it will be necessary to remove to make the hannel?—I have not.

250. Will the removal of the boulders make the channel sufficiently deep without removing part of the rock?—No; in my opinion, it will not.

251. How many yards must be removed to give a channel of ten feet deep, and what would be the cost of the same?—This channel has 6 shoals that require to be deepened. I have allowed to each shoal a sufficient space, and divided them into their separate calculations; collectively, the quantity of rock to be excavated is 68,570 cubic yards; the expense 11,477 *l.* currency; to which add 12 per cent. for contingencies, engineering, &c., the sum total is 12,854 *l.* 4 *s.* currency. This is only an approximation for want of a sufficient data.

252. What is the nature of the bottom of the river for a mile above Grosse Point, and would it afford good anchorage?—Being alluvial, I think it would.

253. Are you in the employment of the Board of Works?—I am. I received orders on the 22d of August last to sound the shoals in the Lachine Canal; since which time I consider myself in the employment of the Board.

254. Is your son Henry in the employment of the Board of Works, and if so, how long has he been so employed?—He was sent for eight or ten days ago, by Mr. Holmes, to be employed in the office of the Board of Works.

255. Would it not be possible, by a slight variation of the line of survey on either side, to add 800,000 or 1,000,000 of yards of excavation?—Yes, it would.

256. What will excavation of rock, eight feet under water, cost per yard, say limestone rock?—Limestone rock, in thin strata, may be worked at 1 *s.* 6*d.* per cubic yard, and if in thick strata may require 5*s.* per cubic yard; also, rock from the surface to eight feet deep in the water may be worked at less expense per cubic yard for 1,000 yards than for 100 yards: the average may be 3 *s.* 6 *d.* to 4 *s.* per cubic yard.

257. The scale of the work proposed by Mr. Mills, for the river line, being larger than the scale adopted for the Beauharnois line, what would be the difference of expense between these scales for the river line, on the data furnished by Mr. Mills' report?—The very short time allowed me to answer this question, which involves tedious calculations, gives, on Mr. Mills' estimate, on section No. 1, a reduction of 6,754 *l.* 9 *s.* currency; on section No. 3, a reduction of 6,652 *l.* 13 *s.* 10 *d.* currency; on section No. 5, from the too low estimate of rock excavation on this section, I have placed it at its probable low value, and balancing this addition with the reduction of scale, find a balance of addition to section No. 5, of 1,192 *l.* 8 *s.* 7 *d.* currency. The sections of Mr. Mills, by approximation, are :

	£.	s.	d.	
Section No. 1	-	-	-	62,455 15 6
— No. 3	-	-	-	73,523 9 7
— No. 5	-	-	-	87,588 3 10
	£. 223,567	8 11	reduced to Beauharnois Canal.	
	235,782	3 2	on the scale of Mr. Mills.	
Difference	-	-	£. 12,214 14 3	of reduction.

258. Would such a canal afford corresponding advantages with the Beauharnois Canal; if not, what additional expenses would be necessary to make it afford corresponding advantages?—The intention of this question appears to be, whether a tow-path on sections No. 2 and No. 4 cannot be made safe towing-paths for vessels of burthen, and at what expense. Time does not permit me to make the calculations necessary to give a clear view of the expense of a tow-path. On Mr. Mills' section No. 2, of six miles in distance, from River Rouge to the Cedar Village; in this distance the river descends 7 feet 7 inches, which descent has to be overcome by a lock of 3 feet lift, in the canal, cutting 110 yards across Pointe à Diable. 2d. Pointe à Wattier; a lock of 2 feet lift, in the canal, to be cut through this point, of 120 yards in length. 3d. Pointe à Biron; a lock of 2½ feet lift in the canal, of 120 yards in length, to be cut through this point. Each of these points with all the necessary works, may be estimated to average 5,000 *l.* each to 15,000 *l.* currency. For the tow-path, the far greater part from River Rouge to the Cedar Village will require a well-driven pile every 10 feet, on the outside of the path, which I propose shall be of 3-inch plank, and 8 feet in width, resting upon 3 sleepers; each mile may cost about 800 *l.* currency per mile to 4,800 currency. Thus the cost of these 6 miles will be 19,800 currency; and section No. 4, a distance of 1 mile and 64 chains, with a good plank tow-path, may cost 1,100 *l.* currency. Total 20,900 *l.* currency. It must be remembered this tow-path of 7 miles and 64 chains is at the foot of high ruinous banks.

Mr. Alex. Stevenson, Surveyor and Civil Engineer, called in; and Examined.

*Ans. to Ques. 1.*—I reside at Rouville Mountain, and am a land surveyor and civil engineer  
259. Did you survey the south shore, opposite Coteau du Lac, with the view to the constructing a canal connecting Lake St. Francis with Lake St. Louis, and have you any additional information offer to the committee on this subject, relative to the entrance, or construction, or comparative expense between the north and south shore?—I did survey the south shore in the months of September and October, in 1834, from M'Pherson's Point, looking out into Lake St. Francis, down to the foot of the intervening rapids, to the little cove at Couvillon's, looking into Lake

Lake St. Louis, through part of the seigniorship of Beauharnois, with a view of constructing a navigable canal between these two lakes. With respect to the lower entrance, there are two fathoms of depth of water, from the entrance to the harbour at the village of Beauharnois, up along the coast in Lake St. Louis, all the way to Couvillon's; and there but little projection of piers will be sufficient to guard it against injury from ice or any storm from the north or north-east; the north-west wind having to blow across a very strong current, can never have much effect upon works constructed at this place; the west and south-west, none at all. The line of this canal, from one extremity to the other, is but  $11\frac{3}{4}$  miles through the ground, the most advantageous possible to ensure durability and cheapness of construction; and from the little cove, immediately above M<sup>r</sup>Pherson's Point, at Lebœuf's farm out into the open lake, to above the Grande Pointe or Longue Pointe, in a direct line, at about mid-channel, the soundings are, commencing at 60 feet from shore, 18, 15, 12, and 8 feet, on a reef opposite the lower end of Isle aux Chats; then 24, 18, 12, and 8 feet, to a reef opposite the middle of Isle aux Chats, and opposite the point below Long Point; then 12, 18, 20, 24; and opposite Long Point in the offing, where the counter-currents make the water ripple very much, there is 30 feet water; this place (Saranac) is completely land-locked, and well defended against all winds, except the south-west, which, being in the same direction as the current, can never make any swell to obstruct or injure the works, or impede the safe navigation of the channel; in fact, it is one of the best harbours to be found anywhere upon the St. Lawrence or lakes. As to the comparative expense of constructing a canal on the south or north sides of the rapids, I am not so well prepared to state particularly; I have seen Mr. Mills' report and estimate, and from what knowledge I have of that side of the country, I must say that I cannot either approve of the route chosen by that gentleman, or his manner of terminating his projection at either extremity; and there being one mile and over, of difference of distance, all other facilities being considered, I really believe the canal can be (or could have been) constructed about at about 100,000 *l.* less cost on the south side than on the north, and be much more permanent and convenient in the former case than in the latter.

260. For whom was such survey made?—The above survey was made at the joint instance of the Commissioners of Lower Canada for improving the navigation between the two Provinces, and Mr. Ellice, the latter of whom paid me through his agents at Montreal and Beauharnois.

261. What is the position of the place you call "Saranac"?—The mouth of the intended canal.

262. Is your estimate based on the supposition that the bottom of the channel is rock, and if so, what kind of rock?—Trapstone, otherwise called grey wache.

263. What would it cost per yard to excavate such rock as you describe, eight feet under water?—12 *s.* 6 *d.* per cubic yard.

264. Did you make a personal examination of the three lines on the north side of the river?—I did not.

*Ans. to Ques. 253.*—I am not.

*Ans. to Ques. 251.*—I do not think it would be 200 yards. The latter part of the question I have already answered.

265. You state in your answer to No. 259, that the canal on the south side will cost 100,000 *l.* less than on the north; were the estimates upon which you formed your opinion made by yourself, from surveys made by you, or upon information received from other persons?—They were not made from surveys of my own, but from my general knowledge of the geology of the country, and of the existence of two rivers, one of which would be exceedingly difficult to cross; there are also about four miles of rock on the upper end of the north side, which would be very hard cutting.

*W. R. Casey, Esq. again called in; and Examined.*

266. Will you state the works that you have been employed on as an engineer?—As sub-assistant engineer on the German-town and Philadelphia Railway and the New York Croton Water-works, as assistant engineer on the Long Island Railroad; and also on the Chambly Canal, for five or six months in 1834, and as chief engineer on the railway from St. John's to Laprairie, from the commencement to the completion thereof; I have also made numerous surveys, both as assistant and chief engineer, in various parts of Upper and Lower Canada, and several of the United States.

267. In what state were the works of the Chambly Canal when you left it?—In an unfinished state.

268. What was the occasion of your leaving that canal?—Because my services were not required during the winter, and in the following spring I was employed on the railroad; I was not however required to return to the canal.

269. When were the works on the canal resumed?—I do not know, but two of the commissioners applied to me in 1838 to take charge of the canal, in case money could be procured to go on with the work.

270. Are you aware of the confused state in which the works on the canal were then left; and do you know that a large account is now pending between the commissioners and the contractors?—I do.

271. Are you aware that the contractors are now putting forth claims to the amount of more than 20,000 *l.* for extra work which they say you authorised?—I authorised no extra work, being only assistant engineer, and I do not know the amount of the claim now made.

272. Have you been examined before the arbitrators sitting upon the claim above mentioned?—I was examined about three weeks ago.

273. What was the purport of your examination?—The principal object I proved was, that the embankment and protection wall, at the upper end of the canal, were to be considered principally as extra work.

274. Did the contractors found any claims on your evidence?—Yes; they brought forward my letter stating that a large portion of this work was done under my superintendence, as assistant engineer.

275. Do you understand that the contractors based a large portion of these claims upon irregular orders given by the engineer and assistant-engineer?—Some portion is based on irregular orders given by Mr. Hopkins, the chief engineer, but the chief item was agreed to by the commissioners

also; any orders given by me were authorised by the chief engineer, but the contractors hold a friendly letter from me, stating that I considered them entitled to additional compensation.

276. When was that letter written?—In the autumn of 1835.

277. What do you mean by a friendly letter?—A letter to aid them in obtaining a grant of money to fulfil their engagements and complete the canal.

278. Were you in the employment of the Chambly Canal Commissioners when you wrote that letter?—No; it was nearly a year after I left the canal.

279. Did you consider at the time you gave the letter alluded to, that the contractors were justly and honestly entitled to the money?—Yes; I considered them entitled to a large portion of the 20,000 *l.* for extra work; but there was a great deal of the work to be performed under contract, which remained unfinished.

280. You state that two of the commissioners applied to you to take charge of the work; was this application made after or before the letter in question was written?—The application was made in the summer of 1838, nearly three years after the letter was written.

281. Have you been desirous of obtaining employment under the Board of Works?—Yes.

282. Do you know of any application to that effect having been made to the chairman of the Board?—Yes; I believe the Honourable Peter M<sup>c</sup>Gill, who was chairman of the commissioners on the railroad of which I had charge, laid my name before the chairman of the Board of Works, as did also the Honourable Mr. Hatt, who was chairman of the Commissioners of the Chambly Canal, when I was employed on it.

283. What answer did you receive to those applications?—None.

284. Have you received any employment from the Board of Works, in consequence of those applications?—I have not.

285. Were the commissioners who applied to you to return to the Chambly Canal aware that you had written the letter alluded to?—They were.

286. In virtue of the appointment you held on the Chambly Canal, had you anything to do with the accounts or contracts?—I had nothing to do with the contracts; I aided in making up the monthly estimates.

287. Did you ever give any orders while employed on the Chambly Canal, except by order of, and through, the principal?—No.

288. What will it cost per yard to excavate rock (say limestone rock) eight feet under water?—I have known rock in a tunnel cost \$5 a yard, and I should think that with coffer dams this would cost quite as much.

289. Can the rock be excavated without coffer dams?—I suppose it could.

290. Do you consider the bottom, which would have to be excavated, as loose rock or continuous rock?—I do not know.

291. Have you had much experience in removing rock under water?—Not much.

292. Have you ever removed any rock under water?—I have not.

293. Have you ever used the patent fuse and patent cartridge, which now so much facilitate work of that nature?—No, I have not.

294. In comparing the cost of removing close rock with that of tunnelling, what is the comparative cost of removing rock in a close tunnel with that of open quarry?—About four to five times the amount.

295. Were you employed by Mr. Simpson and Mr. Harwood to survey the line of a canal on the north side, and do you consider that you have furnished them with the proper estimates, surveys and professional data, to commence the said canal?—I was employed by them, but I have not furnished them with those things.

296. What do you consider then is the precise value of the information that you furnished to Mr. Simpson and Mr. Harwood?—That the difference in the cost of the canal on the two sides can be but a fraction of 100,000 *l.* in favour of the south line.

297. What do you mean by a fraction of 100,000 *l.*?—£. 30,000 *l.* or 40,000 *l.*

298. When you gave that opinion, had you not estimated for a canal of less dimensions on the north side, than that commenced on the south?—Yes.

299. State distinctly whether you have made a full and detailed estimate of what it would cost to make a canal on the north side of the river?—I have not.

300. Are there not several items of great importance connected with the construction of the canal on the north side, which you have not ascertained; I allude particularly to the excavation under water at the eastern entrance?—The first lock will be so arranged as to clear the rock in the bed of the river, and all deep cutting under water; I did not sound at the eastern entrance, but Mr. Harwood did, and his soundings corresponded with those of Mr. Keefer.

301. Is the map of the ravine line, submitted by you, correct?—The map is not correct, but the profile is.

302. Are the sections of the banks of the rivers correctly laid down on the profile?—They are.

303. Would not the incorrect manner in which the ravine is laid down in the plan, mislead the committee as to its eligibility to a certain extent?—I think not; there would be no objectionable curves.

304. Does not the incorrectness tend to shorten the distance?—No, it does not.

305. State the reasons why you have not correctly laid down the course of the ravine, on the map?—I had no time to spare, and thought it could have no bearing whatever, worthy of notice, on the question at issue.

306. Do you consider it a professional course to send in a map, especially in a disputed case like the present, admitted to be incorrect?—I think it of no importance, when the incorrectness has no bearing on the question at issue.

307. Is not the incorrectness in the laying down of the line of the canal proposed?—It is.

*Ans. to Ques. 255.*—It would.

*Ques. 308.* By a diligent search might not a better line be found on the north side than that surveyed by you?—The line could be improved at various points.

309. Do you know whether the Honourable Messrs. M<sup>c</sup>Gill and Hatt received any reply to their application in your favour from the Board of Works?—I do not.

310. Were the inaccuracies in the plan made with any particular view, and if so, state the object?—They were on account of want of time.

311. What

311. What is the object of making the ravine appear perfectly straight on the map, when you have just pointed it out with your finger to be quite circuitous?—I did not know which way the curves ran. I have alluded to this fully in my report.

312. You state that the map was made contrary to your own wish; by whose desire was it made?—By desire of Mr. Harwood; I considered a map quite unnecessary in the case.

*John Jones, Esq. again called in; and Examined.*

313. Did you in your remarks, intend the committee to understand that you approved of Mr. Mills' water route throughout?—No; because in that portion between Pointe au Moulin and Pointe au Coulonge Mr. Mills recommends that the river should be used.

314. Was the lower part of the route, that is, from Pointe au Moulin to Pointe au Coulonge, recommended by Mr. Mills, found, on examination, to afford sufficient water, and to be otherwise practicable for such a canal as he proposed; or was not that part of his route condemned by your commission?—It was condemned by them, there not being sufficient water.

315. How do you conceive that difficulty could be obviated, and what other route do you propose in lieu thereof?—I proposed a route by forming a canal by embankment on the margin of the river.

316. Do you mean the committee to understand that the canal on the north shore should be continuous inland?—I do not; we adopted Mr. Mills' line from the Cedars upwards.

317. Do you think it should be inland from the Cedars?—I do; that is, along the margin of the river, cutting through the points.

318. Was the survey considered in such a state as to afford your commission the means of determining its truth and correctness; and did your commission ever report on the subject?—Our commission never reported, because the survey was not completed.

*Tuesday, 11th October 1842.*

*Samuel Keefer, Esq. again called in; and Examined.*

319. Did you receive instructions from the Board of Works to survey the line of canal on the south side of the river?—I did.

320. Were your instructions in writing?—No, they were not.

321. Did you receive orders to survey the different lines on the north side?—I received orders only to survey a particular line on that side; the line suggested by Mr. Harwood.

322. Were the directions, so given to you, in writing?—They were not.

323. Produce the plan and estimate of your survey on the south side of the river?—(*Witness selected the documents in question from those already before the committee.*)

324. State the time you received your instructions to survey the north and south lines of canal?—With respect to the south side, I received instructions some time in January last to make a preliminary examination with the former surveys in my hand, but not to make a survey.

325. Is there no entry in the books of the office by which you can inform the committee of the date of your instructions?—There is no such entry.

326. Did you make a report to the Board of Works after your preliminary survey?—I did.

327. Was that report in writing; if so, produce it?—(*Witness referred the committee to his report already before them*)

328. Was the report you have now produced approved of; and did you receive further instructions?—It was approved of at the time, but I did not receive further instructions until about the 20th or 21st of June last.

329. Were the instructions you received on the 20th June last in writing?—They were not; my instructions were to examine a portion of the line which the engineer in charge was to have laid out; to see if the same was correct, in order to afford employment for the emigrants who were then arriving in great numbers.

330. When did you receive your instructions to survey and estimate the whole line of the Beauharnois Canal?—On the 19th July I received instructions from the chairman to run a proof level through the line, for the purpose of ascertaining if all was right; but it was not until about the 1st of August that I received directions, verbally, to survey and establish the whole line.

331. When did you commence the survey, under the instructions of the 1st of August?—Immediately.

332. When did you complete the survey?—It is yet incomplete; it will take the engineer who is now in charge about two months to complete it. The line and the completion of the section in the centre has been effected, which is sufficient to base an estimate of the probable cost of the work. That section and estimate is before the Committee; but the further survey referred to is merely to lay out the work for practical operations.

333. When was your estimate for the south side completed; and when was it laid before the Board of Works?—It was completed on the 1st October, and submitted to the committee, the chairman of the Board of Works not being here.

334. Was your estimate examined and approved of by any member of the Board, previously to its being submitted to the committee; and if so, name the member or members who examined the same?—It was not submitted to any member of the Board, but I made it out in a particular form, for the information of the committee, and conceived myself obliged to submit it to them, without waiting for the return of the chairman.

335. Did the president or any of the members of the Board of Works attend you, after or before your survey, over the line on the south or north side?—They did not attend me, except that the chairman accompanied me over the most important part of the line on the south side.

336. Was your estimate based on the supposition that the bottom of the channel, at the western entrance on the south side, was rock?—Boulder stones, and not solid rock.

337. What would it cost per cubic yard to excavate the rock, if solid rock be found at the entrance of the canal, for the purpose of forming a channel 10 feet deep?—About 1 l. a cubic yard.

338. Did you take any means to ascertain the nature of the bottom of the river at the western entrance, under the boulders?—No, I did not.

339. Did you examine the first section from M<sup>c</sup>Pherson's Point, by boring; and what was the nature of the ground?—I did, by sinking a shaft in two places, and found clay and boulders in the proportions mentioned in my estimate.

340. Did you, from that examination, consider that it indicated the nature of the bottom in the channel?—To a certain extent, I conceive it did.

341. What are your grounds for saying that there is no solid rock within 10 feet, in the channel between Chartier's Point and Isle aux Chats?—I conceive the shafts which I sank at Chartier's Point, give some general indication of the channels; and in the course of taking the soundings reported on the chart, I took the pains, when sounding in eight feet water, by means of a graduated wooden rod, of feeling the nature of the bottom; and from that I concluded that the bottom immediately under the eight feet soundings was composed of a mass of boulder stones, varying from 10 to 40 cubic feet in size, between which I could thrust down the rod, and in seven feet water I could see them, but of the nature of the bottom below those boulder stones, I have no positive information; but I conceive, if they were cleared away, it would matter little what the bottom was composed of. The method in which I ascertained the nature of the bottom of the channel was, by examining in passing up while I was taking soundings, and feeling with the rod in several places, as already mentioned.

342. What do you think it would cost per cubic yard to blast such rock and boulder as you think is in the channel?—About 5 s. per cubic yard.

343. Did you make your estimates, submitted to this committee, from your own original rough estimates, to meet the form of question submitted by this committee, or did you make them, after you got that question, from other sources of information?—I did not make the estimate for the north side, submitted to the committee, from original rough estimates, but made it to meet the form of questions submitted by the committee, from my own survey of July last, taken in connexion with a portion of the survey made by Mr. Mills in 1833, of which I made the section at that time. With reference to the south side, I did not make up my estimate submitted to the committee from original rough estimates, but from the survey, which I had only completed a few days before I was summoned by the committee. I depended upon no other sources of information than those mentioned.

344. When did you complete your plan and estimate of the north side?—I completed the plan and rough estimate of 389,000 l. of Mr. Harwood's line, which I was sent to survey, on the 5th July last.

345. From what survey did you compile the estimate for a canal on the north side which you prepared for the information of the committee?—In order to meet the views of the committee, and give them the information desired in their questions, I threw aside Mr. Harwood's line, and selected what I considered the best and cheapest route to be found on the north side for a continuous inland canal, which I conceived the best line that could be selected between the two lakes.

346. When was your final estimate of the line you surveyed on the north side completed and presented to the Board of Works?—It was completed on the 1st October, and submitted at once to the committee, in the absence of the chairman of the Board of Works.

347. Was that estimate completed by information acquired by yourself personally, or from information obtained from others?—From information acquired by myself personally, for that derived from Mr. Mills' survey I had a personal knowledge of myself, having assisted him in that survey.

348. Was your estimate, so made, ever approved of by the Board of Works?—It has been approved of since it was submitted to the committee.

349. Did you sink shafts on the north side, and if so, how many?—I did not; I have attached such prices to the quantities in the estimate as would perform the work if the whole of it should prove the same as is indicated by external appearances. The quantity of rock in the estimate is taken from the shafts sunk by Mr. Mills in 1833.

350. Should the bottom of the channels at the western entrance, on the south side, turn out to be solid rock, would the canal not require to be protracted to Grosse Point?—No, by no means, because the solid rock cannot be within 10 feet of the surface, according to my knowledge of the situation, so that there would be no necessity for carrying the canal to Grosse Point, particularly as the space between the shoal and Grosse Point varies from 12 to 20 feet in depth.

351. What appointment do you hold in the Board of Works?—Engineer to the Board, and, as such, head of the engineering department.

352. Was the decision determined upon by the president of the Board of Works, regarding the line of canal, founded on your estimates, surveys, and reports?—I have every reason to believe that the chairman has been influenced by my representations. I am not competent to say whether they exclusively influenced his decision.

353. What are the committee to understand by your statement, that the survey for the south side is not yet completed, yet that you made your estimates from your own survey, completed only since you came to Kingston?—The estimate was made from my established line, and the levels taken upon the centre, which are sufficient to afford a near approximation of the actual cost. The survey, so far as relates to the centre line, was completed some time last month; but, inasmuch as all the cutting stakes and out slope stakes for the bank are not yet placed, the survey cannot be said to be completed, because all those levels must be taken before we can determine the actual quantities to be removed.

354. It has been stated to this committee that a tow-path can be made from the western entrance of the locks, at Coteau du Lac, to the steam-boat landing; what is your opinion of that fact, and its probable cost?—The towing-path can undoubtedly be made; but it would answer no practicable purpose whatever, when done, except for drawing up the present small craft which navigate the river, partially loaded. The fall here in  $2\frac{1}{4}$  miles is  $8\frac{1}{2}$  feet, and the current runs from four to seven miles per hour, so that for the large class of vessels that will navigate the Cornwall Canal, it would be of no service. The towing-path, to accommodate a draught of 10 feet water, would have to be carried out into the river some distance, or else a channel must be sunk under water near shore. For the want of sufficient soundings on this part of the river, I will not attempt to give the committee an estimate of the probable cost.

355. What

In this estimate I take Mr. Mills's prices as correct, and calculate thereon; but after incurring this increased expenditure, the north side line could not be compared to that on the south side; as in the former there would have to be encountered in several places currents running at from four to six miles an hour; and the cost of maintaining this line would be infinitely more than the corresponding expense on the south side. Colonel Phillpotts estimates this river route as follows:—

Section 1 - - - - -	£.
Add for removal of Fort - - - - -	117,050
	3,250
	£. 120,300

Section 2, said to be navigable for steam-boats; but there are points at which there are currents of five miles, of four miles, and five miles respectively.

Section 3 - - - - -	£.
Section 4.	125,000
Section 5, through the split rock and the Cascades Points; the canal to be cut through rock - - - - -	129,000
Total, exclusive of towing-path - - - - -	£. 374,300 sterling.

or 415,900*l.* cy. Nothing can more fully show the difficulty, expense, and danger—of either the tow-path, required in any case to make Mr. Mills' route available for all description of boats, or to construct such a work as Mr. Jones proposes, namely, a canal along the margin of the river, from the Cedars to the Cascades—than the language of Mr. Mills, with respect to the soil and banks, which I beg leave here to quote: "Above the Cedars, the banks are from 20 to 30 feet high, composed of clay, with some veins of sand, frequently sliding off in very large bodies, showing the destruction which would be consequent upon constructing a canal along or near its foot, or upon the top. Here, also, below the Cedars, it would be impossible, with any reasonable expense, to maintain a canal, either upon or at the foot of the bank of the river, on account of the great bodies of it which frequently slide into the ravine." This opinion is fully sustained by Judge Wright, who states, "That the shores are a formation of clay and loam, underlaid with quicksand, which occasions yearly very considerable slips; and that a canal carried on such ground would be in great danger, if any where near the river."

361. The scale of the work proposed by Mr. Mills for the river line being larger than the scale adopted for the Beauharnois line, what would be the difference of expense between these two scales, applied to the river line, on the data furnished in Mr. Mills' Report?—In the upper section, the saving in the earth work, by adopting the lesser scale, would be  $\frac{2}{5}$ ths; there is not any other saving in this branch of the work. The saving in the locks would be about 750*l.* each. In my answer to question 360, full allowance is made in the estimates for the difference of scale.

362. What extent of the canal at Cornwall is within musket shot of the United States?—I cannot tell what length of canal, but I consider that several portions of the work are so much exposed to annoyance from the American side, that it would not be possible, in the face of an enemy, to work a boat on.

363. State what portions of the work are so exposed?—I principally allude to the part opposite Barnhart's Island and Chimney Island. I consider the whole of the narrow navigation of the St. Lawrence, above Cornwall, to be so much exposed, that it cannot be relied on as a communication in time of war, for which reason, I apprehend, the Rideau Canal was made.

364. Are you aware that there was no other water communication during the last war with the United States than the St. Lawrence?—Yes.

365. Did you ever go over the line of canal on the north side, pointed out by Mr. Harwood?—Yes; the line of Mr. Harwood only differs from the other inland routes at the eastern extremity, as will be seen in my answer to question No. 358.

366. Who made up the estimate for the south line; did you examine it, and when?—Mr. Stevenson made up an estimate, as likewise did Mr. Baird. I examined these estimates some time last fall, again about Christmas, and again in the spring. Mr. Keefer also made an estimate. These several estimates are before the Committee.

367. Did you examine the estimates for the two sides made by Mr. Keefer, and when?—I have examined them within the last few days.

368. Did any of the members of the Board of Works attend with you to inspect the line of canal on the south and north sides; if so, name them?—They did not.

369. Did you make a report with the surveys and estimates to be laid before the Board before the present Beauharnois line was determined upon?—Having fully satisfied myself as to the comparative cost of the two lines, I made my report to the Governor in Council before it was in contemplation to commence the work this season.

370. Was your report, together with the evidence upon which you founded it, laid before the Board of Works, and when?—I conceive that by the constitution of the Board the Act requires no quorum, and that therefore any document before me as Chairman is before the Board.

371. What is the duty of a member of the Board of Works?—Members of the Board are also members of public departments; and I conceive the object of having them members of the Board is, not that it was intended that they should interfere in professional matters, but when circumstances should require it, afford to the chairman of the Board any assistance in their power when general policy was likely to have any influence in the operations of the department.

372. Did you ever summon a meeting of the Board on the subject of the Beauharnois canal; and if so, when and who attended?—Having satisfied myself as to the comparative cost of these canals, I made a report thereon to the Governor in Council, leaving them to decide whether it should be on the north or south side. I would here wish to remark, that the Board has never embarked

barked in any work without the special order of the Council; and that when the Board is once ordered to proceed with a work, I conceive the carrying of it on to be the ordinary duty of the department, and no more requiring minutes to be made thereon than the inspector-general or Crown Lands commissioner are expected to make minutes of the proceedings in their respective departments.

373. Did you submit to the Governor and Council in writing the evidence and reasons which induced you to give a preference to the south side; if so, please produce the paper or a copy of it?—The report called for in that question is the report given in my answer to question No. 359.

374. Do you keep an entry in any book or books in your office wherein you record the proceedings of your meetings, and the reasons for any decisions the Board may arrive at; and if so, produce the book?—We keep three books; there are estimate books, report books, and letter books; and in one or other of them all proceedings of the Board are entered.

375. Are the extracts laid before the committee by Mr. Begley, secretary to the Board, the only entries in your books relating to the Beauharnois Canal?—I believe so; I gave directions that every document in the office or entry in the books relating to the Beauharnois Canal should be laid before the Committee.

376. When the Governor and Council approved of your recommendation for adopting the line on the south side of the river, were the estimates and the evidence which induced you to recommend the same, laid before the Council?—No.

377. How was the decision of the Governor and Council communicated to you; if in writing, produce it?—(*Witness referred the committee to the report of the committee of the Executive Council already before them. Vide Appendix, No. 24.*)

378. Was the estimate for the western entrance of the canal on the south side founded on the supposition that the bed of the river between Chartier's Point and Isle aux Chats was rock?—No, it was known that shoals existed there.

379. Should the bottom of the channel turn out to be rock, would it not materially add to the expense?—Yes, to a certain extent; but from the depth of water in the channel there would be under any circumstances very little excavation.

380. What would be the price per cubic yard for excavating rock eight feet under water in that passage?—Boulder rocks can be removed at from 3 s. 6 d. to 5 s. per cubic yard, connected rock at from 5 s. to 10 s. I have, in the course of my professional practice, removed rock in a much greater depth of water at nearly the same price as I would on land.

381. Did you verbally state before the council your views on the subject of the Beauharnois Canal, and explain to them the information you had received, and the conclusions to which you had come?—Fully.

382. The Governor-general, in his despatch of the 19th of July, states that the report of an eminent civil engineer, and the opinion of the chairman of the Board of Works, decided him in making the canal on the south side. To whom does his Excellency refer in the first instance, and which report of yours in the second?—He must have referred either to Mr. Keefer or Mr. Tate; and the report I conceive must be that to which I have already alluded in my evidence.

383. In the same despatch it is stated that "the objections urged by the petitioners from Coteau du Lac are contradicted by engineers of great experience and scientific acquirements, who being strangers to the country, can have no local bias." To whom does his Excellency refer?—I presume his Excellency refers to the authorities I have already stated, and to whom I alluded in my report.

384. The Governor-general, in his despatch, dated the 6th August, forwards to Lord Stanley your report of the relative advantages of the two sides; to which of your reports does this apply?—To my report of 1st August.

385. Who is the French engineer alluded to in your statement dated Montreal, 1st August?—I can state no more than what is stated in that report.

386. Did you make any of the estimates alluded to in your memoranda, dated 12th August 1841?—I refer to the said memoranda for my answer to this question.

387. What induced you to commence the canal in 1842, when in your own project it was deferred till 1843?—The Order in Council.

388. The employment of emigrants was the cause assigned for the early commencement of the canal at Beauharnois; what is the number of the emigrants so employed?—When I was upon the works I inquired the number of men then employed, and was told about 1,200, of whom about somewhat more than half were emigrants.

389. The Governor-general, in his despatch to Lord Stanley of the 19th July, states, "By the intervention of the agents of the Beauharnois Company, who have of course a strong interest in the work, the land necessary for its execution has been given up gratuitously, and funds have been advanced for the first expenses." Will you name the agent or agents of the Beauharnois Company with whom you have so treated, and explain what is meant by the statement, "and funds have been advanced for the first expenses?"—I wrote to Mr. E. G. Wakefield as an influential person residing at Beauharnois, and through his intervention obtained the relinquishment of about 200 persons through whose land the line of canal would pass. I have personally no knowledge of the terms on which the money was provided.

390. Have you had under your consideration the report of a committee of the House of Assembly of Lower Canada, of which Andrew Stuart, Esq. was chairman, on the subject of the St. Lawrence Canal?—I have had under consideration all the reports connected with it, and I will deliver in a copy of the report in question.—(*Witness subsequently gave in a copy of the said report.—Appendix, No. 35.*)

391. With reference to question No. 383, do you not think that the Governor-general must principally have alluded to yourself as an "engineer of great experience, a stranger to the country, and having no local bias"?—I believe so.

392. What was the proportion of emigrants employed at the commencement of the Beauharnois Canal?—I conceive that I have already answered this question.

393. You have stated that you began the canal at Beauharnois in order to employ the emigrants; why then did you not commence working on the 73,500 l. for roads in Upper Canada, and 97,000 l. for roads in Lower Canada, intended to be expended in 1842, on which the emigrants might have been employed?—Such of the roads as are in the western section of the province, the working details of which were prepared, were in progress, the works on the Gosford Road were in full operation, those on the Gaspé Road, from being obliged to furnish provision, and other causes, were necessarily retarded; those on the Cascade were not in progress owing to the want of the practical details.

394. What prevented those practical details from being acquired?—The first cause of those details not having been acquired was, that an application from Mr. Simpson to give to his step-son, Mr. Roebuck, the management of it, and which was at first agreed to by me, was subsequently declined upon making inquiries; another gentleman was sent upon the works to procure them, whose proceedings were interrupted by his being obliged to leave for Washington.

395. When was that application made, and when was it declined?—The applications were made in the early part of January; they were declined early in February.

396. Was not Mr. Wells kept here six or seven weeks waiting for orders on this very road?—Certainly not.

397. What is the amount expended on the canal to the present time?—Expenditure on the Beauharnois section of the St. Lawrence Canal to the 6th October 1842

-	-	-	-	£. 24,198
To this has to be added the present fortnight's returns, about	-	-	-	3,000
				£. 27,198

Besides the above are to be embraced damages to lands, and consequential damages, which have not been ascertained.

398. Did you consider the early completion of this navigation of equal importance to the roads referred to?—Infinitely more so, as from the rapidity with which the completion of the Cornwall Canal had been proceeded with, I considered it most expedient and advisable that this, the only remaining interruption to the navigation, should be removed as soon as possible, by which means the former heavy expenditure would immediately become remunerative.

Mr. Killaly having perused the evidence taken by the committee, handed in the following statement which he had prepared in reply thereto:

The Hon. Geo. Moffatt, Chairman.

Sir,

Board of Works, Monday Evening, 10 Oct. 1842.

Before proceeding to make some remarks upon the evidence which has been adduced before the Committee of which you are chairman, in support of the charges brought against the Board of Works by Mr. Simpson, I am desirous of expressing to you, sir, and to the rest of the Committee, my sincere thanks for the course adopted by you, in allowing me to examine and comment upon that evidence.

I received a copy of the evidence from the clerk of the committee, on yesterday (Sunday) afternoon, at five o'clock.

Before looking at those voluminous documents, I had expected to find in them, at least, some testimony bearing upon the question at issue worthy of my most serious attention; but a very cursory examination of it has been sufficient to convince me that the evidence itself is of a character to preclude me, or any other professional engineer, from attempting to analyse it, with a view to useful results. That portion of it adduced in support of Mr. Simpson's charges consists, for the most part, of matter which I may term a sort of ignorant gossip, almost wholly irrelevant to the subject. It is not, indeed, wanting in bold assertions of opinion; but those are made in language which is alone sufficient to prove to a man of experience that the witnesses by whom they have been made are profoundly ignorant of the very nature of the question, with respect to which they speak so confidently. The evidence is curiously characterised by vagueness, self-contradiction, confusion of ideas, gross exaggeration, and positive misstatements.

There is but one point in which the witnesses are constant and consistent with themselves, and with each other: they all display, in a manner that must be obvious to any observer, a keen anxiety to establish Mr. Simpson's charges, by means of reckless assertion. I think I may safely add, judging from internal evidence alone, that the testimony of the witnesses has been concocted among themselves, or that their minds have been under the guidance—not to say direction—of some one or more persons, whose business it has been to get up a case in support of Mr. Simpson's accusation against me. These witnesses would seem to have been, as it were, well drilled for the occasion. From this description I do not except either the written or verbal testimony of Mr. Casey, the engineer, employed by Messrs. Simpson and Harwood, and brought forward by Mr. Simpson as a witness against me. This gentleman himself states (I use his own words,) "the object of my examinations and report was not to furnish an estimate of the probable cost of a canal on the north side, but merely to show that the Hon. H. H. Killaly was wrong, in leading the public to believe that a canal on the north side would cost 100,000*l.* more than the south side;" and accordingly, up to this very day, he had not made any estimate in full of the cost of constructing a canal on the north side: on the south side, he states he has not been for seven years; and, in answer to a question, he says, that when he came before the Committee, he was not aware of so important a point as the scale upon which the present canal is being constructed. These two statements are characteristic, in all respects, of the whole of his testimony, namely, the absence of any valuable or even available information, with respect to the particular subject which he pretends to examine. He might well say that his only object was to criticise a report of mine; for the greater part of his entire testimony consists of a sort of literary strictures on my report to the Governor-general, of the 1st of August last, and is far more fit to form articles in a newspaper opposed to the government, than to be submitted to a committee of the legislature, with a view of guiding their judgment upon a scientific point. I am sure that, in my long professional career, I never met with anything, purporting to be the production of an engineer, which so clearly evinces a determination, *fas aut nefas*, to make out and bolster up a case for the employers, and so utterly underserving of serious notice.

The other witnesses brought forward by Mr. Simpson, although they do not pretend to science, like Mr. Casey, are disqualified, by their utter ignorance of the subject, from offering any opinion to which I can pay respect. They consist of pilots, wharfingers, farmers, a stage-coach proprietor, a store-keeper, a doctor, a timber merchant residing at Bytown, and the agent of an insurance company, the latter being Mr. Simpson's step-son; and the whole of them, not excepting the merchant at Bytown, are deeply interested persons.

It is requisite, and I am sure that the committee, considering that I am placed upon my trial, will allow me, in my defence, to explain the grounds on which I question the credit of those witnesses, on the score of personal interest.

There

There can be no doubt that the St. Lawrence navigation will have the effect of diminishing the value of property at Bytown, and affecting the profits of persons engaged in trade there. The evidence of Mr. Wm. Stuart, the merchant of Bytown, is really devoid of all value, as regards the question at issue; nevertheless it evinces the bias with which persons interested in the Ottawa must view this subject, and also the *animus* with which such a witness has been brought forward. In a still higher and more obvious degree, other witnesses have an interest in putting a stop to this work. Mr. Simpson's step-son, Mr. Wm. Roebuck's, income depends upon the continuance of a dangerous navigation, requiring the expensive protection of insurance. His brother, Mr. Henry Roebuck, is known to be a pilot of the rapids, and engaged in the management of a towing establishment, for hauling barges up that part of the river, which would never be used after the completion of an inland canal. A near relative of Mr. Roebuck, viz. Mr. Simpson's own son, is the collector of customs at Coteau du Lac, where he, and his father before him, have been in the habit of exacting fees, contrary to law, from barges passing down the river; and it is certainly more than probable that, when the navigation shall be completed, the customs' establishment at Coteau du Lac will be deemed worse than useless, and that the large revenue which has been derived by Mr. Simpson and his son, from salary as customs' officers, and the illegal exaction of fees, will entirely cease. The first interest of the whole family above named, and of the pilots of the rapids, who have been examined, is, if possible, to stop the work now in progress; but if they should fail in that object, then their next interest would be to get the canal on the north side, where Mr. Simpson owns a considerable property, near to the proposed entrance. It is true that Mr. Simpson's step-son, Mr. Wm. Roebuck, says, that "if I owned a farm at, or in the neighbourhood of, Coteau du Lac, I would give a large sum of money rather than have the canal pass through it, as its value would, I think, be thereby lowered 50 per cent.," and there can be no doubt that Mr. Harwood as boldly states, that the only way in which his property could be affected, by taking the canal through his seignior, would be "to my disadvantage;" but the committee will know how to estimate such statements. The self-interest of the witnesses is only less evident than their want of scruple in denying it. Mr. Whipple, the stage-coach proprietor, though he says, that his only property at the Coteau du Lac is "a wharf and eight or nine acres of land," has omitted to add, that the very entrance of a canal on the north side would be close to those acres, to which an additional value of several thousand pounds would thereby be given; and that the completion of a canal, on either side, would put an end, for a great portion of the year, to the stage-coach business, in which he is largely engaged. It would be easy to prove that the other witnesses, being residents of Coteau du Lac, would have their fortunes improved, if the canal was to be established there; and however unwilling I may be to weary the committee, by dwelling on this most disagreeable part of the subject, it yet remains for me to make one statement, for the purpose of discrediting Mr. Simpson's witnesses. Of these, the two who speak with the greatest confidence and pretence to knowledge are Mr. Casey, the engineer, and Mr. Wm. Roebuck, Mr. Simpson's step-son. Unsuccessful applications for employment in favour of each of them have been made to me within the last 12 months: I did not disregard the applications made to me on behalf of Mr. Casey, but, on the contrary, was inclined by them to make inquiry respecting his professional abilities, and came to the conclusion that it would be wrong in me to trust him with any employment of consequence, under the Board of Works. With respect to Mr. Wm. Roebuck, I am under the painful necessity of stating that, upon application from Mr. Simpson, not many months ago, being made to me for employment on a public work, I expressed a sincere wish to comply with the application; but upon making such inquiries as I judged necessary, before placing any one, who was a stranger to me, in an office of trust under the Board, I gave up all thought of meeting Mr. Simpson's wishes.

In confirmation of the high probability that these witnesses have been actuated by motives of personal interest, if not of ill will towards me, I would recal the attention of the committee to their professions of having no object in view except the love of truth and the public good. As one instance of these very suspicious professions of disinterestedness and public spirit, I beg leave to draw the attention of the committee to the evidence of Mr. Asselin, who, having said that he had "no personal interest for or against the canal," and admitted that he was the owner of the wharf and property known as Asselin's Wharf, at the Coteau du Lac, had the effrontery to add, that the reason why all his neighbours were opposed to the canal being on the south side was, "because they were opposed to the misapplication of the public money!"

Such testimony as that, which I cannot comment upon less severely, is of a piece with a fact, which, as it is perfectly notorious, and has a close bearing upon the question submitted to the committee, I may properly notice, namely, the practice which has been systematically pursued by the Simpson family, of waylaying travellers, and especially members of the legislature, at Coteau du Lac, and endeavouring, by the most unscrupulous assertions, to prejudice their minds in favour of the charges against me, which Mr. Simpson has submitted to the House of Assembly. If it should be unknown to members of the committee, there are yet hundreds of people who know that, in the pursuit of this system of detraction, the persons whom I am exposing did not confine themselves to mis-statements of fact with respect to engineering matters, but that they cast imputations, and made positive charges of dishonesty and corruption, not only upon myself, but upon several gentlemen of long-established and unimpeachable character, whose assistance it is my good fortune to have as officers of my department.

Such is, then, the nature of the testimony got up for the purpose of establishing that I have committed either a gross blunder, or the wilful crime of choosing for a canal which is to cost 250,000*l.* a situation presenting insurmountable obstacles to the use of the work for navigation. I will not pretend to prove that this testimony is false; I cannot even bring myself to look at it, in comparison with that of the able and experienced engineers, upon whose elaborate surveys, made from time to time during a long term of years, in conjunction with my own observation, my deliberate opinion, as to the selection of this line of canal, was formed, and the decision of the Governor and Council was founded. It is hardly with patience that I can write down the names of Mr. Wm. Roebuck, Mr. Whipple, and Pilot Perry, or even that of Mr. Casey, by the side of those of Mr. Stevenson, Mr. Baird, Mr. Mills, Colonel Philpotts, and Mr. Keefer; nor is it, indeed, requisite that I should either claim the authority of the gentlemen last named, or allude to my own extensive experience, in order to defend myself against Mr. Simpson's charges: these accusations have been broken down by the very testimony adduced in support of them. This testimony I venture humbly, but confidently, to submit to the Committee, leaves wholly unaffected my decision in favour of the superior cheapness and efficiency of the south side line.

If, in making the above observations, I have been betrayed, by a natural feeling of indignation, into the use of too strong expressions, I should beg pardon of the Committee for having failed in proper respect towards them. I have endeavoured to keep within the bounds of decorum, and cannot but trust that every member of the committee, imagining himself to be placed in my situation, and subjected, as I am, to accusations which, if they are admitted, would be fatal to my professional reputation and personal character, will find excuses for the warmth with which I have expressed myself.

In defending myself against Mr. Simpson's charges, I have purposely abstained from noticing the testimonies in my favour which, during my absence, have been laid before the Committee. I have thought that no such evidence was required to demolish the self-destructive statements of the witnesses against me; nor am I now disposed to attach any weight to the statements of unprofessional persons who have given opinions before the Committee in favour of the south side. I rely with confidence on the full, calm, and intelligible testimony of the engineers who have been examined. I declare, upon the honour of a gentleman, that my firm belief, after having anxiously reflected upon this subject for more than a year, entirely concurs with the opinions of those gentlemen. I am convinced that, if twice the number of engineers were to make surveys and reports upon this subject, no other conclusion can be come to than that which I firmly maintain, namely, that the line of canal on the south side, now in progress, is greatly superior in point of efficiency to any line on the north side, and cheaper to an extent of about 100,000*l*.

In conclusion, I will merely add, that notwithstanding all the political intrigue and party feeling with which this question has been so industriously mixed up, the points in which, in my judgment, the country is alone interested, are simply, First, Is the line in course of construction a good one? Against its being so not one scintilla of assertion has been made. Secondly, Is it the cheapest? By the testimony of Mr. Casey, the only person brought forward by Mr. Simpson who pretends to speak as to cost, it appears that the saving by adopting it may be under 50,000*l*; but, shortly after, he admits an omission of the value of the difference of scale, which he guesses at 20,000*l*. more. In another part of his evidence, he says, the saving may be the fraction of 100,000*l*, by which he states he means 30,000*l*. or 40,000*l*; but by Mr. Keefer's detailed and elaborate estimate of the lines on both sides, the saving is shown to be 103,000*l*. Finally, Are there any natural obstructions to it which are serious and insurmountable? There are not; for Mr. Keefer's careful examination shows the shoals to be large boulders, stones, and sand, with two channels, with not less than eight feet six inches water; and we have an old, experienced, and solvent contractor, who offers to give ample security, and contract to form a suitable channel, of 400 feet wide, for 7,000*l*.

I beg leave to append Mr. Keefer's conclusive observations upon the evidence adduced in support of the charges against the Board of Works.

Respectfully submitted,  
*Hamilton H. Killaly.*

**Mr. Keefer's Remarks on the Evidence adduced before the Committee, against the Location of the Canal on the South Side of the River.**

The evidence of the pilots, and others, from the north shore, is very contradictory; some stating that the current from Grosse Point to M'Pherson's Point is three miles per hour, and others, that it is from 8 to 10 miles per hour. Some of them admit that there is a channel of 8½ or 9 feet, and others deny the existence of any channel whatever. One witness says that he can get out and walk on the shoal for nearly half the length of it, and that the surf at Grosse Point runs from 10 to 12 feet in height. All the north-shore people, however, concur in stating that the prevailing winds are either west, north-west, or north.

It is an easy matter to procure evidence contradictory of everything these witnesses have stated on the above points, but it is of no consequence whatever to do so. The current, in fact, (notwithstanding this evidence) does not exceed, by measurement, two miles per hour, and when the towing-path, provided for in the estimate, has been made, all the difficulties they have started vanish, for this current offers no sensible impediment to steamers, and when considered in reference to the general line of navigation between Lake Ontario and the sea, this rate of current cannot, with fairness, be objected to, when there are a hundred other places in the river and lakes where the current is the same, and it was never thought necessary to obviate them.

In the present unimproved state of the channel, it is perfectly practicable to conduct a steamer of seven feet draught of water from Grosse Point to M'Pherson's Point, and back again, having first put down buoys to indicate the channel.

That the testimony of pilots cannot always be relied on, has been proved by the fact, that barges and steam-boats are now descending the Lachine Rapids every day, where it was declared by them that no practicable channel existed.

In reference to their testimony in this instance, I will simply state, that the chart is made from soundings taken by myself, with the greatest care, and I can vouch for their accuracy. I did not undertake to lay down all the shoals, both above and below those lying between Chartier's Point and Isle aux Chats, but confined my labours to the place where the channel presented the greatest difficulties, inasmuch as the other shoals do not interfere with the free navigation of the river, leading to the entrance of the canal.

These soundings were taken in a large canoe, with one man to row, one to steer, two others and myself, five in all; and so far from finding the current as strong as these witnesses represent it, I found no difficulty whatever in going from side to side, up or down, or which ever way I pleased. I have often paddled up from M'Pherson's Point, in crossing to the Coteau du Lac.

In the estimate it will be seen that I have provided for removing the points of the shoals next the centre channel, to afford a clear entrance of 400 feet in width, and 10 feet in depth. The shoals consist of a mass of boulder stones, in some places imbedded in sand, and they can therefore be easily removed.

In reference to the prevailing wind, I will barely remark, that every one at all acquainted with the great lakes Erie and Ontario, knows perfectly well that the prevailing wind is from the south-west; and it is not reasonable to suppose that only 160 miles of eastern longitude is sufficient to give another prevailing wind. I know that impartial and uninfluenced evidence will state the contrary; and such being the case, Coteau du Lac must be more frequently the lee-shore of the lake,

lake, while Grosse Point shelters the southern entrance. But it appears to me ridiculous to be setting forth all this nautical reasoning about the entrance to a canal on the River St. Lawrence, the same as if we were on the coast of France or Ireland. It seldom occurs that vessels cast anchor before entering such canals. The usual practice is to come to, and fasten themselves alongside a pier or wharf, which saves all the trouble.

The evidence offered by Mr. Casey's criticism, called a report, is very meagre. It appears from it that he has not made a proper survey of the north side, and that he had only seen the south side about seven years ago; and that in reference to the subject under examination, he did not examine the south side at all. Before he could estimate the difference in cost between the two sides, it is obviously necessary that he should make an estimate of what each would cost; but this Mr. Casey thinks unnecessary, and thinks to satisfy the public, and the committee, without giving an estimate of either. The committee order him to give in an estimate for the north side, and he gives only a partial one; still maintaining that the principal difference lies in the excavation, which he supposes to amount to 50,000 *l.*, neglecting altogether the increased expense on the north side of the embankment, waste-weirs, ditching, and fencing, locks, and lock-houses, bridges and bridge-houses, damages, protection walls, coffer-dams, and pumping.

It is idle to be drawing any comparison, without an estimate full and complete of each side. A careful and rigid examination of my estimates for the north and south side, I trust, will convince the committee, that the Board of Works was not wrong in stating that the canal on the north side would cost 100,000 *l.* more than on the south.

Mr. Casey thinks it unfair to state that the canal on the south side is three miles shorter than on the north; because, he tells us, "the Beauharnois Canal ends at the foot of a strong current." This is not the case; the canal terminates at the head of an eddy, settling up the lake nearly two miles. The map will show that the south side may represent the chord and the arc of a circle, which accounts for the difference in length.

Mr. Casey has been betrayed into a singular fallacy in estimating lockage at so much per foot lift. He should have known that two locks of five feet lift will cost nearly double a lock of 10 feet lift, but by his method they would cost the same; moreover a guard-lock, which has no lift, by his rule would cost nothing at all. He is wrong, also, in assuming the lockage on the Cornwall Canal at 3,000 *l.* per foot lift. How, then, can his calculation be relied on?

In reference to using the ravine on the north side, although Mr. Casey makes his estimates supposing the canal placed in it, he is very guarded in giving an opinion; and as he makes no provision for waste-weirs, it is to be presumed that he considers them unnecessary. But Mr. Roebuck is more confident, and considers the using of the ravine a great advantage; that it would take a series of years to fill up the reaches between the locks, and that "aprons" might be constructed to carry off the flood-water.

It is unnecessary to repeat the objections I urged against using the ravine by damming it, in my report of 5th July last. I will now add the following:

I consider waste-weirs indispensable for the discharge of sudden freshets without injury to the locks. In the engineer's art waste-weirs are one of the most difficult structures to be rendered permanent. But placed in a bank of newly-formed earth, or in the original clay bank (equally as unsafe), the least imperfection in the foundation or workmanship, the slightest settlement of any part of the structure, or the loosening of the earth by frost in spring, may, in the time of violent and sudden freshets, be sufficient to create a leak, which, unless detected at once, and stopped, would inevitably become the means of carrying away the dam, which done, every succeeding dam must go too.

It rarely happens that a ravine affords the opportunity of placing the locks so advantageously as that vessels can approach and depart from them by easy curves, which are necessary in order to prevent vessels from coming in contact with the corners of the locks, and doing damage to the walls.

Again, in placing the locks in the side of a hill, as must necessarily be the case if the ravine be used, every engineering precaution must be taken, by piling and otherwise securing the foundations, to prevent partial settlement; precautions that will add greatly to the expense of the locks on the north side.

With respect to Mr. Harwood's evidence, I wish it to be distinctly understood, that the line upon which I made out my estimate for a canal on the north side, is not that pointed out to me by Mr. Harwood, but the cheapest inland route that I could select. Had I taken Mr. H.'s line, there would have been upwards of three miles at the upper end, averaging 17 feet cutting; whereas, my line, for that distance, scarcely averages 12 feet cutting.

I desire further to remark, emphatically, that it was not until after I had completed my survey of Mr. Harwood's line, according to his written description of it, that he requested to have the levels.

Any connected improvement by the river bank, on the north side, will cost still more than the inland route, which I have estimated at 359,490 *l.* The inland canal on the south side, with the exception of the slight obstruction at the entrance (which can easily be removed) is most singularly favourable, and far preferable to any other line that can be selected to unite the two lakes. It is shorter, safer, more efficient, and cheaper by upwards of 100,000 *l.*

STATEMENT of the comparative Advantages and Disadvantages of the Inland Canals on the North and South Sides of the River.

#### NORTH SIDE.

The canal is 14  $\frac{1}{2}$  miles long. The canal receives into it the formidable freshets of the *à Delisle*; and if carried into the ravine of *Quinchiens*, receives the wash of all the land floods of a large tract of flat table land, rendering necessary the construction and maintenance of waste-weirs. The lock foundations are chiefly on clay. This canal will cost 359,490 *l.*

#### SOUTH SIDE.

The canal is 11  $\frac{1}{4}$  miles long. It is above and independent of all water-courses; consequently, requires no waste-weirs. It can be navigated two or three weeks more every season than the one on the north side. The repairs and superintendence will be less on this side. The lock foundations are chiefly on rock. This canal will cost 255,900 *l.*

Board of Works, Kingston, 10th October 1842.

*Samuel Keefer*, Engineer, Board of Works.

## APPENDIX.

- No. 1.—Return to an Address of the Legislative Assembly, for the Estimate made by Mr. Keefer for a Canal to connect Lakes St. Francis and St. Louis, of 255,900*l.*, alluded to in a Message of the late Lord Sydenham, laid before the House on the 20th September 1842 - - p. 143
- No. 2.—Petition of G. Beaudet, and others, of the County of Vaudreuil, presented to the House on the 23d of September 1842 - - - - - p. 143
- No. 3.—Message from His Excellency the Governor-General, with Extracts from various Despatches relative to the appointment of an Engineer in England, to superintend the Works on the River St. Lawrence; 30th September 1842 - - - - - p. 144
- No. 4.—Comparative Statement of the Routes proposed by different Engineers for a Steam-boat Canal, between Lakes St. Francis and St. Louis, extracted from the respective Reports, by Samuel Keefer, Civil Engineer - - - - - p. 146
- No. 5.—Report on the several Routes proposed for a Canal through the Seigniory of Beauharnois, to connect Lakes St. Francis and St. Louis, 17th February 1842; by Samuel Keefer, Civil Engineer - - - - - p. 148
- No. 6.—Report of the Survey of a Route for a Canal through the Seigniory of Beauharnois, with Estimates, 10th February 1835; by Alexander Stevenson, Civil Engineer - - - p. 149
- No. 7.—Report on the Practicability of constructing a Canal through the said Seigniory, with Estimates, 27th February 1835; by N. H. Baird, Civil Engineer - - - - - p. 152
- No. 8.—Instructions from the Board of Works to Mr. Tate, to survey the South Channel of the River St. Lawrence between Grand Isle and Beauharnois, and also a Route for a Canal through the Seigniory of Beauharnois; 12th February 1842 - - - - - p. 156

— No. 1. —

RETURN to an ADDRESS of the House of Assembly, of 19th September 1842, praying the Governor-general to order the proper Officer to lay before the House the Estimate made by Mr. Keefer, of 255,900*l.* alluded to in the late Lord Sydenham's Message of last Session (in a Memorandum of the Chairman of the Board of Works,) with any Plans, Surveys, Reports or Estimates, relating to the connexion of Lakes *St. Francis* and *St. Louis*, by means of a Canal, with a Copy of such parts of any Despatch or Despatches from the Colonial Secretary, referring the same subject.

Kingston, 20 September 1842. S. B. Harrison, Secretary.

ESTIMATE of the probable COST of constructing a CANAL for Steam-boats between Lake *St. Francis* and Lake *St. Louis*.

The distance of the River *St. Lawrence* being 14  $\frac{3}{4}$  miles, and the difference of level 82  $\frac{1}{2}$  feet; locks, 45 feet wide, 170 feet long, and 9 feet of water on the mitre sills; canal, 80 feet wide at bottom, and 10 feet deep, with slopes 2 to 1.

If Mr. Mills' river route be adopted, (*vide* his Report Route, No. 1,) then we shall have 6  $\frac{7}{8}$  miles of canal, and 7  $\frac{7}{8}$  of river navigation, as follows:—

At Coteau Rapids :										£.	s.	d.
2 $\frac{7}{8}$ miles of canal, averaging about 12 feet, cutting in clay chiefly, at 12,000 <i>l.</i>										34,500	—	—
One lock, 7 feet lift, and one ditto, 10 feet lift    -    -    -    -    -    -    -    -    -										21,000	—	—
One guard lock    -    -    -    -    -    -    -    -    -										9,000	—	—
										£.	64,500	—
At Cedar Rapids:												
1 $\frac{3}{4}$ miles of canal, averaging about 18 feet, cutting in clay and loose rock for half the distance, the other half being river embankment, 26 feet high, at 14,000 <i>l.</i> -    -    -    -    -    -    -    -    -										24,500	—	—
One lock, 8 feet lift    -    -    -    -    £. 11,000    -    -										complete	—	—
One ditto, 12 feet lift    -    -    -    -    12,500    -    -												
One ditto, 10.80 feet lift    -    -    -    -    11,500    -    -												
										£.	59,500	—
At the Cascades :												
2 $\frac{1}{4}$ miles of canal navigation, in earth and rock, and embankment in river, averaging 25,000 <i>l.</i> per mile    -    -    -    -    -    -    -    -    -										56,250	—	—
One lock, 7 feet lift    -    -    -    -    £. 10,000    -    -										complete	—	—
One ditto, 8.22 feet lift    -    -    -    -    11,000    -    -												
One ditto, 10 feet lift    -    -    -    -    12,000    -    -												
										£.	89,250	—
ABSTRACT :												
The Coteau Rapids    -    -    -    -    -    -    -    -    -										64,500	—	—
The Cedars    -    -    -    -    -    -    -    -    -										59,500	—	—
The Cascades    -    -    -    -    -    -    -    -    -										89,250	—	—
										213,250	—	—
Superintendence and contingencies, 20 per cent.    -    -    -    -    -    -										42,650	—	—
TOTAL    -    -    -    -    £.										255,900	—	—

A saving of about 50,000 *l.* may probably be effected by taking the south side of the river.  
Kingston, 19 June 1841. (signed) Samuel Keefer, C. E.

— No. 2. —

PETITION of *G. Beaudet*, and others, of the County of *Vaudreuil*, presented to the House on the 23d September 1842.

To the Honourable the Knights, Citizens, and Burgesses of Canada, in Provincial Parliament assembled.  
The humble Petition of the undersigned Inhabitants of the County of *Vaudreuil*.  
Humbly sheweth,  
THAT your petitioners, on seeing the Report of the chairman of the Board of Works, were fully certain it was based on false statements as to the facility afforded on the south side of the River *St. Lawrence*

St. Lawrence over the north side, on the depth of water at the western entrance, on the width and number of channels, and on the cost of the work; in short, that he had taken a most prejudiced and erroneous view of the case, losing sight of the judge in the advocate.

That being sensible of these facts, they, at their own cost, have directed a survey of the route on the north shore to be made by a skilful and successful engineer, which report and levels, now sub-joined, bears out most of the above assertions.

That at their own cost also they have directed soundings to be taken, and search made for the three channels named by the chairman as existing with 12 to 20 feet water at the western entrance, without avail, finding nothing of the alleged depth and width, or anything like a practicable channel.

That the chief engineer desired buoys to be laid down in nine feet water, to guide boats coming in with supplies to the canal whilst making; but nothing of this depth was to be had, and he was obliged to desist, and make a new survey of this boasted entrance, to bear out the report of the chairman, which he is unable to do. That, on the contrary, he has discovered only one, instead of three channels, which is well known to be dangerous, narrow, crooked, shallow, and impracticable for anything but small light boats.

That, under all these circumstances, your petitioners plead that justice has not been done, but that a system of favouritism has been dealt out, to the detriment of the public interest, and with a wasteful expenditure of the people's money.

That they therefore pray witnesses may be examined, and a full investigation of the case may be gone into, and that a naval and land survey may be made on both sides of the river, by disinterested and competent persons, unconnected with the Board of Works, (in which they must declare their want of confidence,) and that the prosecution of this vast work may be stayed until such report is made to and determined on by your Honourable House.

And petitioners, as in duty bound, will ever pray.

(signed) *G. Beaudet* (and others).

Vaudreuil, September 1842.

MESSAGE from His Excellency the Governor-general, with Extracts from various Despatches, relative to the Appointment of an Engineer in *England* to superintend the Works on the River *St. Lawrence*.

CHARLES BAGOT.

The Governor-general informs the House of Assembly, in reply to the Address which they have presented to him this morning, that no correspondence has taken place with the Colonial Secretary during the years 1841 and 1842, on the subject of the appointment of an engineer, to inspect, report on, or superintend the construction of the St. Lawrence Canal, specially; but that a correspondence has taken place on the subject of the appointment of an engineer officer as commissioner, on the part of Her Majesty's Government, to superintend the execution of all the public works about to be undertaken by the province with the funds to be raised upon the guarantee of the Imperial Parliament.

His Excellency feels some scruple as to the propriety of communicating this correspondence to the House of Assembly without the permission of the Secretary of State; but being desirous of furnishing the fullest information to the house, his Excellency lays before them herewith extracts of the correspondence which has taken place upon the subject, trusting that the Secretary of State will, upon being informed of the occasion, sanction the course he has adopted.

Government House, Kingston,  
30 September 1842.

---

EXTRACTS from CORRESPONDENCE between Her Majesty's Secretary of State for the Colonies and his Excellency the Governor-general, respecting the Appointment of an Engineer Officer, as a Commissioner on the part of Her Majesty's Government, to superintend the Public Works about to be undertaken with the Funds to be raised under the Guarantee of the Imperial Parliament.

EXTRACT from a DESPATCH from Lord *Stanley* to Sir *Charles Bagot*, dated 2 April 1842.

It can hardly be doubted that works so extensive, and calculated to produce such important results, ought to be superintended by the best professional assistance which it is possible to obtain. Her Majesty's Government entertain no doubt of the anxious desire of the Canadian Board of Works to discharge with fidelity the arduous duties which will devolve upon them; but I can as little doubt the anxiety which they must feel to have associated with them in such a trust the best professional assistance which it is in the power of the mother country to furnish.

It is therefore my intention, in anticipation of the acquiescence, which I cannot for a moment doubt, of the colonial legislature in the general arrangements suggested by Her Majesty's Government, to send over an officer of engineers, whom, as Her Majesty's Commissioner, I trust the legislature will have no difficulty in associating with the Board of Works, in the superintendence of the works to be undertaken, and whose experience may probably enable the undertakings to be conducted with the efficiency and economy which must be alike the interest of the colony and of this country.

EXTRACT

## PUBLIC WORKS (CANADA).

145

EXTRACT from DESPATCH from his Excellency Sir *Charles Bagot* to Lord *Stanley*,  
dated 28 April 1842.

I THINK it necessary to make some remarks on the appointment of an engineer officer as Commissioner, on the part of Her Majesty's Government, to superintend the execution of the works.

Of course, as Her Majesty's Government provide the funds with which the public works are to be conducted, it is but reasonable that they should have a share in the management of it, if so desired. To such an appointment Mr. Killaly would not, I am sure, object; but it would be highly desirable that the person to be selected should be a civil and not a military engineer. The rules of the military service render officers of the Royal Engineers responsible to their own immediate superiors, and to no one else; they correspond only through them, and receive their instructions in the same course. Where employed on civil works, this system inevitably produces delay and confusion, and not infrequently collisions of authority. In every instance, I believe, in which civil and military engineers have been placed on the same works in this province, and the instances are not infrequent, these inconveniences have arisen. If, however, your Lordship would select a civil engineer to co-operate with the Board of Works as Her Majesty's Commissioner, I do not apprehend that any difficulty need exist—none, I am sure, would be made by Mr. Killaly; but I apprehend that the legislature would view with some dislike the appointment of a military man, the rules of whose profession, as they know from experience, would prevent them from requiring from him that full information which they would at once obtain from a civilian.

EXTRACT from DESPATCH from Lord *Stanley* to his Excellency Sir *Charles Bagot*,  
dated 2d July 1842.

In your despatch of the 28th of April you advert to the necessity of appointing an engineer officer, as Commissioner on the part of Her Majesty's Government, to superintend the execution of the works which may be undertaken, and point out the reasons which induce you to prefer a civil to a military engineer.

On this subject I have only to observe, that if provision be made by the legislature for the payment of such an officer (which I agree with you would be very desirable), Her Majesty's Government would have no preference for a military over a civil engineer, nor any wish on the subject but to procure the services of the most competent person who could be engaged for this purpose.

COMPARATIVE STATEMENT of the ROUTES proposed by different Engineers, for a STEAM-BOAT CANAL between Lake St. Francis and Lake St. Louis, on the same Scale as the St. Lawrence Canal in *Upper Canada*; viz. Canal, 100 Feet at Bottom, 140 Feet at Surface, and 10 Feet Deep.—Locks, 200 Feet long in the Chamber, 55 Feet wide, and 9 Feet of Water in the Mitre Sills.

1st.—Routes proposed on the NORTH Side of the River.

TABLE showing the Result of Mr. Mills's Survey of Three Routes, to unite Lakes St. Francis and St. Louis, one by the River and two Inland.

DIVISIONS.	Length of Natural Navigation.	Length of Artificial Navigation.	Number of Locks.	Lockage.	REMARKS.	
	Miles.	Miles.		Feet.	Cost, estimated by Mr. Mills in 1833.	£.
Route No. 1.—On River Route: Mr. Mills divides this route into five sections, in the following manner: Sec. No. 1.—Canal past Coteau Rapid, from M'Donell's Point to Point Fa Le Chival, below the fort Sec. No. 2.—From the Fort to the Cedars Sec. No. 3.—Canal at Cedar Rapids, from the village to Pointe à Moulin Sec. No. 4.—From Pointe à Moulin to Pointe au Coulogne Sec. No. 5.—Canal from Pointe au Coulogne to Lake St. Louis Total distance, 14 miles 54 chains. Total fall, 82, 50 feet.	- 6 00 - - - - - - 1 64 - - -	2 68 - 1 57 - 2 25	2 - 4 - 3	0 17 - 30 81 - 25 22	69,210 - 80,176 - 86,396	1st Lock, 7 feet, 2d lock, 10 feet lift. Proposed works will destroy the fort, and prevent Military Canal. Banks low and favourable. Dam at Mouth of River à Delisle, 350 feet long and 11 feet high. (Amount, according to Colonel Phillpott's estimate, 136,260 l.) The fall in this distance is 7.63 feet, channel varying from 12 to 35. The velocity of the current at Pointe au Diable, for 45.2 feet, is 6 $\frac{1}{2}$ miles per hour; for 1,286 feet, five miles per hour. 1st Lock, 8 feet; two combined, 6,405 feet each; 4th, 10 feet lift. (Amount, according to Colonel Phillpott's estimate, 150,810 l.) Fall in this distance, 1.84 feet. Current from two to three miles per hour. Channel deep, from 10 to 35 feet. Consists chiefly of river embankment. 1st lock, 7 feet; 2d, 8-22 feet; 3d, 10 feet lift. Rock cutting at Cascades Point. (Amount, according to Colonel Phillpott's estimate, 158,862 l.)
Route No. 2.—Inland, beginning and terminating at the same Points as Route No. 1 -	7 64	6 70	9	73 03	235,782	The damages (which are not embraced in these estimates) would be less by this Route than by either of the two following; and by purchasing Pointe au Moulin and Cascades Pointe no bridges would be required. (Amount, according to Colonel Phillpott's estimate, 445,932 l.) This Route runs parallel with the bank of the River, and about half a mile from it, and would require two aqueducts and six bridges.
Route No. 3.—Inland, Coteau to Ste. Ann's; Sec. No. 1.—Coteau to Lake of the Two Mountains at Vaudreuil Sec. No. 2.—Vaudreuil to Sainte Ann's Sec. No. 3.—Canal at Sainte Ann's Total distance, 17 miles, 61 chains. Total fall, 81, 45 feet.	- 3 53 - - - 8 53	13 40 - 0 48 14 8	10 - 1 11	78 32 - 3 13 81 45	402,164 - 40,599 442,763	This Route begins at M'Donald's Point; is common with Routes Nos. 1 & 2, as far as River Rouge; thence proceeds in a straight line to Vaudreuil. Two aqueducts and six bridges are required on this part. Cutting averages about 17 feet. Soil chiefly clay. Some dredging required. Estimated in Sec. No. 1. Canal required to be only 50 feet at bottom and 70 feet surface. Excavation chiefly rock.

Note.—Mr. Mills says it is generally agreed that the St. Lawrence is open two or three weeks earlier in spring and later in fall than the Ottawa, the St. Lawrence passing through a more southern latitude; and that these two or three weeks in spring and fall are the most important in the whole year; he therefore, on every account, gives a decided preference to Route No. 1, or River Route.

2d.—Routes proposed on the South Side of the River.  
TABLE showing the Result of Mr. Baird's and Mr. Stevenson's Survey of Two Routes through the Seignory of Beauharnois, to unite Lakes St. Francis and St. Louis.

DIVISIONS.					REMARKS.		
Length of Natural Navigation.	Length of Artificial Navigation.	Number of Locks.	Lockage.	Estimated Cost. (Currency.)			
M. chs.	M. chs.		Feet.	£.			
2 40	11 69	{ 8 lift 1 guard }	83 32	224,441	{ This Route runs about three quarters of a mile from the River, and nearly parallel with it, thus heading all the small streams and gullies clay cutting. Three bridges required. Aqueducts required over the Petite Riviere, Marcheterre, and the River St. Pierre. Route otherwise favourable, as any required depth of cutting may be selected. This estimate includes the purchase of 436 acres of land (valued at 4,360 £.), and every other expense. Mr. S. proposes locks 110 chs. x 23 wide x 7 feet water. This Route would then cost 137,768 £.		
3 60	15 60	9	82 00	194,800	{ Canal forming junction nine miles long, averaging nine feet cutting. Six miles navigation by the River St. Louis rendered navigable by three dams. Beauharnois Bay recommended as a very good harbour, having 10 feet water, 125 feet from shore. Mr. Baird considers the scale too large; that the locks would be unmanageable. He proposes as a better-proportioned Canal, locks 134 chs. x 33 wide, x 8 feet water, which would cost, by this Route, 136,900 £., including every expense. He thinks Mr. Mills's River Route would create steam-boat monopolies, as only large and powerful steamers could ply on it.

The foregoing summary of the various Reports, made upon the projected improvements of the River St. Lawrence, between Lake St. Francis and Lake St. Louis, was drawn up by the undersigned in March 1841.

Office of the Board of Works, Kingston, }  
1st October 1842.

Samuel Keefer,  
Engineer, Board of Works.

— No. 5. —

REPORT on the several ROUTES proposed for a Canal through the Seignior of Beauharnois, to connect Lakes St. Francis and St. Louis, by *Samuel Keefer*, Civil Engineer.

Sir,

West Hawkesbury, 17 February 1842.

ON the 26th and 29th ultimo I made an examination of the routes proposed by Mr. Baird and Mr. Stevenson for a canal through the Seignior of Beauharnois, to unite the waters of Lake St. Francis and Lake St. Louis; and particularly of the south channel of the river, in order to see if the idea which had been suggested, of making one or more dams on that channel, for the purpose of making it navigable to the lower end of Grand Isle, was one that could be carried out.

I took with me the reports and estimates made by those gentlemen, and Mr. H. G. Thompson's report on his survey of the south channel.

With reference to damming the river: I find but one dam at the lower end of the island would raise the water 23 feet, and flood a great extent of cultivated land on the main shore; and the houses being built all along the bank of the river, which varies from 4 to 12 feet above the surface of the water, the thing is therefore impracticable.

But again, in order to pass in rear of the village of St. Timothy, (we cannot go in front), the full height of the level of Lake St. Francis must be maintained, or nearly so; consequently we cannot resort to two or more dams. All, therefore, that can be done in the way of availing ourselves of this channel will be to dam it somewhere about the great bend, a little above the river Marcheterre, where there is a shoal and high banks on each side; the fall from the lake to that place being about 6 feet, and the back water would therefore do but little damage to the land and property on the shores above it. For this small advantage, however, I would consider it unwise to incur the risk of making a dam, which, do the best we could, might be subject to some unforeseen disaster that would destroy the navigation, particularly if evil-disposed persons, or an enemy in time of war, should endeavour to do so.

There is still another reason against a dam: by Mr. Thompson's survey it appears that even now there are gravelly shoals at the entrance of this channel, formed, undoubtedly, by the action of the westerly winds. It is quite evident, therefore, if the current at the head were checked by a dam, the formation of shoals would go on more rapidly. I have, for these reasons, therefore, abandoned the idea of a dam.

The inland route, by the River St. Louis, and coming out at Beauharnois village, is recommended by Mr. Baird, solely on the score of cheapness. His estimate for that route is 194,800*l.*, and the estimate of Stevenson is 224,444*l.*, making a difference in his favour of 29,644*l.* But by his route the distance is 15  $\frac{3}{4}$  miles, and that by Stevenson's 11  $\frac{3}{4}$ , making a difference of 4 miles in favour of the latter.

A careful examination of the estimates has convinced me, that in respect to cost, Stevenson's route is the cheapest.

Mr. Baird enters all his rock excavations at 3*s.* per yard, and in Stevenson's estimate (approved by Mr. Baird) this item is set down at 10*s.*; and for rock under water surface, 15*s.* a yard. (See the estimates.)

Upon the whole, I think the line run out by Mr. Stevenson a very judicious one, and one which I think the nature of the country points out. Mr. Baird, too, has given his full assent to Stevenson's report, and, as I said before, only recommends the inland route on the score of economy.

There are two reasons more that may be advanced against the route by the River St. Louis:—

1st. Drowning lands, by raising the dam at the saw mill, as Mr. B. proposes, 3 feet. I am informed that the present dam causes serious floods every spring, which injure the lands; and to raise it 3 feet more might drown and destroy so much land as to make this a very serious objection to the inland project.

2d. The Locks at Beauharnois, if not combined, must be placed very close together, which, on so great and important a thoroughfare as this canal will be, should be avoided.

The locks on Stevenson's route can be disposed at convenient distances, by descending the hill more gradually.

The best route to unite the waters of these two lakes has long been a subject of consideration with me. You are aware that I assisted Mr. Mills in the survey of the three routes on the north side, and should therefore have a perfect knowledge of them; and I have now no hesitation in expressing the opinion, that Mr. Stevenson's route, or one corresponding with it very nearly, will be found not only the cheapest but the best in every respect. Generally, throughout this line, we shall have such command of the ground as to lay the canal so that the excavation shall just make the banks. The line is continuous, and away from the river, free from the disturbing causes of ice and high water, and is perfectly under command.

I would wish to see a more particular survey made of the mouth of this channel than that of Mr. Thompson's, which was made in very unfavourable weather. The position and extent of all the shoals should be accurately ascertained, in order to see if there is any impediment existing here to the adoption of this route; but I do not think that any other surveys are required, and nothing more, in my opinion, need be done until the work is to be laid out, when much skill will be required to determine the line of minimum expense. It would also be necessary to examine the quarry at St. Timothy, to see if the stone will do for the locks, and to search the country for other quarries, if this will not answer.

Respectfully submitted, &amp;c.

(signed) *Samuel Keefer*.

The Hon. H. H. Killaly,  
Chairman of the Board of Works.

REPORT of the Survey of a Route for an Inland Canal for Steam-boats, to communicate between the Lakes *St. Louis* and *St. François*, through the First Concession of *Beauharnois*, together with Plans, Sections, and Estimate of the probable Cost of effecting the same, on the Scale of 100 feet wide at bottom, with 10 feet depth of water; the Locks to be 200 feet long, by 55 feet in breadth, and to have 9 feet Water on the Mitre Sill.

Sir,  
In obedience to your commands, I have examined very minutely the coast of Lake *St. Louis*, from the harbour at *Beauharnois Village* up to the foot of the rapids of the *Cataroqui*, or *St. Lawrence*, a distance of about two miles, and found more than sufficient water for any vessels plying on the *St. Lawrence*, with a clear coast and smooth bottom; and near the foot of these rapids I found a little cove, at *A.* on the plan accompanying this Report, at the landing-place of one *Couvillon*, offering the most convenient spot wherein to construct the entrance to a canal of the above description.

I next went to Lake *St. François*, and from a distance out into the lake I sounded the channel downwards to half a mile below the upper end of the *Grande Isle*, and there, finding the water to become too shallow for the purposes required, I landed in a little cove, at *Le Bœuf's farm*, next above *M<sup>r</sup>Pherson's Point*, where the bank is low, and 10 feet of water is found at 150 feet from the shore.

At the point *B.* (on the plan) I commenced taking a level inland, to pass all the rapids in one continuous line, and far enough back to avoid all the principal ravines, with which the banks near the river abound very much; and having continued the level downwards to the point *A.*, at *Couvillon's landing*, I found the difference to be 83 feet and  $\frac{3}{100}$ , and the distance 11 miles and 69 chains, passing through cultivated fields in the greater part of the way, crossing over a small river at *C.*, called *Petite Riviere Marcheterre*, and another at *D.*, called *River St. Pierre*, over each of which an aqueduct would require to be constructed: that at *C.* would not be either extensive or costly, but that at *D.* would be both, and form a considerable item in the total probable cost.

The first mile on this route (as almost always is the case) would be the deepest cutting, but the deepest part of that would not amount to 17 feet: it is a tufa soil, somewhat rocky, but there is no bed of rock in it; but still it must be called hard cutting. The 2d, 3d, 4th, 5th, and nearly all the 6th, would be of the easiest excavation possible, no where exceeding four or five feet in depth, and being just enough to form the necessary embankments, which constitutes level cutting, as shown upon the transversal section No. 2. There next succeeds one mile and three-quarters of primitive soil, rather stony, but without any bed of rock in it,—but from the nature of the soil, and its loose texture, it cannot be ranked with the most difficult, especially as there would not be any deep cutting in that distance, which will appear by examining the section No. 1.

This piece of hard cutting is opposite *St. Timothy Church*, and the new mill, and requires a lock to be located there at station 120.

The remaining three miles and a quarter, to arrive at station 144, the uppermost of the seven lifts, is oblique cutting, being in the side of a clay hill the whole way, and consequently the very easiest excavation possible; as shown upon the transversal section No. 3. In order to give a more perfect idea of the depths of cutting required from station 144 to station 150, a distance of 1,166 yards, and comprehending the space allotted to the seven locks, I have laid that down on a natural scale, in section No. 4, showing the location of each lock, and have marked the quality of the soil under each reach and lock, by which it will be seen that from station 144 there is a distance of 693 yards, consisting of clay soil, and 473 yards of hard grit rock, besides about 40 yards of rock under water, to be excavated for the entrance.

The whole of this route, taken together, therefore, forms perhaps one of the most advantageous that can be imagined; the excavation is comparatively easy, and the greater part extremely so; no embankments required but what may be made up by the proceeds of the excavation of the side ditches; several culverts will be required of about 100 yards long each, but as the water courses are not large, those culverts would not require to be very wide: the line surveyed crosses three public roads, over which substantial draw or swing bridges would have to be erected, but private ones (of which there would be required one at every half mile, at least,) might be made less substantial; I should recommend turning bridges, however, in the first case, both on account of the great breadth of the canal, as well as its being required for steam-boat navigation; but, for the reason above stated, I think it would be better to dispense with the service bridges altogether, and allow the farmers to make recesses in the banks of the canal, and keep small scows there for crossing in whenever they may require it. The breadth of land required for this canal will be an object of some consideration; for it will occupy 300 feet in breadth for the canal, its banks, tow-paths, side-ditches, and a road upon each side. Much may depend upon legislative enactment, but if the regulating the price of land be left to arbitrators, it is impossible to give more than a mere guess at what the cost may be; but the total quantity of land required to be occupied for this purpose will be 436 acres. There is a lime-stone quarry, near the location of the lock at *St. Timothy*, which may greatly facilitate the construction at that place: the lime produced at this quarry is of good quality; but, from the quarries not having been explored to any great extent, it is not known whether it will produce good building stone or not. The seven locks at the entrance, however, being so near the Lake *St. Louis*, the building stone for them may be brought from the very best quarries in the district, at comparatively small expense, by water; while the best of lime, sand, rubble stone, &c. may be had in the immediate neighbourhood of the works.

The immense breadth of this canal, as it is proposed to be constructed, and the great disproportion between the breadth of the several reaches, and the length and breadth of the locks, added to the unnecessary depth of water mentioned, together with the consequences attendant thereon, form the principal reason for the estimate of the probable cost being so high; for were it a canal of more just proportion in all its parts, and the depth of the water such only as in all probability might be required for the commercial intercourse between the two Provinces, the estimate might be reduced at least two-fifths. The favourableness of the route, and the easiness of the excavation generally, warrant this assertion; and I feel confident that, if the canal (or any canal) be constructed upon the proposed scale, the country, and all concerned, will find great disappointment, as far as regards revenue from it, and almost as much obstruction as facility in the communication.

The map accompanying this Report, and sections, shows both sides of the River Cataroqui or St. Lawrence, on the north-west side of which is laid down the route of a survey for a canal, made last year by Mr. Mills, as well as that made this present year on the south-east side, through the seignior of Beauharnois, by myself, and to which I would now beg leave to refer you for the more perfect understanding of this Report. The distance on the S. E. side is nearly as short as on the other, and possesses this particular advantage over it, that the excavation is much easier,—will cost considerably less in the first instance,—is continuous throughout from one lake to the other, and therefore not liable to such interruptions as will, and must necessarily, be incident to the navigation of the other, from there being one break of about five miles, and other interruptions in other parts of the whole distance there, which, besides the inconveniency, risk of property, and danger of life, from being exposed to tremendous rapids in case of the slightest accident, must occasion stoppages from the times and periods and different modes of being propelled, and perhaps transhipments also, which cannot be the case upon a continuous canal. I have taken every pains in fixing the prices in the above estimate, and I feel quite confident that, were it thought proper to have the canal constructed on the route here mentioned, there is not an item in that estimate, but contractors

contractors may be found to execute the work for, and in some cases probably for less than what is mentioned.

But in consequence of the great diversity of opinion that exists on the subject of the dimensions necessary for a canal and its locks to have, in order to produce the most beneficial effects for the least outlay; in the first instance, after having examined the best French as well as English authorities thereon, and taking into consideration the dimensions of those canals already constructed in Upper and Lower Canada, particularly those of Chambly, Lachine, Rideau, Greenville, Carrillon, and that of the Welland; and also seeing that an engineer, said to be one of the first class of the United States, has lately (when called upon for his opinion as to the dimensions proper for a canal to connect the waters of Lake Ontario with those of the Hudson, through the state of New York) given it as his opinion, that the canal now constructing in Upper Canada, by which to pass the rapids of the Long Sault, &c., as well as that recommended by himself to communicate between the Lakes Saint Louis and Saint François, in the Lower Province, are mere experiments, at least from his statement such a conclusion is quite natural; and as if to counteract all the beneficial effects of works of such large dimensions to these Provinces, he has recommended a canal through the state of New York to draw off the business, which otherwise was intended to occupy those contemplated Canadian canals, to the New York market, through an immense tract of country, through and by means of a canal of half the dimensions of those recommended for Canada. His proposition, however, to his own countrymen, being found within the strictest rule of economy and propriety, and in conformity with the common rule in such cases, namely, that of adopting something similar in dimensions to what is already established to good effect as to revenue; and also such, as much as possible, as can supply the wants of commercial intercourse, and considering it better for all concerned to have two parallel canals of a moderate size, such as the Welland, Chambly, or Ottawa (those are among the largest class), provided the face of the country admits of their being constructed with facility, and at a comparatively small expense, rather than to lay out a great sum of money to construct a disproportioned canal, which from the unwieldiness of its moveable parts, the power required to manage it, and consequently the great loss of time in the transit from one level to another, by which almost as much obstruction as facility would be proved, and the costly experiment be found of but little effective good.

Seeing, I say, that all these things and circumstances concur to justify me in what I have already often had the honour of stating to yourself on the subject, I have taken the liberty of computing and drawing up another estimate of the expense of constructing a better, and for many and the most cogent reasons, by far the most efficient canal, to follow the same route, and to terminate at the same points, both ways, as the one of which we have been speaking above, for eight feet depth of water: locks to be 23 feet wide by 110 feet long within the chambers, and to have seven feet of water on the mitre sill; the distance being 11 miles and 69 chains, and the guard lock to be combined with a lift. This proposition, with respect to the dimensions of the locks, may be made to vary considerably as to the length and breadth of locks, without incurring much additional expense; the work being the same, the level, after the first mile and three quarters, is the same, consequently the depths and prices per yard are the same in corresponding sections; there would be required one more lock in this case than in the other; but even admitting that, it will be seen the expense bears but little proportion to the foregoing estimate:

TOTAL Probable Cost - - - £.						137,768	16	1

The scale here proposed, although so much smaller than the one before treated of, is still what is called the largest class of canals; it can be varied, however, in the dimensions of the locks considerably, without any material augmentation of the cost. As to the question of how far it will answer the purposes of the probable transport between the two Provinces, for a long time to come at least, and of its lucrativeness, there can hardly a doubt be entertained on either of these subjects. To be convinced that it will answer all the purposes of transport, we have only to compare it with the Welland Canal, the dimensions of the locks of which are the same, but the depth of water less; yet schooners, and other sailing craft, go through it with their lading, to sail upon either of the lakes. The Lachine Canal (and the business of the Ottawa, as well as that of the Cataroqui or St. Lawrence, are both done upon it, without there appearing to be any necessity for a larger), has locks of the same dimensions, except this proposed has three feet more in breadth, and three feet more of depth of water. The Rideau Canal, upon which steam-boats are constantly plying in the proper season, has somewhat larger locks, but not so great depth of water. The Chambly Canal is not very different in the dimensions of its locks, but it also has less depth of water. Canaling experience in the United States recommends such dimensions to be the most effective, and the experience of Europe shows plainly that there is a manageable limit in such cases, beyond which it would be a waste of means to go, when the object in view can be so fully attained at so much less of an outlay. It will be admitted, then, that the proposed dimensions, with perhaps little variation, are capable of obtaining all the commercial intercourse required; and from the peculiar nature of its local situation, a canal on either side could have but little more than the ascending trade to sustain; which, not being the case with the Lachine Canal, it cannot be adduced in proof against the general principles here laid down, which, having shown to be correct, the consequences follow, as a matter of course, as to the return to be expected from it; for the cost of the present transport from Lake St. Louis to Lake St. François, amounts to more than the interest of the sum required to construct the above canal; and if the Lachine Canal, with its locks of less dimensions, and with three feet less depth of water, be sufficient for the business both of the Ottawa and Cataroqui or St. Lawrence, and also an increase of it to tenfold (which it is easy to demonstrate it to be capable of), then, I say, the one herein proposed is surely of sufficiently large dimensions for the business of the Cataroqui or St. Lawrence alone, for a long time to come; and in all probability there would never be any other required; and it is as certainly preferable to the one proposed on the N. W. side of river, for reasons already stated, both as it regards safety as well as expedition.

To Lawrence G. Brown, Esq.  
Montreal, 10 February 1835.

I have, &c.  
(signed) *Alexander Stevenson,*  
Civil Engineer.

— No. 7. —

27 February 1835.

REPORT on the Practicability of Constructing a CANAL to connect Lakes *St. Louis* and *St. Francis*, to avoid the Rapids of the *St. Lawrence*, from the Cascades upwards; from an Inspection made in the Winter of 1834 and 1835.—By *N. H. Baird*, Civil Engineer, Montreal.

Sir,

IN compliance with your instructions, communicated to me verbally in October last, to examine the country between Lakes St. Louis and St. Francis, through the seigniory of Beauharnois; with the view of ascertaining the practicability of constructing a canal of communication between those two lakes, to avoid or overcome the succession of rapids from the Cascades upwards, and that on a scale commensurate with the one now pursuing by the Upper Province, as also on a scale of more proportionate dimensions with the present and prospective trade, and with a view to the general interests of the country: I proceeded on the 4th day November last (being prevented from prior engagement devoting earlier attention to the subject), to Beauharnois, and with the assistance of Mr. Stevenson, D. P. Surveyor, who had formerly traced the ground, commenced my operations, the result of which I have now the honour to submit to your consideration.

Bearing in mind the direct object of the communication, the first duty became the ascertaining the most eligible points of departure from both lakes for the depth of water required, viz. nine feet on the mitre sills, with a due regard to the distance between such points; these requisites I found to exist at the point covering Beauharnois Bay, marked P. on the plan, and also that at A., two miles above Beauharnois village; and in Lake St. Francis, at or near the commencement of the south branch of the St. Lawrence, at B. and H. respectively; the former having been fixed on by Mr. Stevenson on his survey of the inland route A. B., as the most eligible, and in which I perfectly coincide with him, the exception of leaving at H. in place of B., as laid down on the accompanying plan, and on which he has drawn up a minute and detailed report and estimate, which were submitted to me previous to being closed; and after several necessary alterations in the quantities, and in some instances an increase of price, is submitted herewith for your information.

The descriptive portion of that Report, I may safely state, is by no means too highly coloured; on the contrary, for certainly in all the course of my experience in practical engineering, I never traced a more eligible line for the same distance, the formation, quality, with little exception, and direction, being everything that could be wished; if there is a fault, I should say the excavation takes, probably, too slight a hold of the ground, thereby throwing more in embankment than the dimensions of the canal, and nature of our severe and trying climate to such works would warrant, but this may be readily rectified by a regulating lock at the upper extremity of the cut; and as regards the prices offered to the estimate, I consider them on an average fair, and what I feel convinced the work will be done for. This line, as shown on the plan, measures 12 miles, descending 83 feet, 34 by 9 locks, and estimated at 224,444 *l.* 15*s.* currency, and may be completed in three years; that is, three summers and four winters, commencing at the fall or beginning of winter.

There is also attached, an estimate for a ship canal, corresponding with the dimensions of the Welland Canal, estimated at 137,768 *l.* 10*s.* 1*d.*, but to which I consider may be added 13,776 *l.* 17*s.*, making the amount 151,545 *l.* 7*s.* 1*d.*

The

The nature and locality of the ground being so minutely described by Mr. Stevenson, I consider it quite unnecessary to swell this Report by a recapitulation; and will now proceed to state the result of my subsequent investigation, in compliance with the spirit of your instructions, viz. :

“To ascertain whether the line now described is the best possible line of communication for the object in view, or whether, by a minute investigation of the country lying between the St. Lawrence and the St. Louis rivers, a more eligible and less expensive might not be found.”

I accordingly proceeded on this service (Mr. Stephenson having retired to complete the section of the former line), and traced the River St. Louis, from its confluence with the Lake St. Louis in Beauharnois Bay, to its source, the country across from thence to Hungry Bay, and the intervening space, and ultimately fixed on the (dotted) line taking its departure from the Bay, below the former line at H., as being a probable line to connect the communication by way of the River St. Louis. The comparativements of each will appear in their respective estimates and advantages.

The favourable nature of the banks of the River St. Louis suggested the idea of its being made available, at a comparatively small expense, on the principle of damming (which has been pursued with so much success on the Rideau), and which a minute examination thereof demonstrated to be feasible, to a certain extent, or as far as the character of the river supports the plan in its high banks, and which happens not to extend far beyond the point at which the line of junction from the St. Lawrence falls in, at or near the domain line, as above that point the banks assume tamer characters.

When first I laid off this line, it was my intention to have taken my departure from La Fleuris, marked I. on the plan, which would have materially shortened the excavation, but, on making up the calculation, found the expense of lockage across Chival Rouge Pointes on the St. Lawrence, to be more than double that of a continued line of excavation, which caused me immediately to abandon the idea of leaving the River at La Fleuris, and assume that at H., or at Autoine Le Duc's.

By this route I propose to carry the navigation down the River St. Louis to the lake below, at the Beauharnois Point, by a cut across (chiefly unconceded lands) of only nine miles, to River St. Louis, averaging nine feet deep of excavation, with three locks thereon, as shown on the plan and section accompanying, and thence following the course of the River St. Louis to the saw mill  $2\frac{1}{8}$  miles, the water being raised permanently three feet by a dam 16 feet in height by 250 feet in length, at said place, with a lock of eight feet descent, with some excavation from the bed of the river below of about 200 yards in length; thence along the river  $1\frac{1}{8}$  miles to point E. on plan and section, the water being raised sufficiently at said point, to throw back-water into No. 4 lock at the saw mill, by the construction of a dam by 14 feet in height and 190 feet in length, and thence with a lock of four feet descent; thence along a beautiful stretch and sheet of water, to be raised by a small dam at Beauharnois, cutting a few and passing over several of the streams river, the elbows being generally low meadow land, which brings the navigation to the present mill-dam at Beauharnois, in a distance of  $3\frac{5}{8}$  miles, on or immediately above which site I propose the construction of the above-mentioned dam across the mouth of the River St. Louis, at G., for which an excellent foundation, on a smooth hard grit rock presents itself, with banks in every way suited for the construction of such a work, being about 25 feet in height; and from hence the line terminates in the navigable water in Lake St. Louis, in Beauharnois Bay, sheltered from every wind that blows by the projecting points and islands opposite, forming a most convenient entrance (having 10 feet water within 125 feet of the point), in the short distance of half a mile, and which I propose to descend by four locks of 11, 10, 12, and 10 feet respectively, with intermediate excavation, and an embankment on one side corresponding with the ridge on the point, making in all four, 10 feet water in the River St. Lawrence, at point H., to a similar depth at P., in Lake St. Louis;  $15\frac{3}{4}$  miles, at an expense of 194,800 *l.* 7 *s.* 11 *d.*; for locks,  $200 \times 55 \times 9$  feet water; and for ditto,  $134 \times 33 \times 8$  feet water, 136,900 *l.* 17 *s.* 10 *d.*; and in the recapitulation of constructures, thus:

By nine miles' excavation, averaging nine feet. Nine locks of 8, 11, 8, 8, 4, 11, 10, 12, and 10 feet lifts, with three dams, 16, 14, and 18 feet in height, by 250, 190, and 150 in length, and six miles by River St. Louis, with balance in locks, &c. &c.

In recommending this route to your consideration as the more advisable, I ought, properly speaking, to confine my observation entirely to the subject of practicability and expense, which, as per detailed estimate, would appear to be decidedly in favour, was I not aware of the circumstances which have led to such an expense being incurred by the interests you represent, in so far as pointing out the comparativements of the several lines of communication, to those in whose hands are entrusted the arrangement of the proposed improvements of the River St. Lawrence, and who have already gone to much expense in ascertaining the practicability of such a communication on the opposite shore of the St. Lawrence.

Then, first, as touching the matter of estimate, leaving expediency out of the question for the present:

North Shore :				£.	s.	d.
1. Route by the Lake of the Two Mountains, as estimated by Mr. Mills				442,762	19	11 $\frac{1}{2}$
2. Per inland route, along the bank of the River St. Lawrence,						
16 miles	-	-	-	324,943	11	5
3. Per river improvement line, 16 miles	-	-	-	235,782	3	2 $\frac{1}{2}$
On South Shore :						
1. Inland route along the 1st concession of Beauharnois	-	-		224,444	15	-
2. Communication, per River St. Lawrence	-	-	-	194,800	7	11

Those several estimates having been made up from similar premises, viz. for locks  $200 \times 55 \times 9$  feet water, the merits of each, so far as estimates go, can be appreciated. As to the practicability of the river route on the north shore, I can only form an opinion from the report of the engineer on the subject, and my own partial acquaintance with the route, in which, however, without any disparagement to the talents or ability of the individual, which, from the selections, must be beyond doubt, and from what I have seen of the river and its banks, I feel much disposed to think the undertaking would be hazardous, and attended at times with much inconvenience to the trade, and particularly

particularly from the apprehension of the velocity of the current in the spaces proposed to be navigated being much greater than expressed, and as appears at such variance with the velocities as expressed on the accompanying plan, ascertained from the laboured trigonometrical survey made under the direction of the Commissioners appointed for the improvements of the River St. Lawrence in 1830, and which seems to have been done at a season favourable to such work, and with much care and attention, and from which I caused the accompanying plan to be compiled, in order to show, geographically, the comparative merits of the several lines proposed; and the fact of such a line (that is, by way of the river improvements) being strictly confined to steam navigation, and that of the most powerful class of vessels, in consequence limiting the ascending, if not the whole trade, to be subject entirely to the monopoly of steam tow-boats' companies and their charges, to say nothing of the risk attendant on accidents on the verge of such terrific rapids; all which difficulties and inconveniences are avoided by a continuous line of navigation inland, whenever every class of vessels may pass along by the propelling or dragging power, as competition may render the most advisable, at all hours and seasons of open navigation, allowing every manner of craft, from the schooners and brigs navigating Lakes Huron, Erie, and Ontario, down to the smallest batteau, to participate in the general benefit, promote the interest of commerce in the more widely diffused opportunities of transportation, in place of being shackled by the monopoly which a river route must give to capital; in support of which I would instance the Forth and Clyde Canal in Scotland, connecting the Friths of Forth and Clyde, as well as the Caledonian Canal, but particularly the former, conveying sea-bound vessels with full cargoes, tracked through at as quick a rate as necessary, at a comparative trifle, diffusing over the very intervening and adjacent country the benefit of a national expenditure. It would, therefore, appear to me, that for the foregoing reasons the lines of communication, as now surveyed and estimated under your directions on the south shore, should not be brought in competition with a route entangling (if ever it is done) such inconvenience and disadvantages to the commerce of a country, but with the intermediate route on No 2, in the abstract, at an expense of 324,943 *l.* 11 *s.* 5 *d.* *c*<sup>7</sup>. the disparagement between which and either of the other estimates is sufficiently apparent, and speaks for itself.

Before closing this Report, I trust you may not consider it diverging from the object of my instructions, should I offer a few remarks on the scale of canal ordered by the Upper Canada Government, and the opinion of an engineer from the United States, a stranger to the motives and proper interests which ought to regulate the determination of the proper dimensions for a canal to connect the Atlantic with Lakes Ontario and Huron.

The great object must, of course, be to afford the greatest facility of communication at the least possible expense, with a due regard to the present and prospective interests of commerce, and the nature of craft likely to navigate such a communication with advantage and convenience to the public.

On the first, I should be disposed to think that the most practicable scale in execution and after-management, capable of passing the craft navigating the lakes above, with their cargoes, from numerous ports on these lakes, on both shores, embracing moderate-sized steamers, which experience on this river (I believe to the cost of enterprising individuals) fully establishes, should not be of the largest class, should determine the point of scale, and which has, in a great measure, regulated me in the dimensions of several works I have had the honour to estimate in these Provinces. In the proposed improvements of the Ottawa, by the back of the island of Montreal for the Home Government, and in the improvement of the River Trent, to connect the Bay of Quinte with lake Huron for the Upper Canada government, and which latter is now under consideration, locks 134 feet long  $\times$  33 in breadth  $\times$  7 and 5 feet water, and which, requiring an excavation of much less dimensions, as a matter of course must materially affect an estimate, and on which scale I have drawn up my second estimate for the services. Consideration of those immediately interested, amounting to 136,900 *l.* 17 *s.* 10 *d.*, as my firm candid opinion of the proper dimensions for a practically useful and convenient work, and in which I understand I am supported, however singular it may appear, by the report of Judge Wright to his own countrymen (reporting on the practicability of a canal from Lake Ontario to join the Hudson), as about the proper dimensions for a ship canal, to oppose the canals projected on the River St. Lawrence. Forbearing from further comment on the subject, but referring to that report.

*For the large Scale of Locks, 200  $\times$  55  $\times$  9.*

Again: Allowing the very huge size to be adopted, however expensive and unmanageable, I would remark the unnecessary dimensions of excavation to correspond with the locks and depth of water required, viz. nine feet over the sills, and which will at once appear when I state the fact of the Caledonian Canal carrying 18 feet water, and passing large frigates and sea vessels, having the excavation only 50 feet wide at bottom, by 116 feet at surface; water-locks, I believe, 170 feet in length by 40 feet in width, and 30 feet in depth, with 22  $\frac{1}{2}$  miles of such excavation (projected and executed by the late Thomas Telford, Esq. civil engineer); from which it would appear that 68 feet, but say, in round numbers, 70 feet at bottom, with proportionate slopes, perfectly sufficient, and must cause a considerable difference of expense.

Having thus endeavoured to lay before you, in as condensed a form as the importance of the matter will admit, the result of my inspection, in terms of your instructions, and trusting the same may be sufficiently explicit,

I have, &c.

L. G. Brown, Esq. Beauharnois.

## No. 9. —

## FIRST REPORT of Mr. Tate.

Sir,

Beauharnois, 21 March 1842.

IN compliance with the letter of instructions of the 12th of February last, which I had the honour to receive from the Honourable the Board of Works, directing me, previously to proceeding to the marking out of the line for the canal, as selected by Mr. Stevenson, to examine with great care and accuracy the south channel of the river, or that portion of it which runs between the Grande Isle and the main land of Beauharnois, for the purpose of ascertaining how far it could be adopted as part of the canal, either by the use of dams or otherwise; I have proceeded to examine the above-named channel, and entrance thereto from Lake St. Francis, and I beg to lay the following Report before the Honourable Board, as a criterion whereby to estimate the advantages this section of the country possesses for a canal:—

It will be well to state briefly, what a good navigable canal requires; and,

1st. In the first place, it is essential that the entrance and debouchment be of easy access, and at all times, and that the supply of water be ample and steady, not dependent on the operations of nature.

2d. That the line of communication from one point to the other be as direct as possible, and free from liability to injury from the subsequent operations of nature.

3d. That the locks should be of convenient approach, easily worked, and with sufficient intermediate reaches.

4th. That the above objects should be attained by the least expensive means.

Keeping these principles, therefore, strictly in view, I proceeded to examine the entrance from Lake St. François, the south channel, the intermediate country, and the proposed debouchment into Lake St. Louis.

## First in order is the Entrance:

At the the foot of Lake St. François, a point on the south eastern side, extending from the shore of Hungry Bay, called Grosse Point, forms one side of a small bay, called Chartier's Bay, which is the mouth of the south channel, or of that portion of the River St. Lawrence which runs between the Grande Isle and the main land of Beauharnois; the other side of this bay is formed by an island called Clarke's Island, or L'Isle aux Chats. Upon considering the capabilities of this bay as a harbour, or entrance to a canal, it will appear to be sheltered by Grosse Point from the prevailing wind, which is south-west, as well as protected from the swell of Hungry Bay, from which it is quite distinct and separated. It has an entrance of sufficient extent and depth of water, in the whole breadth of which, 1,188 yards, there are two shoals of small extent, upon one of which is a rock with but five feet of water over it. There is every facility for removing these shoals if necessary, but from the fact of their being three entrances of from 600 to 1,200 feet in width, and with a depth of water varying from 12 to 20 feet, it may be deemed sufficient to place buoys at these points.

Pursuing the channel down, there is a fine reach, extending a mile and a quarter, with a good clay bottom, and sheltered from the winds; the current does not exceed two miles per hour, and there is 10 feet of water at 120 feet from the shore. Here, therefore, is a safe and good anchorage from Grosse Point to a Point called M'Pherson's, a distance of two miles and five chains.

This harbour, then, fully comes up to the standard of an unexceptionable entrance.

The description which I have given of this entrance as a harbour, founded on actual survey, differs in very important particulars from the maps on which the north line connecting Coteau du Lac and Vaudreuil is marked. In all those maps which I have seen, Grosse Point is placed out of its true position, to the extent of  $1\frac{1}{2}$  mile nearly, and is made to appear as a serious impediment to the free navigation of vessels sailing out of the harbour into Lake St. François. According to the assumed position of Grosse Point, it would have formed but an indifferent harbour; according to the true position of this point, the harbour could scarcely be surpassed in all desirable qualities.

Pursuing the south channel down past M'Pherson's Point, the current increases in velocity, and ceases to afford any favourable opportunities for the purposes of a canal.

The nature of the banks, falling gradually as they do with the level of the water, would render the damming of the channel not only a work of difficulty, but of very great expense; whilst the height descended, and the distance gained, would form no adequate equivalent for the expense incurred in resorting to this method of forming this portion of the canal.

Having thus examined, in the first place, according to the tenor of my instructions, the entrance and south channel, I proceed to the line connecting M'Pherson's Point with Couvillon's Landing.

Entering into cutting at M'Pherson's Point, the line takes a course past the great eddy, where it proceeds to the end of the first range of concessions. It then follows the division line between the first and second ranges of concessions, until it enters the Buissen Domain, where it curves gradually to the north till it descends from the high ground to near Couvillon's Landing, at which place it enters the river at the foot of the Cascades.

The position of this point, called Couvillon's Landing, affording, as it does, a sufficient depth of water at a distance of 132 feet from the shore, and being in a cove between two natural ridges of rock, is further rendered desirable for a debouchment, from being at the upper end of an eddy which extends nearly from St. Louis Point, a very favourable feature, and one which will be calculated to assist the navigation up to the canal in a material degree.

Upon applying this debouchment to the foregoing standard, it appears to possess the necessary points. Having examined the shore of Lake St. François from the upper end of Hungry Bay, and the bank of the river the whole way down, I am satisfied that the line contains no points more favourable than those abovenamed for a debouchment and entrance.

In proceeding to the section of the line, from the accuracy of Mr. Stephenson's Report, it will be needless for me to enter into minute detail; I shall therefore merely state, that the work on the line is very slight, generally not exceeding what will be required for finishing the banks; and that this line is followed, except in one or two instances, where advantage was to be gained by a trifling divergence.

The characteristics of the line are, that it embraces the whole fall of water between the two lakes; that the entrance and debouchment are amply convenient as harbours; that it is wholly

independent of the river, and of those operations of nature which, besides effecting the supply of water, are apt to render the ultimate cost much greater than the first outlay ; that the descent of the navigation is singularly gradual, and the cuttings proportionably moderate ; and that the locks are separated to a degree sufficient for all the purposes of navigation.

I beg to conclude with one general observation : Considering the distance between the two levels of water in the lakes, and the extent of the fall which has to be overcome, it appears as if nature had, in a singular degree, made compensation for the great impediments in the watercourse, by affording on the land by its side unusual facilities for establishing, at a moderate expense, an efficient and permanent artificial navigation.

The fall of the land very closely accompanies the fall in the water.

The watercourses crossing the line are unimportant, and there are no gullies of the least consequence.

The soil is of a kind to render cutting easy, and for the last 79 chains the line passes along on a bed of sandstone rock, which rock, long used for dwelling-houses in the neighbourhood, appears to stand the climate well, and will, I have every reason to believe, produce, from the excavation, a sufficient quantity of good backing stone for the masonry of the locks, whilst the refuse will be most convenient for the masonry of the piers at the entrance to the canal.

I have, &c.  
(signed) Charles Maitland Tate.

T. A. Begley, Esq.  
Secretary to the Hon. the Board of Works.

— No. 10. —

SECOND REPORT of Mr. Tate.

Sir,

Beauharnois Canal, 13 August 1842.

I BEG to lay before the Honourable the Board of Works, the following Report of the progress of the works of the Beauharnois Canal.

The works, on that portion of the canal comprised between stations 146  $\frac{1}{2}$  and 128, which were commenced on the 12th of last month, are advancing rapidly, and present a good appearance : the north bank of the canal is up to its height at several places.

The accompanying Statement will show nearly the amounts done between the stations :

		Cubic yds.			Cubic yds.
From Station	146 $\frac{1}{2}$ to 146	1,504 94	From Station	136 $\frac{1}{2}$ to 136	2,251 33
	146 to 145 $\frac{1}{2}$	1,484 20		136 to 135 $\frac{1}{2}$	2,218 33
	145 $\frac{1}{2}$ to 145	1,467 90		135 $\frac{1}{2}$ to 135	2,750 00
	145 to 144 $\frac{1}{2}$	1,654 33		135 to 134 $\frac{1}{2}$	2,677 75
	144 $\frac{1}{2}$ to 144	1,826 70		134 $\frac{1}{2}$ to 134	1,994 66
	144 to 143 $\frac{1}{2}$	2,090 69		134 to 133 $\frac{1}{2}$	1,833 33
	143 $\frac{1}{2}$ to 143	2,144 92		133 $\frac{1}{2}$ to 133	1,833 33
	143 to 142 $\frac{1}{2}$	2,408 30		133 to 132 $\frac{1}{2}$	2,124 83
	142 $\frac{1}{2}$ to 142	2,684 00		132 $\frac{1}{2}$ to 132	3,385 06
	142 to 141 $\frac{1}{2}$	3,388 81		132 to 131 $\frac{1}{2}$	2,595 63
	141 $\frac{1}{2}$ to 141	1,383 06		131 $\frac{1}{2}$ to 131	2,693 90
	141 to 140 $\frac{1}{2}$	2,791 81		131 to 130 $\frac{1}{2}$	} River St. Pierre.
	140 $\frac{1}{2}$ to 140	2,462 16		130 $\frac{1}{2}$ to 130	
	140 to 139 $\frac{1}{2}$	2,799 50		130 to 129 $\frac{1}{2}$	3,246 46
	139 $\frac{1}{2}$ to 139	2,522 60		129 $\frac{1}{2}$ to 129	2,214 29
	139 to 138 $\frac{1}{2}$	2,978 07		129 to 128 $\frac{1}{2}$	2,433 39
	138 $\frac{1}{2}$ to 138	1,796 66		128 $\frac{1}{2}$ to 128	2,376 00
	138 to 137 $\frac{1}{2}$	3,025 00			
	137 $\frac{1}{2}$ to 137	3,162 50			
	137 to 136 $\frac{1}{2}$	3,795 00			
			TOTAL - - -		83,879 52

Nearly the whole of the Irish employed being emigrants but newly landed, many of them having suffered severely on the voyage out, and by subsequent privation, the progress of the work has not been quite so satisfactory for the earlier part as it has now become ; the men, by daily food and rest, and regular practice, are now becoming more energetic, and are working with better heart.

The same observations may be, to a certain extent, applicable to the Canadians, who, at first, unused to steady work, and unacquainted with this species of labour, are now in a condition, by judicious management of the former, to compete with the others in the performance of a day's work.

The general health of the men has been very good ; at present there is but one man dangerously ill, and the doctor informs me that he has great hopes of his restoration to health.

The conduct of the men and foremen has been very good ; no collision or angry feeling has arisen between the races, and but five men have been discharged for bad conduct.

These circumstances, together with the favourable state of the weather, favour the supposition that this portion of the line of the canal will be speedily executed.

I am in daily expectation of the arrival of a quantity of tools from Cornwall, consisting of picks and wheelbarrows, the want of which is now becoming very apparent.

I have, &c.  
(signed) Charles M. Tate, Assistant Engineer.

Thomas A. Begley, Esq.  
Secretary, Board of Works.

PUBLIC WORKS (CANADA).

— No. 11. —

THIRD REPORT OF Mr. Tate.

Sir,  
Beauharnois Canal, 1 September 1842.  
I BEG to present to the Honourable the Board of Works a Report of the progress of the works of this canal, from the 14th of August to the present day.  
The works have been going on in a very satisfactory manner, and the anticipations expressed in my last Report have been in a great measure realised. I have now little doubt but that the work will continue to advance equally well.  
The amount of work executed since the last Report is as follows:

From Station 123 $\frac{1}{2}$ to	Cubic yds.		From Station 139 $\frac{1}{2}$	Cubic yds.	
124	1,660 5			1,538 6	{ Excepting the slope on one side.
From 123 $\frac{1}{2}$ to 128 have been commenced since the last Report.	125 1,324 5		140	1,529 5	—
	125 $\frac{1}{2}$ 1,339 2		140 $\frac{1}{2}$	1,110 4	—
	126 1,319 0		141	2,307 5	—
	126 $\frac{1}{2}$ 1,375 0		141 $\frac{1}{2}$	797 3	—
	— 766 3		142	2,275 2	Trk. finished.
	127 697 8		142 $\frac{1}{2}$	994 3	
	— 990 0				
	127 $\frac{1}{2}$ 748 0		143	1,252 7	{ Ex'n finished and slope on one side.
	— 2,863 5				Finished.
	128 2,538 2	Ex'n finished.	143 $\frac{1}{2}$	1,277 2	—
	128 $\frac{1}{2}$ 2,305 4	—	144	1,172 6	—
	129 2,164 0	—	144 $\frac{1}{2}$	988 0	
	129 $\frac{1}{2}$ 955 0	—	145	1,131 3	
	130 795 0	—	145 $\frac{1}{2}$	982 2	
	130 $\frac{1}{2}$	} Valley of the St. Pierre.	146	739 9	
	131		146 $\frac{1}{2}$	541 4	
	131 $\frac{1}{2}$ - -	{ Trk. finished, not sloped.	147	1,128 5	{ Commenced since the last Report.
	132 - -				—
	132 $\frac{1}{2}$ - -		147 $\frac{1}{2}$	1,727 0	—
	133 1,188 0		148	1,408 0	—
	133 $\frac{1}{2}$ 1,698 0		148 $\frac{1}{2}$	1,408 0	—
	134 734 0		149	1,287 0	—
	134 $\frac{1}{2}$ 536 0		149 $\frac{1}{2}$	1,287 0	—
	135 1,576 0		150	1,283 3	—
	135 $\frac{1}{2}$ 851 0		150 $\frac{1}{2}$	1,213 6	—
	136 2,310 9	Ex'n finished.	151	1,256 0	—
	136 $\frac{1}{2}$ 1,161 8	—	151 $\frac{1}{2}$	1,256 0	—
	137 2,142 6	—	152	1,228 3	—
	137 $\frac{1}{2}$ 882 2	—	152 $\frac{1}{2}$	1,242 1	—
	138 1,392 9	—	153	843 8	—
	138 $\frac{1}{2}$ 149 8	—			
	139 2,370 2	—	TOTAL - -	75,023 5	

The banks are nearly to their height for the greater part of the distance, and they present a substantial and workmanlike appearance.  
The conduct of the men continues to be very good, no disturbance of any kind having occurred, either amongst the immigrant labourers or between them and the Canadians.  
A considerable portion of the quarry has been opened, and the stone already gotten, although of not sufficient thickness for facework, averaging only 13 inches, will be admirably adapted for backing, as it comes out in regular thicknesses and of good size. It is hoped that the lower bed will be found of a suitable thickness. This stone, although hard, breaks well, and it is thought that it will be no more severe on the tools than a sandstone.

I have, &c.  
(signed) Charles Maitland Tate,  
Assistant Engineer.

— No. 12. —

FOURTH REPORT OF Mr. Tate.

Sir,  
Beauharnois Canal, 15 September 1842.  
I BEG to submit the following statement of the progress of the works of this canal to the honourable the Board of Works.  
The weather has not been so favourable as during the previous fortnight, and some delay has occurred in consequence; the work, however, advances satisfactorily, and the utmost good feeling continues to exist amongst the men.

The following is the measurement of the work done since the 1st of this month:—

From - - 241 $\frac{1}{2}$	Cubic yds.		To Station 139 $\frac{1}{2}$	Cubic yds.	
to			to	202 10	Banks finished.
242	271 31		140	1,095 9	—
243	542 63		140 $\frac{1}{2}$	631 5	—
244	542 63	End of sec. 7.	141	1,595 5	—
245	806 63		141 $\frac{1}{2}$	1,580 7	—
124	440 00		142	441 4	—
125	2,191 20	Banks finished.	142 $\frac{1}{2}$	930 1	—
125 $\frac{1}{2}$	1,939 81	—	143	101 2	—
To Station 126	1,939 81	—	143 $\frac{1}{2}$	—	
126 $\frac{1}{2}$	1,998 30	—	144	—	
127	1,986 70	—	144 $\frac{1}{2}$	—	
127 $\frac{1}{2}$	1,305 30	—	145	—	Banks unfinished.
128	751 80	—	145 $\frac{1}{2}$	—	—
128 $\frac{1}{2}$	—	Finished banks.	146	—	—
129	—	—	146 $\frac{1}{2}$	—	—
129 $\frac{1}{2}$	—	—	147	—	—
130	—	—	147 $\frac{1}{2}$	—	—
130 $\frac{1}{2}$	Valley of St. Pierre will be filled up by next measurement.		148	2,612 50	
131			148 $\frac{1}{2}$	999 32	
131 $\frac{1}{2}$	—	Finished banks.	149	1,449 00	
132	—	—	149 $\frac{1}{2}$	1,169 16	
132 $\frac{1}{2}$	—	—	150	1,561 56	
133	1,404 48	Banks finished.	150 $\frac{1}{2}$	2,204 10	
133 $\frac{1}{2}$	2,112 00	Banks unfinished.	151	2,154 30	
134	2,561 46	—	151 $\frac{1}{2}$	2,147 00	
134 $\frac{1}{2}$	2,561 46	Banks finished.	152	2,156 30	
135	1,577 30	—	152 $\frac{1}{2}$	2,150 70	
135 $\frac{1}{2}$	678 44	—	153	3,049 10	
136	—	—			
136 $\frac{1}{2}$	—	—			
to					
139	—	Banks finished.		53,838 70	

A considerable quantity of valuable backing stone has been gotten out during the last 12 days, and the quarry will evidently turn out to be of great value. The bed of stone mentioned in my last Report is 19 inches thick, much more easily wrought, and of deeper colour than the top beds. This bed is a large one, extending over the quarry as far as it is yet opened. There is a bed of about six inches underneath this, and then another bed, into which a drill has been entered 14 inches; this bed, it is thought, will be of more value than the upper one.

In altering the direction of a portion of the little River St. Pierre, we have met with solid rock of the same quality nearly as that which occurs at Couvillon's Landing. This rock, it is hoped, will make sufficient backing for the culvert of the St. Pierre, at 100 feet distance, and also for the lock at a distance of about 15 chs. This circumstance will cause no inconsiderable reduction in the expenses of executing the above-named pieces of masonry.

I have, &c.  
(signed) Charles M. Tate, Assistant Engineer.

— No. 13. —

LETTER from Secretary of Board of Works to Mr. Tate, containing further Instructions.

Sir,  
I EXPECT the President here on Friday, and suppose he will immediately send you instructions for your guidance; until then I must defer answering your letter of the 28th ultimo.  
As I consider the Board will be very anxious to have all the soundings possible, and understanding that you are not otherwise employed, I consider it advisable you take further soundings about the upper entrance of the canal, and ascertain, not only the depth of the channel leading from thence into Lake St. Francis, but also the breadth of the same, more particularly at the shoaler parts.

C. M. Tate, Esq. Civil Engineer,  
Beauharnois.  
I remain, &c.  
(signed) Thomas A. Begley, Secretary.

— No. 14. —

REPORT of the President of the Board of Works on the Beauharnois Canal.

Sir,  
I HAVE the honour to acknowledge through you the protest or remonstrance forwarded to his Excellency the Governor-general, by Mr. Simpson, against what he states to be "the recently selected  
Montreal, 1 August 1842.

selected line" of the St. Lawrence Canal. The general tour of inspection, on which I have been engaged for some time, has prevented my receiving that document until within the last day or two. I now hasten to lay before you such facts and information connected with the matter as will, I trust, fully satisfy his Excellency that the opinion of council upon which he has acted, in giving his sanction to the proposed canal being constructed on the south side of the river, was not adopted without full and mature consideration; that my departmental Report, upon which principally the Council founded that opinion, was not made without due examination and abundant well ascertained data; and, finally, that in acting upon that Report, the Council was but carrying out the plan, as estimated for and submitted to and approved of by the Legislature. No expression of disapproval on the south side was used in the House, as I understood; but it did strongly express its disinclination to have the completion of any portion of the navigation of the St. Lawrence deferred for or contingent upon the procuring of a loan from any private company.

The selection of the most eligible route for this canal has received a great deal of attention, professional and otherwise, for a long time. It is more than 20 years ago, I understand, since the first survey was instituted, and there have been, in all, 10 surveys made from that time to the present, of which the following is an abstract:—

1. The first was made about 20 years ago, by a French engineer, who, having generally examined both sides of the river, located the work on the south side. This gentleman's Report I have not been able to obtain; but the result of it, as stated, I have had from highly respectable authority.

2. The second was made in 1833, on the north side, by Mr. Mills, under the direction of the then Commissioners, among whom were Messrs. Harwood and De Beaujeu, the seigniors of the properties adjoining, and through which it was proposed to run the canal. This line entered the river from M'Donald's Point, near Mr. Simpson's house. It was to be maintained partly in the river and partly by artificial cuts, and terminate at the foot of the Cascades. The estimate, 235,782*l*. The objections to this line are strongly and fairly set forth in the Reports of Messrs. Baird & Stevenson, and are, in my judgment, insuperable. Its entrance is represented to be obstructed by shoals, and being on the lee shore of Lake St. Francis, with the much-prevailing south-west wind blowing in, sailing craft frequently could not get out, when they could without difficulty leave the opposite side. Of this line (about 14  $\frac{3}{4}$  miles in length) nearly eight miles are in the river, having in places a velocity of five miles an hour, and there are three parts of canal alternating with two of river. The canal portions are principally effected by cutting across projecting points, and by building locks; and in sundry parts, in order to avoid deep cutting into the high banks of the river, which are here composed of a sleechy clay, with veins of sand, and are very much given to slide, it was intended to form the canal by moles or dams, to an extent of about 13,000 feet in length, and in some cases in very deep water and in rapid currents. The foundations of all the locks, as well as those of the dams, are under the immediate influence of the river, and the difficulties of construction generally on this line would be so great, that I am confident it could not be effected for the estimate; in this opinion I am joined by Colonel Phillpotts, who estimated it at little less than 500,000*l*., and who, I have every reason to believe, selected it as the best the north side afforded, with reluctance.

3. The third survey was also made by Mr. Mills on the north side, commencing and ending at the same points respectively as No. 2. The estimate for this route is 324,943*l*. This line Mr. Mills himself did not recommend, and among other practical objections, is liable to that of having the whole of the lockage (82 feet) combined in one spot.

4. The fourth survey was made again on the north side by Mr. Mills. Starting from the same point as Nos. 2 & 3, but crossing through the seigniories of Messrs. Harwood and De Beaujeu, it terminated at the Lake of the Two Mountains, near the village of Vaudreuil, about a quarter of a mile from Mr. Harwood's house. Mr. Mills' estimate for this line was 444,762*l*., and it also was not recommended by that gentleman.

5. The fifth survey was made by Mr. Stevenson in 1833 on the south shore, passing through the seigniorie of Beauharnois. The estimate, 224,444*l*. In speaking of this route Mr. Stevenson says, "The whole of this route, taken together, therefore, presents perhaps one of the most advantageous that can be imagined; the excavation is comparatively easy, and the greater part of it extremely so no embankments required but what can be made up from among the proceeds of the excavation; no large culverts necessary." In reporting on this line, Mr. Baird (an engineer of considerable experience, and who was employed on the works of the Rideau) states, "In all the course of my experience in practical engineering, I never traced a more eligible line for the same distance, the formation, quality (with but little exception), and direction, being everything that could be wished."

This is the line, with some trifling improvements, now being executed. It will be constructed, on the scale adopted, for 255,000*l*.; but in drawing a comparison between it, on the same scale, and the cost of that on the north side, which Mr. Harwood states to be the cheapest, viz. 389,932*l*. the estimate for No. 5 (the one adopted) should be taken at 285,000*l*.

6. The sixth survey was made in 1835, by Mr. Baird. Mr. Baird also gives the preference to the south side, and in his Report fully corroborates Mr. Stevenson's Survey (No. 5) and Report. But Mr. Baird was disposed to go still more south, so as to adopt part of the River St. Louis, and terminate at Beauharnois village.

7. The seventh survey was that made on the south side by Mr. Keefer, in March last, resulting in the full confirmation of No. 5.

8. The eighth survey was made in April last, by Mr. Tate, and sustains equally with Messrs. Baird and Keefer, Mr. Stevenson's Survey and Report, No. 5.

9. The ninth survey consisted of the marking out of the line (No. 5) for execution; in the course of which more favourable features developed themselves daily.

10. The tenth survey was made lately by Mr. Keefer, of the line pointed out by Mr. Harwood on the north side, as being "the cheapest, and one not previously explored."

All these several lines of levels, in the Board's possession, taken from the year 1833 to the present, and crossing the country in all directions, the information derived from their engineer, who is intimately acquainted with the locality, especially of the north side, having been at the time, Mr. Mills' assistant in the surveys, the very satisfactory nature of the documents of Mr. Stevenson, in

favour

favour of the canal on the south side, the full corroboration of those documents by Messrs. Baird, Keefer, and Tate, together with my whole general acquaintance with the country and nature of the strata, fully convinced me long since that the south side was the proper site upon which the canal should be constructed; this consideration is daily more and more confirmed by the result of the several steps now being taken in marking out the whole of the work for execution, as well as by the actual excavation which is rapidly being advanced, there being about 700 men at work for some time. This opinion I stated to Lord Sydenham two years ago, but the memoranda which I also furnished to that nobleman, previous to last session, and which were laid before the House of Assembly and printed by its order, and upon which the appropriation agreed to by that body were made, distinctly refer to the canal being made on the south side, and must therefore satisfactorily refute the assertion in Mr. Simpson's letter, as to "the line being recently selected."

Notwithstanding all these sources of positive information to which I have referred, and my perfect conviction founded thereon, that the country was sufficiently examined, seeing the continued interested mis-statements and misrepresentations which appeared in the public papers, and that Mr. Harwood had stated publicly and in print, that "there was yet another line unexplored on the north side, and which he was certain could be executed at less cost than any other," in order to set that point at rest, the engineer to the Board was directed to proceed to Vaudreuil, and having got Mr. Harwood to point out this line to him, to proceed to take the levels of it, so as to be enabled to form a comparative estimate of its cost. This duty has been effectively performed by Mr. Keefer; but as I do not consider it necessary to inflict upon his Excellency the wading through a mass of professional minutiae, I will confine myself to making three extracts from Mr. Keefer's report, viz:—

The water in the bay at the debouchment of the River Quinchien, where Mr. Harwood's line terminates, and for a quarter of a mile all round it, will not average more than six feet water. I consider it necessary therefore to allow for "a bank or mole being continued about 200 feet from the shore down to the point where Mr. Mills' line (No. 3) enters (a distance of 3,700 feet); this bank should raise the water in the basin formed by it about six feet. Total length of Mr. Harwood's line,  $15\frac{1}{4}$  miles; it is therefore five-eighths of a mile longer than Mr. Mills', and  $3\frac{1}{4}$  longer than that on the south side."

Again, "The accompanying plan will alone convince you that Mr. Harwood has discovered nothing worthy the serious attention of Government, nor has he pointed out any favourable feature in the country that was not fully considered in the surveys that have been already made." Finally; "it would therefore appear, that the cost of the route proposed by Mr. Harwood would exceed that of Mr. Mill's inland route by about one-fifth (and would therefore amount to 389,932 £). This I imagine is sufficient to show that it would be a fruitless task to go any further into details, or to spend any more time in making more elaborate examinations. The north side of the St. Lawrence between the lakes was thoroughly examined by Mr. Mills in 1833, and in that duty I assisted him and made out all his plans. From the intimate knowledge I have thus acquired of that part of the country, I feel a good degree of assurance in expressing the opinion that no line on the north side can be found to equal in economy in facility of navigation, or in freedom from the disturbing causes of flood and ice, the route intended to be pursued on the south side."

His Excellency, in his reply to the Vaudreuil address, has so fully exposed the insufficiency of military and political reasons adduced by the opponents to the canal on the south side, that I feel it only remains for me to notice the assertions of Mr. Simpson, "that water cannot be found at the entrance and exit of the depth contemplated in the canal; consequently vessels, which the canal would be capable of bearing, will be incapable of getting in or out."

Now, first as regards the proposed entrance to the canal from Lake St. Francis, Mr. Stevenson thus speaks:

"It commences in a cove above M'Pherson's Point in the south branch of the river, about half a mile below the upper end of Grande Isle, where the bank is low; and ten feet of water is found at 150 feet from the shore."

On the same point Mr. Baird says: "the first duty became the ascertaining of the most eligible points of departure from the lakes; for the depth of water required (nine feet on the mitre sill), with a due regard to the distance between these points."—"These requisites I found to exist in Lake St. Francis at or near the commencement of the south channel at B. and H. respectively; the former having been fixed on by Mr. Stevenson on his survey as the most eligible, and in which I perfectly coincide."

On the same point, Mr. Tate who was sent by the Board to take levels, soundings, &c. preparatory to the commencement of the work, thus speaks:

"At the foot of Lake St. Francis, a point on the south-eastern side, extending from the shore of Hungry Bay, called Grass Point, forms one side of a small bay called Chartier's Bay, which is the mouth of the south channel, or of that portion of the river which runs between the Grande Isle and the mainland of Beauharnois. The other side of this bay is formed by an island called Isle aux Chats, or Clarke's Island. Upon considering the capabilities of this bay as a harbour or entrance to a canal, it will appear to be sheltered by Grass Point from the prevailing wind, which is south-west, as well as from the surf and swell of Hungry Bay, from which it is quite distinct and separate. It has an entrance of sufficient extent and depth of water, in the whole breadth of which, about 1,188 yards, there are two shoals of small extent, upon one of which is a rock with but five feet water over it. There is every facility for removing these shoals, if necessary, but from the fact of there being three entrances of from 600 to 1,200 feet in width each, and with a depth of water averaging from 12 to 20 feet, it may be deemed sufficient to place buoys over them."

"Pursuing the channel down, there is a fine reach extending a mile and a quarter, with a good clay bottom, and sheltered from the winds. The current does not exceed two miles an hour, and there is 10 feet of water at 150 feet from the shore. Here, therefore, is a safe and good anchorage from Chartier's Bay to a point called M'Pherson's Point, a distance of two miles and five chains. This harbour, then, fully comes up to the standard of an unexceptionable entrance."

The elaborate chart of Mr. Thompson, a hydrographer of deservedly high standing, fully sustains the foregoing description of Mr. Tate's.

With respect to the entrance from Lake St. Louis, Mr. Stevenson thus speaks: "Having examined very minutely the coast of Lake St. Louis, from the harbour at Beauharnois village up to the foot of the rapids, a distance of about two miles, and found more than sufficient water for any

any vessel plying on the lakes, with a clear coast and smooth bottom; and near the foot of the rapids I found a little cove, at the landing of one Couvillon, offering the most convenient spot wherein to construct the entrance to a canal of this description."

The opinion of Mr. Tate on this position is as follows:

"The position of this point, called Couvillon's Landing, affording as it does a sufficient depth of water at a distance of 132 feet from the shore, and being in a cove between two ridges of rock, is likewise rendered further desirable for a debouchement, from being at the upper end of an eddy, which extends nearly from St. Louis point, a very favourable feature, and one which will be calculated to assist the navigation up to the canal in a material degree."

Mr. Tate concludes his Report with the following general observations:

"Considering the distance between the two levels of water in the lakes, and the extent of the fall which has to be overcome, it appears as if nature had, in a singular degree, made compensation for the great impediments in the watercourse, by affording on the land by its side, unusual facilities for establishing, at a moderate cost, an efficient and permanent artificial navigation. The fall of the land very closely accompanies the fall in the water; the watercourses crossing the line are unimportant, and there are no gullies of any consequence. The soil is of a kind to render cutting easy, and for the last 79 chains the line passes occasionally on a bed of sandstone rock; which rock, long used for dwelling-houses in the neighbourhood, appears to stand the climate well, and will, I have every reason to believe, produce from the excavation a sufficient quantity of good backing stone for the masonry of the locks, while the refuse of it will be most convenient for the construction of the piers at the entrance to the canal."

Mr. Keefer also describes Couvillon's Landing as a suitable, and the fittest spot to select for the entrance. The deep water he finds to run in close to the shore, as described by the other gentlemen, the eddy near the shore being auxiliary to vessels beating up in scant winds, and the outer current equally so in beating down, and the construction of two moderate piers on the ridges of rock, on each side of the deep channel, one to serve as a wharf or landing, the other to afford shelter from wind blowing up the Lake, will completely afford all the necessary convenience and accommodation.

I have thus, without noticing the various anonymous mis-statements which have been circulated, confined myself simply to giving the facts and the essence of the several Reports made, from time to time, since 1833.

I feel sanguine that they will fully satisfy his Excellency upon the subject, and I trust will, when known, remove from the public mind any false impressions which may have been made upon it. As deeply connected with the quiet and satisfactory progress of the work to which the foregoing relates, I would take the liberty of offering a few suggestions for the consideration of his Excellency, and the adoption of which I would respectfully urge upon his Excellency's serious attention, as tending in my humble opinion, materially to prevent collision upon the works of this canal, between the different races which it must be expected, will necessarily be congregated there, and which collision might lead to deplorable consequences.

The peculiar circumstances of this work seem to me to require some peculiar arrangements on the part of the government. An extensive public work is, for the first time, undertaken through a district entirely settled and inhabited by Canadians of French origin; a large temporary population of strangers will be introduced and brought into immediate contact with the settled inhabitants, and with whom the difference of language will not only be a bar to friendly intercourse, but it may too reasonably be apprehended that these strangers, whether labourers, contractors, or officers of government, will from being ignorant of the language, usages, and peculiar feelings of the people, be likely to give them offence, or do them wrong unintentionally. With respect to this point, it unfortunately happens that there is no capable engineer of French Canadian origin; but I have taken all the precaution in my power, by appointing two junior assistants of that race, and by the selection of a paymaster and accountant who understand the people and language. It is further to be feared, that petty trespasses, such as the pilfering of the gardens of the *habitans*, &c. &c. may frequently be committed, and engender irritation and hostility.

To guard against these evils which I apprehend, as well as to render the first commencement of extensive public works popular with the *habitans*, a few steps appear to me advisable to be taken.

1. Although I conceive that to ensure economy, and certainly in the execution of public works of this description, general competition and the contract system founded thereon, is absolutely necessary. I think that a certain portion of the line, say three or four miles, ought to be laid off in small contracts. These I propose to apportion among the residents, at the valuation of the engineer, and thereby, by giving a large portion of the *habitans* employment on their own account, lessen the probability of collision. As this course is directly departmental, I shall not hesitate to take the responsibility of acting on it, although in so doing I am sure to encounter further attack and obloquy.

2. The second point I consider to be, the having an Irish Roman-catholic clergyman resident for the time being near the work, who, from his acquaintance with the language and habits of that class, which, judging from the extensive emigration, will be in large numbers on the work, can exercise the salutary influence over them that such clergy are admitted to possess.

3. It would be of importance to have a French Canadian gentleman, perfectly conversant with the English language, upon the line generally, to attend at the payments, and explain between the parties, and who would give his whole time in keeping peace and promoting a friendly feeling, and to the arrangement of petty differences. He should be in the commission of the peace. The respective remunerations of these two gentlemen I consider can be borne from the estimate for the work.

4. It would be necessary to have a few of the steadiest of the police force close to the work, to prevent petty trespasses, and the other little causes alluded to as likely to create bad feeling.

5. Finally, in consideration of the circumstances which have recently taken place upon the Cornwall and Welland canals, I think it would be necessary to have, not on the work, but in the neighbourhood of it, a party of military (the regular force I would much prefer). Such arrangements being made, I entertain strong hopes that the direct interference of the latter would not be required.

Should his Excellency, upon consideration, be pleased to adopt these suggestions, or any of them, he can easily have them carried into effect.

I have, &c.

(signed) *Hamilton H. Killaly,*

President Board of Works.

REPORT of a SURVEY for a CANAL on the North Shore of the *St. Lawrence*, on a Route suggested by the Honourable Mr. *Harwood*, Seigneur of *Vaudreuil*.—By *Samuel Keefer*, Civil Engineer.

Sir,

Kingston, 5 July 1842.

IN pursuance of your verbal instructions of the 21st ultimo, I proceeded to Coteau du Lac, taking with me Mr. Harwood's memorial on the subject of the canal between Lakes St. Francis and St. Louis.

I sent for Mr. Harwood, and desired him to point out the route for a canal alluded to in the latter part of his memorial; and having gone over part of the ground with him, and obtained from him a written description of the proposed route, which is submitted herewith, I ran the level over it, from lake to lake, taking such levels and observations to the right and left as would give me a correct general idea of the country through which I was passing, that I might form an opinion as to there being any better line for a canal than those already surveyed.

Between Coteau du Lac and Smith's Falls, on the River à Delisle, I levelled over two lines, for the purpose of finding the lowest ground, as well as to ascertain the level of Smith's Falls, with reference to the lake. The lake is at present 15 inches higher than the water above Smith's Falls.

I think Mr. Harwood must be mistaken in stating Mr. Mills told him the water in River à Delisle, above Smith's Falls, was eight feet above lake St. Francis; for I can discover nothing in Mr. Mills' plans, report, or estimates that confirms it. If he had said that the surface of the water above Smith's Falls was eight feet above the bottom of his canal, he would have spoken nearly or quite correct; and as, in surveys of this kind, it is the practice of engineers to refer all heights and depths to bottom of canal, it would have been a most natural way for Mr. Mills to have answered the question.

In order that you may be able to form an opinion of the route proposed by Mr. Harwood, I will now enter upon a short description of it, which, with the accompanying plan, will at once convince you that he has not discovered anything worthy the serious attention of the government, nor has he pointed out any favourable feature in the country that was not fully considered in surveys that have been already made. In describing his route, I will also compare it with the inland route, No. 2, proposed by Mr. Mills, as it will show the uselessness of making an estimate of the cost.

*Mr. Harwood's proposed Line.*

1. Starts from the bay, above the steam-boat landing, at the Coteau du Lac, in which the water is quite shallow: it is 400 feet to 9 feet water.

The line runs in rear of the village, and follows the low lands above half a mile from the St. Lawrence, and crosses the River à Delisle nearly half a mile below Smith's Falls. This portion of the route is  $3\frac{1}{8}$  miles long, and averages a little more than 17 feet cutting: soil, clay, with some ridges, containing numerous boulder stones. The land falls towards the St. Lawrence.

2. After crossing the River à Delisle (which might be dammed, and the water turned through the canal, with a waste weir to carry off the flood waters,) the line turns gradually to the right, crosses the River Rouge near its mouth, follows up a branch of the Rouge, and then turns again to the right, and crosses St. Emanuel road, 400 yards from the St. Lawrence, runs parallel with the St. Lawrence at that distance till it crosses the River à la Graise; it then runs along the south east bank of the River à la Graise, at such a distance from it as will give about five feet cutting, in order that the excavation will be sufficient to make the banks, and crosses the Chemin St. Dominique, above 1,200 yards from the St. Lawrence.

This section is  $3\frac{7}{8}$  miles long, and averages 12 feet cutting; soil, clay. Requires one dam and two aqueducts.

3. From St. Dominique to St. Frioll the line continues up the valley of the River à la Graise, and passes the summit or highest ground between that river and the Petite Quinze Chiens, one mile westward of St. Frioll. The cutting through the summit is  $8\frac{1}{2}$  feet deep; the line crosses the St. Frioll road near the cross, 8,300 feet from the St. Lawrence.

This section is  $2\frac{1}{8}$  miles long; soil, clay, with a slight mixture of sand in places; and the depth of cutting averages about six feet, or a little more.

4. The

*The Inland Route, (No. 2) of Mr. Mills.*

1. Starts from the bay, above M'Donald's Point, and follows along the low ground bordering the St. Lawrence, and has an average depth of cutting of 10 feet, and is  $2\frac{5}{8}$  miles long to the mouth of the River à Delisle.

2. Crossing the River à Delisle by an aqueduct, the line passes through Horse Shoe Bay, crosses the River Rouge near its mouth (about a quarter of a mile), and then runs in nearly a direct line from thence to where it crosses the Chemin St. Dominique, about 1,000 yards from the St. Lawrence.

This section is  $3\frac{7}{8}$  miles long, and the cutting averages 12 feet; soil, clay. Requires three aqueducts.

3. Between St. Dominique and St. Frioll, this line takes a higher level, in a more direct line towards Cascades, and runs nearly parallel with the St. Lawrence.

The length of this section is  $2\frac{3}{8}$  miles; soil, clay, with a light mixture of sand, and the depth of cutting averages about nine feet.

4. Shortly

*Mr. Harwood's proposed Line.*

4. The depth of cutting at the St. Frioll road is seven feet. At the distance of half a mile from this road the line intersects the south bank of the Quinchien, it then follows along the bank of this creek, looking down at convenient places, till it at length descends into the bottom of the valley. At the St. Antoine road, this valley is 8,500 feet from the St. Lawrence; and consequently, before it joins the Ottawa above Cascades, it must take nearly a south-east direction, making the distance much longer.

To make one or more dams across this ravine, and by that means turn the drainage of the whole surrounding country through the locks, or over waste weirs, as suggested by Mr. Harwood, is highly objectionable; as in this case, not only would the works be placed in jeopardy by the land floods, but the rubbish and deposit brought down with those floods would be a constant source of annoyance, by settling in about the lock gates, and deranging their working.

For these reasons, and in order to obtain a desirable length of reach between each lock, I have considered it necessary in following this ravine to lay the canal partially in the south bank of the valley, cutting out enough to form an embankment on the north side, and thus by regular gradations descend to the bottom of the valley, and leaving a sufficient space between the canal embankment and the north bank of the creek for the necessary drainage of the lands. About one mile eastward of St. Frioll, this ravine is 200 feet wide at bottom, and 14 feet deep; the banks gradually attain a greater height, till at or near the debouchement of the creek they become 60 feet high; but the breadth of the ravine is here reduced to 80 feet at bottom. The banks have a slope varying from  $2\frac{1}{2}$  to 3 feet to 1.

To an engineer, this would not by any means appear to be a desirable place to make a canal.

The length of this section is  $6\frac{1}{8}$  miles, the soil chiefly clay, and the cutting (in order to institute a comparison) may be averaged at six feet, which is, perhaps, putting it in rather too favourable a light.

The water in the bay, at the debouchement of the Quinchien, and for a quarter of a mile all round it, will not average at present more than six feet deep; the bottom is a stiff clay. I have therefore considered it necessary to allow for a bank or mole being continued about 200 yards from the shore, all the way to the point where Mr. Mills places his water-lock, in route No. 2. This bank should raise the water in the basin formed by it about six feet, and the water-lock should be placed in the warm waters of the St. Lawrence.

The total length of this line, as before described, is  $15\frac{3}{8}$  miles, and the average depth of cutting 9.40 feet. This line is therefore five-eighths of a mile longer than Mr. Mills' inland route (No. 2,) and about three miles longer than the route through Beauharnois.

To compare the expense of these two routes in a rough manner, the cost may be taken in the compound ratio of the lengths and depth of cutting; *i. e.* :—

The cost of Mr. Har-	} : {	Cost of Mr. Mills' route (No. 2.)	} -	$15\frac{1}{4} \times 9.40$	:	$14\frac{3}{8} \times 8.20$ .
wood's route.				or - 14.335	:	119.92.
				or - 6	:	5 nearly.

It would therefore appear that the cost of the route proposed by Mr. Harwood would exceed that of Mr. Mills' inland route (No. 2) by about one-fifth of the latter.

This, I imagine, is sufficient to show that it would be a fruitless task to go any further into detail, or to spend any more time in making more accurate and elaborate examinations. The north side of the St. Lawrence, between these lakes, was thoroughly examined by Mr. Mills, in 1833; and in that duty I assisted him, and made all his plans. From the intimate knowledge of this part of the country that I have thus acquired, I feel a good degree of assurance in expressing the opinion, that no line on the north side of the river can be found to equal, in economy, in facility of navigation, or in freedom from the disturbing causes of ice and flood, the route intended to be pursued on the south side of the river.

Respectfully submitted by, &c.

Engineer, Board of Works.

Hon. Hamilton H. Killaly,  
President Board of Works.

— No. 16. —

SPECIFICATION for the Earth-work and Rock-work of the *Beauharnois Canal*, by *Samuel Keefer*, Civil Engineer.

*Dimensions.*—The canal, generally, will be 80 feet wide at bottom, but where the excavation does not exceed five feet in depth for a distance of one quarter of a mile, the bottom will be made 100 feet wide.

The banks are to be raised 15 feet above bottom of canal, to be 12 feet wide at top, and the slopes inside and outside to have two feet base to one foot perpendicular. The bottom of the canal is to be one foot below the mitre sill, to afford 10 feet of water in the canal.

*Drain.*—A catch-water drain must be formed on the south side of the south bank, to drain off the surface water to the nearest discharge, and shall be of such size as the engineer may consider necessary for that purpose.

*Grubbing.*—All the trees, stumps, and roots are to be wholly removed from the space occupied by the canal and its banks, and either burned or removed to the outside of the banks.

*Mucking.*—In cuttings under 10 feet, all the surface soil containing vegetable or other matter, unfit, in the engineer's opinion, for forming the face of the banks, shall be stripped from the entire surface of the cutting (previous to commencing the excavation), and from thence on each side, for a breadth extending half way under each bank, and the same must be placed to form bank within the outside slope-stakes. The ground, thus prepared by mucking, must be kept three chains in advance of the banks; and no bank can be formed thereon until it has been inspected and approved by the engineer, or the foreman under him.

*Tap Drains.*—Lateral drains, for draining off the water below bottom of canal during the progress of the work, are to be formed at the contractor's expense, and only in such places as the engineer may approve of, in order to create the least necessary amount of damage to farms.

*Excavation.*—All the best earth for making tight banks must be placed in the front part, that of inferior quality in rear; and all stones that may occur in the excavation must be moved outside of the banks, except in certain cases, when there is a scarcity of materials for making banks where the engineer may direct them to be laid, so as to form the rear part of the embankment. In those parts of the canal where there will be a surplus of earth after forming the banks opposite, it must be taken either to form the nearest embankment, or it must be placed in spoil-bank evenly, on each side of the canal, as the engineer shall direct. The top of the spoil-bank must be levelled, and made so as to throw the surface water from the canal, and, if the engineer shall so direct, it must all be laid on one side of the canal. If the quantity of surplus earth is great, the spoil-bank must be raised from three to six feet above the towing-path, as the engineer may direct, and formed as shown in the margin; the slope of the face to be two to one.

*Embankment.*—In forming the banks, the earth, if carried by carts, must be laid on in courses not exceeding 12 inches in thickness, and all the best materials must be placed in front.

Where an embankment is to be formed in the river, as in section No. 1, it must be raised in the first place only 18 inches above the surface of the river, and made only half its proper breadth at that height, which half must be next the outside, in order that, after the water has been drained from the canal, the remaining inner portion of the bank may be formed in courses, as before described. Stones are to be thrown on the outside of the bank, to prevent its being washed away by the current.

The earth for forming the banks must be taken from the excavation, or from such other place as the engineer may direct.

*Puddling.*—Should it appear necessary, in the engineer's opinion, for the security of any of the banks, to resort to puddling, it must be done in the following manner. The seat of the bank having been prepared by making, as before specified, a trench must be sunk four feet wide and three feet deep, and deeper if the engineer should think it necessary. The best clay that can be procured must then be wrought into good puddle, by means of water, and through-working with the spade. The courses of puddle are to be only nine inches thick, so that in laying a superior course the spade may also penetrate the course below it; this done, the bank may be formed thereon with carts, in 12-inch courses, to the puddle at bottom, making a ditch  $3\frac{1}{2}$  feet wide, and taking care to incorporate the top course of puddle with that below it. The bank may then again be raised three feet, and the same process repeated in each course, to the top-water line of the canal.

## SPECIALLY FOR SECTION NO. 2.

*Rock Excavation.*—In a thorough cut of solid rock, the bottom will be 55 feet wide, or as much wider as the engineer may direct; the sides perpendicular, and formed as true to the line as circumstances will permit, without making much use of the hammer. In such parts of this section as the engineer may consider it necessary, the contractor is to build a rough-dry stone wall upon the upper edge of the rock cutting, of the material furnished thereupon, for the purpose of bringing the surface to a uniform level, and for retaining the inner slopes of the banks.

Any well-shaped serviceable stones for building, that may be found in this excavation, must be reserved for the backing of the locks; the remainder to be carried to form the piers at the lower entrance, or disposed of in forming the rear part of the embankment, as the engineer may direct.

In forming embankment on the surface of the smooth solid rock, after having removed all the substances unfit for bank from the place it should occupy, agreeably to the engineer's direction, a trench 10 feet wide, and from  $2\frac{1}{2}$  to  $3\frac{1}{2}$  feet deep, at the engineer's direction, shall be mined under the centre part of the bank, and thoroughly cleared of all loose stones, chips, and rubbish; this trench is then to be filled with clay, rammed as tightly as it can possibly be done, the clay to be put

put in courses not exceeding four inches in thickness, and just sufficient water used to bring it to a firm consistence.

The embankment is then to be formed thereon in courses, as before specified, and if the engineer thinks it necessary, a puddle-bank must be carried up therefrom, in the manner before described, as high as to top-water line.

All the spare earth in the reach below lock No. 5, must be carried to form the embankment below lock No. 6, and whatever other earth may be required to form the banks below lock No. 7, shall be taken from the adjacent clay banks, at such places as the engineer shall direct.

The whole of the work is to be done in a permanent and substantial manner, according to the true intent and meaning of the foregoing specification, and to the full satisfaction of the Board of Works, or their engineer for the time being.

Beauharnois, 19 August 1842.

CORRESPONDENCE between His Excellency the Governor-General and the Colonial Secretary, relative to the Placing of the CANAL on the SOUTH SIDE of the *St. Lawrence*.

Sir C. Bagot's Despatch to Lord Stanley, 19th July 1842, No. 137, *vide* p. 88.

Lord Stanley's Despatch to Sir C. Bagot, 20th August 1842, No. 235, *vide* p. 93.

(No. 165.)

My Lord,

Government House, Montreal, 6 August 1842.

With reference to my despatch to your Lordship of the 19th ultimo, I have the honour to transmit to your Lordship herewith a copy of the Report made to me by the Chairman of the Board of Works, as to the relative advantages of constructing the canal between lakes St. Louis and St. Francis, on the north or south shore of the St. Lawrence. I trust that the statements contained in this Report will convince your Lordship of the propriety of my decision to undertake that work on the south side.

1716: 1 Aug.

I have adopted what appeared to me to be the necessary precautions to prevent misunderstandings between the inhabitants of the country through which the canal will run, and the labourers employed on the work.

The Right honourable the Lord Stanley,  
&c. &c. &c.

I have, &c.,  
(signed) *Charles Bagot*.

— No. 18. —

STATEMENT of the OBJECTIONS to the Location of the CANAL on the South Side of the *St. Lawrence*, by *John Simpson*, Esquire, a Member of the Committee.

I.—*The Western Terminus.*

- 1st. Because it abounds in rocks and shoals.
- 2d. That there is no passage out of it, unassisted by a tug-boat.
- 3d. That, when high winds prevail from the north or north-west, from the south or west, even tug-boats (without which it would be impossible to get out), would endanger the boat or damage the cargo.
- 4th. That the set of the current and the prevailing winds render it not only difficult, but also dangerous, to approach that shore.
- 5th. That there is no safe anchorage near the western terminus, nor for seven miles of its approach.
- 6th. That it is dangerous, nearly at all times, to approach M'Pherson's Point; that if a vessel, in attempting to enter the mouth of the canal, should miss the Channel, it would put in the utmost peril the crew, cargo, and boat.
- 7th. That a vessel, to go into or out of the entrance, could alone do so during daylight.
- 8th. That, if a sudden squall arose, the vicinity affords no safe anchorage or harbour.
- 9th. That if by possibility a sufficient depth of water could be made in the Channel, free from rocks and shoals, the Channel is too angular to become practicable without tug-boats.

II.—*That the Canal is a Provincial one, and that, if the North Side would cost 50,000 l. more than the South, it would be economical and wise to place it on the North Shore.*

1st. Because the River St. Lawrence would afford a wide and nearly impassable barrier to the incursions of a foreign enemy, or to the discontented refugees of this province.

2d. That it would be cheaper and easier to defend canals on one side of the river than to be forced to divide troops for that purpose, with this dangerous part of the river between them.

3d. That the level on both sides being alike, the locks must be the same on each; that the difference in the expense can consist only in the excavation, whether that be in the number of cubic yards or the rocky quality of it.

That the south side would require 1,763,956 cubic yards, at 11  $\frac{1}{2}$  d. per yard - - £. 84,106

That the north side requires ——— - - - - - at 12  $\frac{1}{2}$  d. —

595.

4th. That

4th. That the first estimate or survey of a French engineer is not before us, and appears on the authority of hearsay only.

5th. That the surveys and estimates of Messrs. Stevenson & Baird were by order of the seignior of Beauharnois, to enable him to dispose of the seignior, and should be therefore, deemed of little or no authority.

— No. 19. —

FIRST PART of a REPORT of a SURVEY for a CANAL on the NORTH SHORE, made by order of Messrs. *Simpson & Harwood*.—By *William R. Casey*, Civil Engineer.

Gentlemen,

Coteau du Lac, 5 September 1842.

I have the honour of submitting to you the first part of a Report on the survey of a route for a canal on the north side of the St. Lawrence, joining Lakes St. Francis and St. Louis. As this survey has been rendered necessary by the letter of the Hon. H. H. Killaly, of the 1st August, addressed to the late chief secretary, it will be proper to examine that communication with some care. The two points at issue are, the entrance into the canal from Lake St. Francis, and the comparative costs of construction on the two sides of the St. Lawrence.

The letter referred to is very explicit on the former head; and as the position of the mouth of the canal is given, and the number, depth, and width of the channels between the Beauharnois side and Clarke's Island clearly stated, every opportunity is afforded to those taking an interest in the question to go and sound for themselves, an operation of which every man is capable, and of which he cannot well doubt the result.

Not so, however, with the cost of the canal proposed; and on this subject, beyond the statement that the canal on the south will be three miles shorter than the line on the north side, there is not a particle of engineering information given so that even after surveying the north side, and with some acquaintance with the south side also, I am still unable to offer any reasons why the cost on the north should exceed or fall short of that on the south side. By reasons, I do not mean opinions or impressions, but facts and information, placed in such a light as to enable every thinking man to judge for himself. Opinions, even from the highest judicial tribunals, are backed by facts or reasons; but here it is merely stated that Mr. S., M., B., &c. gave the preference to the south side, in which the Board agrees, and therefore the case is proved. This objection becomes, however, most formidable, when we reflect that the whole object of the letter is not, by taking high ground, to state fairly and openly the comparative advantages of the rival lines, and show why this or that has been preferred; but the aim of the writer is to quote only such opinions, parts of opinions, facts, and casual observations, as to the incautious general reader appear to favour the south side.

Thus, what weight is to be attached to the opinion of the French engineer, whose experience, character, and capacity, are as unknown to the public as is his very name to those who invoke his aid?

In speaking of the survey, No. 2, the line recommended by Mr. Mills, Mr. Killaly observes: "Its entrance is represented to be obstructed by shoals;" that is, the only entrance contemplated on the north side is merely known to the Board indirectly, and on examination into its merits, does not appear to be considered as at all required at their hands, whilst the entrance on the south shore has received every attention; and, not satisfied with quoting from the Report of Mr. Tate, the authority of Mr. Thompson, "a hydrographer of deservedly high standing," is brought in also, the whole being endorsed by the President himself, as sufficient "to fully satisfy his Excellency," and "remove from the public mind any false impressions."

Colonel Phillpotts estimated the cost of "the river route" at nearly 500,000 *l.*, on the scale of the Cornwall Canal; but this remark does not aid us in judging of the comparative cost of two inland canals of entirely different dimensions. I shall do the colonel the justice to believe that he never contemplated the possibility of the canal being placed on the south shore. Indeed, how could an officer of the corps of Royal Engineers, more especially Colonel Phillpotts, overlook, after the scenes of 1738, a proposition which an American civil engineer considered in 1833 so obviously clear, that the mere enumeration of it was sufficient to carry conviction.

Mr. Mills, in the very Report from which Mr. Killaly quotes, says, "There is a political objection to its being located on the south side of the St. Lawrence, which I will barely name."—"The work in contemplation must be considered national in its character, therefore ought to be so located as to be less in danger of foreign invasion." But this remark did not favour the Beauharnois side, and finds no place in the letter.

To the third survey it is objected, that it has "the whole of the lockage (82 feet) combined in one spot." \*No line can be found to which some objection may not be made, but is this objection of weight sufficient to turn the scale against the north side? It may not be difficult to have two or three small reaches between the locks, which would obviate this objection. Then again, the facility with which materials can be procured, the greater economy of management, and the convenience to the boatmen in having all the locks within one mile, are objects worthy of serious consideration. The estimate is 324,943 *l.*, and deducting only one-fourth for the difference in size, there remains 243,707 *l.*, as the estimate of an inland canal on the north side, against 255,000 *l.*, the estimate of the inland canal on the south side. If estimates are to be adduced as evidence when they favour the south side, they should not be omitted when they favour the north.

The fourth survey was by Mr. Mills, and to this, as well as to the last, it is singularly enough objected, that Mr. Mills did not recommend them, although he expressly says, "I have determined to recommend the Plan, No. 1, along the St. Lawrence."

The

\* Mr. Mills's estimate shows this assertion to be entirely unfounded.—*W. R. C.*

Kingston, 28 September.

The fifth survey was by Mr. Stevenson, and he very justly designates the south side as very advantageous.

I consider the north side as very advantageous, but not on that account preferable to the south.

Mr. Baird prefers the south side, but no reason is vouchsafed.

In a quotation from Mr. Keefer's Report, the following passage occurs, with the italics: "The north side of the St. Lawrence, between the lakes, was *thoroughly examined* by Mr. Mills in 1833, and in that duty I assisted him, and made out all his plans. From the intimate knowledge I have thus acquired of that part of the country, I feel a good degree of assurance in expressing the opinion that no line on the north side can be found to equal in economy, in facility of navigation, or in freedom from the disturbing causes of floods and ice, the route intended to be pursued on the south side."

Mr. Mills, in his Report of those very examinations, says, "I visited the south side of the St. Lawrence, and passed over the country from Lake St. Francis to Beauharnois, on Lake St. Louis. Purely geographically, this would seem the most natural and direct route for a canal between these waters: I did not examine this route with instruments, but have become very well acquainted with the country. I believe it to require a longer canal, and although very feasible, yet possessing no advantages, and no extraordinary facilities to construction."

Mr. Mills is eagerly quoted where his remarks may be turned against the north, and religiously avoided where he denies the existence of any advantage on the south side. Indeed, to such an extent is this principle carried, that the obvious national advantages of the north shore are not even admitted. Not only so, but the reply of the Governor-general to the deputation in July last, is actually brought forward as obviating all military and ('38 to the contrary notwithstanding) political objections. His Excellency is assured by the proper authorities, that circumstances over which he has no control require the location of the canal on the south side; what, then, remains for a British Governor to say, than that it will be the duty of the Government to defend it. But is the canal to be placed on the south side merely because the British arms are able to defend one place more? Can any one doubt that the difference in cost not being very great, his Excellency would immensely prefer the north side?

The whole case may be stated thus: the great (that is the commercial) objects of the work will be equally well accommodated on either side, with, of course, equally efficient canals. In a military point of view, the canal on the north side would be national, whilst on the south side it might not only become useless, but might actually be turned against the country; hence a trifling difference in cost should not be considered in the decision. The great object is, therefore, to obtain a tolerable approximation to the relative costs. Now, there being no tunnels, large valleys, wide ravines to cross, or indeed any large works on either side, there remain only the earth-work and locks. The lockage will be the same on both sides, hence the difference in cost, 100,000 £, must be sought for in the earth-work almost exclusively. This sum is sufficient to remove 1,600,000 cubic yards of earth at 1 s. 3 d. per yard, 2,000,000 cubic yards at 1 s. per yard, or 2,600,000 cubic yards at 9 d. per yard. The least of these is an enormous mass of earth, and there can be no difficulty in pointing out where such an excess occurs on the north side. This admits of being stated clearly and concisely. Why, then, not come out openly at once, and say that we give the preference to the south side, because we have two or three millions of cubic yards less to remove than on the north side, or so much less rock, or whatever it may be, which increases the cost of that side 100,000 £ over the south side.

The estimates of different persons, made at different times, for works of different dimensions, convey no idea of the comparative engineering merits of rival lines; and unless you can procure something tangible and definite as to the actual quantity of work to be done on the south side, there will be no possibility of my being able to say whether you are right or wrong in the position assumed, that the south side offers no substantial advantages over the north, as regards facilities of construction.

It is said that Mr. Harwood's line, or the line on the north shore corresponding to the line of the Board of Works on the south side, would cost one fifth more than Mr. Mills' inland route, and would therefore amount to 389,000 £. Mr. Mills' estimate was for a canal of the size of the Cornwall Canal. Now I have understood that the lockage on that canal has cost about 3,000 £ per foot lift, which for 82 feet would give 246,000 £; only 9,000 £ less than the estimate of the Beauharnois Canal complete. There must, consequently, be a vast difference in size, yet the reader naturally infers that the comparison is just.

In stating that the line on the south side is shorter than that on the north, no allusion is made to the strong current between M'Pherson's Point and Lake St. Francis, and the reader infers that the upper termini are equally advantageous. The whole state of the case could not be given without admitting some inferiority; hence so much only is stated as is favourable to the Beauharnois side. Persons on the north side, on the other hand, cheerfully admit that Couvillon's Bay forms an excellent entrance, whilst Mr. Killaly denies the very laws of nature, and actually calls the north or west, the lee bank of the St. Lawrence.

It is but justice to the President of the Board of Works to state, that his answer to the objections urged against the sufficiency of the channels leading from Lake St. Francis to the upper terminus of the canal is full and explicit. The public is assured that "there are three entrances of from 600 to 1,200 feet in width each, and with a depth of water averaging from 12 feet to 20 feet." Now, although the very existence of these channels is still denied by many who have sounded them within the last few weeks, and although highly respectable persons confidently assert that there is not even a single channel 500 feet wide and 12 feet deep, instead of three, as above, I still think there must be some mistake in the matter. It is quite impossible to suppose the Board ignorant of the case, and equally impossible to suppose the mis-statement to have been made intentionally; for the infamy of the former would be rivalled by the atrocity of the latter supposition. I have not sounded across from the Beauharnois side to Clarke's Island, but as far as a "landsman" is able to judge, should pronounce the entrance, as regards current and exposure to the "Nor' westers," the quarter whence comes the heavy blows of autumn, as very far inferior to the old established landing on the north side.

No donations of land, or even money or materials, can be expected on the north side. I believe, also, that the land given to the province on the south side will be eventually paid for. What

interest

interest has the "habitan" of Beauharnois more than the farmer of St. Eustache, in the carrying trade between England and the States of Ohio, Michigan, &c.? When he discovers, as he soon must, that he has given away part of his estate in order to render that which is left less valuable and convenient, he will petition the legislature for relief. And when a private railway company in this Province cheerfully paid 25*l.* per arpent for the land occupied, giving every man a crossing on his farm, and aiding the drainage of his land by the construction of the road, does it become the Province of Canada to accept the trifling sum of a few thousand pounds worth of property, two or three per cent. on the probable cost of the work, obtained by some means or other from the habitants of Beauharnois.

I will, as soon as possible, forward on to Kingston the second part of this Paper, with a description and profile of the line, the amount of earth-work, and the result of my sounding the channels between Clarke's Island and the Beauharnois side.

It is but fair to observe, that the line on the north side, surveyed by myself without any assistant in eight or ten days, labours under great disadvantages as compared with the located line on the south side, which undoubtedly occupies the best ground, and on which many months have been spent with unlimited means. Great improvements may be made in the line on the north side, by the rigorous and systematic survey which precede a final location; hence some allowance should be made in comparing the best line on the south side with a line on the north, which can only be considered as a tolerably near approximation to the best line which that side affords.

To the Hon. R. W. Harwood, and  
John Simpson, Esq. M. P. P.

I have, &c.  
(signed) William R. Casey,  
Civil Engineer.

— No. 20. —

#### SECOND PART OF Mr. Casey's REPORT.

Gentlemen,

Coteau du Lac, 17 September 1842.

I now give you the detailed statements of the survey of the north side, with such calculations and information as, with similar data from the south side, will enable you to institute a fair comparison between the engineering merits of the rival lines.

The general result may be stated thus:—The entire length of the line, from M'Intyre's Bay, at the foot of Lake St. Francis, to the locks near the steam-boat landing, is  $14\frac{1}{2}$  miles, or about 15 miles if carried down to the St. Lawrence water. Of this distance,  $9\frac{1}{2}$  miles are artificial canal, and  $5\frac{1}{2}$  miles are in a ravine, which, with embankments at proper intervals, gives a large natural channel. The entire fall I make 82 feet 2 inches; but, as there was a very strong wind from the east, which must have raised the waters of the Ottawa at the Cascades when I took the last level, it will be proper to add two or three inches on that account, say 82 feet 5 inches, as given by Mr. Mills in 1833. The total quantity of excavation amounts to 1,840,000 cubic yards, for a canal nine feet deep, 75 feet wide at bottom, banks on both sides 12 feet high, 12 feet wide at top, and slopes both inside and outside, two horizontal to one vertical. Where the embankment exceeds the excavation, one-eighth is added, and the sum is put down as excavation. There are, therefore, 1,840,000 cubic yards to be handled to form the channel of the canal. The difference in cost of the two sides is said to be 100,000 *l.* nearly; and, as observed in the first part of this Paper, this difference must be sought for in the greater amount of excavation on the north side, the quality being the same. Rock will be encountered only at the upper end of the canal on the north side; and the estimate of loose and fast rock on this section by Mr. Mills, amounts to only 8,200 *l.* for his enormous canal. The present line will run a less distance through rock, and the dimensions are very little more than two-thirds of the other. Deducting, however, 10,000 *l.* for 40,000 cubic yards rock, and we have 95,000 *l.* equal to 1*s.* 0  $\frac{1}{2}$  *d.* per cubic yard, on the entire excavation of the north side, a price at which it would, I think, be readily taken by responsible contractors. To carry out the calculations of the Board of Works, there must be no excavation whatever on the south side, but a natural canal, requiring nothing more than the locks. But not only is there some cutting on the south side, but there is reason to believe that a much greater quantity of rock will be encountered on that side. Suppose the most favourable case, and one not at all likely to occur in practice, that is, a uniform depth of cutting of five feet, which is just sufficient to form the embankments, and the quantity to be excavated will be, for 12 miles, one million of yards, worth about 50,000 *l.*; so that there can be little risk in assuming that the saving in the earth-work must fall short of 40,000 *l.*, omitting all consideration of the rock on the south side, as well as of the very material saving which a complete survey must effect on the north side. An appeal will perhaps be made to River de Lisle, and the so-called "Rivers" Rouge and La Graise. These, as well as other minor considerations for and against the north side, will be given afterwards.

The length of the line on the south side has been hitherto taken at 12 miles, terminating near M'Pherson's Point. Between the mouth of the canal and the broad lake is a very strong current, against which a tug-boat could only draw a fraction of the load she would take with ease through the lake, whilst on the north side a steam-tug may start from the present wharfs with her full complement of barges, or the latter, if without steamers, may sail with the lightest fair wind up the lake. It will require a stiff breeze to enable a barge to reach the lake from M'Pherson's Point. To make an equally efficient canal, it must be carried up several miles higher, when, with an extensive breakwater to resist the "north-westers," it would, at best, be equal to the line on the north side. This opinion is directly at variance with that of the Board Works, "that no line on the north side can be found to equal in economy, in facility of navigation, or in freedom from the disturbing causes of flood and ice, the route intended to be pursued on the south side." If disposed to speak ironically of the western terminus on the south side, it would be in vain to search for more appropriate and cutting expressions than superior "economy," or "facility of navigation." To suppose that a barge can be taken even as easily from any point in Lake St. Francis (equi-distant from the proposed western termini of the two canals) to M'Pherson's Point and back,

as

as to M'Intyre's Bay and back, is to assume a position against the evidence of one's senses. Indeed, this, and the "three entrances of from 600 to 1,200 feet in width each, and with a depth of water averaging from 12 feet to 20 feet," are to me enveloped in mystery. A proper survey, to enable an engineer to state fully the capabilities of the entrance, would occupy several weeks, as the extent of water is very great, the shoals numerous, the channels very intricate, and the current very rapid. This was, of course, entirely out of my power; but, after sounding wherever there appeared anything like an entrance, I have not succeeded in finding more than eight or nine feet in depth, and a width of channel about one-third of that of one of the entrances of the Board of Works. Many persons, some Members of Parliament included, have of late examined this "unexceptionable entrance," and have, as far as I have heard, been no more fortunate than myself. To admit that the buoys now there designate the best entrance, is virtually to admit that, up to the 1st of August last, the Board were profoundly ignorant of the most important element; indeed the element which may be said to have decided the question in favour of the south; for, by assuming superior facilities of navigation, the line was reduced to 12 miles in length, with a corresponding diminution in cost. A copy of Mr. Thompson's chart, which "fully sustains the description" of the Board of Works, would, by pointing out the three entrances, put this question at rest.

The capabilities of the entrance must necessarily have come under the observation of Mr. Killaly two years since, when stating to Lord Sydenham his preference of the south side; of Mr. Keefer, when estimating the cost of the canal from Mr. Killaly's memorandum, dated 12th August 1841; of Mr. Keefer, again, in March last; of Mr. Tate, in April; of Mr. Keefer, when reporting the superior "facility of navigation" of the line on the south side over any line on the north, after examining "Mr. Harwood's line;" lastly, of Mr. Killaly himself, when writing his letter of the 1st August to Mr. Murdoch.

When comparing the lengths of the rival lines, the depth of practicable channel, the strength of current, and the general facilities of navigation should be taken into account; for these circumstances, if materially different on the two sides, might not only warrant, but even render expedient and proper, a considerably larger disbursement on the side offering the greater advantages to the trade. The Board of Works give the preference to M'Pherson's Point on the south, over M'Intyre's Bay on the north side, whilst I consider it not only inferior to the latter, but positively objectionable. It is obvious that persons engaged in the navigation of the river are the proper authorities to refer to, where there can be any room for doubt. It will be remembered that the objections are limited to the western entrance, the excellence of Couvillon's Bay being generally admitted, so that I have not examined it.

The following is a brief description of the route: The sketch given on the map gives a correct idea of the line as far as the ravine; thence to the Ottawa the route will be winding, but without any objectionable curves.

The line given on the profile commences at M'Intyre's Bay, crosses the point below, passing between Mr. Simpson's house and the road to the river, a distance of three-fourths of a mile; thence three-fourths of a mile on the banks of the St. Lawrence to near M'Bean's mill, where the line turns to the north and crosses the River de Lisle, about 800 feet above the bridge; thence to the River Rouge, near the highway, which it keeps near till past Mrs. Taylor's, where it strikes across to rather low ground, at the St. Emanuel road, a distance of four miles and a half nearly from the lake. From this point the line is very nearly straight for a distance of four miles and a half to the ravine, which it follows to the Ottawa. The head of the ravine is nearly a mile and a half from the river at the Cedars. With the exception of the point at the lake, the greatest height above the level of the lake is 5 feet 10 inches, for a few hundred feet behind Mrs. Taylor's. At the former place, the land, for 600 feet, is about eight feet above the lake, though this may be avoided by keeping on the bank of the river.

The only structures on this line from which that on the south can be free, are the dam across River de Lisle, the aqueduct or embankment across the Rouge, and the aqueduct over the La Grasse. A dam 350 feet in length over the first is estimated by Mr. Mills at 1,000*l.*, but I will put it down at 2,500*l.*, with a slide for logs; the aqueducts, 240 feet long each, are estimated by Mr. Mills at 8,000*l.*; I will, however, allow 10,000*l.* for two aqueducts 40 feet long each, in all 12,500*l.* But by placing an embankment of earth from the neighbouring cut, across the valley of the Rouge, with a sluice-way for the water in spring, at a cost of 500*l.*, the aqueduct would be saved, and a distance of 2,000 feet of large ravine would become available for navigation. Here would be a saving of 4,500*l.* on the aqueduct, as well as the excavation of 100,000 cubic yards of earth, worth at 1*s.* per yard, 5,000*l.*; in all 9,500*l.* leaving only 3,000*l.* against the north side. It is, however, immaterial which we take, as the advantages of the ravine cannot well be estimated at less than 20,000*l.*; for with the exception of about a mile, the width is such as to render unnecessary the constant annual repairs required on the banks of artificial canals, or the protection wall which will, in my opinion, be indispensable throughout these immense canals. It is even found necessary in the enlarged Erie Canal, which is less than one-half the size of this. The cost will not be less than 5,000*l.* per mile of canal, and at least four miles of the ravine will not require any. As this is a "steam-boat canal," the advantages of a channel varying from twice to five times the width of the artificial canal, will be apparent to all who duly appreciate the new mode of transportation to be introduced by these great works. As far, therefore as these secondary considerations go, the north has nothing to fear from an examination.

There remain, then, only the land, and the road, and farm crossings. If the line on the south side be only 12 miles long, there will be a saving of several hundred pounds; the farm bridges should be bought off on both sides, and the cost of the road bridges will, I believe, be twice as great as on the south side. On all these, the difference may be 5,000*l.* or 6,000*l.* against the north. A mile and a half of slope wall will be required on the north side against ——— on the south side. Only four or five culverts will be required.

An examination into these details merely confirms what is obvious to any eye at all accustomed to judge of ground; that the only substantial difference must be sought for in the excavation, which, again, depends on the length of the line and the depth of cutting, or, what is more important, the height of embankment. Thus the cost, with cuttings of seven and three feet, are about equal (five being the minimum), but the filtration and chances of failure are vastly greater in the latter

latter than the former case; the two profiles should therefore be compared with this object in view, as a break in this canal will make an impression not easily effaced.

If, therefore, you are enabled to procure the "definite and tangible" information alluded to in the first part of this Report, it will be very easy to see where the difference of cost is, what it is, and whether it is sufficient, supposing it to be in favour of the south side, to more than counter-balance the national advantages which, with a single exception, all unite in according to the north side. As to the precise amount, opinions will differ, some going as high as 100,000*l.* others as low as 10,000*l.*; but the generality will, perhaps, be between 10 and 15 per cent. on the probable cost, carefully determined from experience in Canada, where alone works of this magnitude are undertaken.

The calculations are based on the line down the ravine, but an excellent line may also be had on the table-land as far as the Cascades, with some peculiar advantages previously alluded to, and it is not impossible that this latter line might be entitled to the preference; but as the object of this paper is to give a general idea of the advantages and disadvantages of the north side, and not to compare rival lines on that side, the subject cannot be discussed here. These calculations show it to be scarcely possible that the difference in cost should be 50,000*l.*, even with a canal 12 miles long, and if carried up, as it in my opinion eventually will be, the cost will be equal to or above that on the north side; still the location will have been secured. As regards the other point, facilities of navigation, depth of water, &c., the Board will scarcely insist on the accuracy of Mr. Killaly's statements of 1st August last, as too many persons have, since that time, examined it themselves, with the result already given; if otherwise, however, it will be necessary to procure a chart of the three entrances with from 12 to 20 feet water.

I conclude with the remark, more than once made in this Report, that I believe the quantity of excavation may be considerably reduced by placing the line on the best ground, which, again, can only be done by full and systematic surveys.

All which is respectfully submitted,  
(signed) W. R. Casey,  
Civil Engineer.

To the Hon. R. W. Harwood, and  
John Simpson, Esq. M. P. P.

Engineer, Board of Works.

— No. 22. —

ESTIMATE of the Probable Cost of Constructing a Canal between *Lake St. Francis* and *Lake St. Louis*: Locks 200 × 45 × 9 feet; Canal 80 feet wide at bottom, 10 feet deep; banks, both sides, 14 feet high and 12 feet wide at top; slopes 2 to 1.

North side—Inland.

The line upon which the following estimate is made commences at M'Donald's Point, at the foot of Lake St. Francis, runs along the edge of the St. Lawrence to River à Delisle, which is crossed by a dam; crosses the River Rouge by a large culvert, near its mouth; crosses the River à la Graisse in the same manner, and strikes into the ravine, which debouches into the Ottawa, above the Cascades. The last lock is placed near the point of the Cascades, so as to carry the Canal to St. Lawrence water, in Lake St. Louis; and between the water lock and the mouth of the Quinz-chiens River a single bank is constructed on the river side, raising this reach six feet above the Ottawa, and thus obviating the difficulty of excavating under water.

 In this estimate there are 3,076,000 of exc'n.; 289,066 embank't.; and 56,340 solid rock.  
 In Mr. Mills' there are 2,788,913 of exc'n.; 310,139 embank't.; and 81,676 solid rock.  
 Mr. Casey has - - - 1,840,000 of exc'n.; none stated. none stated.

Office of the Board of Works, } Samuel Keefer,  
 Kingston, 1 October 1842. } Engineer Board Works.

— No. 23. —

Detailed ESTIMATE of the probable Cost of a Canal on the North Shore of the *St. Lawrence*,  
 by *W. R. Casey*, Civil Engineer.

Kingston, 3 Oct. 1842.

THE object of my examinations and report was not to furnish an estimate of the probable cost of a canal on the north side, but merely to show that the Hon. H. H. Killaly was wrong in leading the public to believe that a canal on the north side would cost 100,000*l.* more than on the south side; also, that he was in error in asserting the existence of three channels, with from 12 to 20 feet of water at the western terminus. As I understand it, the Board admit that no trace of a single such channel can be found, so that there remains only the comparative costs.

The great items are the lockage and earth work; the minor ones are the aqueducts, culverts, bridges, protection wall, and cost of land, including farm bridges. Now, as the lockage is the same, and as the total cost of the minor items on the north side is (exclusive of land) only about 30,000*l.*, the principal difference must be sought for in the excavation, the cost of which on the north side would little, if at all, exceed 120,000*l.* The quality of the earth being the same, the piers should be the same on both sides; and as they are rather high in the following estimate, they may require reduction in comparing them with the prices of the Board of Works.

ESTIMATE.					c. yds.	£.
Coteau du Lac to St. Emanuel Road, 4-4 miles	-	-	-	-	993,515	
St. Emanuel Road to ravine, 4-5 miles	-	-	-	-	639,015	
3,400 feet embankment to first lock	-	-	-	-	68,000	
Embankment in ravine	-	-	-	-	322,100	
Towpath in ditto	-	-	-	-	80,000	
Ravine to locks, 4,000 running feet	-	-	-	-	88,000	
Extra embankment at River à la Grasse	-	-	-	-	30,000	
					2,220,631	a' 1 s. 111,031
Seven road bridges, a' 1,500 l.	-	-	-	-	-	10,500
8,000 running feet protection wall, 12,000 cubic yards, a' 10 s.	-	-	-	-	-	6,000
Dam over River de Lisle	-	-	-	-	-	2,500
Aqueduct over Rouge, 2,222 c. yds. masonry, a' 1 l. 15 s.	-	-	-	-	£. 3,888	
60 lineal feet wooden trunk, a' 5 l.	-	-	-	-	300	
Horse-path, 60 feet, a' 2 l. 10 s.	-	-	-	-	150	
					-	4,338
Aqueduct over River River à la Grasse	-	-	-	-	-	4,338
Five culverts, 6 feet span, 1,750 cubic yards masonry, a' 1 l. 15 s.	-	-	-	-	-	3,062
50,000 cubic yards rock, at 5 s.	-	-	-	-	-	12,500
					£.	154,269
Total cost of earth work, rock, bridges, culverts, aqueducts, dam, and protection wall, of 14 <sup>4</sup> / <sub>5</sub> miles of canal, from locks at Cascades to M'Intyre's Bay at Lake St. Francis. The cost of land and farm bridges I do not know.						
Cost of earth work and rock, as above						£. 123,531
Mr. Mills' inland route						£. 133,716
Deduct <sup>1</sup> / <sub>5</sub> for difference in dimensions						22,286
						111,430
Exceeds Mr. Mills' estimate the sum of						£. 11,101

For a much more expensive route.

I mention this, not as doubting the accuracy of Mr. Mills' estimate, but merely to show that I have not attempted to make a low estimate of that portion of the work on the north side, on the value of which hangs the decision of the Committee, according to my view of the case.

Now as regards quantity, by Mr. Mills' estimate					c. yds.	3,250,728
As per my estimate					c. yds. 2,270,630	
Quantity saved by ravine, deducted from line above ravine					378,918	
					2,649,548	
Add <sup>1</sup> / <sub>5</sub> for difference in size					529,909	
					-	3,179,457
Difference					-	71,271

It is possible that the 310,139 cubic yards of embankment in Mr. Mills' estimate are included in the excavation. In that case my estimate would exceed his 238,868 cubic yards; otherwise, it would fall short of his estimate 71,271 cubic yards, or nearly 2 <sup>1</sup>/<sub>4</sub> per cent. Where the embankment exceeds the excavation, I have added <sup>1</sup>/<sub>5</sub>, and put the sum down as excavation, which consequently gives the total number of yards to be handled to form the canal. The dimensions are 80 feet bottom, 10 feet deep; banks, 12 feet at top, 14 feet high, and slopes 2 to 1.

The north side admits of three routes; that by the river, on the table land, and in the ravine. The last has been adopted in this estimate, but no opinion is given as to their relative merits.

Lastly, I feel very sure that considerable reductions can be made in the excavation, if as minutely surveyed as the line on the south side.

All which is respectfully submitted.

(signed) W. R. Casey, Civil Engineer.

LETTER from the Acting Clerk of the Executive Council, enclosing Copy of a Report of a Committee of the Council on the Necessity for an immediate Extension of the Public Works.

Sir, Executive Council Office, Kingston, 5 October 1842.

I HAVE to acknowledge the receipt of your note of this morning, and herewith transmit you a copy of an approved Report of a Committee of Council on the subject of the Beauharnois Canal, which is the only proceeding relative thereto on record in this office.

To G. Moffat, Esq. } I have, &c.  
Chairman Committee Beauharnois Canal. } (signed) Wm. H. Lee.

COPY of a REPORT of the Committee of the Executive Council, dated 13th June 1842, approved by his Excellency the Governor-general in Council the same day, on the Subject of the Necessity for an immediate Extension of the Public Works.

THE Committee of Council have, in pursuance of your Excellency's instructions, had under consideration the subject of the necessity for an immediate extension of the public works not yet authorized to be proceeded in, in order to meet the pressing emergency of providing for the great amount of immigration which appears to be coming into the province, as well from Great Britain as of British subjects from the neighbouring States.

The committee think it desirable, for the purpose of giving immediate employment to the immigrants, to proceed at once with the continuation of the great St. Lawrence navigation, by taking steps to commence the works necessary to connect the waters of Lake St. Francis and Lake St. Louis; and as the secretary of the province for Canada East has stated that the City Bank of Montreal are prepared at once to furnish the funds necessary to enable the government to commence these works, the committee are of opinion that it is advisable to proceed forthwith, and accordingly recommend that the Board of Works be instructed to take the necessary steps to commence the construction of these works, and that the receiver-general be instructed to close with the offer of the City Bank of Montreal for a loan of 20,000 *l.*, to enable the Board of Works to carry on the operations for the present season.

As the president of the Board of Works has stated his opinion, which has been recently confirmed by a minute survey, that a connecting line of water communication between the lakes referred to can be much more advantageously placed upon the south side of the St. Lawrence than on the north side, both as regards the permanency of the works and the cheapness of their construction, and efficiency when completed,

The committee are of opinion that the course of the canal should be on the south side of the river, and that the Board of Works be authorized to proceed accordingly.

(Certified.)

LETTER from Secretary of Board of Works, respecting the Detention of Witnesses for Cross-examination by the President of the Board.

Sir,

Board of Works, Kingston, 4 October 1842.

HAVING examined the evidence relating to the canal to connect Lake St. Francis with Lake St. Louis, handed me by Mr. Todd, clerk of the committee, I have the honour to inform you that I cannot see the least necessity for detaining the pilots or others, not scientific persons, for cross-examination by the president of the Board. As you requested, I have consulted with the Hon. Mr. Harrison, who fully concurs in the view I had taken.

The Hon. Geo. Moffatt,  
Chairman St. Lawrence Canal Committee.

I have, &c.  
(signed) *Thos. A. Begley,*  
Secretary.

— No. 26. —

EXTRACT from Proceedings of the Board of Works; 13th December 1839.

Ordinary Meeting.—Present. Messrs. McCord, chairman, de Bleury and Redpath.

THE Board examined the reports and plans of the different engineers who have been employed to examine and report upon the best means of constructing a canal to unite Lake St. Francis with Lake St. Louis; and the secretary is now instructed to draw up a report on the same, embodying the following heads:—To show the difference between the various reports already made; that they are partial; and that the Board will be unable to give an opinion of the best route to be adopted until they have sent an engineer, in whom they can place confidence, to examine the different lines.

(Certified a true copy.)

(28.)

REPORT of the Board of Works to His Excellency the Governor-general, relative to the *Beauharnois* Canal.

Sir,

Board of Works, Montreal, 14 December 1839.

IN reference to the communication of his Excellency the late Governor-general, dated 13th October last, requiring the opinion of this Board "whether, for the completion of the St. Lawrence Canal, it would be advisable to run it on the south or north side of the river," the Board beg leave respectfully to report:—

595.

That

That having carefully examined the reports, plans, and estimates of Messrs. Baird and Stevenson, on the practicability of constructing the said canal through the seignory of Beauharnois, and those of Mr. J. B. Mills, for the same, through the seignories of Loulanges and Vaudreuil, they find themselves unable to arrive at any conclusive opinion on this subject, for the want of more information.

The Board find that the engineers who have been employed to report on these routes have confined themselves in their examinations each to his own side of the river, and consequently that no investigation by a professional person has yet been made as to their comparative merits. The Board are further of opinion, that a route may be found for this canal possessing many decided advantages over any that has yet been proposed; and in order to enable them to report satisfactorily on the reference now before them, they are desirous of engaging a skilful and competent engineer to make such examinations as they shall direct.

The Board therefore respectfully request that his Excellency will be pleased to authorize the employment of an engineer to make, under instructions that he shall receive from this Board, such examinations as will enable them with confidence to report to his Excellency on the proper route to be adopted for this highly important improvement.

The Assistant Civil Secretary,  
&c. &c. &c.

I have, &c.  
(signed) *J. S. McCord*,  
Chairman Board of Works.

— No. 28. —

EXTRACT from a Report made by the Board of Works, dated 20th February 1840, to His Excellency the Governor-general.

“THE Board are at present unprepared to decide the preliminary question submitted, namely, on which side the St. Lawrence, between the Lakes St. Francis and St. Louis, the canal should be located, for the reasons set forth in their Report, No. 28; but should it please your Excellency to grant the prayer thereof, the Board are of opinion that they will be enabled to submit to your Excellency's consideration a more advantageous and less expensive line than any yet proposed for that object.”

— No. 29. —

EXTRACT from that part of the Report of the President of the Board of Works to the Governor and Council, dated 12th May 1842, relating to the Canal from the Coteau to the Cascades.

“£. 500. This sum is to cover cost of surveys, estimates, &c. The Board would strongly recommend that some progress with the works of this section should be authorized this year, so that it may be completed in 1844, no work having been yet commenced on it. Several lines have been explored for its route, chiefly on the north side of the river, to which the Board of Works, conceiving there was much objection, as to difficulty of construction and expense, have had the line formerly selected by Mr. Stevenson, on the south side of the river, carefully re-surveyed by a competent engineer. The result of the survey fully confirms the view the Board had taken of it, the line being in every respect preferable to that on the north side, and the work can be executed at a very reduced cost.

“An objection has been made by some, in a military view, to having it on the south side, to which the Board of Works do not attribute any weight, more especially as the Cornwall portion of the navigation (nearly completed) is within musket-shot of the American territory, as will necessarily be other portions of the general line also; whereas this portion, as proposed, is about 20 miles from the frontier.

(Certified a true copy.)

(signed) *Thomas A. Begley*,  
Secretary Board of Works.

— No. 30. —

EXTRACT from Colonel *Phillpott's* Report, dated 24th of October 1838.

AFTER Colonel Phillpotts states his objections to the south side, in a military point of view, he continues—

“To this it may be answered, that the communication now under consideration is chiefly, if not altogether, intended for commercial purposes, and that the whole line of the St. Lawrence would be so much exposed, in the event of a war, as to preclude its use to any great extent. This important question, however, requires full consideration, and it will of course be decided by higher authority than the report of any individual. I have here provided for placing the canal on the north side of the St. Lawrence, according to Mr. Mills' plan; and if Mr. Baird and Mr. Stevenson are correct, the sum I have mentioned will be more than sufficient for placing it on the south side, if that route shall be finally determined on.

“I think it probable that, by putting one or two dams across from the south shore to Grand Isle, the river itself may be made navigable nearly all the way to St. Timothy; but I have not yet had an opportunity of examining the ground sufficiently to enable me to speak positively on the subject; I am, however, induced to believe that in any case it may be found possible to construct a canal on the south shore cheaper than on the north.”

— No. 31. —

REPORT on a SURVEY of the River *St. Lawrence*, between Cote à Colonge and Coteau du Lac, by *Henry G. Thompson*, Surveyor and Civil Engineer.

To *John Jones*, Esq. Chairman, &c.

Sir,

I HAVE the honour to submit the following report of the survey executed by me, in compliance with the instructions communicated in your letter of the 12th August; the words of which are here set down, viz.:—

The commissioners appointed to survey Lake St. Louis and other places, under the Act 6 Will. 4, c. 23, having engaged your services for a portion of the survey and planning of the River St. Lawrence, from Cote à Colonge to the mill at the Cedars, and from the village of the Cedars to Coteau du Lac,

“The object of the survey, you will find by the Act, a copy of which is now handed you, is ‘to obtain such information as may serve to guide the Legislature with regard to the work which it is proper to undertake, for establishing within the limits of Lower Canada a water communication, corresponding, if possible, with that which the Legislature of Upper Canada has undertaken to establish on the River St. Lawrence, near Cornwall, in the said province of Upper Canada.’

“As the waters of the St. Lawrence are liable to vary in depth at different times, it will be expedient that you ascertain, from persons living on its shores, the lowest level of the water at any past time, upon which to reduce all your soundings as the true depth of the water. It will also be necessary that you set up some permanent mark, graduated in feet and inches, in order to rectify your soundings to the same level during the progress of your work. In order that the commissioners be informed of the progress of your survey, you are desired to make weekly reports in abstract of your work, by letter addressed to the chairman of the commission, at Quebec.”

At a meeting, held in Montreal, of the commissioners, on the 12th August, I was further instructed to use as my guide in the proposed survey the map of that part of the River St. Lawrence which lies between the Coteau du Lac and the Cascades, executed by Alexander Stevenson, Esq., and also to limit my survey to the taking of soundings, and the ascertaining of the velocity of the current at different points.

The details of the survey with which I was thus entrusted are laid down in the plan hereunto annexed, and to which I beg leave to refer you. On the 15th August, my operations were commenced at Pointe au Moulin, and continued thence in the first instance to Pointe au Chenette. The soundings laid down on the plan show great irregularity in the depth of the water of the bay extending between the two points. On the plan are laid down six lines of soundings, taken in the bay; the first at 20 yards from the shore, the second at 40 yards, the third at 100 yards, the fourth at 180 yards, the fifth at 280 yards, and the sixth at 400 yards; the average interval between the soundings on each line is about 60 yards. I ascertained, from persons living on the shore, that the water was generally a foot and a half lower than at the time of my survey. I erected a graduated water-mark, but derived no assistance from it, as the waters neither increased nor abated during my stay. The soundings are reduced one foot and a half, agreeably to the information I received. At Pointe au Moulin I ascertained, by one experiment, the velocity of the current to be seven knots an hour: an accident which occurred to the log-line prevented me from repeating the experiment, but I have reason to believe that the result which I have marked is correct, within a few yards. From Pointe au Moulin the current diminishes gradually; and at Pointe au Chenette, I ascertained its velocity to be  $3\frac{1}{2}$  knots an hour, being the mean of seven experiments. There are a number of shoals of stone running out from the shore, from 80 to 90 yards; they will be found on the plan, indicated by dots. For three-fourths of the distance, from the extremity of the canal to the west of Pointe au Moulin, there is a continuous channel of five feet reduced in depth; and for the remaining fourth, I found a channel of 15 feet. From Pointe au Chenette to Pointe au Coulonge, are laid down on the plan three lines of soundings, at the distances from the shore, and with the average interval above mentioned. I found that the current continued to increase gradually, and that at Pointe Coulonge its velocity was  $4\frac{1}{2}$  knots an hour, being the mean of seven experiments. At the distance of 100 yards from the shore, and between the two points, as by the plan, there is a continuous channel of at least 16 feet in depth. Between Points au Moulin and au Chenette the current is strong, and may be pronounced unnavigable by ordinary craft beyond the lines of soundings.

From the steam-boat wharf to Pointe Boudette, the lines of soundings laid down on the plan are irregular in number; those along the shore are generally at the respective distances above mentioned. As in the previous survey, I erected a graduated water-mark, but again found no variation: the information regarding the general depth of the water corresponded with what I had previously received. At McDonald's Point I found the velocity of the current to be  $2\frac{1}{2}$  knots an hour, lower down,  $2\frac{1}{4}$ ,  $2\frac{1}{2}$ , and  $1\frac{3}{4}$  knots, being in each case the mean of four experiments. At French's Reef, I found it to be  $4\frac{1}{2}$  knots an hour, and at Evat's Point  $3\frac{1}{2}$  knots, being in each case the mean of four experiments. The current at Pointe Boudette is weak, and easily surmounted; the water in the small bays between the steam-boat wharf and the latter affords a channel, which varies from three to four feet in depth, and is generally rapid.

Between Pointe Boudette and Point au Diable I made several lines of soundings, which will be found exhibited on the plan; there is an excellent channel running close to the shore over clay bottom, with a gentle current; at Point au Diable the current is found to increase to  $5\frac{1}{2}$  knots.

Between Point au Diable and Point Biron I found abundance of water, and a gentle current; at the latter point its velocity reaches 5 knots an hour. The plan exhibits all the varieties of the current, and of its depth.

From Pointe Biron the velocity of the current diminishes, and in approaching the Cedars it becomes very gentle. Between Pointe Marcoux and King's Wharf, and at a distance of 80 yards from the shore, I found from 12 to 24 feet of water. The cross soundings show the depth of water between opposite points.

The above survey was concluded on the 8th of September.

I have, &c.

Montreal, 22 September 1842.

(signed) *Henry G. Thompson.*

— No. 35. —

REPORT on a SURVEY of that portion of the *St. Lawrence* between Lakes *St. Louis* and *St. Francis*, by *Henry G. Thompson*, Surveyor and Civil Engineer.

Sir,

Montreal, 31 December 1836.

I HAVE the honour to report to you that, on the 24th September 1836, I received instructions to proceed to make a survey, take soundings, &c. of that portion of the River *St. Lawrence* which is comprised between Lakes *St. Louis* and *St. Francis*.

Agreeably to those instructions, I engaged men, laid in provisions, &c., and on the 1st October arrived at the foot of Lake *St. Francis*, on the south shore of which I commenced my operations.

I may here remark, that throughout the survey the weather was exceedingly unfavourable, and frequently days elapsed during which I could not employ the men on the service.

The plan which accompanies this Report exhibits in detail the work performed. You will perceive, Sir, that the survey was commenced at the lower extremity of Lake *St. Francis*, and continued thence (downwards) to Lake *St. Louis*, between Station Z. and 87; the survey was trigonometrically executed; and, from the latter, scaled.

Between Cat Island and the south shore lies a shoal, as indicated on the plan; the river affords a good channel, on either side of the shoal, of 16 feet. Below the surface of the shoal I found a gravel composition.

From station 4 to station 8, the current was ascertained to be gentle; from station 8 to station 12, the rapidity of the current increases; and at M'Pherson's Point it obtains  $2\frac{1}{2}$  knots per hour, as indicated on the plan. From station 12 to station 24 exists a series of strong rapids. In the Bay, between station 24 and station 30, I found from 10 to 30 feet of water, and a gentle current. In front of station 31, a shoal exists, with from one to two feet of water; below the surface of this shoal, I found, as in the preceding one, a gravel composition. From station 30 to station 34, the current is gentle; the water varies in depth from seven to 24 feet. From station 34 to 40 the current is smooth and very strong, as indicated on the plan. Between station 40 and station 46, exist the crooked rapids; in the rapids, and above them, I attempted to take soundings, but could not succeed with such accuracy as might be indicated on my plan; I, however, took a few soundings in running down. From station 46 to 56 exists a very strong current, which it was impossible for me to sound. From station 56 to station 90, exists the Cedar rapids; and from station 90 to station 99, I found a very smooth and rapid current. Between stations 99 and 110 I was able to take a few soundings, as indicated on the plan. From station 110 to 128 exist that series of unnavigable waters known as the Cascade rapids. Station 131 is at the head of Lake *St. Louis*, where I found a good harbour, and abundant water.

The waters on the south shore of the River *St. Lawrence*, between the two lakes, are extremely unequal, and in my humble opinion, unnavigable. There are only two bodies of water between the extreme points of the survey, that could be used for the purposes of navigation. They will be found indicated on the plan.

By my instructions I was directed to take levels between portions of navigable waters, and had it been in my power I should have done so; but in consequence of the advanced season, and the absolute refusal of my men to continue their engagements, I was compelled to limit myself to the single level indicated on the plan; it will be found laid down in feet. From station 30 to station 131, it will be necessary to take the levels by land, as the waters between those points are unnavigable.

I beg leave to say, that the survey was executed with great care, and that in point of accuracy the plan may be depended on.

John Jones, Esq.  
Chairman, &c.

I have, &c.

LETTER from the Receiver-General to the Cashier of the City Bank of *Montreal*, respecting a Loan of 20,000 *l.* for Public Improvements on the River *St. Lawrence*.

Sir,

Montreal, 14 June 1842.

It having been communicated to the Government that your bank would be disposed to afford accommodation, by way of loan, to carry on the public works in the province, until arrangements are completed in England to realise the money granted by the Legislature at its last session, to the extent of 20,000 *l.*, I am desired and authorised to inform you, that your assistance will be cheerfully accepted. This loan is required exclusively for public improvements, and will be expended on the same, under the Board of Works; and as the Board will draw on me by warrant, I will give cheques to the respective parties on your bank; consequently, such monies as I may pass my promissory note, at three months after date, will be placed to my credit.

The promissory notes will be redeemed by either drafts on England, or by payment in Montreal.

I have, &c.  
(signed) *John H. Dunn*,  
Receiver-General.

*P. S.*—Drafts drawn on you on my account, signed by Bernard Turquand, and countersigned by Thomas Cary, my clerks, will be as though signed by myself.

To C. H. Castle, Esq.  
Cashier of the City Bank, Montreal.

— No. 35. —

COPY of the Fourth Report of the Standing Committee of the House of Assembly of *Lower Canada*, on Roads and Public Improvements.

THE Standing Committee of your Honourable House, on roads and public improvements, pursuant to their order of reference, proceeded to the examination of the Report of the commissioners named under, and in virtue of an Act passed during the last session of the provincial Parliament, intituled, "An Act for Improving the Internal Navigation of this Province," to cause plans to be made, and levels to be taken, for the purpose of ascertaining whether it is practicable to improve the navigation of the River St. Lawrence, for steam-boats or other vessels, between Lachine and the line which separates this province from the province of Upper Canada, with the accompanying plans, estimates, and documents, and have the honour to report as follows:—

The general advantages to arise from the improvement of the navigation of the St. Lawrence, between the Cascades and Lake St. Francis, were fully understood by the house when they passed the aforesaid Act, under the authority whereof the above-mentioned commissioners were named, and have acted.

The objects of that Act have, in the opinion of your committee, been fully accomplished by the enlightened zeal of the commissioners; and your committee cannot, in justice, withhold the expression of their unqualified approbation of the able and judicious proceedings and recommendations of Mr. Mills, the civil engineer, selected by the commissioners to examine the site of the proposed improvements, and to make the requisite estimates.

It appears, however, not to have been in their power to ascertain what would be the probable amount of the indemnity to become due to the individuals through whose lands portions of the canal might be cut. From information taken before your committee, and hereunto subjoined, the probable amount of such indemnity will not exceed from 400£. to 500£.

By the report of Mr. Mills, three different routes are traced and estimated for carrying into effect the improvement of the navigation of the St. Lawrence, between Lachine and the line separating this province from Upper Canada.

That which Mr. Mills recommends, your committee concurs with him, and with the commissioners, in also recommending. This route follows the River St. Lawrence itself, and connects the line of channel, by intermediate canals, at the impracticable points. According to this plan, the whole length of improvement, as stated, would comprehend a distance of 14 miles and 54 chains, of which 7 miles and 64 chains by the river, and six miles and seven-eighths by canal. This distance bears a descent of 82, 43-100 feet, of which 9, 47-100 feet are overcome in the river, and 72, 96-100 feet are distributed between new locks of various lifts. The whole is estimated at the cost of 235,782£. 3s. 2½d. currency, exclusive of the sums to be paid for indemnifying proprietors of lands through whose lands the canal would pass, and which, as above-mentioned, may be estimated at the additional sum of from 400£. to 500£.

Your committee recommend that this sum, amounting together to about 240,000£., should be raised by loan, upon the public credit of the province, at so low a rate of interest as the same can be obtained.

The present productive value of the existing canal stock belonging to the province, in the Lachine Canal, as well as the ratio of its past increase, will be seen by the following table—See Table (A.)

The province is in like manner possessed of other canal stock in the Chambly Canal, now in progress, and nearly completed. The cost of this last canal may be estimated at above 50,000£. currency, and neither the one nor the other stock is charged with any debt.

Besides these funds, there can be little doubt that the now proposed canal will, even in the first year of its going into operation, pay the full amount of the interest of the sum which it will cost, without imposing any tolls burthensome upon the trade and navigation of the river.

Insufficient as re the present locks at the Coteau du Lac and at the Cascades, the revenue derived from them is by no means inconsiderable, and is annually increasing, as will appear from the following

182

PAPERS RELATING TO

following Table, made up from Returns transmitted to the house by his Excellency the Governor-in-chief.—See Table (B.)

	£.	s.	d.
To this charge in the last season of - - - - -	3,093	15	6
Are to be added the cartage by land amounting to above -	5,400	-	-
Towage of Durham boats and batiaux boats, by horses -	3,510	-	-
Towage by steam-boats from Lachine to Cascades -	1,700	-	-
Making a Total of - - - £.	13,073	15	6

It may be proper to add, that the proposed improvements will not in their progress interfere with the line of water communication as now used.  
All which is nevertheless humbly submitted.

MINUTES OF EVIDENCE.

Monday, 10th February 1834.

ANDREW STUART, Esquire, in the Chair.

READ the order of reference, relating to the message of his Excellency the Governor-in-chief, received on Saturday last, and the Report of the commissioners appointed under the Act for the Internal Improvement of the Navigation of this Province, with the accompanying documents and plans.

Charles Archambeault, Esquire, Member of the Committee, was Examined as follows:—

Have you any and what means of becoming acquainted with the route of canal recommended by the commissioners named under the Act 3 Will. 4, c. 9, in their Report laid before the Assembly in the present session, and referred to this committee?—I have been long acquainted with the locality along the Cedars, from Lake St. Louis to Lake St. Francis. I have frequently descended the rapids in that part of the province. It is the route by which is brought down nearly all the produce of those parts of Upper Canada and the United States bordering on the different lakes. They descend those rapids in Durham boats, drawing about three feet and a half of water, conducted by experienced pilots. It is also by this route that nearly all the merchandise that is sent up to the places last above mentioned is conveyed. The merchants suffer great difficulties, losses, and delays in these rapids, because they are under the necessity of unloading (except at the military canals) a great part of their cargoes, and have it conveyed by land, at a great expense. They are, moreover, obliged at different places to cause the batteaux so unloaded to be towed up by from eight to ten horses; and it happens frequently that both the batteaux and the cargo are lost in those rapids.

What is the present amount of the transport between Lachine and the province line, on the route as now used, and what may be the expense of such transport?—I cannot exactly state the number of tons of different effects imported and exported by that route; but I can certify that it is the only route made use of at present for the trade of Upper Canada and the United States bordering on the lakes.

What, in your opinion, would be the effect of opening the projected line of canal?—The canals recommended by the commissioners would be of the utmost advantage for both provinces, and for our neighbours that have settled along the lakes, and a great source of economy for all.

What might be the probable cost of indemnifying individuals through whose lands it would pass?—The route of the canal recommended by the commissioners will generally pass through those parts already purchased, and paid for by the commissioners appointed under the Act 1 Will. 4, c. 21, and what will have to be purchased cannot cost more than about 400*l.* or 500*l.*

Do you see any and what obstacles to the route recommended by the aforesaid commissioners?—Being well acquainted with the locality, and having paid great attention to the line drawn on the plan, and by which the canals must pass, I see no obstacle; on the contrary, I sincerely believe that it is the most convenient, the cheapest, and most expeditious route that can be chosen for conveying any kind of effects or merchandise.

Paul Timothe Masson, Esq., a Member of the House, appeared before the Committee, and the Evidence of Charles Archambeault, Esq., having been read to him, he approved the same in all its contents, and added the following to the answer to the second question:—

To the best of my knowledge, the quantity of tons that are conveyed up to those parts was, in 1833, 20,000, and 60,000 were taken down the same year. From the Cascades to the Coteau du Lac, or Lake St. Francis, the following sums were paid for conveyance, viz.:—

	£.	s.	d.
For land-carriage, about - - - - -	2,400	-	-
Towage of boats and batteaux by horses - - - - -	3,500	-	-
Tolls paid at the locks at the Cascades, &c. - - - - -	3,093	15	6
Towage from Lachine to the Cascades, by steam-boat, about -	1,700	-	-
Amount paid in 1833, from Lachine to Lake St. Francis - £.	10,693	15	6

— No. 30.—

(No. 29.)

COPY of a DESPATCH from the Right honourable Sir Charles Bagot, Bart., G.C.B., to Lord Stanley.

My Lord, Government House, Kingston, 23 February 1843.

I HAVE the honour to acknowledge the receipt of your Lordship's despatches, (Nos. 308 and 309, in duplicate), bearing date the 30th December 1842 and 3d January 1843, announcing the Queen's assent to the Act passed in last session by the

No. 30.  
Despatch from  
Sir C. Bagot to  
Lord Stanley,  
23 February 1843.  
Pages 102, 103.

the Canadian Legislature, for authorizing the raising of a loan of 1,500,000*l.* in England for the purpose of executing certain public works in the province, and stating the steps which Her Majesty's Government have taken thereupon to carry out the objects which I have had in view in the several communications that I have had with your Lordship upon this subject.

I feel much satisfaction, in which my Council participates, at the terms which have been obtained for the portion of this loan, which has already been offered to public competition, as they indicate very clearly the confidence which is felt in the British stock market with regard to the future progress of this province in prosperity and wealth, and cannot fail to have an important and immediate influence upon its financial credit.

No effort will be spared by this Government to maintain this position, and the recommendation of your Lordship with regard to the punctual payment of the interest will be strictly attended to. For this purpose I have to request that your Lordship will inform me to whom the interest is to be remitted, and the exact period at which it will become payable.

I fully appreciate the objection set forth in your Lordship's despatch (No. 308), to making the debentures redeemable at an earlier period than 20 years; but I considered it advisable to mention the suggestion, as the objection had not been found to prevail on former occasions, when smaller sums have been raised, under circumstances, it is true, less favourable to the credit of the province and to the chance of its being able to avail itself of the proposed power of redemption before the furthest period named in the debentures.

The rate of commission demanded by the Bank of England appears reasonable. It will be duly defrayed at the same periods as the interest, and all expenses attending the preparation of the bonds will be with propriety paid out of the proceeds of the loan, as suggested by your Lordship.

With regard to the amount of sinking fund to be set apart for the repayment of the loan, I have not been able to address your Lordship upon it as soon as I expected, in consequence of the necessity of awaiting the preparation of the accounts of revenue and expenditure for the past year, which might afford some evidence of the operation of the changes made in the Canadian customs duties in 1841, and of the probable surplus to be devoted to a sinking fund.

I am not yet able to supply this information, the accounts not having been closed, and the absence of the Inspector General, in attendance upon the Court of Appeals at Toronto, offers another difficulty at the present moment to my sending your Lordship a satisfactory memorandum upon the subject; but I have no hesitation in undertaking that a sum of at least five per cent. shall annually be set apart by the province for the joint purpose of paying the interest, and creating a sinking fund towards the redemption of this debt.

I have, &c.

(signed) *Charles Bagot.*

No. 31.  
Despatch from:  
Sir C. Bagot to  
Lord Stanley,  
24 February 1843.

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*, Bart., G. C. B.,  
to Lord *Stanley*.

My Lord,

Government House, Kingston,  
24 February 1843.

WITH the view of furnishing the Lords Commissioners of Her Majesty's Treasury with the earliest intimation of the amount which will be required during the present year for the prosecution of the public works to be provided for out of the proceeds of the Canadian Loan Act, I have the honour herewith to transmit a copy of a communication from the Receiver-General, accompanying an estimate prepared by the Board of Works, of the sum which will be required during each quarter of the year 1843.

The

The aggregate is large; but the reasons pointed out by the Chairman of the Board of Works, for using the utmost diligence in pushing forward the works at a season so favourable to their economical construction; and the consideration that the revenue to be derived by tolls on these works will, in some instances, commence only with their individual completion, and, in all, will be greatly augmented by the completion of the whole, will, I trust, be sufficient to justify the proposed expenditure, and to secure your Lordship's approbation of the activity intended to be exerted in this service during the present year.

I should add, upon this topic, that the saving upon the contracts made during 1843, in consequence of the circumstances pointed out by Mr. Killaly, will far exceed any gain that is likely to arise in deferring the negotiation of this portion of the loan in England.

As it appears from the Receiver-general's letter, that a balance of 86,373*l.* 19*s.* 6*d.* remains undrawn out of the sum already raised, from which must be deducted the expenses attending the preparation of the bonds, there remains to be borrowed to meet the service of 1843, about 470,000 *l.*, which I request that your Lordship will move the Lords of the Treasury to raise, in such sums, and at such times, as may appear to their Lordships most advantageous to the province.

I have, &c.,

(signed) *Charles Bagot.*

Enclosure in No. 31.

Receiver-general's Office, Kingston,  
22 February 1843.

Sir,

I HAVE the honour to transmit to you, in order that you may lay the same before his Excellency the Governor-general, and for transmission to England for the guidance of the Right honourable the Lords Commissioners of Her Majesty's Treasury, a copy of a letter dated the 20th instant, together with the accompanying statement from the Chairman of the Board of Works, being an estimate of the sum of money which will be required to be provided during the year 1843. You will please to observe that the total amount of the estimate is 555,200*l.* There remains of the 300,000*l.* at present raised in England a balance undrawn for of 86,373*l.* 19*s.* 6*d.*, which deducted from the above sum, there will remain to be raised for the year 1843, 468,826*l.* 0*s.* 6*d.* To make an even sum, I should suggest that the amount to be at present raised be 470,000*l.*, should it be found that the state of the money market in England is advantageous for the sale of so large a sum at one time; and if not, the Right honourable the Lords of the Treasury will be able to form the best opinion on this point; but it must be understood that means must be provided to meet the engagements entered into by the Board of Works with the contractors agreeable to the estimate. I need not state to you the embarrassments that would occur to this Government if any difficulty or delay should take place in meeting the demands of the Board of Works.

Encl. in No. 31.

R. W. Rawson, Esq.,  
&c. &c. &c.

I have, &c.  
(signed) *J. W. Dunn, R. G.*

Sir,

Board of Works, Kingston, 20 February 1843.

IN obedience to the Order in Council, I have the honour herewith to submit for your guidance as close an approximating estimate as is possible of the sum which will be required this year to meet the payments on the various works now in progress, under the Appropriation Act of last year.

The execution of the works being carried on entirely by contract, the rate of expenditure of course in some measure rests with the contractors; but as the season is particularly favourable for the extensive procurement and delivery of materials, and from the present rate of wages and uncommonly low prices of provisions, it is so much the interest of the contractors and the public that the utmost energy should be exerted in driving on the works. I have little doubt of the full sum which I have named being required to meet the demands.

I have, &c.

(signed) *Hamilton H. Killaly,*  
Chairman Board of Works.

(True copy.)

*John W. Dunn, R. G.*

(No. 34.)  
EXTRACT of a DESPATCH from the Right honourable Sir Charles Bagot, Bart., G.C.B., to Lord Stanley, dated Government House, Kingston, 24 February 1843.

I AM gratified by learning from your Lordship's despatch of the 14th January, No. 312, that the progress which was made in the public works during the past year, and the selection of the works for immediate commencement, as reported in my despatch of the 11th December, No. 244, have given satisfaction to your Lordship.

I have now the honour to enclose a statement of the works for which appropriations were made under the Act directing the application of the recent loan of 1,500,000*l.*, to which is appended in each case a brief notice of the progress which has been made in each work, and of the date at which it may be expected that most of them will be completed.

Enclosure

## PUBLIC WORKS (CANADA).

187

## Enclosure in No. 32.

STATEMENT of the PUBLIC WORKS at present in progress under the direction of the Board of Works, and by authority of the Appropriation Act, 4 & 5 Vict. c. 28. Encl. in No. 32.

St. Lawrence Canal.	Cornwall - - -	Opened to the trade in December last.
	Prescott - - -	Advertisements for materials ready.
	Beauharnois - -	Considerable progress made in the procuration of materials, and about four miles of canal excavated; the entire will be opened for navigation next season.
	Lachine - - -	Widening and enlargement thereof now being proceeded with.
St. Ann's - - -	- - -	Will be ready for the trade on the opening of the navigation.
Welland - - -	- - -	The works of enlargement, and re-construction of the locks rapidly advancing.
Burlington Bay - - -	- - -	The old work put in such a state of repair as to stand until the new work will be ready; the railway for the delivery of the material is nearly completed.
Lake St. Peter - - -	- - -	The several dredge and steam-vessels and scow-tenders ready for work on the opening of the season.
Rondeau Harbour - - -	- - -	Materials advertised for, and the work will be completed in 1844.
Port Stanley - - -	- - -	Considerable progress made in the work, which will be completed in 1843.
„ Catfish - - -	- - -	Materials advertised for, and the work will be completed in 1844.
„ Burwell - - -	- - -	Materials advertised for, and the work will be completed in 1844.
„ Dover - - -	- - -	Materials advertised for, and the work will be completed in 1843.
„ Windsor - - -	- - -	Contracts made, and materials being delivered, the work will be completed in 1844.
„ Cobourg - - -	- - -	Contracts made, and materials being delivered, the work will be completed in 1843.
Light-houses - - -	- - -	Floating light for Long-point built, and the fixed Light-house for the same is in course of construction. Gull Island and Presqu'île Light-houses repaired, and ten new lights below Montreal erected.
Newcastle District Improvements	- - -	Progressing rapidly, and will be completed in 1844.
River Richelieu - - -	- - -	The Chambly Canal being now finished, the works at St. Ours on the Richelieu will be commenced forthwith.
River Ottawa - - -	- - -	The contracts for the bridges made, and the work progressing, the other improvements will be commenced as soon as the season will permit.
London, Chatham and Amherst-burg Roads - - -	- - -	The work is in progress, and will be completed in 1844.
London and Sarnia - - Roads	- - - ditto - - -	ditto - - - 1843.
London and Brantford - „	- - - ditto - - -	ditto - - - 1844.
London and Stanley - „	- - - ditto - - -	ditto - - - 1844.
Cascades - - -	- - - ditto - - -	ditto - - - 1844.
Main Northern - - -	- - -	Not yet commenced, but the advertisements have issued for the contracts.
Gosford - - -	- - -	Will be completed this season.
Bay of Chaleurs - - -	- - -	ditto.
Hamilton and Dover - „	- - -	Will be completed in 1844.
Bridges between Montreal and Quebec - - -	- - -	Materials delivered, and the works will be completed next season.

*General Observations.*—The entire of the foregoing works are carried on by contract, and from the present low rates paid for provisions, &c., the several contracts have been taken on terms very advantageous to the public, and there is no doubt of the estimates being sufficient to cover the cost of the respective works. It is highly desirable, in the opinion of the Board, that the greatest effort be made to have the works finished simultaneously, and as soon as possible, that the benefit of the revenue to be derived therefrom may be had, and the expenses of establishments got rid of.

By order of the Board of Works,

Thomas A. Begly, Secretary.

COPY of a LETTER from Sir *John Barrow* to *G. W. Hope*, Esq.

Sir,

Admiralty, 4 April 1843.

No. 33.  
Letter from Sir  
John Barrow to  
G. W. Hope, Esq.  
4 April 1843.

I AM commanded by my Lords Commissioners of the Admiralty to send you herewith, for the information of Lord Stanley, a copy of a letter from Captain Sandom, dated the 8th of last month, (No. 18), relative to the improvements carrying on on the lakes of Canada.

I am, &c.  
(signed) *J. Barrow*.

Enclosure in No. 33.

(Extract.)

Her Majesty's Ship "Niagara," Kingston,  
Canada, 8 March 1843.

Sir,

Encl. in No. 33.

THE forward movement given to improvements in this country, by the liberal guarantee of money from the parent state, is most evident in the progress made and making in the formation of harbours, canals, and such works.

The late Governor-general (Lord Sydenham) formed a Board of Works, at the head of which is placed a talented and persevering engineer, Mr. Killaly; under this gentleman's direction, harbours are now forming upon Lake Erie, on a good and permanent scale, and the essential canal communications assuming a systematic regularity which, while it promises to be of the greatest benefit and advancement to this noble colony in mercantile and agricultural pursuits, cannot fail to contribute to its naval defence in a most eminent degree.

Commencing at the Western extremity of Lake Erie, advantage is taken of an inroad of the lake at "Point aux Pins" to form a fine harbour, which will progress to become an entrepôt, ensuring the independence of this western frontier of Canada from her adjoining powerful neighbour at the Detroit Strait. Further to the eastward, Port Stanley will be made a good and secure harbour. Improvements are in progress at Long Point Bay; and the Harbour of the Grand River (the colonial authorities finding it is not the intention of Her Majesty's Home Government to expend money upon it as a naval station) is now in progress of those improvements which (considering what nature has done) it were a disgrace not to have made long ago.

The permanent reconstruction of the works of the Welland Canal are being proceeded with, upon a scale suited to the largest class sailing craft navigating Lakes Erie and Ontario.

The large St. Lawrence Canal extends 12 miles to avoid the "Great Long Sault Rapids," and was opened in November last.

There are three obstructions above the upper end of the St. Lawrence Canal, between it and Prescott, viz., the "Gallopes," "Point Noquois," and "Rapid Plat;" to surmount which, three short canals with the necessary locks are requisite. The surveys and plans of these works are now completed, and they will be taken in hand forthwith, so as to be opened simultaneously (with the other improvements in the river) in the fall of next year, 1844.

The Beauharnois Canal, to avoid the Coteau, Cedar, and Cascades Rapids, is also energetically advancing, and will be ready to be opened in the fall of 1844. The Lachine Canal enlargement is also being proceeded with; but this proportion will not be ready before 1845.

The improvement of the navigation of Lake St. Peter will be proceeded with vigorously by this season.

I have, &c.  
(signed) *William S. Sandom*, Captain, R. N.

(No. 33.)

COPY of a DESPATCH from the Right Hon. Sir *C. T. Metcalfe*, Bart., G. C. B.,  
to Lord *Stanley*.

My Lord,

Kingston, 27 May 1843.

IN order to expedite the preparation of the documents relating to the public works of this Province, which it is your Lordship's intention to lay before the House of Commons, in reply to the Address to which your despatch of the 13th ultimo (No. 18,) relates, I have the honour to send herewith such of the information as is at present completed, viz.

1st. A Return showing the monies borrowed since the 1st January 1840, by this government for public works, the rates of interest to be paid, and the arrangements made for repaying the principal and the interest.

2d. A Map of the Province of Canada, showing the position of all the public works hitherto executed or in the course of construction, and of the various canals, roads and other public works referred to in the correspondence called for by the House of Commons; with a supplementary document, exhibiting the estimates prepared for each of the works, and the amount expended, and remaining to be expended on each; the dimensions of the locks in the canals, and such other information as may be useful in illustrating the map.

I have, &amp;c.

(signed) *C. T. Metcalfe*.

No. 34.

Despatch from Sir  
*C. T. Metcalfe*,  
Bart., to Lord  
*Stanley*.  
27 May 1843.

No. 1.

*Vide Map at the end  
of the Volume.*

No. 2.

## Enclosure 1, in No. 34.

A RETURN showing the Monies borrowed since 1st January 1840, by the Local Government for Public Works, the Rates of Interest to be paid, and the Arrangements made for repaying the Principal and the Interest. Encl. 1, in No. 34.

IN the year 1840, the sum of 26,000 *l.* currency, was borrowed from the chartered banks, for the purpose of making improvements on certain roads in Upper Canada. This sum, with the interest at the rate of six per cent., has since been repaid out of the consolidated revenue fund. Since the abovementioned period, the only monies borrowed by the Canadian Government, have been advances occasionally obtained from the banks, in anticipation of the loan of 1,500,000 *l.* then about to be raised on the guarantee of the Imperial Parliament; and which were expended on the public works for which that loan was raised, and have been repaid to the banks out of the proceeds of the first instalment of the English loan, amounting to 300,000 *l.*, which has already been drawn for by the Receiver-general.

(signed) *Rawson W. Rawson*, Chief Secretary.

Enclosure 2, in No. 34.  
A SCHEDULE explanatory of the Cost, &c., of the several Works now constructing in Canada.

RESPECTIVE WORKS.	NATURE OF THE WORK.	Original gross Estimate submitted by Mr. Killaly.	Detailed Estimate furnished by the respective Engineers.	Expenditure.		Contracts already entered into.		Value of Work not contracted for.	Periods of Completion.			REMARKS.
				In the Years		Gross Amount.	How Payments are made.		For Contracts already made.	For the whole Work.		
				1842.	1843.					As originally proposed.	As now recommended.	
				Amounts in Pounds Sterling.								
St. Lawrence Navigation, viz.		60,000	58,000	10,958	3,824	14,782	- - -	In Pounds Sterling. 43,218	completed	1846	1846	Those works are being proceeded with on the principle of obtaining 14 feet depth of water through Lake St. Peter; and the canals to have 10 feet depth of water, 80 feet width of bottom, slopes 2 to 1; locks 45 feet wide by 200 long, with 9 feet depth of water on the cills.
Lake St. Peter - - -	- - straightening and deepening the channel, removing bars, lighting, &c.	-	-	-	-	-	-	-	-	-	-

(No. 54.)

COPY of a DESPATCH from the Right Hon. Sir C. T. Metcalfe, Bart., G.C.B.,  
to Lord Stanley.

Government House, Kingston,  
29 June 1843.

My Lord,

I HAVE the honour herewith to submit the remainder of the information required by your Lordship's despatches of the 13th April and 29th May (Nos. 18 and 27), the preparation of which has been unavoidably delayed in consequence of the absence of the President of the Board of Works on a tour of inspection.

I also append, for your Lordship's information, a return of the tolls received upon the Rideau and Ottawa Canals, furnished by the Ordnance Department.

I have, &amp;c.

(signed) C. T. Metcalfe.

No. 35.  
Despatch from Sir  
C.T. Metcalfe, Bart.  
to Lord Stanley.  
29 June 1843.

No. 1 to 9.

## List of Enclosures in No. 35.

No. 1.—Extracts from the General Report of the Hon. H. H. Killaly, dated August 1841	p. 191
No. 2.—La Chine Canal	p. 195
No. 3.—Lake Saint Peter	p. 198
No. 4.—Extracts from various Reports respecting the Beauharnois Canal, Nos. 1 to 7 inclusive	p. 199
No. 5.—Rapide Plat and Gallopes, Rapids, &c.	p. 203
No. 6.—Latest Estimate of the cost of completing the Welland Canal, founded upon absolute Tenders	p. 204
No. 7.—Statement of Tolls received on the Welland and La Chine Canals	p. 205
No. 8.—Burlington Bay Canal, &c.	p. 205
No. 9.—Statement of all Money received as tolls on the Rideau and Ottawa Canals in each of the years 1840 to 1842, both inclusive	p. 208

(No. 1.)

EXTRACTS from the GENERAL REPORT of the Honourable H. H. Killaly, dated August 1841.

"THE necessity of involving the Province in the cost of forming a second water communication with tide-water, has been for a long time the subject of dispute and argument with many.

Encl. 1, in No. 35.

"Until latterly, I was among the number of those who doubted the prudence of it; but the vastly increasing trade, doubling almost annually, and the conviction upon my mind, after mature consideration, that the lowering of freight consequent upon affording additional facilities, together with the productiveness of the western countries, which is only now coming into operation, will increase still further this trade to an almost inconceivable extent, have convinced me that a second and more facile outlet is called for.

"Besides, the transport being confined to the Rideau, the navigation of which depends upon the stability of dams of great height (in one case 60 feet), should any injury arise to one of these dams (as was apprehended last spring), either through accident or malice, the effects of it would be ruinous to half the commercial interests of the country.

"I am decidedly of opinion, that the scale upon which the Cornwall Canal was undertaken, is unsuited to the means of the Province, and is not absolutely necessary for the greatest increase of trade which the most sanguine may look forward to, and that a schooner navigation, combined with a system of tug-boats, would have answered every commercial purpose; but now, from the large expenditure already incurred upon the central portion, the little required to complete it, and the comparatively small saving that might be effected upon what remains to be done, by adopting the schooner scale, I am led to conclude that the best and wisest course will be to open the Saint Lawrence throughout, from Montreal to Lake Ontario, for steam-boats and schooners, not upon the full size of the Cornwall Canal, but on a scale sufficiently large to admit a powerful class of steamers or tug-boats to pass.

"The estimates transmitted herewith are based upon the principle of locks being adopted, length 175 feet, breadth 40 feet, and 8 feet 6 inches depth of water; but as some time from the present period will, under any circumstances, elapse before the actual building of locks is commenced, the question will, in all probability, be fully decided as to the power and suitableness of the several modes recently proposed for the propelling of vessels, and this decision will naturally govern the dimensions of the locks, and may seriously tend to a diminution of expenditure."

Dimensions ultimately adopted, 200 long, 45 wide.

*Saint Lawrence Navigation.—From Prescott to Dickinson's Landing.*

"From Lake Erie to tide-water, after passing the Welland, the next portion of the route which will require an outlay when the other improvements, more immediately called for on the river below it are completed, is the part between Prescott and Dickinson's Landing, a distance of about 40 miles, in which the collective falls at a few points amount to about 22½ feet; to overcome which by the necessary locks, &c., would require about 150,000 £, but as the down-stream carriage upon this part of the river is safe and facile, and tug-boats can

(although with difficulty) bring up light barges, it is considered unnecessary, in the present state of the navigation generally, to incur any outlay thereon."

Original gross estimate submitted by Mr. Killaly, 151,312 £.

*Cornwall Canal.*

"The improvement of this reach of the River Saint Lawrence (in length about 11½ miles), and in which there is a fall of 48 feet, was estimated at 216,343 £, and was commenced in 1833-34. Shortly after operations commenced, it is stated, that from the increase on the prices of provisions, and other causes, the commissioners considered themselves justified in adding very largely to the contract rates, in some instances, as much as 30 per cent. Under these increased rates, the works have been continued from that time without reference to any fluctuation in the price of provisions.

The accounts rendered by the Commissioners up to 1st January 1839, show an expenditure of 354,203 £. 2 s. 1 d. to that date, exclusive of some outstanding claims. I have had a minute and careful estimate made by Mr. Keefer, engineer to the Board, within the last month, from which it appears that the sum of 43,867 £. is required to open the canal to the trade, and a further sum of 13,804 £. for sundry small works, lock-houses, &c., making in all an amount of 57,671 £. 6 s. necessary for the full completion of the entire of the Cornwall Canal :

Although the advantages to be derived from the improvement of this portion of the navigation would of necessity be very circumscribed, until that between Lake St. Francis and Lake St. Louis was also perfected, yet in favour of the immediate finishing of the Cornwall Canal it may be justly urged :

"First.—That it would enable the river forwarders to have their barges towed up by steam from the Coteau du Lac to Kingston, by which a saving in time of two days would be made.

"Secondly.—To avoid the cost of tracking up the Long Sault Rapids, which, during the past year attending this very limited trade was 3,000 £.

"Thirdly.—The passenger trade would be much benefited by it.

"Fourthly.—Some return beyond the cost of maintaining the establishment of lock-keepers, &c., would be obtained from the large sum already expended, which, until this canal is completed, must remain a *caput mortuum*."

*Improvements required between Lake St. Francis, and Lake St. Louis.*

"The Coteau, the Cedars and the Cascades Rapids, between these two lakes, present most formidable difficulties to the dragging up of a small barge with but 15 or 20 tons. To vessels of any size, they are wholly insurmountable. The construction of the necessary locks and canals, to overcome these, Mr. Keefer estimates at 255,900 £; and I have every reason to believe the work can be done for that sum."

Original gross estimate submitted by Mr. Killaly - £.255,900

Detailed after-estimate furnished by the Engineer - £.248,976

*La Chine Canal.*

"The only remaining barrier after the foregoing, to the free passage of lake-going vessels between Quebec and Lake Huron, is the La Chine Canal; the necessary enlargement of which would cost by Mr. Keefer's estimate, 225,300 £."

Original gross estimate submitted by Mr. Killaly - £.225,300

Detailed after-estimate furnished by the Engineer - £.208,636

*Welland Canal.*

"Upon this work, about 491,777 £. have been expended from time to time, upon its construction, and as the locks, the most important part of the work, had been formed with perishable materials, the outlay upon annual repairs has been necessarily very heavy; notwithstanding which, the locks are now in a dangerous and ruinous state; of this sum, about 117,800 £. in stock, is held by private individuals, for the purchasing out of which, and thereby placing the work entirely in the hands of the Province, a Bill is now before the Parliament.

"After a very careful consideration and revisal of the several estimates furnished by the various engineers, the completion of this work in a permanent and fully sufficient manner, with cut stone locks of 120 feet in length, 26 feet wide, and eight feet six inches depth of water on the sills, together with the required weirs, waste-gates, stone aqueduct over the Chippawa, a steam-boat lock, and a capacious and safe harbour at each of the terminations, widening of the deep cut, widening and deepening of the feeder throughout, I estimate at 450,000 £. Of debentures authorized by a late Act of the Provincial Parliament, to be issued for this work, about 180,000 £. remain undisposed of, leaving a balance of 270,000 £., to be further sanctioned and provided for the ultimate full completion of the work.

"It is, no doubt, in the recollection of his Excellency, that the completion of the canal on the full scale upon which a portion of the St. Lawrence navigation was proceeded with, has been strongly urged upon the attention of Government. The chief arguments used being the benefit of enabling Atlantic steamers, with cargoes, to proceed to the Upper Lakes, and the advantage which would be obtained in time of war, from having the power of concentrating our naval forces upon either lake, as may be required. The subscriber is of opinion, that the scale referred to, viz., locks 56 feet wide, 180 feet long, and 10 feet draft of water, is quite unsuited for sea-borne steamers, and unnecessary for those well suited to the lakes and to the commerce of the country; and that even if this scale were adopted, at enormous

enormous cost, transhipment from the sea to the lake vessels would, notwithstanding, always take place at Quebec or Montreal.

"In a military point of view, no doubt the second proposed advantage would be great, but being quite beyond the means of the Province, the work, as necessary for the trade of the country, has been alone estimated for.

"The large lock which is proposed at each end, would allow (in case of danger) of the steamers being brought up many miles inland.

"From the very unsafe and precarious state of the canal, it would be of the utmost consequence to have the works commenced forthwith, if possible."

Original gross estimate submitted by Mr. Killaly, - - £. 450,000.

Detailed after-estimate furnished by the Engineer, - - £. 405,000.

*River Richelieu.*

"Upon the completion of the works of the Chambly Canal, now rapidly advancing, the only impediments to an uninterrupted navigation between the River St. Lawrence at Sorel, and the head of Lake Champlain, a distance of about 180 miles, will be presented by the fords near St. Ours, St. Denis, and Belœil.

"To remove these obstructions by means of dredging and clearing the channel of rocks, the Legislature of Lower Canada appropriated a sum equal to about 7,650 £, of which 4,525 £. remain unexpended. The outlay incurred under this appropriation has effected nothing, and I am of opinion, that the erection of a steam-boat lock, and a dam of moderate height, say four or five feet over low water at or near St. Ours, is the most certain mode of obtaining the object in view, and the value of the water-power which would be created by the dam, in the midst of a productive country heretofore without mills, would yield a considerable return towards defraying the interest on the money expended."

Original gross estimate - - - - £. 21,000.

*River Ottawa.*

"The improvement of the navigation of this river is a measure which has been for a long time strongly advocated, principally by those interested in that district of country.

"The project embraced the full completion of an uninterrupted navigation from the St. Lawrence by the Ottawa, Lake Nipissing, and French River, to Lake Huron. The sum of 3,000 £. was appropriated some time ago to defray the expenses of a survey, on which about 1,500 £. have been expended; but the information as yet obtained is not at all of such a nature as to hazard an estimate of what the cost of the undertaking would be, and, in my judgment, this navigation is not required in the present state of the country. In saying so, I would not be understood to mean that obstacles ought to be opposed by the Government to the project, in case the parties interested should be inclined to proceed in it upon their own resources; on the contrary, arrangements might be made mutually advantageous to them and to the interests of the Province.

"The improvement on the Ottawa, included in this estimate (*see Appendix*), relates solely to the lumber trade; to afford facilities to which, by the construction of suitable slides at those places where they are most required, and to reconstruct the bridges at Bytown, it is proposed to appropriate the sum of 28,000 £.

*"Burlington Bay Canal.*

"The dangerous and dilapidated state of this very important work renders it necessary that steps be immediately taken to repair, or rather wholly re-construct it, in a substantial and permanent manner. Such is its present ruinous condition, that it cannot be repaired effectually; and a few hours of a heavy blow from the east or south-east might very reasonably be expected to close it up altogether; the consequence of which would be most serious to the mercantile interests of Hamilton and Dundas, and to the extensive and highly productive country of which these ports are the outlets.

"However advisable it may be for the purpose of obtaining still-water, and have the entrance commanded from the land, to locate this work northward of the existing passage, yet the placing of it so much in-shore as has been lately proposed, I consider unadvisable. By so doing, sail-vessels would be prevented from getting out many days during the season; and in making for it, if they did not succeed at once in getting in, would unavoidably be driven aground."

Original gross estimate, submitted by Mr. Killaly - £. 45,000.

Detailed after-estimate, furnished by the Engineer - 38,500.

*"Improvement of the River Trent, and Inland Waters of the Newcastle District.*

"The persisting in these works, as heretofore contemplated, would, as appears by the original estimates, involve the Province in an expenditure of about 620,000 £.; but from the rates upon which those estimates are based, I am of opinion that 200,000 £. or 300,000 £. in addition to that sum would be required to effect the object.

"The line of this intended water communication from the Bay of Quinte to Nottawassaga Bay, with upwards of 820 feet of lockage, a proposed depth of five feet water, continued through a series of lakes and currents, and in many cases extremely circuitous, is, in my judgment, quite unsuited to the principal purpose for which it was originally recommended, namely, the line by which the produce of the Western States would be sent down to tide-water.

"The second argument advanced for its formation was, the facility it would afford for the transport of the agricultural and other produce of the inland townships to market; and

thirdly, the advantages to be reaped by the lumberers; the two latter, I consider, can be obtained sufficiently, more immediately, and at infinitely less cost, by the erection of two or three locks to connect the long reaches of natural navigation, by the construction of two or three cross roads from thence to the nearest ports on Lake Ontario, and finally, by the formation of slides at the places where they may be required.

"A farmer or merchant at the head of Rice Lake is within 12 or 14 miles of the harbours of Port Hope and Cobourg, on Lake Ontario, to which he could have facile access afforded him by an outlay of about 10,000*l.* or 12,000*l.*, whereas, to get the same produce to Lake Ontario by the proposed navigation would require a previous expenditure on it, even according to the estimate of 233,447*l.*, and the distance to be travelled would be about 80 miles.

"As to the lumber trade, I believe a very moderate sum expended on slides would effect quite as much as is necessary."

Original gross estimate proposed by Mr. Killaly - - - £.50,000

*Harbours and Lighthouses on Lake Ontario and Lake Erie.*

"There is no expenditure more called for, and from which the benefits to be derived would be more immediately serviceable to the country, than the outlay which is required to construct or complete some harbours on the lakes. Many of those on Lake Ontario are in a very inefficient and incomplete state.

"On Lake Erie there literally, at this moment, is not one into which a vessel can run, or remain in with safety.

"The state of the lighthouses on Lake Erie is equally bad; that which had been at the end of Long Point, the most important station on the lake, was prostrated long since. Others have not been lighted for a considerable time. The natural consequence of all which is, that we have not now one steam-boat on this lake, and the difficulty and cost of inducing ship-owners to risk their vessels into the ruins of what were constructed as harbours, is so great as almost to put a stop to the shipping of the produce of the country.

"The sum of 74,000*l.* has been set down in the estimates, after much consideration and calculation, as sufficient to remove general and well-grounded complaints on this head."

Original gross estimate as proposed by Mr. Killaly - - - £.74,000

*" Bay of Chaleurs Road.*

"This line of communication along the north side of the Bay of Chaleurs from Percé Point to the head of the bay, a distance of 140 miles, is interrupted in two places by portions of the road which are so little formed as to be almost impassable, one from Little Pabos to Port Daniel, the other from the Little Nouvelle to the Indian Mission, in all about 48 miles.

"These portions being improved, and the Metis or Kemp Road (from Point Aux Snelles, on the River St. Lawrence, to the head of the Bay of Chaleurs) better opened, the entire of Gaspé east and south, of New Brunswick east and north, would be approachable from the St. Lawrence with facility, as New Brunswick middle and west is by the Temiscouata Road."

Original gross estimate proposed by Mr. Killaly - - - £. 15,000

Detailed after-estimate furnished by the Engineer - - - 14,835

*" The Gosford Road.*

"Under this head is embraced the completion of the main line leading directly from Quebec through St. Giles, Ste. Croix, Inverness, &c., to Sherbrooke, at present but partially open, and not available in summer. It passes through the large tract of good settlement land belonging to the Crown, and will curtail the line of travel between Quebec and Sherbrooke by more than 50 miles."

Original gross estimate furnished by Mr. Killaly - - - £. 10,000

Detailed after-estimate furnished by the Engineer - - - 9,280

*" The Main Province Road from Quebec to Amherstburg and Port Sarnia.*

"Unquestionably beneficial as it would be to have the Main Province Road properly opened and established throughout, yet such an undertaking, in the present state of the country, is altogether beyond its resources. Under this head, therefore, is embraced the improvement of those portions only along which the advantages of water carriage are not afforded, viz., from the Cascades to the Province Line, and from Brantford to London; these portions it is proposed to properly form and macadamize or plank, and establish toll-bars thereon, the revenue from which would be quite equal to meet the interest of the outlay. From London westward it is intended for the present only to open, drain, trunk and form, raising and bridging where necessary.

"The building of the several bridges over the large rivers between Quebec and Montreal, the crossing of which at certain seasons is very dangerous, and attended with loss of life, is also calculated for."

Original gross estimate proposed by Mr. Killaly - - - £. 155,000

Detailed after-estimate furnished by the Engineer - - - 144,580

(No. 2.)

*La Chine Canal.*

Sir,

Board of Works, Kingston, 21 January 1841.

UPON the annual statement and other documents connected with La Chine Canal, sent in reference to this department, I am directed by the Board to report for his Excellency's information, that their attention having been, in the course of the past forwarding season, forcibly attracted by the evident insufficiency of the wharves for the accommodation of the greatly increased trade, the Board fully concur with the views expressed in the concluding paragraphs of the Commissioners' Report as to the necessity of immediately acquiring additional land adjoining the harbour and wharves. The Board are, however, disposed to go much further, and are of opinion that the affording of other necessary accommodation loudly called for by the trade, can no longer be put off; they conceive that two graving or dry docks for the building or repairing of vessels, several passing places along the line of canal, and a distinct and extensive wharf for firewood, are indispensable; all of these have been the subject of several petitions from the forwarding merchants to his Excellency and his predecessors. The necessity of them is fully admitted by the Canal Commissioners, but they justly say, that by the Act under which they are appointed, their powers extend only to works of repair.

The idea of enlarging this canal generally has been another cause of deferring these necessary works hitherto. There have been two schemes of enlargement put forward, one upon a scale so extensive as to equal the Cornwall Canal, and departing from the present line nearly in toto; the other, merely enlarging the existing canal to a reasonable extent. The contemplation of either should not, in the opinion of the Board, prevent the required accommodation being now afforded, for these reasons, that the necessary works will be attended with but comparatively small expense; that in the event of a moderate enlargement of the canal taking place, they will be available and form part of it; and should the idea of the enlargement on the great scale be ever entertained, even then, from the lapse of time that must occur, the expenditure upon the accommodation for the trade, in the meanwhile, would be fully warranted.

The Board would therefore respectfully recommend that the Canal Commissioners be instructed to have plans and estimates prepared of the cost of these works,—the dry docks, passing places and additional wharves, including the purchase of the ground that would be required, and they are of opinion that the most suitable place for the fuel-wharf and yard would be west of the second bridge, the cost of which should also be embraced in the estimate; it would then only be necessary for the Legislature to repeal the clause in the 9 Geo. 4, c. 12, by which the powers of the Commissioners are restricted to works of repair solely, and reinvest them with those of the original Commissioners, by which they were empowered, with the sanction of the Government, to have constructed such "other works" as might be necessary for the perfection of the canal, and to take the land necessary.

I have, &amp;c.

T. W. C. Murdoch, Esq.  
Chief Secretary.

(signed) Thomas Begly, Secretary.

EXTRACT from a REPORT of Mr. Keefer's, dated 16 November 1842, respecting the Line to be adopted in the enlargement of the La Chine Canal.

"I HAVE examined the whole line of the La Chine Canal, in company with Mr. Atherton and Mr. Mills, and after much discussion and reflection, we have unanimously concluded that the old line should be preserved, and the canal enlarged from Montreal to the Guard Lock, and from thence upwards; that the canal should be formed outside of the present one, by means of a mole or pier in the river, carried up and terminating opposite the village of La Chine.

"By pursuing this plan we obtain—1st. A fine broad entrance to the canal. 2d. Without disturbing private property and wharfs about La Chine; and 3d. We are not stinted for room, as we should be if we attempted enlarging the canal above the Grand Lock. 4th. We can build all the locks in summer, without, 5th. interfering with the old ones. 6th. We shall create the least possible amount of damage to farms; and 7th. The total cost of the canal will be less than by forming it an independent one. We shall also be able to carry on the work in summer and winter without disturbing the navigation.

"The plan decided on appears to be so plainly pointed out by a mere inspection of the ground, that I cannot anticipate any serious objection being raised against it. In pursuance therefore of the Chairman's instructions to me before I left Kingston, I have desired Mr. Atherton to take such steps as are necessary to commence the work forthwith. He has accordingly given notice for receiving tenders up to the 14th of December (a copy of which notice he will send up by the same mail that takes this letter), and hopes to have the portion of rock excavation intended to be let, laid out by the time the water is drawn from the canal. This is all that can now be done to make a beginning, but in the meantime, and very shortly, the whole line can be divided off into sections, the sites of the locks and culverts fixed upon, and plans and specifications prepared, so as to offer the whole to tender early in the winter, in order that every preparation may be made by procuring materials, &c., for commencing all the works in spring."

Thomas A. Begly, Esq., Secretary to the Board of Works.

PAPERS RELATING TO

REPORT on the La Chine Canal.

Sir,  
CONFORMABLY with the instructions of the Board of Works, of the 15th instant, I have now the honour of submitting my Report on the proposed re-construction of the La Chine Canal, a subject to which the honourable the Chairman of the Board was pleased in the month of May last to order that my attention should be directed.

Montreal, 23 December 1842.

Three different projects have been suggested for effecting the proposed work, viz. :

- 1st. The widening and deepening the present line.
- 2d. The adopting an independent line from near Leishman's Point at La Chine, thence running the line at the back of the village, and through the low grounds of the reclaimed Lake St. Pierre, to the present terminus at Montreal.
- 3d. The constructing of the canal within the limits of the bed of the St. Lawrence, down the La Chine rapids, to about the foot of Nun's Island, and thence inland to the present terminus at Montreal.

Each of these projects is affected by considerations of no ordinary importance, as the base of their respective claims to preference ; these will doubtless be fully considered by the Board ; the special duty incumbent on me, on the present occasion, is to submit a statement of the costs which these different projects would in my opinion respectively involve, and which I respectfully beg to present as follows :—

ESTIMATE.—PROJECT, No. 1.  
*Enlarging the present Line, &c.*

	QUANTITY.	RATE.		£.		s.	d.
		s.	d.				
Connected rock cutting (50 feet) on Divisions 1 to 5 inclusive.	197,000	4	—	39,400	—	—	—
Detached rock on ditto - - - - -	30,000	2	—	3,000	—	—	—
	227,000						
Earth-work (100 feet bottom) in the upper reach, half at 1s. per yard, and half at 1s. 6d. per yard ; average, 1s. 3d.	447,189	1	3	27,949	6	3	
Cartage, half a mile on - - - - -	20,920	—	9	784	10	—	—
Earth-work (100 feet bottom) in the middle reach, half at 1s. per yard, and half at 1s. 6d. per yard, averaging 1s. 3d.	19,768	1	3	12,373	—	—	—
Cartage, quarter of a mile on - - - - -	3,212	—	6	80	6	—	—
Earth-work (100 feet bottom) in the lower reach, half at 1s. per yard, and half at 1s. 6d. per yard, averaging 1s. 3d.	121,349	1	3	7,584	6	3	
Rock cutting, 50 feet bottom, and earth-work 100 feet bottom -				91,171	8	6	
Pier at La Chine, to be formed from the waste on sections 1 to 5.	168,960	2	—	16,896	—	—	—
Clearing the channel, 200 feet wide, and expenses connected with the La Chine Basin.	—	—	—	5,000	—	—	—
Lock, No. 1. Guard-lock at La Chine - - -	11,000						
„ No. 2. at Côte, St. Paul, 11 feet lift - -	15,000						
„ No. 3. 9 feet lift - - - - -	14,000						
„ Nos. 4 and 5 combined, 26 9 lift - - -	30,000						
				70,000	—	—	—
Culverts, waste weirs, and bridges, probably -	—	—	—	10,000	—	—	—
Land, 150 acres, at probably 25 <i>l.</i> - - -	—	—	—	3,750	—	—	—
Contingencies - - - - -	—	—	—	5,000	—	—	—
				201,817	8	6	
Enlargement to 100 feet bottom through the Rock, in Divisions 1 to 5 inclusive.	150,000	4	—	30,000	—	—	—
Total with 100 feet bottom throughout -	—	—	—	£. 231,817	8	6	

PROJECT, No. 2.

The adopting an independent line from near Leishman's Point, at La Chine, thence running the line at the back of the village, and through the reclaimed lands of Lake St. Pierre to the canal basin at Montreal.

This Line, No. 2, may be described as follows :—

1st Division.—One mile and a half from Leishman's Point through rock cutting, averaging 15 feet deep.

2d Division.

## PUBLIC WORKS (CANADA).

197

2d Division.—One mile and a half through hard ground, partly soil and partly rock, in about equal proportions; the cuttings averaging 15 feet deep.

3d Division.—Four miles through soft ground and bog-earth. The levels through this division might be so adjusted that the cutting and banking may balance each other, but it is considered that a greater pressure of water than three feet cannot be put on this soil, in consequence of its being of a nature unsuitable to resisting water pressure, and consequently that the depth of cutting through this division must be seven feet at least.

4th Division.—One mile and a half near Montreal, admitting of an average cutting of six feet.

## MEASUREMENT:

1st Division: Rock cutting, 50 feet bottom	-	-	-	285,912 feet.
2d Division: Ditto	-	-	-	142,956
„ Hard soil	-	-	-	142,956
3d Division: Bog-earth, 100 feet bottom	-	-	-	725,894
4th Division: Common soil, 100 feet bottom	-	-	-	197,002

The lockage will be the same as for Project No. 1. The culverts, waste weirs, and bridges will also be the same; but a greater quantity of land will be required, and heavier damage incurred by the farms being intersected by the line of the canal. The rates of prices will, however, be much in favour of the independent line. On these data the estimate will be as follows:—

## ESTIMATE.—PROJECT, No. 2.

	QUANTITY.	RATE.	—		
		s. d.	£.	s.	d.
Connected rock-cutting on Division, No. 1, 50 feet bottom.	285,912	3 6	50,034	12	—
Connected rock, on Division, No. 2	142,956	3 6	25,017	6	—
Earth-work - - - - - No. 2	142,956	— 10	5,956	10	—
Ditto - - - - - No. 3	725,894	— 7	21,171	18	2
Ditto - - - - - No. 4	197,002	— 10	8,208	8	4
Rock-cutting, 50 feet bottom, and earth-work, 100 feet bottom.	-	-	110,388	14	8
Completing the La Chine entrance	-	-	1,000	—	—
Locks, same as for Project, No 1.	-	-	70,000	—	—
Culverts, waste weirs and bridges	-	-	10,000	—	—
Land, 220 acres, at probably 25 l. per acre	-	-	5,500	—	—
Contingencies, as before	-	-	5,000	—	—
			201,888	14	6
Enlargement to 100 feet bottom, through rock, on Divisions 1 and 2.	329,986	3 6	57,747	11	—
Project, No. 2, 100 feet bottom throughout	-	-	£. 259,636	5	6

## PROJECT, No. 3.

The constructing the Canal on the bed of the St. Lawrence, or adjacent thereto, down the La Chine Rapids, to about the foot of Nun's Island, and thence inland to the present terminus at Montreal.

This line has been projected with the view of rendering the canal works subservient to the double purposes of navigation, and the attainment of mill-power.

In order to compare this project with the others before referred to, the summit level of the La Chine Rapids on Lake St. Louis, must be equally attained. The works involved in this Project No. 3, must therefore start from the head of the pier embraced in No. 1, and may be described as follows:

1st Division.—Eight miles of pier on the line of the bed of the St. Lawrence, adjacent to its northern bank, so located as to divide the fall of the La Chine Rapids into a series of steps at the different locks; the river line terminating at a point near the mouth of the river St. Pierre.

2d Division.—Half a mile inland to the present junction with the harbour at Montreal.

The bed of the river being almost exclusively connected rock, this line of navigation would be most easily formed by a retaining pier.

The height of this pier along the different reaches of the canal would be necessarily not less than 16 feet at the tail of the respective locks, gradually increasing to 25 feet at the head

198

PAPERS RELATING TO

head of the locks, the lifts being supposed to be nine feet. The average height would therefore be 20½ feet, and the measurement will be as follows:

MEASUREMENT and ESTIMATE, PROJECT No 3.

	RATE.	
	s. d.	£. s. d.
Earth-work for body of pier, to be excavated from the north bank of the river, eight miles in length, 12 feet in top, average height, 20½ feet, and sloped on each side, at the rate of 2 to 1, containing 1,699,737 yards.	1 -	84,986 17 -
Stone facing to pier, 4 feet thick outside, and 2 feet thick inside, 450,560 yards.	5 -	112,640 - -
2d Division.—One mile and a half earth-work, averaging 6 feet cutting, 197,002 yards.	- 10	8,208 8 4
Pier and Earth-work - - - - -	- -	205,835 5 4
Locks, same as before - - - - -	- -	70,000 - -
Culverts and bridges, probably - - - - -	- -	5,000 - -
Land - - - - -	- -	2,000 - -
Contingencies, as before - - - - -	- -	5,000 - -
PROJECT, No. 3. - - - - -	£.	287,835 5 4

The above estimate does not embrace any work connected with the formation of mill-seats and water-races connected therewith, but simply the works necessary for the canal. As regards this project, I would beg to remark, that I cannot contemplate its adoption without entertaining the most serious apprehension of the casualties to which works so located would be exposed, and the consequent hazard to which the whole trade of the Province would be exposed; but I deem it no part of my duty on the present occasion to discuss the relative merits of projects referred to, further than as regards the practical costs of the respective works, and of which I now beg to submit the following abstract of the results of the foregoing calculations:

ABSTRACT:								£.	s.	d.

Secretary to the Board of Works.

(No. 3.)

LAKE ST. PETER.

REPORT of Mr. Atherton's, of 27 December 1842 on the Improvement of the Navigation of Lake St. Peter.

Contracts for the dredging outfit for the prosecution of the Lake St. Peter works have been completed to the following extent:

CONTRACTS FULFILLED:								£.	s.	d.
Mr. J. J. Nesbitt, 1 dredging vessel	-	-	-	-	-	-	-	1,800	-	-
„ 1 trial scow	-	-	-	-	-	-	-	400	-	-
Mr. D. Vaughan, 1 dredging vessel	-	-	-	-	-	-	-	2,100	-	-
„ 1 trial scow	-	-	-	-	-	-	-	400	-	-
Messrs. Millar, Edmonston & Allen, 1 tug-boat	-	-	-	-	-	-	-	1,500	-	-
Contracts Fulfilled								£.	6,200	- -

CONTRACTS

PUBLIC WORKS (CANADA).

199

CONTRACTS ON HAND:						£.	s.	d.
Mr. J. J. Nesbitt, 4 discharging scows	-	-	-	-	-	1,800	-	-
Messrs. Ward & Brush, engines for 2 dredging vessels	-	-	-	-	-	2,000	-	-
Ditto ditto for 2 sets of buckets and sinks complete, according to weight, probably	-	-	-	-	-	800	-	-
Frames and thimbles	-	-	-	-	-	500	-	-
The St. Mary Foundry Company, for engines for tug-boat	-	-	-	-	-	2,700	-	-
Mr. Armstrong, of Quebec, for the sluices of the scows and machinery for washing same, at schedule prices, according to weight, but probably	-	-	-	-	-	750	-	-
Contracts on Hand	-	-	-	-	-	£. 8,550	-	-

CURRENT EXPENSES:						£.	s.	d.
Expenses for outfit of chains, anchors and cordage, and towage into winter quarters (bills not all delivered), probably	-	-	-	-	-	350	-	-
Further expenses on the opening of the navigation for like purposes	-	-	-	-	-	250	-	-
	-	-	-	-	-	£. 600	-	-

I also think it advisable that about 2,000 l. be invested for leading iron cables and buoys in the line of operations, but this has not yet been formally proposed to the Board for their sanction	-	-	-	-	-	2,000	-	-
Expenses of management; Mr. Atherton's salary from 18 Sept. 1841 to 1 January 1843	-	-	-	-	-	384	17	2
George Meldrum, from 1 August 1842 to 1 January 1843	-	-	-	-	-	62	10	-
	-	-	-	-	-	£. 447	7	2

SUMMARY OF LAKE ENGAGEMENTS, as above.

	£.	s.	d.
Contracts fulfilled	6,200	-	-
Ditto on hand	8,550	-	-
Bills for outlay, probably	600	-	-
Salaries to engineer and superintendent	447	7	2
Proposed outlay for outfit, not yet sanctioned by the Board	2,000	-	-
	£. 17,797	7	2

The contract works now on hand are in satisfactory progress, and I have every reason to anticipate that operations on the lake will be commenced as soon as the season will admit.

(No. 4.)

EXTRACTS from REPORTS respecting the *Beauharnois* Canal, No. 1 to 7 inclusive.

(1).—EXTRACT of a Letter from the Chairman of the Board of Works to the Civil Secretary, dated 14 December 1839. (No. 28.)

"In reference to the communication of his Excellency the late Governor-general, dated the 13th October last, requiring the opinion of this Board, 'whether for the completion of the St. Lawrence Canal, it would be advisable to run it on the south or north side of the river,' the Board beg leave respectfully to report:

"That, having carefully examined the Reports, plans and estimates of Messrs. Baird and Stephenson, on the practicability of constructing the said canal through the seigniory of Beauharnois, and those of Mr. J. B. Mills for the same, through the seigniories of Soulanges and Vaudreuil; they find themselves unable to arrive at any conclusive opinion on this subject, for the want of more information.

"The Board find that the engineers who have been employed to report on these routes, have confined themselves in their examinations each to his own side of the river; and consequently, that no investigation by a professional person has yet been made as to their comparative merits. The Board are further of opinion, that a route may be found for this canal possessing many decided advantages over any that has yet been proposed, and in order to enable them to report satisfactorily on the reference now before them, they are desirous of engaging a skilful and competent engineer to make such examinations as they shall direct."

(2.)—EXTRACT from a REPORT of the Chairman of the Board of Works to his Excellency the Governor-general, dated 20 February 1840.

“The Board are at present unprepared to decide the preliminary question submitted, namely, on which side of the St. Lawrence, between the Lakes St. Francis and St. Louis, the canal should be located, for the reasons set forth in their Report (No. 28); but should it please your Excellency to grant the prayers thereof, the Board are of opinion that they will be enabled to submit to your Excellency’s consideration a more advantageous and less expensive line than any yet proposed for that object.”

(3.)—EXTRACT from a REPORT of the President of the Board of Works, for the information of his Excellency the Governor in Council, dated 12 May 1842.

“The Board would strongly recommend that some progress with the works of this section\* should be authorized this year, so that it may be completed in 1844. No work having yet been commenced on it, several lines have been explored for its route, chiefly on the north side of the river, to which the Board of Works, conceiving there was much objection as to difficulty of construction and expense, have had the line formerly selected by Mr. Stevenson on the south side of the river, carefully re-surveyed by a competent engineer. The result of the survey fully confirms the view the Board had taken of it, the line being in every respect preferable to that on the north side, and the work can be executed at a very reduced cost. An objection has been raised by some in a military view, to having it on the south side, to which the Board do not attribute any weight, more especially as the Cornwall portion of the navigation (nearly completed) is within musket shot of the American territory, as will necessarily be other portions of the general line also. Whereas this portion, as proposed, is about 20 miles from the frontier.”

(4.)—ESTIMATE of the probable Cost of Constructing a CANAL between *Lake St. Francis* and *Lake St. Louis*. Locks, 200 × 45 × 9. Canal, 80 feet wide at bottom, 10 feet deep. Banks, 14 feet high, and 12 feet wide at top. Slopes 2 to 1.

SOUTH SIDE—INLAND (BEAUHARNOIS CANAL).

1.—From Channel in Lake St. Francis to Mainland.

	£.	s.	d.	£.	s.	d.
Removing 19,100 cubic yards of boulder-stones from the point of the shoals between Isle au Chats and the Mainland; the stones to be raised by the patent steam dredge (constructed on the principle of the steam excavator, now in successful operation in the United States), and deposited in the deep water below the shoals, at 5s. -	-	-	-	4,775	-	-
Cost of dredge, 2,500 l. for its use on this service - - - -	-	-	-	500	-	-
Excavation below surface of water at the entrance of the canal, 5,500 cubic yards, at 1s. - - - - -	275	-	-			
Boulder-stones that may be found in this excavation, 1,000 cubic yards, at 1s. extra - - - - -	50	-	-			
Forming the end of the pier from the excavation, 1,500 cubic yards at 6d. - - - - -	37	10	-			
Slope wall, for its protection, 150 cubic yards, at 7s. 6d. - - -	56	5	-			
Coffer-dam (no pumping, as the water can be drawn off through the canal) - - - - -	600	-	-			
Timber bulwark for the defence of the point of the pier, 550 cubic yards, at 9s - - - - -	274	10	-			
				1,266	5	-
TOTAL of the First Item - - - -	£.			6,541	5	-

2.—The Canal from the Mainland to Water in Lake St. Louis.

Excavation to 0.29-65 chains, 204,500 cubic yards, at 11d. - - -	9,372	18	4

SUMMARY.

1st Item.—From Channel in Lake St. Francis to Mainland -	6,541	5	-
2d Item.—The Canal from the Mainland to water in Lake St. Louis -	220,333	15	-
3d Item.—Excavation under water to the Channel in Lake St. Louis, Piers, Coffe-dams, &c. -	13,470	-	-
Superintendence and contingencies -	15,555	-	-
TOTAL -	£.		
	255,900	-	-

Remarks.

In reference to the first item, it may possibly be found advisable (instead of going to the expense of removing so much as 19,000 cubic yards of the points of the shoals) to construct a towing-path from the entrance of the canal along the bank of the river, a distance of one mile, to the point at Knight's House, and from thence, a distance of 30 chains, along the shoal lying on the south side of the channel, and terminating at the point where the channel is narrowest. This would cost much about the same as the work estimated, being as follows :

	£.	s.	d.
Towing-path along back, 28,160 cubic yards, at 8 <i>d.</i> -	938	13	4
Towing-path to point of shoal, 31,680 cubic yards at 1 <i>s.</i> 6 <i>d.</i> -	2,376	-	-
Removing points of shoals, 6,800 cubic yards, at 5 <i>s.</i> -	1,700	-	-
Use of the steamdredge -	500	-	-
£.	5,514	13	4

Office, Board of Works, }  
Kingston, 1 October 1842. }

(signed)

Samuel Keefer, Engineer, Board of Works.

(5.)—EXTRACT from the REPORT of the President of the Board of Works, to His Excellency the Governor-general, upon Mr. *Simpson's* Objections to adopting the South side of the *St. Lawrence*, for the line of a Canal.—(*Vide* pp. 160–163.)

(6.)—EXTRACT from the REPORT of *J. B. Mills, Esq.*, Civil Engineer, respecting the Improvement of the Entrance to the *Beauharnois Canal* from *Lake St. Francis*.

20 December 1842.

“ In descending, therefore, it may be settled that Grosse Point is to be neared ; thence, the south channel afford an easy and good direction for the canal, and is of ample dimensions, the narrowest part being 500 feet wide, where even a sail-boat can tack and beat. Just below said narrow place there is a little work to be done, in order to improve the channel and its direction ; (I say improve, as now a pilot understanding the ground can take a steam-boat of the largest dimensions for canal navigation, full freighted, to the canal by the south channel, having to veer awkwardly at one point only, which is just below the place marked 500 feet wide). The boulders upon the shore are, I consider, all that are to be moved, and which cannot amount to 50 cubic yards. This done, the channel from the canal to the lake is good and liberal enough to satisfy any reasonable demand, and should it ever appear desirable to tow from the canal to Chartier's Point, and even to Grosse Point, the towing path can be along the beach and shoal at a moderate expense, and at a convenient distance from the channel.

“ We will have ultimately at each extremity of the *Beauharnois canal*, a small amount of work for a dredge ; in clearing away coffer-dams, &c., at *Lachine*, there will be the same class of work, as well as at the termination of the short canal necessary for the improvement of the navigation below *Prescott*. In reference to all which I propose that either the Government shall have a dredge built, to be worked under their directions, or shall contract for a bulk sum for each job. *Noble* says his dredge and out-fit will cost 1,250 *l.* ; *Simpson* values his at 250 *l.* As to the work now more immediately referred to (the removal of the boulders partially obstructing the entrance from *Lake St. Francis*), it will thus cost more to prepare to do it than the work itself will cost.”

(7.)—EXTRACT from SECOND REPORT of Mr. *Tate*.

“ Sir,

*Beauharnois Canal*, 13 August 1842.

“ I BEG leave to lay before the honourable the Board of Works, the following Report of the progress of the Works of the *Beauharnois Canal*.

“ The works of that portion of the canal comprised between stations 146½ and 128, which were commenced on the 12th of last month, are advancing rapidly and present a good appearance. The north bank of the canal is up to its height at several places.

“ The quantity of excavation done to this day, 83,879 cubic yards.

“ Nearly the whole of the Irish employed being immigrants but newly landed, many of them having suffered severely on the voyage out and by subsequent privation, the progress of the work has not been quite so satisfactory for the earlier part as it has now become. The men, by daily food and rest, and regular practice, are now becoming more energetic and are working with better heart. The general health of the men has been very good. The conduct of the men and foremen has also been very good. No collision or angry feeling has arisen between the races, and but five men have been discharged for bad conduct.

“ These facts, together with the favourable state of the weather, favour the supposition that this portion of the canal will be speedily executed.”

EXTRACT from Mr. *Tate's* FOURTH REPORT.

15 September 1842.

“ THE weather has not been so favourable as during the previous fortnight, and some delay has occurred in consequence. The work, however, advances satisfactorily, and the utmost good feeling continues to exist amongst the men.

“ The total amount of excavation to this day, 212,740 yards.”

(No. 5.)

## RAPIDE PLAT, GALOPES, &amp;c.

Sir,

Beauharnois, 8 February 1843.

IN accordance with instructions received from the Board of Works, as per letter of the secretary, of the 29th December 1842, "to prepare such plan and estimates for the several works, whether earth-work or masonry, as are required to perfect the navigation of the St. Lawrence, between Prescott and Cornwall Canal, upon the same scale as the Beauharnois Canal," I beg leave to submit the following remarks, reference being had to my plans of the works in question, and the report of the Commissioners for improving the Navigation of the St. Lawrence, of December 1833, which plans and Report are in the office of the Board of Works.

The Report above alluded to contains some remarks of mine upon the "scale" of improvement necessary for these minor rapids, which I consider yet good; viz. That as the channel of the river passing the points in question, is ample for the draught of water and the tonnage contemplated in these improvements, all descending craft of whatever kind will go down the river, therefore these improvements, being for the ascending trade, require only 50 feet of bottom, rather than 80 feet, as at the Beauharnois Canal.

The locks must follow the scale and style of those at the Beauharnois Canal.

The first impediment to the navigation of the St. Lawrence above the Cornwall Canal is at Farren's Point, which plan I do not propose to alter. In the final location some slight changes may be made, which will not materially affect the cost. This remark applies also to the points above.

The works at Farren's Point must be about four-fifths of a mile in length. The plan of operations proposed here, was to excavate the canal mainly in the river bank, and form the outside bank of the material from said excavation, and without making any use of pier or crib-work of timber, (upon the presumption that enough stone will be found in the course of excavation, as at Long Saut, by which to form the bank and render it permanent; but at Farren's Point the quantity of stone in the excavation is of doubtful magnitude). As acting on this plan is virtually saying that we will dig into the river bank, and carry out earth for the outer bank until the canal is formed, or until so much of the earth thrown out remains as to form the outer bank, and that such plan is evidently indefinite. I propose to proceed differently, but upon a plan which I think will not cost more; therefore I conclude that certainty, facility, ultimate safety and economy, urge the adoption of pier or crib-work to form the lower part and outside of the embankment in the river. This wood-work will be ever under water, and finally covered with the embankment, and will cost 3,724*l.*, also I add for work connected with the lock 1,000*l.*, making 4,724*l.*

In the Report above referred to, the expense of improving this place is put down at 23,735*l.* 10*s.*, to which I add the above 4,728*l.*, and we have for the expense here 28,459*l.* 10*s.*

The next point for improvement is Rapide Plat, which is  $3\frac{2}{10}$  miles in length; here also I refer to the plans and Report of 1833, and propose to adhere to that plan.

For about three-quarters of the distance the plan then contemplated (as at Farren's Point) for effecting the improvement, will answer but for a little more than one mile of the work, or the mile next below the first half mile from the head, where the shore is bold and the current strong; I propose to adopt pier and crib-work, which will cost 5,586*l.*, also to the work connected with the lock I add 1,000*l.*, making 6,586*l.* This canal is nearly four miles long, and I think requires a guard lock, which cannot be constructed to answer all the ends desirable short of 9,883*l.*; a guard lock was not originally contemplated here.

The improvement, as per said Report, was to cost 46,227*l.* 10*s.*, which amount I leave to stand, and the above items, 5,586 × 9,883*l.*, making for the expense at Rapide Plat 61,796*l.* 10*s.* currency.

Above Rapide Plat there are three points noticed in the Report of 1833, which may be considered difficult, viz., the Pine-tree Point, Point Iroquois, and Presqu'isle; the first I do not consider requires improvement. Point Iroquois is a difficult passage, and a very expensive place to improve.

Before giving an estimate, or an opinion concerning it and Presqu'isle, I wish to make some further examinations. With Point Iroquois and Presqu'isle, I will put the Lower Galopes, and for the present dispose of them by saying that the improvements in the application of steam power, which yet are in progress, are favourable to the hope and to the opinion that these minor obstacles may soon be successfully encountered, not requiring any expenditure upon them.

The next point in course, is the upper and principal Galopes, about which there is no question as to the necessity of its improvement. In the Report of 1833 the expense at this place is put down at 14,153*l.*; to which I wish to add, on account of some changes in the manner of proceeding, as at Farren's Point, and partially at Rapide Plat, 4,000*l.*, making for the improvement at the Galopes 18,153*l.*

Above the Galopes, and near Chimney Island, for a short distance, it will be necessary to dredge the Canadian Channel and remove some large boulders.

I am not now in possession of perfect data for an estimate here, but I think that 750*l.* will do what is necessary.

595.

Thus

Thus I have gone over the line from the Cornwall Canal to Prescott, and ask for expenditures as follows :

	£.	s.	d.
Farren's Point - - - - -	28,459	10	-
Rapide Plat - - - - -	61,796	10	-
The Galopes - - - - -	18,153	-	-
Chimney - - - - -	750	-	-
TOTAL - - -	£. 109,159	-	-

The stone for the locks at the several points will be obtained conveniently.  
If desirable, this work can all be put under contract soon, the locks immediately.

I am, &c.  
(signed) J. B. Mills.

To The Hon. H. H. Killaly,  
Chairman of the Board of Works.

(No. 6.)

WELLAND CANAL.

ESTIMATE of the Cost of Re-constructing the Locks, Constructing the Harbours, and Enlarging the Trunk of the *Welland Canal*, assuming the *Grand River* as the source of Supply.

	£.	s.	d.
Work already under contract - - - - -	237,600	-	-
Constructing the harbours - - - - -	20,700	-	-
Two locks below St. Catherine's - - - - -	20,250	-	-
Allanburg locks - - - - -	9,000	-	-
Port Colborne lock - - - - -	8,460	-	-
Thirty waste weirs and 20 bridges - - - - -	13,950	-	-
Aqueduct over the Welland River - - - - -	18,000	-	-
Locks to and from the Welland River - - - - -	5,400	-	-
Enlargement of the trunk throughout - - - - -	48,771	-	-
Gates for 28 locks - - - - -	12,600	-	-
Superintendence and contingencies - - - - -	39,474	-	-
£.	434,215	-	-

The foregoing is an estimate of the cost of all the works necessary for the full completion of this canal, upon the principle of its being supplied as at present from the Grand River ; but from the apprehensions entertained by some that this source of supply may at a future period be found inadequate for the greatly increased trade, which may with certainty be calculated upon, and from the low rates at which the work remaining to be done is tendered for, I would strongly recommend, as highly deserving the consideration of the Board, the bringing through the waters of Lake Erie at once. By so doing the communication would be rendered perfect, and the supply of water, both for the purposes of navigation and for the most extended machinery, more than sufficient. The effect of draining the several flooded townships would be to render upwards of 30,000 acres of land, at present worthless, very valuable, and also to produce the most salutary effects upon the health of this section of the country. An estimate is accordingly submitted of the cost of enlarging the canal so as to admit the waters of Lake Erie.

	£.	s.	d.
Work now under contract - - - - -	237,600	-	-
Constructing the harbours - - - - -	20,700	-	-
Two locks below St. Catherine's - - - - -	20,250	-	-
Two locks at Allanburg, and entrance to the feeder - - - - -	9,000	-	-
A guard lock at Port Colborne - - - - -	3,600	-	-

(No. 8.)

BURLINGTON BAY CANAL.

Sir,

Board of Works, Kingston, 18 March 1843.

IN reporting upon the proper site for the construction of the Burlington Bay Canal, I shall, *in limine*, lay down the conclusions at which I have arrived, and then proceed to enumerate the considerations which have led to them. In these conclusions, I consider that I assume a strong and impregnable position, for they are the result of much patient and careful thinking, after twice visiting the ground, and after making approximate estimates of the cost of constructing the canal at each of the several places that have been named.

First.—To construct a canal which shall combine the greatest number of advantages, and afford to vessels and craft navigating it the greatest ease on entering and departing, the situation should coincide with that of the present canal.

Secondly.—At this place the canal can be constructed at the least expense; any other site would cost more.

There have been four places named for the site of this canal: 1st. The one herein proposed, being in fact a reconstruction of the present canal; 2d. A situation close to the north side of the present canal.—(This plan was a suggestion of my own, in my Report and estimate of the 9th July 1841, in which I proposed to abandon the old work altogether, but to place the new work near enough to it to be under shelter from the S. E. winds);—3d. At the old outlet; 4th. Near the north shore, cutting the canal through Brant's Pond.

In favour of the first position, being that which I have now selected, I may remark, that the fact of the present canal keeping itself open, and maintaining its depth from year to year, while the sand is in continual motion along the beach, indicates the safety and certainty of the result, that would attend the expenditure of money at this place.

On the other hand, it has not been proved, nor can it be known, what would be the precise result of cutting the canal more northerly.

In a nautical point of view, one of the strongest reasons in favour of this position is this, that the line of navigation from Hamilton to the outer lake will be made to coincide very nearly with the middle of the delta formed by the beach, so that vessels going either way have fair beating-ground and ample room to take advantage of every wind at all favourable. In this direction the wind will be more constant and regular than nearer the north shore where the hills are high, and cause it to move more at intervals or in gusts.

Not trusting to my own judgment in nautical matters, I have obtained the opinion of several lake captains relative to the position of the canal. I find that the most experienced and intelligent seamen (among whom I will mention Captain Gordon, of the steamer *Britannia*, who has had the advantage of several years' daily experience in running through the canal during the season of navigation), concur in representing the first position as decidedly preferable to any other for the accommodation of sailing craft. The only advantage conceded to the fourth position being that vessels, in case of snow storms or fogs, which at certain seasons of the year are very frequent, would have a better chance of making

the entrance with the sounding lead, by following up the land along the north shore. As an off-set to this advantage it is, however, stated, that if the wind is at all strong from the eastward the lake is so rough that it would be impossible to steer by soundings, because of the uncertainty of obtaining them with accuracy.

It is my intention to obviate this difficulty, in a great measure, by attaching a bell to the pier-light, with machinery suitable to keep a hammer striking it at stated intervals during fogs and snow-storms.

With this contrivance the canal constructed in this place will afford the most facile, safe and durable entrance that can be obtained.

In reference to the cost of a canal at the several positions, I herewith submit detailed estimates of the first and fourth, made up from the contract price for timber, from Mr. Shaw's estimate of the cost of stones delivered, and from a comparison of the most recent tenders for workmanship in framing and sinking the cribs; the second I have calculated to cost 2,000*l.* more than the first, and the third will cost about 65,000*l.*; the cost of each will therefore stand thus:

					<i>Feet.</i>	<i>£. cy.</i>
1.	Re-construction of old canal	-	-	-	2,430	38,094
2.	Canal close to present canal	-	-	-	2,430	40,094
3.	Canal at old outlet	-	-	-	4,300	65,000
4.	Canal at Brant's Pond	-	-	-	4,400	69,356

The first or intended site will therefore cost 2,000*l.* less than the second, 26,906*l.* less than the third, and 31,262*l.* less than the fourth.

In these estimates I have allowed for making the clear breadth between the piers 150 feet, as being in my opinion sufficient, with straight and parallel piers, for ensuring easy entrance. I propose to substitute a ferry for the swing bridge, but if this prove inadequate to the travel across the canal, 150 feet is not too great a span for the erection of a double swing-bridge, which, placed upon a long, narrow and pointed pier, in the middle of the channel, can be made to open both sides at once, and leave the whole, except 20 feet, clear for the passage of vessels.

By the execution of the work estimated for, the old south-east pier, which has been constructed at great expense, will be brought into use, and the new south-east pier, which is exposed to the force of a tremendous sea, will be placed beyond the possibility of danger.

I propose to carry out the piers to 15 feet water in the lake, and 12 feet water in the bay.

The great advantage of constructing the canal at the present site is the facility afforded by the old canal of communicating with all parts of the new work while in progress, and the security of the materials, which can be transferred at pleasure from the lake to the bay and *vice versa*, under shelter of the old south-east pier. This is an advantage that cannot be enjoyed at either the third or fourth position; there, when a storm comes on there is no shelter, every thing is at the mercy of the waves; the difficulty and delay these storms would occasion would greatly enhance the cost of the work at those two places.

In making my estimate for the cut through Brant's Pond, I have not heeded the suggestion set forth by certain interested parties, that it would merely be necessary to construct piers to and from Brant's Pond, and the force of the current would sweep out the mud at the bottom. There is no analogy in the operation of natural causes to support this assertion; on the contrary, we observe at every enlargement of the present canal beyond the ordinary breadth that a deposit of sand has taken place; so would it do here. I have therefore considered it necessary, and have so estimated, to continue the piers unbroken through the pond.

You will perceive, by this Report, that reflection and calculation have brought me to adopt your views and suggestions relative to making use of the present canal for forming the new one. My first Report and estimate referred to an independent canal, close to the north of the old one; but the result of the estimates, and the consideration of the great advantages afforded by incorporating the old south-east pier with the new one, induce me now to report in favour of re-construction.

Did I not anticipate the opposition of interested persons to the plan now proposed, I would consider it necessary to apologize for dwelling at such length upon a decision, the correctness of which is so obvious; but plain as it may appear to you, that the canal can be constructed so much cheaper at the present site, and at the same time be made to combine so many more advantages than at any other place north of it, I shall not be surprised to find a strong opposition raised against the plan by persons who will not hesitate to assert, that the least eligible and most expensive place is the one which ought to be selected.

I have, &c.

S. Keefer,

Engineer, Board of Works.

ESTIMATE of the Cost of Re-constructing the *Burlington Bay* Canal.

It is proposed to found the south pier in the channel of the old canal, to build another pier parallel to this on the north side, at a distance from it of 150 feet; to dredge and clear out the intervening space to form the new canal, which will therefore include the taking up and clearing away of the whole of the present north pier, and to fill in the space between the new and old S. E. pier with stones.

The north pier will be made 2,330 feet long and 20 feet wide, with the exception of 30 feet at the eastern termination, which will be 30 feet wide.

The south pier will be made 2,430 feet long, 2,155 feet of it to be 20 feet wide, and the rest (275 feet) at the eastern end will be 50 feet wide at one place, and diminish to 30 feet wide at the end.

Both piers are to have a recess left in them, 40 by 30 feet, for a ferry-boat to ply, in lieu of the present swing bridge.

NORTH PIER:

	£.	s.	d.
From A. to B., 700 feet.			
„ C. to M., 525 feet; 1,225 feet of pier, 20 feet wide, and founded in 10 feet water, on brush bottoms, at 3 l. 10 s. 6 d. per cubic foot - -	4,318	2	6
From B. to C., 755 feet.			
Recess, 60 feet, 835 feet of solid pile, wharfing-piles cut off at surface-water, and crib-built thereon, 2 l. 11 s. - - - - -	2,129	5	-
From M. to D., 300 feet of pier, 20 feet wide, and founded in 10 to 15 feet water, brush bottoms, at 4 l. 0 s. 6 d. - - - - -	1,207	10	-
From d. to D., 30 feet water, crib in 15 feet water, at 7 l. 2 s. - -	213	-	-
Piling and capping from A. to B., 700 feet			
Ditto ditto C. to M., 525 „			
Ditto ditto M. to D., 330 „			
———— 1,555 feet, at 10 s. - - - - -	77	15	-
Extra piles at D., 30 feet, at 15 s. - - - - -	22	10	-
	7,968	2	6

Note.—The piers extend to 15 feet water in the lake, and to 12 feet water in the bay.

SOUTH PIER:

Recess, 60 feet.			
From G. to h., 1,950 feet of pier, 20 feet wide, founded in an average of 10 feet water, brush bottom, 2010 feet, at 3 l. 10 s. 6 d. per - -	7,085	5	-
From h. to H., 250 feet of pier, 20 feet wide, founded in 10 to 15 feet water, 250 feet, at 4 l. 0 s. 6 d. - - - - -	1,006	5	-
From H. to K., 275 feet of pier, varying from 50 to 30 feet wide, in 18 feet water, at 9 l. 2 s. 3 d. - - - - -	2,405	18	9
Piling and capping G. to g., 800 feet, at 10 s. - - - - -	400	-	-
Ditto ditto g. to H., 1,355 „			
Recess - 60 „			
Piles only on one side, 1,415 feet single, at 5 s. - - - - -	353	15	-
H. to k., 275 „ double, at 10 s. - - - - -	137	10	-
Extra piling, H. to k., 100 piles, at 15 s. - - - - -	75	-	-

11,463 13 9

Filling in between new and old S. piers, 2,594 cords, £. s. d.			
at 15 s. - - - - -	1,945	10	-
Sea wall at junction of S. pier with the beach, 600 cords, at 15 s. - - - - -	450	-	-

£. 2,395 10 -

Removing old North Pier:			
Taking away 94 cribs, at 20 l. per crib - - - - -	1,880	-	-
Pulling out 124 piles, at 25 s. per pile - - - - -	155	-	-
	2,035	-	-

Excavation for N. Pier to S. water:			
460 × 5 × 81 = 6,900 yards, at 5 d. - - - - -	143	15	-
Dredging; all required.			
A. to B., 500 × 4 × 40 = 80,000			
B. to C., 890 × 10 × 50 = 400,000			
C. to M., 525 × 4 × 40 = 84,000			

Cubic feet - - 564,000 = 20,888 cubic yards, at 1 s. -	1,044	8	-
Excavation between new and old N. pier, 350 × 5 × 85 = 5,509, at 5 d.	114	15	5
	£.	2,302	18 5

Dredging; one half of which may possibly be required, perhaps more; but supposing it necessary to open the navigation at once to 10 feet water:—

250 feet	×	110	×	2	=	55,000
475	„	×	120	×	8	= 456,000
300	„	×	90	×	10	= 270,000
700	„	×	80	×	5	= 280,000

Cubic feet - - 1,061,000 = 39,296 cubic yards, at 1 s. - - £. 1,964 16 -

ABSTRACT.

	£.	s.	d.
Cost of constructing the north pier - - - - -	7,968	2	6
Ditto ditto south pier - - - - -	11,463	13	9
Filling space between new and old south piers and sea wall - - -	2,395	10	-
Removing old north pier - - - - -	2,035	-	-
Excavation and dredging for north pier - - - - -	2,452	18	5
Dredging between piers - - - - -	2,153	16	-
Pier light on south pier, with bell and machinery - - - - -	300	-	-
Mooring-posts, 160 at 10 s. - - - - -	80	-	-
Iron for bolts, &c. - - - - -	500	-	-
Ferry-boat and machinery - - - - -	500	-	-
If it should be necessary hereafter to build a bridge instead of the ferry, add - - - - -	500	-	-
And if it should not be found practicable to drive piles for forming a portion of the north pier as herein estimated, add for crib-work - - -	835	-	-
Erecting a new lighthouse on the beach - - - - -	600	-	-

11 July 1843.

Sir,

Treasury Chambers, 11 July 1843.

I AM commanded by the Lords Commissioners of Her Majesty's Treasury to acquaint you for the information of Lord Stanley, and in order that the requisite notification may be made to the Government of Canada, that in further pursuance of the arrangements for raising the sum of 1,500,000*l.* by way of loan for the construction of Public Works in that Colony, my Lords have accepted tenders for the purchase of further Debentures for 300,000*l.* in the following proportions; viz., 50,000*l.*, at 109*l.* 1*s.* per cent., producing 54,525*l.*; and 250,000*l.* at 109*l.* per cent., producing 272,500*l.*; and that the produce thereof, amounting to 327,025*l.*, will be paid to the credit of the Canada Loan Fund Account at the Bank of England.

I am further to request that you will move Lord Stanley to give the necessary directions for apprizing the Governor-general of Canada, that the debentures thus about to be issued, will bear interest at the rate of four per cent. per annum from the 1st instant, to be paid half-yearly, the first instalment of such interest therefore becoming due on the 1st of January 1844.

I am, &amp;c.

(signed) *C. E. Trevelyan*.

## C A N A D A.

## CANADA.

— No. 1. —

(No. 90.)

COPY of a DESPATCH from Lord *Stanley* to Governor the Right hon.  
Sir *Charles Bagot*, G. C. B.

Sir,

Downing-street, 3 March 1842.

I HAVE had under my consideration the Bill passed by the Legislature of Canada in September last, and reserved by the late Governor-General of that province for the signification of Her Majesty's pleasure, intituled "An Act for the Disposal of Public Lands."

I have also had before me the Report of the Commissioners of Colonial Lands and Emigration, to whom I referred this Act for any suggestions which their general acquaintance with enactments relating to lands in the colonies might enable them to offer with advantage on this occasion. The Commissioners have bestowed so much care in the examination of the Act, and their report states with such precision their reasons for the conclusions which they have formed on the details of this measure, that any abridgement would diminish the force of their remarks. I therefore send you a copy of the whole report for your information, and accompany it now with the expression of my own views on the subject.

The differences existing between the cases of Canada and Australia, pointed at by the Commissioners, are sufficient, in my opinion, to justify the adoption of a different system in the former colony for the disposal of lands. I do not, therefore, offer any objection to the general rule of sale by a fixed price. The plan of making free grants of 50 acres of land I consider to be open to much more serious objection. To a very limited extent, and for the purpose of opening new districts, and keeping up communications, I can conceive the plan working beneficially; but I concur with the Commissioners in laying little stress on the nominal conditions imposed, so far at least as relates to the power of enforcing them. It appears to me, that this scheme will, besides, operate as a serious interference with the supply of labourers for hire, and will be justly complained of by companies and others who have bought Crown lands on speculation. If small free grants to emigrants with very limited means become common, it is evident that their chance of effecting sales to the same class is seriously deteriorated. If this clause of the Bill should stand, it will be imperative on you to be most cautious in the exercise of your discretionary power; for the pressure upon you, when it is known that you have the power, will be overwhelming; indeed I entertain very considerable doubt as to the prudence of your acceptance of such a responsibility. I would press, therefore, upon your attention the precautions recommended by the Commissioners on the subject of the free grant allotments, which appear to me to be well worthy of notice.

With respect to the clauses which provide for the commutation of existing claims to land by the issue of scrip or orders for nominal sums of money, which are to be received as money in the purchase of the public lands, I have to observe that there is no explanation afforded of the grounds on which 4*s.* per acre is assumed as the price. The Commissioners represent that the upset price in the western part of the province has been considerably higher, and that they are under the impression that the average selling price for the last 10 years has not been less than 8*s.* per acre. I hope, also, that it is quite clear that the Act will not include in this system of commuting claims to land by the means of scrip, any claims to the free grants of 50 acres, as any such provision would defeat the intention of the grant.

I trust that the Legislature will not be indisposed to give a fair consideration to such of the preceding objections as may not be susceptible of an answer by the

CANADA.

appropriate amendment of the Act; and in that reliance I propose, after the expiration of the 30 days during which the Bill must lay on the tables of both Houses of Parliament, and, if no address to the Queen be made on the subject, to advise Her Majesty to confirm it.

I shall have no objection to your communicating to the Legislature, by message, the suggestions of the Commissioners in respect to the application of the money derived from the sales of land to purposes of emigration.

I have, &c.  
(signed) Stanley.

Encl. 1, in No. 1.

Enclosure 1, in No. 1.

(No. 96.)

4 & 5 Vict. c. 100.

COPY of an Act passed by the LEGISLATURE of the PROVINCE of CANADA, in the Fifth Year of the Reign of Her Majesty Queen VICTORIA, intituled, "An Act for the Disposal of Public Lands."

Preamble.

WHEREAS it is expedient to provide by a law, applicable to all parts of this province, for the disposal of public lands therein; be it therefore enacted, by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada," and it is hereby enacted by the authority of the same, that the Act of the Parliament of the late province of Upper Canada passed in the second year of the reign of Her Majesty, and intituled, "An Act to extend and continue for a limited Period the Provisions of an Act passed in the First Year of Her Majesty's Reign, intituled, 'An Act to provide for the Disposal of the Public Lands in this Province,'" and the Act thereby continued be and the same are hereby repealed.

2 Vict. c.  
1 Vict. c.  
repealed.

No free grant of land hereafter.  
Claims to free grants to be determined by Governor and Council.  
Scrip to be issued for claims to land duly allowed, and to be received in payment for purchase of lands.

2. And be it enacted, that, except as hereinafter provided, no free grant of public land shall be made to any person or persons whomsoever.

Scrip when and how to be issued;

3. And be it enacted, that all claims to free grants of land arising out of or under the authority of any Order in Council, or other regulation of the government now in force, shall be adjudged upon and determined by the governor of this province, by and with the advice of the Executive Council.

To be assignable by delivery.  
Lower Canada militia land scrip to be assignable by delivery, and received in payment for public land.

4. And be it enacted, that all claims for land under any Order in Council, or other regulation of the government now in force, heretofore allowed by competent authority, or which shall hereafter be allowed by the Governor in Council, shall be commuted for land-scrip or orders for nominal sums of money to be issued by the Commissioner of Crown Lands, and such scrip shall be received as money upon all sales of lands of the Crown in this province, the proceeds of the sales of which lands are not or shall not be set apart for any specific purpose.

Receipts to be taken for scrip issued.

5. And be it enacted, that upon payment of the fees chargeable upon any such grant of land, in cases where the grant is subject to such fees, and free of any expense where the grant is free of fees, the Commissioner of Crown Lands, in lieu of locating the claimant, shall issue to him or her scrip or orders for nominal amounts in money equal to the amount of his or her grant, calculating the value of such grant in that part of Canada formerly called Upper Canada, at the price of four shillings currency per acre, and that the said scrip shall be issued in amounts not greater than five pounds in any one note, and that such notes shall be assignable by delivery.

Scrip to be received in payment of arrears.  
Scrip to be issued for claims to land

6. And be it enacted, that the militia scrip or orders for nominal amounts in money heretofore issued in that part of this province formerly called Lower Canada, under the authority of the proclamation of the Governor-general of that province, bearing date the eleventh day of December in the year of our Lord One thousand eight hundred and thirty-eight, shall be assignable by delivery, and shall be received in payment upon all sales of public land in this province, the proceeds of which are not or shall not then be appropriated for any specific purpose, and shall be received at and for the nominal rate at which the same were issued.

7. And be it enacted, that the Commissioner of Crown Land take receipts for any such scrip as may be issued, and shall issue the said scrip to the claimant, or his or her legal representative, in full discharge of the claim; and such scrip may be paid by delivery upon any sale of the public land aforesaid; and that the receipts to be given for payments upon sales of the said public land shall specify the amount received in money, or in the scrip aforesaid respectively.

8. And be it enacted, that the said scrip shall be received for deferred payments or instalments upon sales of public lands heretofore made, as well as upon sales to be made under the authority of this Act.

9. And be it enacted, that all rights and claims to land assigned under the authority of the Acts hereby repealed, shall be exchanged for the scrip aforesaid by the Commissioner of

## CORRESPONDENCE RELATIVE TO EMIGRATION.

3

of Crown Lands, upon application of the assignee, or his or her authorized agent, and such scrip shall thereafter be assignable by delivery.

10. And be it enacted, that no assignment of any right or claim to land assigned under the authority of the said above repealed Acts, which shall have been made by any married woman conjointly with her husband, shall be considered void or voidable by reason of the coverture of such married woman.

11. And be it enacted, that from and after the passing of this Act, all unlocated rights or claims to public land shall be held and considered to be personal goods and chattels, and not liable to be governed or adjudged upon by the laws relating to real or landed property.

12. Provided always, and be it enacted, that nothing in this Act contained shall be held to alter the law as respects rights to land located, or to make the same personal property, or to alter the descent or disposition thereof, or the adjudication of claims thereto arising from assignment, devise, bequest, or other disposition thereof, or the rights of the owners thereof, in any respect whatsoever, or to make good any claims thereto, forfeited or held to be forfeited by reason of non-performance of the conditions upon which the same have been assigned or located.

13. And be it enacted, that no new claims to land founded upon any regulation or order of the Government shall be allowed or entertained unless made before the first day of January which will be in the year of our Lord One thousand eight hundred and forty-three, except where the parties originally interested and claiming shall be under the age of twenty-one years on the said day.

14. And be it enacted, that the price of such public lands shall from time to time be fixed and ascertained by the authority of the Governor of this province, by and with the advice of the Executive Council thereof.

15. And be it enacted, that it shall and may be lawful for the Governor of this province in Council, to appoint in each municipal district a resident agent for the sale of public lands, who shall be authorized and empowered, under the direction of the Commissioner of Crown Lands, to make sale of public lands within the district for which he acts, at such prices as shall have been under the authority of this Act duly fixed and ascertained.

16. And be it enacted, that every such district agent shall keep regular accounts of sales of land within his division, and make the said sales appear in the plans or maps in his office.

17. And be it enacted, that it shall not be lawful for any district agent appointed under the authority of this Act, directly or indirectly to purchase any land which such district agent shall be appointed to sell as aforesaid; and if such district agent shall offend in the premises, he shall forfeit his said office.

18. And be it enacted, that the purchase-money upon the sale of such public land, or the scrip paid in therefor, shall, in the first instance, be paid to the district agent, who shall transmit the same to the Commissioner of Crown Lands, whenever the amount in the hands of such agent shall exceed fifty pounds currency, deducting therefrom his per-centage, as hereinafter provided; and, in default of such remittance, he shall be liable to be charged at the rate of fifteen pounds per cent., as a penalty, per annum, for the time he shall retain any such sum in his hands, after the amount shall become remittable, as aforesaid; and the district agents, upon the receipt of any purchase-moneys, or scrip, shall give the purchaser or purchasers a receipt for the same, specifying therein the number of the lot, or the land purchased, or otherwise sufficiently describing the same; and such receipt shall bear date on the day on which it is actually signed, and shall authorize the purchaser to take immediate possession of the lot so sold, and to maintain actions and suits in law or equity against any wrongful possessor or trespasser on such land, as fully and effectually as if the patent deed had issued on the day of the date of such receipt.

19. And be it enacted, that so soon as the purchase-money of any particular lot or quantity of land shall have been paid up in the manner aforesaid, the purchaser or purchasers shall thereupon become entitled to receive letters-patent for the same, free of further expense, and subject only to such reservations as are usually made in letters-patent of the same description; and such letters-patent shall be transmitted by the Commissioner of Crown Lands to the agent for the district in which the lands are situate, within the space of thirty days after the purchase-money shall have been paid, and the payment duly notified to the Commissioner of Crown Lands, unless, by reason of any unforeseen event or unavoidable necessity, the same cannot be so transmitted; and it shall be the duty of the district agent, upon the receipt of such letters-patent, to deliver the same to the owner or owners thereof, upon demand, without charge.

20. And be it enacted, that the Commissioner of Crown Lands for the time being, and also every district agent, shall, before entering upon the duties of his office, give good and sufficient security, to the satisfaction of the Governor of this province in Council, for the faithful discharge of his duty, and for the due payment of all monies which shall in the course thereof come into his hands; that is to say—for the payment of such monies or scrip as shall come into the hands of any district agent aforesaid to the Commissioner of Crown Lands, and for the payment of such monies as shall come into the hands of the Commissioner of Crown Lands, or the balance remaining unexpended in his hands, to the receiver-general of this province.

21. And be it enacted, that the district agents shall receive such a per-centage upon the amounts received by them, as well as such payments for inspection of lands and other extraordinary duties performed under the direction of the Commissioners of Crown Lands, as the Governor of this province in Council shall direct and appoint.

22. And be it enacted, that it shall be the duty of the Commissioner of Crown Lands to pay over, once in three months, to the receiver-general of this province, all sums remaining in his

under the Acts hereby repealed.

Certain assignments by married women declared valid.

Claims to public land to be personal property.

Proviso as to lands located.

No new claim to land admitted after 1st Jan. 1843, unless the claimant be a minor on that day.

Price of land, how to be fixed from time to time.

Governor to appoint a resident agent in each district for the sale of lands.

Duty of agents.

Agents not to purchase lands.

Agents to receive payments for lands, and to remit when over 50*l.* in their hands, under a penalty.

Receipts for payments, how to be made.

Letters patent to be issued, free of expense, within thirty days after payment of purchase-money.

Security to be given by Commissioner of Crown Lands and district agents.

District agents, how to be paid.

Commissioner of Crown Lands to pay over

balance to the Receiver-General every three months.

And to render detailed accounts to Government half-yearly, to be submitted to the Legislature.

Lists of lands for sale to be printed and exhibited.

To appear in Official Gazette and one public newspaper.

Governor may direct sales to be made to occupant in certain cases.

Free grants of 50 acres may be made to actual settlers in certain cases.

Governor and Council may appropriate lands for public purposes.

Proviso.

Errors in grants of public lands, how to be rectified.

Proviso.

Proviso.

Courts in Upper and Lower Canada empowered to annul patents for land issued through mistake.

Practice of court regulated.

Commissioner to keep a register for assignments of claims of lands located. Patent may issue in the name of the assignee.

his hands arising from the sale of the public lands aforesaid, retaining a sum sufficient to meet the contingent expenses of the department, but not exceeding five hundred pounds.

23. And be it enacted, that the accounts of the Commissioner of Crown Lands shall be rendered to the government of this province for half-yearly periods; and that copies of the said accounts, containing the particulars of the receipts and expenditure of the office, with lists of all sales made up to the period of accounting ending next before the commencement of each Session of the Provincial Parliament, shall be laid before both Houses within ten days next after the commencement of each Session of the Legislature.

24. And be it enacted, that it shall be the duty of the Commissioner of Crown Lands, at least thirty days before any sale shall be made under the authority of this Act, to cause printed lists of the lands open for sale to be exhibited in the office of Crown Lands, and in the offices of the respective agents in whose districts the lands shall respectively be for sale, specifying the prices of such lands and the terms of payment: and copies of such printed lists shall be published in the official Gazette, and in one public newspaper in the district, in which the lands are respectively situate; and such lists shall be revised once in each year, under the direction of the Commissioner of Crown Lands.

25. And be it enacted, that it shall and may be lawful for the Governor of this province in Council, without any such publication, to direct sales of public land to be made at a fair valuation to any lessee or occupant; or to any individual who, from the peculiar situation of the property applied for, would be liable to injury by the disposal of the land to any other person or persons than such lessees or occupants or other individuals interested as aforesaid.

26. And be it enacted, that, notwithstanding anything in this Act contained, it shall and may be lawful for the Governor of this province, with the advice of the Executive Council, to appropriate as free grants any public lands in this province to actual settlers upon or in the vicinity of any public roads in any new settlements which shall or may be opened through the lands of the Crown, under such regulations respecting such settlements as shall from time to time be made and declared by the Governor of this province in Council: Provided always, that such grants shall not be made to any person or persons who shall have heretofore received any grant of land from the Crown; and provided also, that the extent of any grant so to be made shall not exceed fifty acres; nor shall any such grant be made to any other than natural-born or naturalized male subjects of Her Majesty of the full age of twenty-one years.

27. And be it enacted, that it shall and may be lawful for the Governor of this province, by and with the advice of the Executive Council, to set apart and appropriate such of the said public lands as shall be deemed expedient to be so set apart and appropriated for the site of market places, gaols, court-houses, places of public worship, burying-grounds, schools, and for other like public purposes; and at any time before the issue of letters-patent therefore, to revoke such appropriation and setting apart as may seem expedient, and to make free grants for the purposes aforesaid, the trusts and uses for which the grants shall be made being expressed in the letters-patent granting the lands therein specified: Provided always, that no such grant for any such purpose shall be for a greater quantity of land than ten acres for every one of the purposes aforesaid, in any one instance in which, or for any one occasion for which, land shall be granted as aforesaid.

28. And be it enacted, that in all cases in which grants or letters-patent for land shall have issued for the same land inconsistent with each other, through error or mistake, and in all cases of sales or appropriations of land inconsistent with each other, for the same land, and in all cases wherein by reason of false survey the land supposed to be conceded shall be found wanting in the whole or in part, it shall and may be lawful for the Governor of this province in Council to decree and order a new grant equal in extent, or equivalent to the land lost, according to the discretion of the said Governor in Council: Provided always, that no such claim on account of any error in survey shall be entertained or granted unless the land found wanting shall be equal to one-fifth of the whole quantity described to be contained in the particular lot or parcel of land granted or conceded; and provided also, that no such claim for indemnity shall be entertained after the space of five years from the issue of the letters-patent granting or conceding such lot or parcel of land, or shall extend to cover the value of any improvements made by the grantees in error or mistake under any such grant.

29. And be it enacted, that it shall and may be lawful for the Court of Chancery in that part of this province formerly called Upper Canada, and for the Court of King's Bench in that part of this province formerly called Lower Canada, upon action, bill or plaint to be exhibited in either of the said Courts respecting grants of land situate in the said parts of this province respectively, and upon hearing of the parties interested, or upon default of the said parties, after such notice of proceeding as the said courts shall respectively order, in all cases wherein patents for land have or shall have issued through fraud or in error or mistake, to decree the same to be void; and upon the registry of such decree in the office of the provincial registrar of this province, such patents shall be deemed void and of none effect to all intents and purposes whatsoever, and that the practice and proceeding in court in such cases shall be regulated by orders to be from time to time made and issued by the said courts respectively.

30. And be it enacted, that it shall be the duty of Her Majesty's Commissioner for the sale of Crown Lands for the time being to keep a book for the entry, at the option of the parties interested, of the particulars of any assignments made as well by the original nominee or locatee, as also by any subsequent assignee or assignees of any such claim on lands heretofore located in respect thereof, such assignment or assignments being first produced or exhibited

## CORRESPONDENCE RELATIVE TO EMIGRATION.

bited to the Commissioner aforesaid, together with an affidavit of the due execution thereof sworn before any justice of the peace, who is hereby fully authorized to administer the oath in this behalf, and such affidavit shall truly express the time of the execution of such assignment or assignments; and thereupon it shall be the duty of the said Commissioner to cause the material parts of every such assignment to be entered or registered in such book of entry or registry, and to indorse on every such assignment a certificate of such entry or registration; and every such assignment so entered or registered shall be valid against any one of a previous date or execution, but not then entered or registered, except in cases of express notice; and in all cases of such assignments being duly registered, it shall and may be lawful that the patent issue in the name of such assignee or assignees: Provided always, that in case the subscribing witness or witnesses to any such assignment shall be deceased, or shall have left the province, it shall and may be lawful for the said Commissioner to register any such assignment upon the production of an affidavit or affidavits proving the death or absence of such witness or witnesses, and proving also the handwriting of such witness or witnesses.

CANADA.

Proviso.

31. And be it enacted, that any person or persons wilfully swearing falsely to the execution of any such assignment, or to the handwriting, or to the death or absence of any such witness or witnesses, shall be liable to the pains and penalties of wilful and corrupt perjury. Punishment for false swearing.

32. And whereas by reason of the receipt of land-rights in lieu of money in payment upon sales of clergy reserves in that part of the province lately called Upper Canada, a certain sum of money is due and owing to the fund arising from the proceeds of clergy reserves, which under the said Act hereby repealed was to be repaid out of the proceeds of the lands of the Crown; Be it therefore enacted, that it shall and may be lawful for the Governor of this province to direct and order the Commissioner of Crown Lands to pay over all proceeds of sales of Crown Lands over and above the expenses attending the sale thereof, in like manner as proceeds of sales of clergy reserves, until the debt or sum due and owing to the clergy reserve fund shall be fully discharged. Governor may direct the Commissioner of Crown Lands to pay the balance due to the Clergy Reserve Fund in Upper Canada,

Passed by the Legislative Assembly, Wednesday, 25th August 1841.

## Enclosure 2, in No. 1.

Sir,

Colonial Land and Emigration Office,  
9, Park-street, Westminster, 19 February 1842.

Encl. 2, in No. 1.

WE beg to acknowledge the receipt of your letter of the 22d ult., transmitting to us, for our consideration and report, a Bill passed by the Council and Assembly of Canada in September last, and reserved by the late Governor-general of that province for the signification of Her Majesty's pleasure thereon, entitled (No. 96) "An Act for the Disposal of Public Lands."

The object of this Bill is to regulate the method of disposing of the public land of the province; and we have the honour to report, that the principle which has been adopted by the Canadian Legislature is that of sale by a fixed, though not necessarily uniform, price, subject to the exception, in certain cases, of free grants, which are not to consist of more than 50 acres. This principle, together with the exception to which it has been made subject, was strongly recommended by the late Governor-general, who also obtained for it the sanction of the Secretary of State.

It is true that the experience of the large prices occasionally realized for land in New South Wales has led to the adoption, for the Australian colonies, of a mixed system of sale, namely, of first offering the lands to public competition, and then leaving the unsold portion to be purchaseable at the upset price, the object being to prevent the loss which might possibly be occasioned to the revenue, if lands under all circumstances and of every quality were sold at the same price. In Canada, however, under the auction system which prevailed there for several years, the variations in the price of land have been very inconsiderable. Lord Sydenham, indeed, in the despatch in which he announced his intention to establish, upon his own authority, the method of sale by fixed price, states that it was the result of Lord Durham's inquiry, which had been confirmed by his own, that "the increase of price from competition at the time of sale was nugatory." The circumstances of Canada are such as to show the inherent probability of this result. On the one hand, large tracts of waste land are the property of individuals who would be anxious to dispose of them, and to undersell the Government; and, on the other hand, an unlimited supply of public land can be obtained at a small fixed price in the neighbouring states. Competition, therefore, in the purchase of public land in Canada would seem highly improbable; while the delays and uncertainties attending even a modified system of auction must necessarily act as a discouragement in a country where the facilities for acquiring land abound in every direction. In the same despatch to which we have already referred, Lord Sydenham says that he feels it unnecessary to reproduce the arguments which are so ably and conclusively stated in the Report, forming Appendix (B.) to Lord Durham's Report in favour of the mode of disposing of waste lands by fixed price; it is sufficient for him to say, that all his "inquiries upon the subject have led to a full conviction of their correctness, and of the propriety of their being practically adopted." Considering, then, the circumstances of the colony, and the high authority by which the system is supported, it is perhaps not unreasonable to conclude that the valid objections which have been urged against a fixed price in New South Wales, where active competition has been known to take place, are not applicable in the case of Canada; and we may add, that the present Act empowers the Governor in Council to fix and ascertain the price of public lands from time to time. It will thus be possible to prevent the alienation of any district or large portion at a price considerably below what may be considered its proper value; and we conclude that, should the Crown possess any valuable lands in long-established towns, they will be exempted, if not from the general rule of sale by fixed price, at least from the ordinary price of the colony: it further follows, that it will be within the discretion of the Governor to lower the price of land; but justice to former purchasers requires that this authority should be most sparingly, if at all, exercised.

Before adverting to the chief modification of the principle of the fixed price which is introduced into this Act, we may mention that the Governor in Council is authorized to direct sales to be made, at a fair valuation, to any lessee or occupant who, from the peculiar situation of the property applied for, would be liable to injury by the disposal of the land to any other person. It seems very proper that such discretionary power should be granted to the Governor; but we recommend that, in the exercise of that discretion, it should be a rule that no land should ever be sold for less than the established price of ordinary lands; and we would also express our hope that, as the Governor is empowered to show this consideration to occupants, as well as lessees or proprietors, he will think it desirable in all cases to give the preference, in the purchase of any land which has been squatted on, to the person so occupying it, and not allow another to obtain the benefit of his labour and capital, by purchasing the land away from him at the fixed price.

We come now to the consideration of the plan of free grants which it is proposed to permit by law as the exception to the more general rule of sale. By the 25th section the Governor in Council is empowered to appropriate as free grants any public lands to actual settlers upon or in the vicinity of any public roads, in any new settlements which may be opened through the lands of the Crown, under such regulations respecting such settlements as shall from time to time be made by the Governor in Council, provided that the extent of any such grant shall not exceed 50 acres. The plan therefore, it will be seen, contemplates that

No. 124. June 22,  
1840, printed in  
Par. Paper, 613,  
1840, p. 95.

that the Government will undertake the opening and regulation of certain new settlements and the construction of public roads through them; and that to actual settlers upon or in the vicinity of these roads it may make grants of not more than 50 acres.

By this provision the Legislature of Canada no more than gives its sanction to a plan which had already been carried into operation under the authority of the late Governor-general. In the upper division of the Province, and we believe in the lower also, a road had been opened at the expense of Government, and it had already been announced that lots of 50 acres would be laid out on each side of it, and granted to settlers on conditions of which the following are the principal: Intending settlers are not to apply for the land until they are ready to reside upon it, and they must have the means of maintaining themselves and families until a crop can be raised from the ground. The patent will not be issued until one-third of the land has been cleared and placed once under crop, and for effecting this amount of improvement four years are allowed from the date of location.

We must confess we can place no reliance on these precautions. Universal experience, wherever settlements have been formed on the waste lands of the Crown, has shown that it is in vain that such conditions are imposed. However reasonable in themselves, or well adapted to the circumstances they may seem, there is the fatal objection to them in practice that they cannot be enforced. The Government cannot really ascertain whether every applicant has the means of supporting himself and family until a crop is raised from the ground, nor can it ensure his making the best use of those means so long as they are required for the purpose; nor, on the other hand, can there be perfect security that these free grants will not be made to persons above the class of labourers for whom they are intended, and possessed of capital applicable to the purchase of the land. Again, the Government can in no way ensure a settler's remaining upon the land, which is the main object of the whole plan, if the prospect of improving his condition be presented to him elsewhere; neither can it ever really exercise the power of ejectment, if at the end of the period of location the prescribed amount of improvement has not been effected on the ground; the point itself being one which it is so difficult to ascertain. Adverting to these considerations, we could not perceive without expressing some apprehension any recurrence to the system of conditional grants in any of the colonies.

At the same time we must mention, that in this case it was had recourse to by the late Governor-general, not as being in conformity with sound principles of colonization, but on political grounds, and with the view of retaining British emigrants in the province. The principle indeed of the system was strongly supported by Sir G. Arthur and by authorities connected with the disposal of land in the upper division of the province. In their arguments, however, too much stress we think was laid upon the success which had attended some settlements effected in a similar manner, but to a limited extent, and under the watchful superintendence of private parties individually interested in the success of the undertaking. These examples, we think, would form but an imperfect guide to the operation of the system when on a great scale and under the management of the Government.

We are far, however, from submitting the above-mentioned remarks as objections to the confirmation of the Act, as the clause is merely permissive, and the result will doubtless be much affected by the mode in which it may be carried into operation by the Governor. We hope that the provision of the law of only laying out these free grant allotments upon the line of some road to be opened at the public expense will be strictly adhered to and that no latitude of interpretation will be given to the expression in the Act, of settlers "in the vicinity" of these public roads. It would seem further to be desirable that the settlers should not receive their orders of location and be placed on the ground until the means had been provided, and the necessary preparations made, for commencing the construction of the road. The certainty of employment at wages appears to us to afford the only means by which the appropriation of uncleared lands by persons without capital, and exclusively of the labouring class, can be formed with any prospect of success. This condition may perhaps be also deemed the more essential, looking to the political object for which the plan has been established; for, as we have already observed, should the parties placed on these settlements meet with difficulties and obstacles which their want of means prevent them from readily overcoming, or indeed should there be any check to the prosperity of the different settlements, there will of course exist no power of compelling grantees to remain on the land when once they found it for their interest to quit it.

Having offered these observations upon what appear to be the leading features of the Bill, we shall now briefly advert to the most important of its remaining provisions.

The first in order are the clauses which provide for the commutation of existing claims to land by the issue of scrip or orders for nominal sums of money, which will be received as money in the purchase of the public lands. The land claims which are to be thus commuted are stated to be those which have arisen out of any orders or regulations "of the government now in force." What the extent of these claims may be we are not aware. We take it for granted, however, that they are not meant to include any demands which may have been made for free grants of 50 acres under the system established by Lord Sydenham, as it would obviously have defeated the sole object of his plan, if such claims as those were to be met by the issue of a scrip made assignable on delivery, and therefore affording no security for a supply of labour on the roads, nor for the settlement of the land. Reference is also made to land claims which may have been assigned under the authority of the former land Acts of Upper Canada which are by this Act repealed: and it is provided that they may be exchanged for scrip, upon application of the assignee. The militia scrip moreover of Lower

## 8 CORRESPONDENCE RELATIVE TO EMIGRATION.

## CANADA.

\* See Par. Paper, 2,  
1839, p. 170.

Canada is made assignable on delivery, and is to be received in payment on the purchase of the public lands. It may be right to mention, that by the Papers presented to Parliament\*, Lord Durham's Proclamation, authorizing the issue of this militia scrip, appears to bear date the 11th September 1838, but that the date assigned to it in the present Act is the 11th December 1838.

The method of disposing of all claims to land, by granting assignable land orders instead of fixing the locations and granting specific portions of land, appears to have the advantage of preventing all uncertainty as to the value of the boon conferred, and of enabling the claimant to obtain land where it best suits him; or should he not desire to hold land, to part with his order to others willing to purchase it, and therefore more likely to undertake the improvement of the land. By the present Act no value is put upon the land in the lower division of the province, and we conclude, therefore, that it will, for the generality of claims, be taken at the price which will now be fixed on ordinary land by the Governor. But as far as regards militia-men, it was laid down in Lord Durham's Proclamation that the commutation should be according to the average price of public lands for the 10 preceding years, and to these particular claims therefore, should any remain outstanding, and not already converted into scrip, the same principle will, we suppose, continue to be applied. For Upper Canada, the value of land is by this Act to be calculated in the issue of scrip at 4s. per acre; but upon what principle the price has been so fixed does not appear on the face of the Act. The upset price has hitherto been considerably higher, and the average selling price for the last 10 years has, we believe, not been less than 8s. per acre.

The remaining provisions of the Act appear to us to be well calculated to facilitate the sale of waste lands, and to promote the general settlement of the country. We are glad to observe that resident agents for the sale of land are to be appointed in each municipal district. They will be under the direction of the Commissioner of Crown Lands, and it will be their business to keep maps and plans of surveyed lands for inspection at their office, to publish lists of the saleable lands within their district, with the prices affixed to them, 30 days before any sale is effected, and at those prices to sell them to any person willing to purchase them. They will be paid by a per centage upon the amount of money which they receive for the sale of land, and, together with the Commissioner of Crown Lands, are to give security for the faithful discharge of their duties, and due payment of all moneys which they may receive. Payment for land will be prompt, and the purchaser will be entitled to letters patent granting the land within 30 days after the payment of the purchase-money. Indemnity is further provided for purchasers in cases of double grants, or of incorrect surveys, and a power is granted to the courts of law in each of the former divisions of the province to declare void letters patent which may have been issued through fraud or in error. The letters patent we observe are to be free of expense, but are to contain the usual reservations. In regard to this latter point it may be right to mention, that it was the opinion of Lord Sydenham, as expressed in his despatch, No. 179, 12th October 1840, that if the reservation of minerals had any effect at all, it must be injurious; and as regards the reservation of timber, that some alteration would be desirable; and he requested, therefore, that the clause relative to the reservation in grants might be omitted from the Royal instructions. We are not aware whether or not this request was complied with, but we thought that it might be useful to draw attention to it on this occasion.

See Par. Paper,  
Canada, 1841,  
p. 37, presented  
by command.

The reservation of  
minerals has been  
excluded from the  
Royal instructions.

A further provision of the present Act is to empower the Governor in Council to reserve such small portions of land, never to exceed in each case 10 acres, as may be required for public buildings, burying-grounds, and other like purposes of a strictly public nature. We do not observe any provision for reserving such ground as may be required for public roads.

Finally, facilities are afforded for the registry of assignments of claims on land heretofore located, and the Act concludes with making provision for the repayment of a debt due to the Clergy Reserve Fund of the upper division of the province.

Having thus gone through all the material provisions contained in the Act itself, we may perhaps be permitted to add a very few brief remarks, since another opportunity may not present itself, on some enactments that it is proposed to introduce into the Act of Parliament on Australian sales, and which have not yet been adopted in any Canadian legislation. No allusion is made in this Act to the application of the money derived from the land; and we are aware that upon the extent to which any special appropriation may be practicable for this purpose, having regard to the general finances of the province, we are not in possession of sufficient information to judge; but we are anxious not to pass over this opportunity of throwing out the remark, that if some fixed proportion at least of the proceeds of land can be devoted to the introduction of emigrants, it is a measure recommended by peculiar considerations of expediency. There is this essential difference between a revenue derived from the sale of lands and the general revenue of the colony, that the one is voluntary and the other compulsory. The former, therefore, increases in proportion to the inducements which may be held out to persons with capital to effect a purchase of waste land. But no more powerful inducement can be held out to such parties than that the value of their purchase-money shall be returned to them, either by the introduction of labourers, through whose aid alone they can clear and cultivate their land, or by effecting local improvements of a public nature, affording facilities of communication, such as roads, bridges, and the like. This encouragement is entirely wanting, if the purchase-money is to be absorbed into a common fund, forming the revenue of the colony, and applicable to the public exigencies of a general nature, from which the individual purchaser would only indirectly benefit as a member of the whole community.

Again

## CORRESPONDENCE RELATIVE TO EMIGRATION.

9

CANADA.

Again, in the proposed Act of Parliament on Australian lands, means are provided for enabling intending purchasers to deposit money in this country, and acquire a right of nominating properly qualified emigrants for a free passage either to the full amount or to the extent of some fixed proportion of their deposits. We think, for reasons which we expressed in the latter part of our report of the 17th August last, that if some such measure were also to be adopted by the legislature of Canada, it would very probably be found to tend most decidedly to improve the character of the emigration to the province, and to accelerate the sale and settlement of its waste lands.

In conclusion, we have the honour to state that we have no objection to report to the confirmation of the present Act. We would only venture to recommend that the attention of Governor-general should be invited to the expediency of a cautious use of his discretionary power in giving effect to those provisions of the Act which have been pointed out, and that, especially as regards the system of free grants, the utmost care be taken that they be not bestowed upon persons possessing capital, and only upon the labourers for whom they are intended, in those places where regular employment upon Government works can be afforded to them.

As great anxiety prevails in this country to obtain information relative to these free grants of land, we beg to suggest that full information should be forwarded to this country, with as little delay as possible, relative to the extent to which it may be intended to lay them out for appropriation, the part of the province in which they may be placed, and the conditions annexed to the location of them.

It will be desirable also that a statement should be furnished of the prices fixed by the Governor on the public lands, together with the general size of the lots, and the parts of the province in which they are situated.

We have, &c.

COPY of a DESPATCH from Governor the Right Hon. Sir *Charles Bagot*,  
G. C. B. to Lord *Stanley*.

No. 2.  
Despatch from  
Sir Charles Bagot  
to Lord Stanley.  
11 April 1842.

Government-house, Kingston,  
11 April 1842.

My Lord,

I HAVE the honour to acknowledge the receipt of your Lordship's despatch, of the 3d March, No. 90, on the subject of the Bill passed, during the last session of the legislature of this province, intituled, "An Act for the disposal of the Public Lands." Your despatch is accompanied by a report from the Commissioners of Colonial Land and Emigration, for whose consideration the Bill had been referred.

Upon so much of this report as expresses concurrence in the provisions of the Bill, it is unnecessary for me to make any comment. I therefore proceed at once to the arguments urged against certain of its clauses, and more especially against the system of free grants of 50 acres extent, in the correctness of which your Lordship appears to concur.

In the argument on this point the Commissioners have evidently in their recollection, the failure which has attended former conditional grants, but they do not seem sufficiently to understand the difference between the system contemplated by the present Act, and that which, as they say, has been condemned by universal experience. Formerly, claims to land were created in the most lavish and improvident manner, not within the province alone, but in the mother country. For many years, every discharged soldier was entitled to land; every intending settler received an order for it in proportion to his alleged capital; every leader of a party was endowed according to the number of his pretended followers; in short, almost every one who applied, obtained an order for land, until it seemed as if the Government had no other object but to divest itself, as quickly as possible, of all control over the unsettled portions of the province. When an individual who had obtained an order for one of the smaller grants of 100 or 200 acres presented it at the land office, he received a location ticket for a particular range in a particular township, marked off on the office chart. To this location ticket the condition of performing certain settlement duties was attached. His name was then inscribed on the chart, and he started

CANADA.

off to seek his land, possibly 100 miles distant from the seat of Government. An inhabitant of the old world, he was little prepared for the difficulties and dangers of forcing his way through the primeval forest, and when at last he got to his land, if indeed he ever got there, he found himself many miles, perhaps, distant from a human habitation; shut in by the almost impenetrable forest, unacquainted with the manner of clearing it, and without any one to assist or instruct him. Under such circumstances, he most likely got disheartened, and retracing his steps, either became a labourer for wages, or went off to the United States, but not without having first disposed of his location ticket, probably for the merest trifle, to some of those land speculators who were ever on the watch for such opportunities. His name nevertheless remained on the chart, and there was nothing to indicate that he had not become a settler. The next applicant for land received the next lot, and probably passed through the same process to a similar result; and thus whole townships were filled up with the names of settlers who had no existence but on the land office charts. At a later date, after the lapse probably of many years, these location tickets were presented at the land office and patents demanded for them, not in the name of the original locatee, but in that of the subsequent purchaser. Proof of settlement duties was required, and was furnished according to law by the affidavits of two individuals before a magistrate. These affidavits were commonly and notoriously false; and could, it is said, be procured to any extent from individuals who had not even seen the land respecting which they professed to certify. The patent was then issued, and the land passed altogether from the control of the Crown.

Such was the case with individual settlers; with those who obtained grants as the leaders of parties the case was still more simple. It was the practice of the leader to purchase the use of the names of so many individuals as were necessary to make up his complement. With these names he obtained the grant; but it was never contemplated that those who lent their names should really receive the land, nor did they ever demand it. A transaction thus commenced in fraud was, of course, carried on in fraud, and large tracts were in this way transferred from the Crown to individuals, without any compensating advantage of any kind whatever, and to the manifest detriment of future settlers.

When such was the system of mismanaging the Crown estate, it is not surprising that all minor correctives failed; the only surprising thing is, that any of the estate remained. Nothing probably but the depreciation produced by the system itself saved any portion of it. The great defects of the system, and what defeated every check which it was attempted to interpose, were the making location tickets transferable, the absence of any practical limits within which the settlement duties should be performed, and the ticket exchanged for a patent, and the not requiring the certificate of a responsible government officer, as to the performance of the location duties. In a young country, and more particularly where grants were extended over so large a surface, these defects were, to some extent, insurmountable; and, unfortunately, in Upper Canada, at least, no sooner was the transferable character of location tickets established, than the interests of a very large and influential body of the inhabitants came into operation against the Crown. But this scheme of free grants, the evils of which no one can feel more strongly than myself, has no analogy whatever with that contemplated by the present Act, nor can the arguments drawn from the one apply at all to the other. The plan of 50-acre grants was first adopted by Sir George Arthur, on the Garrafraxa Road, and two similar settlements were projected by Lord Sydenham, in Lower Canada, one on the Kennebec Road, the other through the townships of Lambton and Forsyth. In each case the object was to promote settlement in a situation where, for political reasons, it was advisable that population should be created. The conditions of settlement, and the reasons for the extent of the grants, your Lordship will find at length in Lord Sydenham's despatch of the 14th January 1841, and its enclosures.

But your Lordship agrees with the Commissioners in considering that no stress can be laid on any regulations for the enforcement of conditions in the case of free grants. After fully inquiring into the matter, I am compelled to say that I cannot concur in this opinion. The causes which led to the failure of the former system do not exist in the present case. The conditions of the 50-acre grants are plain, specific, and of immediate operation; they are to be enforced within

For Lord Sydenham's Despatch, 14 January 1841, vide Correspondence relative to Emigration to Canada, presented to Parliament by Her Majesty's Command, 1841, p. 61.

within a restricted locality, and under the constant supervision of a government agent. If a settler neglects or infringes them, he is superseded at once by another; and, as far as experience has hitherto gone, there has been no difficulty whatever in the matter. So long as these settlements are not unnecessarily multiplied, and for the use of a proper discretion the executive Government is responsible, I cannot understand how any difficulty can arise in regard to the enforcement of the conditions.

Again, the Commissioners say that the Government cannot ascertain whether the applicant has the means of supporting himself and family until a crop is raised. Why not? the question is one of the simplest calculation. A man has a certain number in his family; the amount necessary to subsist them through a certain number of months can be ascertained to a fraction, and if the applicant cannot show that he either has, or has the means of obtaining this amount, he will be rejected.

The next objection is, that there can be no perfect security that the grants will not be made to persons above the rank of labourers and possessed of capital applicable to the purchase of land. The security is, that no man possessed of capital would accept, under the conditions specified, a grant limited to 50 acres, the actual value of which would not exceed from 12*l.* 10*s.* to 25*l.*, and that, even if he did accept it with the intention of expending capital on it and purchasing adjacent land, it would be the very best thing that could happen; the capital which he would expend would increase the value of the Crown property in the neighbourhood infinitely beyond the money price of the grant which he had obtained. So strongly is this felt, that it is now a recognised axiom among a large class of proprietors to make free grants of a certain portion of their land, to increase the value of the rest; and there are probably few individuals who would not willingly grant 50 out of every 200 acres to resident settlers with small capital, in the certainty that the remaining 150 acres would infinitely repay them.

It is next observed, that the Government cannot ensure a settler's remaining on his land if the prospect of improving his condition elsewhere be held out to him. If the settler abandons his land before his four years are completed, he forfeits it, and another settler is put on; if he leaves it afterwards, he will be sure to sell it first to some other person, otherwise he would lose his four years' labour, and sacrifice the increased value which his land must have acquired. In either case, the public does not suffer; indeed, it is a common practice with those who are accustomed to the clearing of land to obtain wild land, for the express purpose of reselling it at an increased value as soon as they have partially cleared it. The arrangement is peculiarly advantageous to emigrants from the old country, whose inexperience in this description of labour makes them quite helpless, and it is one, the independence and freedom of which seems to have peculiar charms for the class who follow it.

Again, it is said that the Government cannot really exercise the power of ejectment if, at the end of the period of location, the prescribed amount of improvement has not been effected. Whether the Government could eject or not can only be proved by experience, though I do not think there would be much difficulty; but in reality the question could scarcely ever be raised. As Government gives no assistance to the settler, he must either work or starve. If he is to work, he will be sure, even assuming that he labours generally for wages, to do enough to his own land to secure him possession of it at the end of the probationary term; if he is idle, he will be compelled, from mere want of food, to leave the settlement, and immediately he does so without leave, his land would be forfeited. The case of an individual remaining on his land four years, and finding the means to subsist himself, without putting about 17 acres once under crop, is so highly improbable, that it need scarcely be insisted on.

The Commissioners further observe, that the arguments of Sir George Arthur and the authorities of Upper Canada would form but an imperfect guide to the operation of the system when on a great scale, and under the management of the Government; and your Lordship remarks, that the pressure on me, when it is known that I have the power of making these free grants, will be overwhelming. I am afraid, from these observations, that considerable misapprehension exists as to the state of this province. I have already observed, that it is now an admitted axiom with individual proprietors to make gratuitous grants of a portion of their lands to actual settlers, with a view to increase the value of the remainder.

For Lord Sydenham's Despatch, 23 Dec. 1840, *vide* Correspondence relative to Emigration to Canada, presented to Parliament by Her Majesty's Command, 1841, p. 50.

remainder. And in Lord Sydenham's despatch of the 23d December 1840, it is mentioned, that from 25,000 to 30,000 acres had, at that date, been put at the disposal of Dr. Rolph by individual landowners, to be applied in this way. As far as I can learn, however, very few, if any, settlers have been procured on these terms. But if eligible settlers are reluctant to accept small free grants from individual proprietors, they will naturally be more reluctant to accept them from the Government, which is sure to impose more stringent conditions, and to enforce them more rigidly. The only countervailing consideration is, that the Government grants would be in the neighbourhood of some road or public work, while individual grants would not have that advantage. But that this reluctance is not exaggerated is proved by experience. On the Garrafraxa Road, which has been open now nearly two years, only 138 families, containing 540 individuals, are now settled; and although this is perhaps the most fertile and healthy section of the whole province, the applications for the grants have never been so numerous as to create any pressure on the Government. On the Lambton Road, which was opened last year, and which is in the immediate vicinity of the British American Land Company's tract, and therefore, in the best district of Lower Canada, only 11 families have been located. The report from the Kennebec Road I have not yet received, but I understand that the settlers upon it are even less numerous. So far, therefore, from my being exposed to pressure from persons desirous of obtaining 50-acre grants, the difficulty will be to find eligible people to accept them. And this fact at once disposes of the apprehension of the Commissioners, that such settlements may be undertaken on too large a scale, even if your Lordship should consider that the responsibility of the head of the Government, and the watchfulness which will be exercised over him by the local Legislature, were not sufficient to ensure the discreet use of his powers. But in reality, the pressure which was felt by former governors, and which made it so difficult for them satisfactorily to manage the Crown estate, arose not from emigrants or settlers, or persons of the lower classes, whose influence must at any time be unimportant; but from the wealthier and more powerful class who had made land speculation a trade, and whose influence in the Legislative Council and Assembly, of which many of them were members, enabled them to resist any attempt to limit the creation of land rights, by which the supply of such rights would have been lessened, and their own power of buying them up brought to an end. But as these parties cannot possibly profit by the 50-acre grants, there is no risk of their attempting to embarrass the Government respecting them; and indeed the mania of land speculation has so much decreased of late years, it has proved so unprofitable, and is so likely to prove still more so under the taxation of the District Councils, that few even of the most eager of the original speculators would desire now to increase their possessions. It is notorious that many persons in Upper Canada, possessed of many thousand acres of wild land purchased from U. E. loyalists, militiamen, discharged soldiers, and others for a mere trifle, are unable to raise a sixpence upon them, and will be obliged to allow a portion to be seized for the payment of the land-tax. The existence of these extensive properties in a wild state has been the greatest drawback to the prosperity of Upper Canada; but it has been brought about, not by grants to actual settlers, but by grants in discharge of claims to persons who had nether the intention nor the means of settling.

The Commissioners, however, appear to suppose that the Government is not so capable of superintending a settlement on a system of free grants as "private parties individually interested in the success of the undertaking." To what examples they refer, in these words, I am unable to learn. The settlement of Colonel Talbot, the only one coming at all within this description, which has been successful, succeeded for the very reason that he had no individual interest in the land on which his settlers were placed. In Lower Canada, the settlements undertaken by leaders and companies have, without a single exception, failed. The Canada Company may, to a certain extent, be considered as successful; but it would indeed be astonishing had it been otherwise, considering the very advantageous bargain which they made with the Government, and the great value of the land which they hold.

In regards to the issue of scrip, the Commissioners observe, "We take it for granted, however, that they are not meant to include any demands which may have been made for free grants of 50 acres under the system established by Lord Sydenham;" and your Lordship also calls my attention to this point. It

seems

seems only necessary to refer to the Act, and to the published conditions, to set this doubt at rest. The Act authorizes the appropriation of free grants to "actual settlers," and the conditions engage that after a settler has been four years on his 50 acres, and has cleared a certain proportion, he shall receive a title to it. No claim can possibly exist on the part of such settlers until after the expiration of four years, and at the end of that period the claim can be for nothing else than the 50 acres on which the settler has been located. The proposed scrip is to be issued for land claims heretofore existent, not for what are hereafter to be created; and even if it were not so, there is no fear that a settler in an improved neighbourhood would dispose of land of which one-third had been under crop, for 4s. an acre.

The value of the scrip in Upper Canada was fixed at 4s. an acre, because that is the value at which land in that part of the province is assessed by law. This valuation has produced, as yet, no complaint, nor, considering the great advantages which the system offers to those having land claims, is there any reason to anticipate complaint.

The Commissioners conclude their report by adverting to the provision about to be introduced into the Imperial Act, respecting land sales in Australia, for the appropriation of the proceeds of a portion of them to the conveyance of emigrants. Upon this point it is only necessary to observe that as, by the Union Act, the revenue arising from sales of land forms part of the consolidated fund which is appropriated to the payment of the debt, and certain other fixed charges, and as there is little reason to expect that that fund will for many years do more than meet those charges, together with the interest on the fresh debt authorized during the last session, the discussion of this suggestion at the present moment would be superfluous. But were it otherwise, I should be inclined to doubt whether a principle, which may be quite true in regard to isolated colonies like the Australian settlements, could be applied to a colony conterminous for 1,500 miles with a foreign country, descended from the same ancestors, and speaking the same language. Were the Canadian land revenue appropriated to the conveyance of emigrants across the Atlantic, it is perfectly certain that those whose ultimate destination was the United States would endeavour to take advantage of it. No precautions or scrutiny, no obligations or contracts, would prevent this; nay, an attempt to enforce such contracts, though it might retain the emigrant for a short time in the British dominions, would make his ultimate departure only still more certain. Even now we are often imposed upon in the conveyance of emigrants within the province, though the arrival of these persons by the route of the St. Lawrence is at least *prima facie* evidence of their intention to settle here. How much more impossible would it be to guard against such imposition in the mother country?

I have thus gone through, at considerable length, the arguments contained in your Lordship's despatch and its enclosure, because it appears to me that these arguments have proceeded upon a misapprehension of the actual position of this province, which it is most desirable at once to remove. In the management of the Crown lands, as well as in other branches of the public service, it is impossible to lay down undeviating rules for the guidance of the executive; but I trust that your Lordship will give me credit for an anxious desire, in the exercise of the discretion entrusted to me by law, to act with due caution and consideration. It is far from my disposition to adopt any novel theory, and bring it at once into extensive operation, before an opportunity has been afforded of testing its utility; nor do I think that, in the present instance, if I had the will, I should have the power. But it may be truly said, that in Canada much has heretofore been done to promote immigration, nothing to promote settlement. The authority to open up fresh country by 50 acre grants, in the neighbourhood of roads, will give me, I hope, the power to do something towards this most important end; and I should, therefore, very much regret that your Lordship should think it necessary to fetter, by your instructions, a discretion which the law has placed in my hands. Upon the great line which connects the eastern townships with Quebec, it will be indispensable to adopt this system, if it is expected to throw a British population into that section of the country, and to keep open the road between those places. It may also be advisable to form such a settlement in the rear of the French settlements in the counties of Terrebonne, Two Mountains, &c.; but on this point I am not prepared at present

## CANADA.

to express an opinion. But your Lordship may be assured that I shall not unnecessarily multiply such settlements; and, above all, that I will take the utmost care that they be not perverted from their original and legitimate object.

I have, &c.

Despatch from  
Lord Stanley to  
Sir Charles Bagot.  
1 March 1842.

Sir,

Downing-street, 1 March 1842.

I HAVE the honour to transmit herewith the copy of a pamphlet which has been compiled for the use of persons disposed to emigrate to British North America, by the Commissioners for Colonial Lands and Emigration, from information supplied to this department for the purpose by the governors of the respective provinces.

I have to request that you would cause the statements contained in this pamphlet, so far as the province under your government is concerned, to be carefully examined by competent persons, with a view to the correction of errors, and to the supply of any further information which may be deemed useful to the public in this country.

I am, &c.

(signed) *Stanley.*

Despatch from  
Sir Charles Bagot  
to Lord Stanley.  
16 April 1842.

My Lord,

Government House, Kingston, 16 April 1842.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch of the 1st ultimo, No. 78, inclosing the copy of a pamphlet compiled for the use of persons about to emigrate to British North America, which your Lordship directs me to submit for the revision of competent persons within this province. I have examined this pamphlet, and find it substantially correct, and I have also submitted it to some of those who appear to me most likely to possess useful information on the subject; but as only one copy accompanied your Lordship's despatch, the collection of opinions from various quarters occupies more time than would otherwise have been the case, and it will therefore not be in my power to return it to you by this mail. I shall, however, I trust, be able to send it home by the mail of the 18th May.

The only correction it occurs to me to make is in the list of emigrant agents, in which Mr. Hawke is named as the agent at Toronto, and Mr. Roy at Kingston. On the removal of the seat of government to Kingston, Mr. Hawke was ordered to assume the agency here, and Dr. Bradley was appointed in his place at Toronto. This arrangement still subsists.

I have, &c.

My Lord,

Government House, Montreal, 28 May 1842.

I HAVE the honour to transmit to your Lordship herewith the Return of the agent for emigrants at the port of Quebec, for the fortnight ending on the 21st instant.

I also enclose, for your information, the copy of a letter from Mr. Buchanan, reporting the wreck of the vessel "Jane Black," with 417 passengers, at a place 250 miles below Quebec, and the measures adopted by him for the relief of the passengers. Under the peculiar circumstances of the case, I have approved the measures taken by Mr. Buchanan.

I have, &c.

REMARKS :

- (a) Employed in Quebec.
- (b) A few remain in Quebec, and some in Montreal; one family went to friends in Shipton, E. Townships; the remainder proceeded to Kingston, Perth, and Hamilton, where they have friends.
- (c) Four mechanics remain in Quebec, the others went in the vessel direct to Montreal.
- (d) Some remain in Quebec, and others will stop at Montreal; the remainder intended going to St. Catherine's, Perth, Bytown and Toronto, where they have friends, and a small number are going to join their relations in the United States.
- (e) Proceeding to Montreal, Perth, Brockville, Kingston, and Toronto, and a few, per the "Tottenham," are going to Shipton, E. Townships.
- (f) A part remain in Quebec, employed; the residue went to Bytown, Kingston, and Toronto, and a few went to join their relations in New York.
- (g) The tradesmen intend stopping in Quebec; the farm labourers will proceed to Kingston, Lanark, Guelph, and Hamilton.

Cabin passengers not included - - - - -	142
To corresponding Period last Year - - - - -	7,259

Note.—Emigrants arrived at this port since the opening of the navigation are, farmers, labourers, and mechanics, and all landed in good health. Those by the "Favourite," "Mohawk," and "Monarch," from Glasgow, 169 in number, are farmers and respectable mechanics, all in good circumstances; who, with the exception of a few of the tradesmen, are proceeding to join their relations, settled in different sections of the province. Two families went to their friends in Shipton, E. Townships.

The "John Bell" and "Tottenham," from New Ross, with 429 passengers, are chiefly labourers and farmers, many of the former very poor and depending on immediate employment for their support; the farmers generally appear to possess money, and, with few exceptions, are proceeding to their friends in Canada West.

On my boarding the "Tottenham," to inspect the vessel, I found that the master had removed all the berthing and accommodation for his passengers previous to his arrival in port, contrary to the fourth clause of the Provincial Passenger Act, for which I fined him in the penalty of 5*l.*, which he paid, to avoid costs of prosecution. The penalty I handed over to Mr. Jessopp, the collector of customs.

Barque "Borneo," with 291 passengers, from Limerick, are chiefly labourers, and a few farmers; many of the latter appear in good circumstances; the labourers are poor, and depending on immediate employment for their support.

Passengers per "Prince George," from London, are 262 in number, and, with the exception of 40, are paupers, sent out under the sanction of the Poor Law Commissioners, chiefly from Kent. They landed in good health, and received a free passage, with two days' provision, and 20*s.* sterling each adult, on leaving the ship. They are, with few exceptions, proceeding to their friends in the Newcastle, Home, and Gore districts. Two families, cabin passengers, who are in possession of considerable means, I have induced to settle on the Lambton-road; they have taken 50 acres each, and intend, so soon as they have made the requisite improvements, to purchase a further quantity of land from Government.

Note.—Emigrants arrived during the past week all landed in good health, and consist of farmers, mechanics, and labourers, many of them in good circumstances. Their destination is principally to Canada West; some to join their friends and others to obtain lands or employment. The passengers from the ports of Padstow, Gloucester, St. Ives, Plymouth, Hull, and Aberdeen, are of the better class of emigrants, and all appear to possess means. Many of them have their friends settled in different sections of the province, and others, particularly from Padstow, are miners and mechanics in search of employment.

The Irish emigrants were not generally so well off; a considerable number of them are very poor. Those with large families were assisted to proceed to their friends, and to where they would meet with employment. Many of them are, however, in good circumstances, and have brought out a good deal of property. Their destination is, with few exceptions, to the western part of the province.

Among the arrivals this week are 417 passengers, brought up by the steamer "Lumber Merchant" from the wreck of the ship "Jane Black," from Limerick, lost on the night of the 9th instant at Pointe des Monts, 250 miles below this port. The poor people were encamped for 10 days, and on a short allowance of food, before the steamer reached them; they saved but little of their luggage, and many of them who left their homes in comfortable circumstances, lost everything they had. Captain Gorman stated that a large number of his passengers brought out a considerable amount of money among them. They were Protestants, and intended to settle in the western section of the province. Owing to the distressed state in which these people arrived, I was under the necessity of assisting about 200 of them with a passage and provision to Montreal, on their route to their friends.

Captain Simpson, of the ship "Llan Rumney," from Hull, brought up 54 passengers from the wreck of the "Kent," from Glasgow: this vessel was lost on the same night as the "Jane Black," at Seven Island Bay, 300 miles below this port. The passengers saved the greater part of their effects, and were able to defray their own expenses from this port. Much credit is due to Captain Simpson for his kind and humane conduct to these people during their stay in his ship. They state that several vessels had passed previously, but refused to take them off the wreck. Captain Simpson supplied them with provisions, at his own expense, until their arrival at this port.

I fined Captain —, of the "—," from —, 5*l.* for the infringement of the fourth clause of the Provincial Passenger Act, which he paid, to avoid the costs of prosecution: the amount I handed over to Mr. Jessop, Collector of the Customs.

REMARKS:

- (a) Some went to Montreal, others to Kingston, Port Hope, and Darlington, and a few went to the United States; the chief part of the passengers, per "Agnes and Ann," went to join their friends in Pickering.
- (b) Proceeded to Toronto and Lake Simcoe, where some of the farmers intend to purchase; a few remain in Quebec, others in Montreal, and the remainder to West Canada.
- (c) Proceeding to Coburg, Perth, Pickering, and Toronto; a few remain in Quebec.
- (d) Proceeded to Bytown, Kingston, Toronto, and Hamilton; a few remain in Quebec, and some proceeded to the United States to join their friends and relations.
- (e) Going to Kingston, Belleville, Port Hope, and Toronto.
- (f) The chief part went to Canada West, and a few to join relations in the United States.
- (g) A few remain in Quebec and Montreal, the remainder went to Kingston, Colborne, Prescott, and Toronto, where many have friends.
- (h) Went to the Eastern Townships, Montreal, Belleville, Brockville, and Toronto, where many have friends; some went to join their relations in the United States.
- (i) Proceeded to Kingston, Prescott, Niagara, Toronto, and Hamilton, where several have friends already settled.

Note.—The emigrants arrived during the past week, consist of farmers, mechanics, and labourers, a large portion of whom are in search of employment; there are, however, a number of families in good circumstances, who are, with few exceptions, proceeding to Canada West, where many have friends, and others with the intention of settling.

I have been under the necessity of extending relief to a considerable number of families during the past week, owing to the difficulty of procuring labour for them in this section of the province. Among the passengers arrived are 14 families in the "Carlton," from Glasgow, these people are members of the North Quarter Glasgow Society; they landed here in good health, but without a shilling in their pockets; and consist of mechanics and labourers; all appear anxious and desirous of getting employment, and many of them have relations in the Upper Province. I assisted those with large families to proceed thither. Masons are at present required on the Government works in this city, and mechanics of this class find ready employment at good wages, 5s. per day; all other description of employment is, I regret to say, scarce; this is to be attributed solely to the depressed state of trade, and the small number of vessels arrived to this date. The timber coves which, in former years, furnished employment to a large number of labourers on their first arrival here, are this season not employing a single man, and the number of resident labourers thrown out of employment completely absorb the work which formerly was open to emigrants.

Among the passengers in the "Lord Canterbury," from Bristol, were eight families, 54 in number, who were assisted by their respective parishes; they are proceeding to the western section of the province. The remaining families are all in good circumstances, and have brought out a good deal of money with them; they intend settling in the Johnston, Midland, and Home districts.

In the "Emanuel" were three families, 19 in number, also sent out by their parish; they were forwarded to Montreal at ship's expense, and are going to their friends at Prescott.

REMARKS :

- (a) Went to Montreal, Kingston, and Toronto, also to Coburg and Goderich. Several had no particular place in view.  
(b) Going to Kingston and Toronto. Several by the "Thomas Dryden" and "Eleuthera" are proceeding to Albany and New York.  
(c) Proceeding to Montreal, Bytown, and Kingston. A few remain in Quebec, and others intend going to the United States.  
(d) Going to Montreal, Bytown, Toronto, Hamilton, and New London. A few are proceeding to the United States.  
(e) Proceeding to Montreal, Kingston, Prescott, Toronto, Coburg, and Colborne.  
(f) Went to Kingston, Bytown, Toronto, and Hamilton; and a few to the United States.  
(g) A few remain in Quebec; some to the East Townships; and the remainder to Bytown and Kingston.  
(h) Went in the vessel to Montreal, on their route to Upper Canada.  
(i) Some went to Huntly, Bondhead, East Hawksbury; others to Kingston and Toronto, and a few to the United States  
(k) Members of the Glasgow Emigration Society, and all going in search of work.  
(l) Proceeding to Canada West.  
(m) The chief part are going to Toronto; the remainder to Kingston. A few are going to the United States.

To same period last Year	-	13,509
INCREASE in favour of 1842	-	3,010

Note.—The emigrants arrived during the past week have landed generally in good health, over two-thirds of whom are Irish. They are chiefly of the agricultural class; and the average of those who are in possession of small capital is, I consider, greater than in former seasons. Their route is, with a few exceptions, to the western section of the province; some to join friends, and others to purchase lands. I have endeavoured to persuade a few of the heads of families who have good means, but without any fixed destination in view, to visit some of our flourishing settlements in this section of the province, and judge for themselves; but I regret to say, that their dread of the winter is so great, that it is difficult to induce them to attend to any offer for settlement, no matter how favourable it may be, should it be situated in Lower Canada.

It is gratifying to state, that to this period there have been but few cases of complaint against masters of vessels. The accommodation has been very good, and passengers generally well supplied with provisions.

In the ships "Bowling," "Harper," and "Renfrewshire," from Glasgow, are 727 passengers, members of the different emigration societies. These people are all very poor, and owing to their long passages, average 54 days, arrived here short of provisions. The two former proceeded direct to Montreal, and I was under the necessity of furnishing them with a supply of oatmeal and biscuit, to enable them to reach that port. Those by the "Renfrewshire" landed here, but without provisions, or the means of paying their transport up the country; and as they principally consisted of persons with large families, for whom employment could not be obtained here, I was under the necessity of assisting the greater portion of them to proceed to the western section of the province; some to join their friends, and others in search of employment. I regret to remark that the members of the Glasgow emigration societies arrived here, both this and last year, in a more destitute condition than any other emigrants from the United Kingdom; they leave their homes with barely sufficient to pay their passage and to procure a scanty provision, and unless they have a favourable passage, land here in a state of great distress. These passengers, although much under the period allowed by law for a voyage to this port, were out of provisions some days before their arrival at quarantine.

The emigrants from England are from Padstow, Bideford, and Aberystwith; they are all able to pay their way to their destination, and many of them have brought out a good deal of money. They all emigrated on their own account, with the exception of one family, eight in number, sent out in the "Voluna," from Padstow, by parish relief.

A number of families have landed here during the week with the intention of proceeding to their friends in the United States; they have, in many instances, been sent for by their friends, and all have a fixed destination in view.

INCREASE in favour of 1842	-	4,696

Note.—Emigrants arrived during the past week consist of farmers, mechanics, and labourers. In several of the vessels there has been a number of cases of small-pox, measles, and fever; and there has consequently been a considerable addition to the number of patients in Quarantine Hospital.

In the "Bryan Abbs" were 18 families, 104 persons, sent out by Colonel Wyndham from his estate in the county Clare. These people were well provided for, and received the sum of 20 s. sterling each adult, on landing here, to enable them to proceed up the country.

In the "John Walker," from Liverpool, were 236 passengers; 18 were left sick at Grosse Isle; and three deaths occurred during the voyage. They consist of English, Irish, and Scotch. There are a few respectable farmers with capital, who are proceeding to settle in the Home District; the remainder are labourers and mechanics in search of employment.

The "Albion," from Sligo, 123 passengers, generally poor, and proceeding up the country for employment; a few families are going to their friends in the United States, left four sick at quarantine. In the "Marquis of Wellesley" were 264 passengers, from Dublin, chiefly farmers, who have brought out a large amount of capital; they are all a respectable class of people. Three families are gone to their friends in the Eastern Townships, and the rest to Canada West. 76 passengers in the "Queen of the Isles," from Glasgow, are mechanics and labourers, and all appear to have sufficient means to convey them to their destination.

In the "Cabotia" and "Minstrel," from Liverpool, 408 passengers. A few English farmers have brought out good means with them; the chief part are labourers, and a few mechanics, who are proceeding to different sections of the province to their friends. The latter vessel left nine in hospital; and a few of the families were short of provisions. One family, seven in number, and a number of young men and women, were assisted by their parish; about 30 of them are gone to their friends in the United States.

Passengers from Hull and Bristol, 192 in number, are all in good circumstances, among whom are several farmers with capital. In the "Irvine" from Bristol, were four families, 32 in number, sent out by their parish.

One hundred and seventy-one passengers in the "Pussey Hall," from London and Cowes, were sent out under the sanction of the Poor Law Commissioners; they were well supplied during the voyage; and the sum of 116 l. 10 s. sterling was paid to them on landing, with a free passage to Montreal. 244 passengers in the brigs "Samuel" and "Hannah," from Killala, are very poor; they all landed in good health. A number of the young men I have directed to the Gosford Road for employment; and those with families I assisted to proceed up the country.

Passengers in the brig "Percival," 149 in number, were 55 days on her passage. Passengers were short of provisions, and obliged to put into Sydney for a supply.

Passengers from Scarborough are respectable farmers, and all appear to possess means.

In the "Onyx," from Dublin, are a number of respectable farmers with money; the remainder are labourers and mechanics, proceeding to different sections of the province. 13 of her passengers were left at Grosse Isle.

In the "Chieftain," from Larne, with 261 passengers, there are several farmers with their families, who have brought out capital varying from 200 l. to 600 l.; they are proceeding to settle in Canada West; the remainder are farm servants and labourers, who have emigrated in search of employment.

I regret to say that employment continues very scarce, both in this neighbourhood and in Montreal; and, from reports received from Mr. Hawke, I regret to find the same complaint exists in that quarter, and will, I fear, continue until the harvest commences.

CANADA.

— No. 8. —

(No. 151.)

COPY of a DESPATCH from Governor the Right hon. Sir Charles Bagot, G.C.B. to Lord Stanley.

No. 8.

Despatch from Sir Charles Bagot to Lord Stanley. 12 July 1842.

My Lord,

Government House, Quebec, 12 July 1842.

I HAVE the honour to transmit to your Lordship herewith the Returns received from the medical superintendent at Grosse Isle, and the agent for emigrants in this city since my despatch of the 29th ultimo, No. 142.

Your Lordship will perceive that the number which has arrived up to this date very far exceeds the whole number who emigrated during the last year; and although the great influx is now over, many more may yet be expected. Fortunately those who have latterly arrived, amounting in one day to upwards of 5,200, have been unusually healthy, and have accordingly been enabled to proceed up the country without delay.

I have, &c.  
(signed) Charles Bagot.

Enclosure in No. 8.

(b) A few will remain in Montreal, and the remainder proceed to Bytown, Buckingham, Niagara, and Bastard.  
(c) Went to Port Hope, Hamilton, and London district, and a few young men to the United States.  
(d) These two vessels proceeded direct to Montreal, where some of the passengers will remain; all the others will settle in Canada West.  
(e) Many are bound to New York, the others proceed to Richmond, Stratford, and Toronto; one family to Frampton, Lower Canada.  
(f) Some remain in Quebec with friends; several have gone to Kingston and Richmond, and many to the state of Ohio.  
(g) Principally went to Kingston, Toronto, and London districts; some remain in Quebec, and several went to New York.  
(h) All have proceeded to Canada West.

WEEKLY RETURN of EMIGRANTS arrived at the Ports of Quebec and Montreal, from the 19th day of June to the 25th day of June 1842—continued.

Note.—The emigrants arrived during the past week have landed, with the exception of those in a few vessels, in good health, and among them are a considerable number of respectable families with capital.

In the "Gazelle" and "Jane Duffis," from Donegal, are 470 passengers, among whom are a number of respectable farmers, who have brought out a large amount of property. The capital in these two vessels (from the information I have been able to collect) amounts to from 8,000 £. to 10,000 £. Their destination is Canada West, principally in the Home and Gore districts.

The "Henry," from Killala, with 148 passengers, arrived in good health; a few families are in good circumstances, but the greater part poor; many of them have friends in the Ottawa, Bathurst, and Johnston districts. Three families are going to their friends in the state of New York. The passengers per the "Queen Victoria," "Luna," "Bowes," and "Queen," from Sligo, 711 in number, all landed in good health; and although they had long passages, average being 45 days, they, with the exception of one or two families per the "Queen," had a surplus stock of provisions on landing. A few families are in good circumstances, but the greater part are poor; about one-fourth are going to their friends in the United States, the remainder to different sections of the province. Those with large families were assisted from this office with means to enable them to reach their friends in the Home and Newcastle districts.

In the "Xenophon," from Belfast, 250 passengers are farm labourers and trades; a few of the former are in good circumstances and are proceeding to Port Hope, Hamilton, and a few families to their friends in London district, and from eight to 10 young men to their friends in the state of New York. This vessel had a long passage, 52 days, but they all landed in good health.

Sixty passengers in the brig "Robert Munroe," from Leith, are respectable tradesmen; all appear to possess means, and with the exception of three families who remain in Montreal with their friends, are proceeding to the neighbourhood of Toronto to settle; they went to Montreal direct in the vessel.

In the brig — from —, were 160 passengers; this vessel proceeded direct to Montreal, after a few hours delay here, with her passengers. On boarding her, they complained of an overcharge for emigrant tax, children under 14 and seven being charged the full tax of 4s. 6d. sterling, which is contrary to law; but as the vessel only remained here a few hours, I forwarded instructions to the agent at Montreal to take the necessary steps to give them redress in case the captain refused to refund the overcharge. A number of these families were very poor; they are members of the Glasgow emigration societies, and will require assistance to enable them to proceed up the country.

Six hundred and thirty-seven passengers in the — and —, from Liverpool, are principally labourers, and generally very poor; about one-fourth are going to the United States to their friends; among them are 10 or 12 Welch families, consisting of about 50 individuals, who are going to the state of Ohio; they appear to have sufficient means to pay their way. The passengers per — suffered a good deal from sickness; there were 12 deaths from smallpox during the voyage, and a number of cases were sent to hospital on her arrival at quarantine. This vessel had a long passage of nine weeks, and consequently a great many of the passengers were short of provisions; they all complain of the neglect and inattention of the master, —, to them during the voyage; and I regret that owing to the defective regulations of the present Passengers' Act, I could not give them any redress to their complaints.

One hundred and sixty-six passengers per "Jubilee," from Westport, landed in good health; they are chiefly labourers; a number are going to their friends in the United States, and others in search of employment.

In the brig "Ann Moore," from Limerick, were 182 passengers. There was, I regret to say, a good deal of sickness in this vessel; she left 50 of her passengers at Grosse Isle, 37 of whom were sent to hospital. A passenger by this vessel, named Patrick Quincy, jumped overboard during the night, while the ship was at anchor at Grosse Isle, and was drowned, leaving a wife and eight children, who was sent to the hospital with fever; he has left 40 sovereigns in gold, which was taken charge of by the medical superintendent until his wife recovers.

The passengers by the "Prince of Wales," 193 in number, from Galway, landed in good health; they are chiefly labourers and farmers, and are proceeding up the country in search of employment; a few families are in good circumstances; about 40 are going to the United States to join their friends settled there.

Employment, I regret to say, still continues scarce in this district; I have, however, succeeded in procuring employment on the Gosford Road for about 100 men, and from 100 to 150 in the Eastern Townships. Employment, I hear, is abundant in this section of the province, but I find the greatest difficulty to induce those seeking to try that section of the province.

Emigrant Department, Quebec, }

INCREASE in favour of 1842	-	9,141

Note.—The emigrants arrived this week are principally farmers and labourers. Those in the "William Tell" and "Richard Watson," from Dublin, 364 in number, landed in good health; they are chiefly labourers, and a few farmers who appear possessed of small capital. Passengers in the "Mary Russell," "Boadicea," "Marys," and "Messenger," from Limerick, arrived in good health, and consist of farmers and labourers. They are, with few exceptions, proceeding to Canada West, with the intention of settling. In the "Mary Russell" the passengers were of a superior class. Several families brought out capital from 500*l.* to 600*l.*; and the master reported almost every family was in possession of from 40*l.* to 50*l.* in gold. These people all proceeded to settle in the Home and Gore districts. In the "Dumfriesshire," "Marys," and "Margaret Johnston," were 1,135 passengers from Belfast; they landed in good health, and are all proceeding to the western part of the province. Only eight families, about 50 individuals, out of this number, applied for assistance, which they received as they were going to join their relations settled in the western section of the province.

Passengers from Hull and Plymouth, 335 in number, are principally agriculturists, and all appear in good circumstances. A few are going to the United States, but over three-fourths intend settling in Canada West, in the Newcastle, Home, and Gore districts; and one or two families to the Huron tract.

Ninety-eight passengers in the "Dependent," from Bridgewater, arrived in good health, 52 of whom are sent out by the Chard Union, in Somersetshire. These people were found in provisions by the ship, and received the 20*s.* sterling on landing; the remaining passengers were of the better class, and possess good means. They intend going to the western section of the province to settle. A good many of the paupers intend to proceed to the United States.

The passengers in the "Blonde" and "Feronia," 483, from Glasgow, are a fine intelligent body of people, and have brought a large amount of capital with them; it is impossible to ascertain the exact amount, but from the information I have received, I should estimate it from 10,000*l.* to 12,000*l.* They are proceeding to the Bathurst, Home, and Gore districts with the intention of settling. Many of them are going to join their friends. Passengers by the "Ayrshire," 416 in number, from Newry and Dublin. She had a long voyage of 51 days, and had 25 deaths previous to arrival at Grosse Isle, all children, from the effects of measles. A number of families embarked at Dublin, were aided in their emigration by the Earl of Fitzwilliam, from his estate in the county of Clare. These people, owing to their long passage, landed here, as well as many of the other passengers, short of provisions, and I was under the necessity of assisting 15 families who had expended all their means, to enable them to proceed up the country.

Three hundred and twenty-six passengers in the "Thomas and Hannah" and "Jane Avery," from Londonderry, arrived in good health. They are chiefly labourers, and all very poor. I had to relieve a large number of families who were without means to proceed up the country; some to their friends, and others in search of employment.

In the brig —, — master, from —, were 213 passengers. The vessel arrived in a most wretched state at Grosse Isle, from sickness. There had been five deaths previous to her arrival there, and 56 cases of typhus were sent to hospital, two of whom died in a few hours after. This vessel cleared from —, according to the certificate list of her passengers sent to this office by the Government agent at that port, with 192 passengers. On arrival here she was found to have 22 on board whose names were not on her list. She was also exceedingly crowded, the passengers being obliged to keep all their luggage and provisions between decks, there being no room in the lower hold (with the exception of a small space for water and fuel). It was full of salt. On measuring the superficial space between decks, I found she had only room for 165 adults, whereas she had 180  $\frac{3}{4}$  on board, being an excess of 15  $\frac{3}{4}$  passengers. The necessary information was immediately placed in the hands of the Crown officer, to prosecute the master for the infringement of the second clause of the Imperial Passenger Act. The dreadful condition in which this vessel arrived may, in my opinion, be in a great measure attributed to the crowded state of the vessel, and to her having a cargo of salt in the lower hold, which was full up to the platform that the passengers occupied.

One hundred and ninety-four passengers in the "Orbit," from London and Gravesend, were sent out under the direction and superintendence of the Poor Law Commissioners. There were five deaths during the voyage, one old man, the others children, and left a number of cases at Grosse Isle. These people were forwarded to Montreal at ship's expense, and received 20*s.* sterling each adult on landing here.

The passengers in the "Ruth" and "Jane," from Cork, are chiefly labourers with very limited means. A large number of the "Ruth" were very destitute; and as employment in this district is very limited, I have to forward a considerable number of them up the country.

Two hundred and fifty-three passengers in the "Devereux," from Liverpool, and 186 in the "Mary Alice," from Newport, Ireland, are very poor, and principally depending on employment for their support. Notwithstanding the passage to Montreal is only 1*s.* 3*d.* each, I was under the necessity of forwarding a very large proportion of the passengers in the latter vessel. They are going to different sections of Canada West to join their friends. The passengers from Sligo, 439 in number, have landed in good health. They are principally labourers, and intend to proceed up the country in search of employment.

G. C. B. to Lord *Stanley*.

Government House, Kingston,  
11 March 1842.

My Lord,

I HAVE the honour to transmit to your Lordship herewith the returns with regard to land sales, for the year 1841, as required by Lord John Russell's circular despatch of the 29th May last: I also enclose the copy of a letter from the surveyor-general, stating that, from causes over which he has no control, he was unable to furnish these returns earlier; but that in future they will be prepared at the commencement of each year.

I have, &c.  
(signed) *Charles Bagot*.

Enclosure in No. 9.

Surveyor-general's Office, Kingston,  
7 March 1842.

Sir,

Encl. in No. 9.

I HAVE the honour to enclose herewith the returns called for in your letter of the 21st July last, and beg that you will transmit them to the proper office, in order that they may be forwarded to Her Majesty's Secretary of State for the Colonies.

From causes over which this department had no control, the completion of these returns has been unavoidably postponed to a later period than is desirable; but as these causes have now ceased to exist, they will hereafter be prepared at the commencement of each year.

The Commissioner for Crown Lands.

I have, &c.

Letter from the  
Colonial Land and  
Emigration Com-  
missioners to  
J. Stephen, Esq.  
5 July 1842.

COPY of a LETTER from the Colonial Land and Emigration Commissioners to  
*J. Stephen*, Esq.

Sir,

Colonial Land and Emigration Office,  
9, Park-street, Westminster, 5 July 1842.

WITH reference to your letter of the 26th April last, transmitting to us certain returns connected with Crown lands in Canada, we have the honour to state, for Lord Stanley's information, that we have taken an opportunity to examine into and collate the contents of these documents.

We enclose, in case they should be found to present the results of the information in a more useful form for future reference, two abstracts which we found it convenient to prepare of the two first of the foregoing returns, consisting of nominal lists of all parties to whom free grants, or grants subject to settlement duties and the payment of fees, had been issued during the past year.

By

By the return connected with the subject of surveys, it appears that the quantity of land surveyed in the course of 1841 was 178,010 acres, and the average expense of survey  $1\frac{1}{2}d.$  per acre.

The extent of land that had been sold during 1841 appeared in a former return, which accompanied Sir Charles Bagot's despatch, No. 17, of the 26th of January, and was enclosed to us in your letter of the 19th of February. It showed that the whole quantity of land in the United Province which had been sold during 1841 amounted to 60,593 acres, besides 13 village lots in Canada West, averaging  $3\frac{1}{2}$  acres each. The purchase-money was nominally rather more than 19,000*l.*, of which, however, only about 316*l.* reached the hands of the receiver-general in cash applicable to the public service, the residue having been absorbed chiefly in the satisfaction of U. E. claims, outstanding army and militia claims, and also to the extent of about 1,930*l.* in remissions of purchase-money to officers of the army and navy.

We do not find that we have any remark to offer on these returns at present, with a view to any practical step, except in so far as Lord Stanley may deem that the two following cases ought to be noticed. In the list of Unconditional Grants, appears one of 400 acres to Mungo Ponton, and another of 200 acres to John Scott, and in the column headed "For what reason made," the insertion opposite to them is, "By Order in Council, 4th August 1831," and, "By Order in Council, 28th October 1841;" both those dates being subsequent to the Treasury Instructions of November 1826, which abolished free grants, and required all lands to be in future disposed of by sale. We should conjecture that the Orders in Council must have been issued in fulfilment of some obligations of prior date, and entertain no doubt that the case admits of that or some other satisfactory explanation; but having observed on the face of the returns a grant made in apparent contravention of instructions, it seems our duty to notice it, in case the Secretary of State should consider it right to request that the circumstances may be more fully explained.

We have, &c.  
(signed) *T. Fred. Elliot,*  
*Edward E. Villiers.*

Copy of a DESPATCH from Lord *Stanley* to Governor the Right Hon.  
Sir *C. Bagot*, G. C. B.

No. 12.  
Despatch from  
Lord Stanley to  
Sir Charles Bagot.  
17 July 1842.

Sir,

Downing-street, 17 July 1842.

By the return of free grants made in Canada during 1841, which accompanied your despatch, No. 58, of the 11th March last, I observe that allotments of 400 acres and 200 acres have been given to Mungo Ponton and John Scott, respectively, without any conditions being attached to them. The only reason assigned for these grants is, that they were issued in obedience to Orders in Council passed on the 4th August 1831 and 28th October 1841. As the system of making free grants of land was abolished by Treasury instructions dated so far back as November 1826, I should wish to receive from you an explanation of the grounds on which the grants to Ponton and Scott proceeded.

I have, &c.  
(signed) *Stanley*.

— No. 13. —

(No. 178.)

Copy of a DESPATCH from Governor the Right Hon. Sir *Charles Bagot*,  
G. C. B., to Lord *Stanley*.

No. 13.  
Despatch from  
Sir Charles Bagot  
to Lord Stanley.  
24 August 1842.

My Lord,

Government-house, Kingston,  
24th August 1842.

I HAVE the honour to transmit, in reply to your Lordship's despatch of the 17th ultimo, No. 203, requiring an explanation respecting certain unconditional allotments of land recently made to Mungo Ponton and John Scott, two reports from the surveyor-general of the province, which contain all the information that I am able to furnish upon the subject.

Your Lordship will perceive from these reports that the letters patent issued last year in Ponton's case, were in completion of a grant made by a special Order in Council, dated 4th August 1831, the reasons for which (beyond those stated in the report), in contravention of the Treasury instructions of November 1826, cannot, after the lapse of so many years, be ascertained.

In

15 August 1842.  
24 August 1842.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

27

In the case of Scott, it appears that the grant was made to rectify an official mistake committed in the year 1834, and to prevent the infliction of great hardship on a party who was settled upon the land, under a title supposed to be valid, in the year 1833.

CANADA.

I have, &c.  
(signed) *Charles Bagot.*

## Enclosures in No. 13.

Surveyor-General's Office, Kingston,  
15 August 1842.

By Special Order in Council, dated 4th August 1831, Mungo Ponton, a native of Scotland, who came to the late province of Upper Canada, having a family of ten children, with the intention of becoming an actual settler, was allowed a free grant of 800 acres of land.

Encl. in No. 13.

Pursuant to the above order the grant was located by the Hon. Peter Robinson, Commissioner of Crown Lands, on lots No. 8 in the 7th Concession, No. 8 in the 8th Concession, No. 7 in the 12th Concession, lot No. 14 in the 13th Concession, in the township of Seymour, and the locations confirmed by Order in Council, dated 20th of June 1836.

Descriptions of the two first-named lots issued from this office for letters patent on the 21st June 1836, and for the remainder of the grant on the 23d of June 1841.

(signed) *Thomas Parke,*  
Surveyor-General.

Surveyor-General's Office, Kingston,  
24 August 1842.

AN Order in Council of the 11th July 1833, in favour of Thomas Fraser, as the son of an U. E. loyalist, having been lodged in this office, a letter of location was issued in his favour to Mr. Mount, the Government agent for the London district, which order must have been subsequently transferred to Mr. Jones, the Government agent for the Western District, as it was presented to and located by him in October 1833, on lot No. 18, in the 10th Concession of Moore.

The letter of location above mentioned had been given to John and William Scott, to whom Fraser had assigned his claim, and it was on their application located on the lot in Moore, on which they immediately settled. The location was shortly afterwards entered on the office plan of the township among others made by Mr. Jones.

In 1834 Fraser applied again for land, and through an official oversight was located on No. 9, in the 8th Concession of Enniskillen, no notice having been taken of the letter of location previously issued, and the action on it. For this lot a patent issued in March 1836.

Some time after this the Scotts, who had resided on the lot in Moore from their first settlement in 1833, and had made very large improvements, applied for a patent in Fraser's name, when it was discovered that from the error committed by this office that person had already received his grant, and they had in consequence lost the labour of years.

The Scotts, on learning this, petitioned the Government, setting forth their case, and the Governor in Council, to obviate the effects of the official error above stated, passed an order on the 28th October 1841, cancelling Fraser's location on the lot in Moore, and granting it to John and William Scott, under the authority of which a description for patent issued from this office on the 17th December 1841.

(signed) *Thomas Parke,*  
Surveyor-General.

Despatch from  
Lord Stanley to  
*Sir Charles Bagot*.  
30 Sept. 1842.

Sir,

Downing-street, 30 September 1842.

I HAVE to acknowledge the receipt of your despatch of the 24th of August, enclosing the reports of the surveyor-general of Canada upon the grants of land which had been made to two persons named Mungo Ponton and John Scott, subsequently to the date of the abolition of the system of free grants, and without the assignment of any special reason for such deviation from the established rule.

291.

I have

CANADA.

I have to acquaint you, in answer, that the explanation afforded me in the case of Scott's grant is complete; and that with respect to Mungo Ponton, although the grounds for his grant are not equally clear, it will not be desirable to raise any question which can create the impression that it is intended to disturb him in the possession of the land guaranteed to him by the Order in Council.

I have, &c.  
(signed) Stanley.

Despatch from  
Sir Charles Bagot  
to Lord Stanley.  
28 July 1842.

COPY of a DESPATCH from Governor the Right honourable Sir *Charles Bagot*,  
G.C.B. to Lord *Stanley*.

My Lord,

Government-house, Quebec, 28 July 1842.

HAVING referred to the emigration agent at this port your Lordship's despatch of the 3d ultimo, relative to the infraction of the Passengers' Act by several vessels which brought out emigrants to this country in the year 1841, and relative to a discrepancy between the number of emigrants included in the ship returns and those comprised in Mr. Buchanan's report\*, I have the honour to transmit herewith, for your Lordship's information, a copy of the answer which I have received.

In respect to the latter subject, it is unnecessary for me to add anything to Mr. Buchanan's statement; but on the former, it appears to me that he has not made his explanation so clear as it ought to be.

By the Passengers' Act two modes of reckoning the number of emigrants that may be carried in any vessel are prescribed; first, in a certain proportion to the tonnage; second, in a certain proportion to the superficial measurement. These two modes, however, very commonly produce different results; so that a master who may be within the law according to his tonnage, may be beyond it according to his superficial measurement, and *vice versâ*. This has actually occurred in each of the cases enumerated in the enclosure to your despatch, in which the vessels were all within the law as far as their tonnage formed the standard, though beyond it according to measurement. But heretofore it had been the practice of the collector of customs at this port to look only to the tonnage of vessels, not their measurement; and being assured that the law had not been infringed in that respect, to make no further inquiry. Thus it happens that none of the vessels alluded to in your Lordship's despatch had been proceeded against for infraction of the law.

Since the receipt of that despatch, however, the emigrant agent has taken much care to ascertain the sufficiency of the superficies of every vessel for her number of emigrants; and it appears that in a very large number of cases the law is infringed in that respect. This is the case not only with vessels sailing from ports where there is no emigrant agent, but from those also where there is such an agent, and from which the masters bring with them the usual certificate of their having embarked their emigrants under the superintendence of that officer. These persons naturally feel themselves aggrieved, when, having been sanctioned by the Government agent on the other side of the Atlantic in taking on board a certain number of emigrants, they are prosecuted by the Government agent here for having more than their complement.

I would suggest, to obviate this cause of complaint, that the agents at the outports should be instructed for the future to pay more attention to the measurement of emigrant vessels; and I would also submit to your Lordship whether it might not be possible to simplify the matter, by getting rid altogether of the calculation by tonnage, and adopting that by superficial measurement only. Where the space between decks and between berths is so strictly laid down, the emigrants would be sufficiently protected by being secured a certain extent of superficial space, without reference to the tonnage of the vessel. The adoption of two different standards tends to produce much confusion and error.

I have, &c.  
(signed) Charles Bagot.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

29

Enclosure in No. 15.

CANADA.

Sir,

Emigrant Office, Quebec, 26 July 1842.

Encl. in No. 15.

I HAVE the honour to acknowledge receipt of your letter of 28th ult., enclosing me a copy of a despatch from the Secretary of State, accompanied by an extract of a report of the Colonial Land and Emigration Commissioners, respecting the cases, which occurred last year, of infringement of the Passenger Act; and also showing that the ship returns furnished from this office did not include the whole number of emigrants who arrived in 1841.

I have the honour to report, for the information of his Excellency, that the deficiency which appears between the number of passengers contained in the ship returns forwarded from this office, and the total number landed in this colony during the season of 1841, is owing to my not having made out returns for vessels which arrived at this port with less than 30 passengers, which I had the honour to state to you in my letter of the 24th of September last.

In reply to that part of the report of the Colonial Land and Emigration Commissioners, transmitting a list of 25 vessels which appear, from the ship returns forwarded from this office, to have infringed the Passenger Act, in not having sufficient superficial space for the number of passengers on board, on examination of this table, I find there are a few errors, which must have originated in copying, and I herewith transmit a correct list, taken from the books in this office.

I also beg to state, that in these calculations I have included the children under one year, calculating three to an adult (who are exempt by the Act); these deductions being allowed, several of the vessels which have but a small excess would be within the law.

I have the honour further to report, that the collector of the customs here has heretofore enforced the penalty for excess of passengers, when that excess appears in reference to the numbers allowed according to the tonnage of the vessel, but has not taken any notice as to the numbers allowed according to the superficial contents of the lower deck or platform of the vessel; and when, in consequence of Lord Stanley's despatch above mentioned, I called his attention to cases of this latter description, he declined to interfere, and I have therefore applied to the law officers of the Crown to take proceedings in all such cases, and shall strictly enforce the penalty. I have been advised that these penalties cannot be legally taken until after conviction in a proper court, and I have therefore directed proceedings only against those who have most clearly infringed the Act.

I also beg to state, that I have forwarded to the collector of customs a copy of Lord Stanley's despatch, as also the report of the Colonial Land and Emigration Commissioners, drawing his attention to the same.

In respect to such masters of vessels as may have incurred the penalty during the last season, the only evidence now in my power is the official documents of the number of passengers arrived on each voyage, and my affidavit of the superficial contents of the lower deck or platform of each vessel; these I could furnish; but considering that the time has expired within which proceedings could be taken in this colony, and it may be doubtful whether these documents would arrive in time for any to be taken at home, and that then, I am informed, they could not be used as evidence, but only as information, I have not thought it necessary to prepare them.

I have, &amp;c.

T. W. C. Murdoch, Esq.  
Chief Secretary, &c. &c. &c.

(signed) A. C. Buchanan,  
Chief Agent.

No. 16.  
Despatch from  
Lord Stanley to  
Sir Charles Bagot.  
25 August 1842.

(No. 234.)  
COPY of a DESPATCH from Lord Stanley to Governor the Right hon. Sir Charles Bagot, G.C.B.

Sir,  
Downing-street, 25 August 1842.  
I HAVE received your despatch, No. 164, of the 28th July, pointing out the inconvenience which attends the practice of regulating the number of emigrants on board passenger ships by the tonnage and superficial measurement of the vessels, and suggesting that the number of passengers should be calculated by measurement only.  
I fully agree with you in opinion that it would be desirable to dispense with one or other of the limitations imposed by law on the number of emigrants embarked. The point, however, was carefully and minutely inquired into when the new Passengers' Act was in progress; and, in consequence of the different construction of shipping, it was found necessary to retain both checks.  
In conformity with your suggestion, the emigrant agents at the outports of the United Kingdom have been instructed to pay attention to the superficial measurement, as well as to the tonnage of vessels inspected by them; and attention has been drawn to the subject in a notice which has been published for the information of the trade on the approaching operation of the new law.  
I have, &c.  
(signed) Stanley.

No. 17.  
Colonial Land and  
Emigration Com-  
missioners to James  
Stephen, Esq.  
23 August 1842.

COPY of a LETTER from the Colonial Land and Emigration Commissioners to James Stephen, Esq.

Sir,  
Colonial Land and Emigration Office,  
9, Park-street, Westminster, 23 August 1842.  
WE have the honour to acknowledge the receipt of your letter of the 20th instant, enclosing a despatch from the Governor-general of Canada, dated 28th July 1842, respecting the cases of infraction of the Passengers' Act, brought under the notice of Lord Stanley in our letter of the 7th of May last.  
The subject to which Sir Charles Bagot's despatch principally relates, is the double check of tonnage and space imposed by the Passengers' Act upon the number of emigrants embarked. We quite agree with the remark which is justly made by Sir Charles Bagot, that it would have been desirable, if possible, to dispense with one or other of these limitations, but we have the honour to report, that this point was carefully and minutely inquired into when the new Passengers' Act was in course of being framed, and that for reasons connected with the construction of shipping, it was found necessary to keep up both checks. We have addressed a circular instruction, as suggested by the Governor, to the officers at the out-ports, desiring them to pay attention to the superficial measurement, as well as the tonnage of vessels; and we have drawn attention to the subject, in a notice which we have published for the information of the trade, on the approaching operation of the New Passengers' Act.  
We have, &c.  
(signed) T. Frederick Elliot.  
John George Shaw Lefevre.

to Lord Stanley.

CANADA.

No. 18.

Despatch from  
Sir Charles Bagot  
to Lord Stanley.  
8 August 1842.

28 July 1842.

My Lord,

Government House, Montreal,  
8 August 1842.

WITH reference to my despatch to your Lordship of the 28th ultimo, No. 164, I have the honour to transmit herewith the copy of a letter from the emigrant agent, accompanied by a list of vessels which had infringed the Passengers' Act by carrying more passengers than are allowed in proportion to their superficial measurement. These vessels, which were within the law as regarded their tonnage, had left Quebec before the attention of the emigrant agent was called by your Lordship's despatch of the 3d June, to the necessity of calculating their passengers with reference to their superficial measurement as well as their tonnage, and it is accordingly impossible now to take any proceedings against them in the provincial court. But if your Lordship is of opinion that under the circumstances of the case it would be right to take proceedings against them in England, the emigrant agent will obtain any further evidence, should it be required, which may be pointed out to him.

I have, &c.  
(signed) Charles Bagot.

Enclosure in No. 18.

Sir,

Emigrant Office, Quebec, 28 July 1842.

Encl. in No. 18.

I HAVE the honour to transmit herewith a list of 15 vessels who have infringed the second clause of the Imperial Passenger Act in carrying an excess of persons over the number allowed by law according to the superficial contents of the lower deck or platform of the vessel.

These vessels had all sailed on their return voyage previous to my being aware of their having infringed the law.

A return of those vessels which have sailed from ports in the United Kingdom at which Government agents are stationed, I have forwarded to them, in order that they may take the necessary steps to recover the penalty, against the bonds given by the masters previous to sailing.

As I am not aware of the nature of the evidence which may be required to convict these parties in the United Kingdom, I have not deemed it necessary at present to do more than report the circumstance to you, in order that I may receive his Excellency's commands on the subject.

T. W. C. Murdoch, Esq.  
Chief Secretary,  
&c. &c. &c.

I have, &c.  
(signed) A. C. Buchanan,  
Chief Agent.

REMARKS:

- (<sup>a</sup>) Proceeded to Blenheim, Brantford, Toronto, and other parts of Upper Canada.  
(<sup>b</sup>) Proceeded in the vessel direct to Montreal.  
(<sup>c</sup>) Several went to the United States, and the remainder to Bytown and Kingston.  
(<sup>d</sup>) Part went to Kingston and Toronto, some to Caledon and St. Catherine's; others have no particular place in view, having no friends before them, and several of whom went to the Eastern Townships.  
(<sup>e</sup>) Went to Kingston and various parts of Canada West.  
(<sup>f</sup>) Some went to Belleville, others to Kingston and Toronto, and a part proceeded to the United States.  
(<sup>g</sup>) All went to Canada West.  
(<sup>h</sup>) Went to Bytown, Cobourg, Toronto, and Port Hope; 48 sent out by the Poor Law Commissioners.  
(<sup>i</sup>) All proceeded to Kingston, Bytown, Toronto, and Brockville.  
(<sup>j</sup>) Went direct to Montreal in the vessel; the 130 were members of the Glasgow Emigration Society.  
(<sup>k</sup>) Several went to the State of Illinois, some went to the Gosford Road many to the Eastern Townships, and the residue to Upper Canada.  
(<sup>l</sup>) Went to different sections of Canada West.  
(<sup>m</sup>) Some remain in Quebec and Montreal, the remainder went to the Eastern Townships and Kingston.  
(<sup>n</sup>) Proceeded in the vessel direct to Montreal.  
(<sup>o</sup>) All went to Canada West.  
(<sup>p</sup>) Many of these went to the United States, the remainder to Bytown and Kingston.  
(<sup>q</sup>) Went to Toronto and Hamilton, and a few to New York.  
(<sup>r</sup>) All proceeded to Canada West; eight families in the "Hope" sent out by Colonel Wyndham.

*Note.*—Over 7,000 emigrants landed at this port during the past week, 5,000 of whom arrived during the 5th and 6th inst., and all extremely healthy. By a report received from Dr. Douglas, the medical superintendent at Grosse Isle, it appears he only had occasion to send four cases out of the whole number to hospital, a circumstance unprecedented. Their healthy state may in a great measure be attributed to the extremely fine passages most of the vessels have made. The average of the week is less than 40 days, and the “Sherbrooke,” “Jessie,” and “Victoria,” from Liverpool, and “Robert Bruce,” from Bristol, came over in from 26 to 30 days, without a single day of rough weather. They consist of farmers, labourers, mechanics, and servants, very many of whom have brought out a good deal of property, and are, with few exceptions, proceeding to settle in Canada West. I should estimate this number at two-thirds; the remainder are very poor, and many without the means sufficient to take them to their friends, or to where they will meet with employment.

Those who arrived here in the most distress were 35 families, 158 persons in the ship “Independence,” from Belfast; and 22 families, 130 persons, in the “Wexford,” from Glasgow. These families had formed themselves into societies, and collected subscriptions, which barely enabled them to procure a passage and provisions for the voyage, and arrived here destitute of both money and provisions. I forwarded them up the country, there being no employment available for them in this district. The other emigrants who received assistance to emigrate were from Dublin and Limerick, 141 in number; they all received a sum of money on landing here, to enable them to proceed to their friends, and were also well supplied during the voyage. Those from Limerick are mostly Colonel Wyndham’s tenantry; they are proceeding to their friends in the Newcastle district. Ten families, 48 in number, in the Arcturus, are paupers, sent out by their parishes, under the superintendence of the Poor Law Commissioners; they all received sufficient means to carry them to their destination.

A case of gross infringement of the Imperial Passenger Act occurred this week, the — Captain — from — with — passengers. About 130 of these people state that they had engaged their passage with Mr. — in this vessel, to proceed to St. John’s, New Brunswick, but, contrary to their agreement, they were brought to this port. I immediately took proceedings against Captain — to oblige him to fulfil the contract between these people and Mr. —, which he, to avoid prosecution, immediately complied with, and furnished those who were desirous of proceeding to St. John’s with a conveyance, there being fortunately a schooner about to sail for that port. A report of the particulars of this case, with the affidavits of the passengers, I forward separate. It is but justice to the master to state, that he appears in no way to blame, having only joined the vessel a few days previous to her sailing, and he used every exertion to remedy the evil on arrival here. I have also had occasion to place information in the hands of the Crown officer to prosecute the following vessels for the infringement of the Imperial Act, in not having sufficient superficial space for the accommodation of their passengers; viz. the — from —, — from —, — and — from —, — from —, and the — from —. The — from —, the — and — from — were fined by the collector of customs for an excess of passengers over the tonnage. These vessels have each paid the penalty.

There are still, I regret to say, a good many hands unemployed at the different agencies throughout the province; but as the harvest is now approaching, I anticipate but little difficulty in being able to dispose of them all to advantage. Mr. Hawke reports that the crops look most promising, and that throughout Canada West, there is every appearance of a beautiful harvest; this, in connexion with the large additional number of hands which will shortly be required on the St. Lawrence improvements in this section of the province, will more than absorb those at present seeking employment, and also furnish for those who may arrive.

*Note.*—The emigrants arrived during the past week all landed in good health; they consist of mechanics, farmers, and a few labourers, and are generally in good circumstances.

The passengers per the "Amazon," from Hull, consist of eight families, and a few young men, chiefly mechanics; the greater part of them intend proceeding to join their friends settled in the State of Ohio, and all appear to possess good means; two families (farmers) are proceeding to settle in the neighbourhood of Toronto. One hundred and seventy-seven passengers in the "Exile," from Belfast, are a respectable-looking people, chiefly farmers; a considerable number of them have their friends in the western section of the province. The — had an excess of 18 passengers over her complement, according to the superficial measurement of her passenger deck; and I have taken the necessary proceedings against the master to enforce the penalty. The —, from —, with 239 passengers, landed in good health; this vessel also had an excess of 26  $\frac{3}{4}$  passengers over her complement, according to measurement, particulars of which I have placed in the hands of the Crown officer for prosecution. These people are, with the exception of a few families, all in good circumstances and able to pay their way to their destinations, which is to the Bathurst, Home, and Gore districts. One hundred and three passengers in the brig — from —, are a healthy set of people, and consist of farmers and labourers, many of whom have friends in the western part of the province. This vessel was ascertained, on checking her list of passengers, to have an excess of 10  $\frac{3}{4}$  adults over her complement, according to tonnage, for which excess the master was fined in the penalty of 20 *l.* sterling, although, according to the extent of her superficial space, she might have carried from 12 to 14 passengers more. Passengers by the "Consbrooke," from Liverpool, and "Baltic," from Yarmouth, are chiefly farmers and labourers. Some respectable families in the former vessel are proceeding to settle in the Eastern Townships. I am happy to report that during the past month I have succeeded in directing a very considerable number of families to that section of the province; and by the reports I have since received, they have all succeeded in getting employment, with the exception of some few young men, who were dissatisfied with the wages offered, viz. 2*s.* per day, with board. The following extract of a report received from A. B. Hawke, Esq. chief agent for Canada West, dated the 20th instant, conveys most gratifying intelligence of the increased demand for labourers; and that the number of the unemployed, which I have had occasion to allude to in my former reports, are rapidly decreasing: "The accounts which I have received from Cobourg, Toronto, and Hamilton since I wrote you last, state that the near approach of harvest has increased the demand for labour, and that the number of unemployed persons was rapidly diminishing; but few emigrants, so far, have obtained employment on the public works. When we consider how few canal labourers settle and become good farmers, it is a subject of congratulation that so many have found employment in the rural districts, and unless we have a very extensive emigration late this fall, there is every prospect that all the emigrants will be comfortably settled before the winter sets in."

In the schooner "Defiance," from Miramichi, was 108 passengers, 10 of whom landed there this season; the others are old residents, chiefly farmers and labourers; employment being very scarce they have come on here seeking it; the greater part intend proceeding up the country.

To same period last year - - - - -	-	23,614
Increase in favour of 1842 - - - - -	-	12,989

Note.—The emigrants arrived at this port since the 24th ult. consist chiefly of farmers and labourers, and all landed in good health.

In the "Troubadour," from Glasgow, were 224 passengers, consisting of farmers and mechanics, many of whom are in good circumstances ; they are all proceeding to the western section of the province to settle, where many of them have friends ; they proceeded to Montreal in the vessel. One hundred and thirty-three passengers in the "St. Andrew," from Stornaway, are principally labourers, and a few farmers, and all very poor ; they intend settling in the Eastern Townships, in Bury and Linwick ; their means being very limited, I was under the necessity of assisting them with a conveyance, for the women and children, as far as Sherbrooke.

In the "Margaret Balfour," from Belfast, were some very respectable emigrants, with good means ; they all went to the western section of the province for settlement and employment. Two families, 12 in number, in the "Mary," from London, are proceeding to their relations at Guelph ; they were assisted to emigrate by their parish. The other emigrants by this vessel appear in comfortable circumstances, and have all proceeded up the country, some for employment and others to join their friends. Seventy-four passengers in the brig "Anna Maria," from Limerick, consist of farmers and labourers ; five families are proceeding to their friends at Bytown ; the remainder are going to their friends in the United States ; they all appear able to pay their own way.

In the "Pactolus," from Glasgow, were nine families, 51 souls, who have been aided to emigrate by public and private contributions ; they landed here very poor. Two families who have relations in the province, one at Guelph, the other near Montreal, were forwarded to them ; the others were sent in to the country settlement for employment. This vessel proceeded direct to Montreal ; the remainder of her passengers were all in good circumstances, and all intend settling in Canada West.

The demand for labourers throughout the country settlements has considerably increased ; and I received a letter from one gentleman in the Eastern Townships a few days since, requesting me to forward him from 20 to 30 hands, to whom he will give steady employment until the winter, at 2 s. 6 d. per day. I find great difficulty in inducing any of those seeking employment to avail themselves of this offer ; if they have the means of proceeding up the country, nothing will induce them to remain in this section of the province.

To the same period last year	-	-	-	-	-	-	-	24,187
Increase in favour of 1842	-	-	-	-	-	-	-	13,280

Note.—The emigrants of the past week landed in good health, but a large proportion of them very poor, and requiring assistance to enable them to reach their friends; they are, with few exceptions, proceeding to different sections of Canada West, to join their friends and relations, who have been for some years residents in the province.

A number of passengers per —, from —, are very poor; and I was under the necessity of assisting them with a free passage up the country to enable them to proceed to their friends. The greater part of these people were on board the vessel over 12 weeks, as owing to a report of the vessel being unseaworthy, the Government agent at — would not permit her to proceed to sea until a proper survey was held, and she was reported fit for the voyage. Passengers by the "Royal Bride," from Dundee, are respectable farmers, and all have friends and relations settled in the province; they all appear to possess means. One hundred and ninety-eight passengers in the "Nelson Village," from Belfast, are also, with few exceptions, proceeding to Canada West to join their relations; they are mostly agricultural labourers, a number of whom possess money; a few young men, whose means are limited, proceeded to the Gosford Road for employment. The passengers per "Huron," from Liverpool, and "Henry Volant," from Ballyshannon, are labourers, and a few trades and servants; the greater part are proceeding up the country to their friends, and others I have directed to the Gosford Road for employment. Three families have gone to the Eastern Townships. There are but few emigrants about this city or Montreal out of employment at present. Several hundred hands are at present employed on the Beauharnois Canal, at 3 s. per day.

Increase in favour of 1842 - - - - -	-	13,497

*Note.*—The emigrants arrived during the past week consist of agricultural labourers, a few farmers, mechanics, and domestic servants, and nearly all appear to have their friends or relations settled in different sections of the province. They have landed generally in good health ; but owing to long and tedious passages, the average being over 57 days, very many families, whose funds were limited, were unable to proceed to their destination without assistance.

The passengers per the “Macoa,” 282, sailed from Londonderry on the 10th May, and after being a few days at sea were obliged to put into Belfast in distress, and were detained there until the 19th June. As these people were delayed at that port upwards of four weeks, attended with a good deal extra expense, the funds of many of the families were completely exhausted on arrival here, and I found it necessary to grant some assistance to enable them to reach their friends. The master, Mr. Milligan, was most kind and attentive to their wants during the voyage, and they all speak most favourably of his attention. They are all proceeding to Canada West.

One hundred and fifty-two passengers in the “John and Robert,” from Liverpool, had also a long passage of 50 days ; many of the families were short of provisions, and being obliged to purchase from the master, they landed here very poor. They also state that they were waiting a considerable time in Liverpool for a vessel. With few exceptions, they are proceeding to Upper Canada to their friends.

One hundred and seven passengers in the brig “Alice,” from Glasgow, and 78 in the “Sir William Wallace,” from Aberdeen, are all respectable farmers and agriculturists, and, with the exception of one or two families in the former vessel, appear in good circumstances, and are going to join their friends and relations in the Huron tract and London district. A few families are proceeding to the neighbourhood of Perth and Bytown, and up the Ottawa River. Six families, 38 in number, in the “St. Lawrence,” from Cork, are going to their friends in the Bathurst district ; they are all in good health, and appear well able to pay their way. There is a good demand for skilled labour among the farmers in this section of the province, and good hands have no difficulty in procuring employment. Common labourers find it much more difficult, and for steady employment are dependent on the public works. About 400 hands are at present employed on the Gosford Road, in this district, one-half of whom are emigrants of this season. Wages, 2*l.* per month and their board.

(No. 13.)—WEEKLY RETURN of EMIGRANTS arrivsd at the Ports of *Quebec* and *Montreal*, from the 20th day of August to the 27th day of August 1842.

REMARKS:

- (a) Went to Canada West for settlement; one family to join friends in Burford, London district.
- (b) A few will remain in Montreal to join relations, and the remainder proceed to Bytown, Kingston, Port Hope, Dundas, Buckingham, and Brockville.
- (c) Proceeding to St. Vincent, county of Simco, and other parts of Canada West.
- (d) Some went to Richmond, Midland district, others to Goderich in the Huron tract, and a part to Williamsburg, county Dundas.
- (e) Proceeding to join friends in the Bathurst and Johnson district. A few families intend remaining in Montreal and Kingston, where they have friends.
- (f) Proceeded to Beverly, Ramsey, township of Young, above Brockville, Toronto, and Adelaide; five families went to Prince Edward's Island, others to Troy, and the remainder to Montreal, Kingston, and Toronto.

*Note.*—A large portion of the emigrants arrived during the last week have suffered much from want of provisions and from sickness; the average length of their passage being over eight weeks.

The ship —, with 505 passengers, was 68 days on her voyage, and her passengers suffered very much from sickness, 30 deaths having occurred previous to her arrival at quarantine, and two more during her detention there, from the effects of small-pox and typhus fever. Many of the passengers were so much reduced from want of food that the medical officer was under the necessity of retaining a number in hospital for a few days to enable them to recover their strength. The stock of provisions of a great many became exhausted after being out about five to six weeks, and they were under the necessity of purchasing food from the master at most exorbitant rates. This, as well as many other complaints made by the passengers, are now undergoing legal investigation, which, when closed, will be duly reported. A large number of these people are proceeding to join their friends, chiefly in Canada West; there are a good many Scotch emigrants among them, who are in good circumstances, and who are going to their friends in the London and Western districts.

Sixty-nine passengers per the "Euphrosyne," from Bristol, are farmers and farm-labourers; two or three families have brought out a good deal of capital with them, and intend settling in the London district; this vessel was 69 days on her voyage, but they all appeared well supplied.

Passengers per the "Caledonia," 86 in number, from Glasgow, are respectable farmers and mechanics; they are all proceeding to join their friends in Canada West.

One hundred and twenty-three passengers in the "Elephanta," from Greenock, are, with the exception of a few families, in good circumstances; they had a long passage of 51 days, but were well supplied with provisions.

In the "Edinburgh," from Liverpool, were 300 passengers; this vessel was 54 days on her voyage, and many of the passengers were short of provisions; they however landed in good health; they consist of farmers' labourers and a large number of mechanics; the former are all proceeding to join their friends, and the latter in search of employment.

Passengers by the "Borneo," 135, from Limerick, and "John Bell," from New Ross, are chiefly labourers, coming out to join their friends; a number in the former vessel are going to the United States.

Emigrant Department, Quebec,  
29 August 1842.

COPY of a DESPATCH from Lord *Stanley* to Governor the Right honourable  
Sir *Charles Bagot*, G. C. B.

No. 21.  
Lord Stanley to  
Governor the  
Right hon. Sir  
Charles Bagot,  
27 October 1842.

Sir,

Downing-street, 27 October 1842.

HAVING referred to the Commissioners of Colonial Lands and Emigration your despatches, No. 166, 172, and 189, of the 8th and 13th of August, and 13th of September, enclosing the Returns for two weeks of emigrants who had arrived at Quebec down to the 27th August, together with a list of the vessels which to that period had infringed the Passengers' Act, by carrying an excess of passengers, I have the honour to transmit to you, for your information, a copy of the Report made to me by the Commissioners on the subject, and to acquaint you that the reasons which they have assigned for not instituting prosecutions in this country against the parties who have violated the law by carrying an excess of passengers appear to me to be conclusive.

Oct. 14.

I am, &c.  
(signed) *Stanley*.

Enclosure in No. 21.

Sir,

Colonial Land and Emigration Office,  
9, Park-street, Westminster, 14 October 1842.

Encl. in No. 21.

WE have the honour to acknowledge your letters of the 29th and 31st August, and 7th instant, the first transmitting to us a despatch from the Governor of Canada, dated the 8th of August, with a list of vessels which up to that period had infringed the Passengers' Act, by carrying an excess of passengers, the two latter forwarding the usual weekly returns which had been received from the emigration agent at Quebec.

The circumstances attending the greatly increased emigration of the present year had continued, upon the whole, to be satisfactory, and the emigrants appear with but little difficulty to have obtained employment, either at the public works or with private parties.

We have called for reports from the Government emigration agents upon all the cases of infringement of the law which have been brought under our notice by these returns, when the vessels have sailed from ports at which those officers are resident; and we have now the honour to report, that it does not appear to us desirable that any steps should be taken in this country for the punishment of the parties connected with the ships. The number of such cases mentioned by Mr. Buchanan in which vessels have brought a greater number of passengers than is allowed by the Act, is 14; and in nearly all of these, the excess has occurred in respect of the superficies of the deck; but we find, upon reference to the Government emigration agents, that the method of measurement adopted in the colony must differ from that which is in use in this country; and that in the opinion of those officers many of the vessels which are supposed to have infringed the Act in respect to the numbers they conveyed, are not justly liable to the charge. The doubt which is thus thrown upon the subject, it would be necessary, though difficult, and perhaps in some instances impossible, to remove, before any proceedings could be taken against the parties; and such a measure would then perhaps be considered severe, seeing that the numbers conveyed in the vessels had been sanctioned by the officers who are appointed to guard against the infringement of the Act. It is right to mention, moreover, that no inconvenience from overcrowding appears in any of these cases to have been suffered by the passengers, and that the evil of an excess of numbers will, as we hope, be more efficiently checked under the Act which has now come into operation. Any discrepancy, moreover, in the calculations of officers in this country and in the colony as to the numbers which any vessel is entitled to carry, will in future be obviated, inasmuch as by the 17th clause of the new Act, it is required that this fact shall be ascertained, and be noted down amongst other particulars in a list, which must receive the signature of the chief officer of the Customs before the vessel can be cleared; a duplicate of this list will be carried out by the master of the vessel, and be an authoritative guide to the immigration agent in the colony in all matters to which it relates.

We may mention, that among the cases before us there are two in which there would appear to have been an admitted excess of passengers; in one of them, however, assuming that the admeasurement of the deck in this country was correct, the number in excess is trifling, and was unattended with any evil during the voyage; it would scarcely seem expedient, therefore, in this case to risk a prosecution in this country, which would be dependent, after this lapse of time, upon evidence to be transmitted from the colony. In the other case to which we refer, the excess of numbers had been expressly allowed by the

## CANADA.

the Government emigration agent in this country before the vessel sailed, upon the ground that the parties connected with the vessel had been misled by the Custom-house officers as to the numbers which she could legally carry. It appears the passengers had come from a great distance, and being collected at the port, would have been left behind in a state of destitution if he had prevented their embarkation. We have instructed him never, in future, to exercise any such discretion, which is beyond the law; but it would at the same time, we conceive, be not right, under the circumstances, to institute proceedings against the parties belonging to the ship for the breach of the law.

We cannot, therefore, as we before had the honour to submit, recommend that any steps should be taken in this country in respect of those vessels which are stated to have infringed the Passengers' Act, and not to have been proceeded against in the colony.

We have, &c.

James Stephen, Esq.

(No. 4.)

Answers to Queries.

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—A warrant for 3,000*l.* has been placed at my disposal during the past quarter, out of the proceeds of the immigrant tax, on account of the expenditure incurred at the different agencies throughout the province. The amount of tax received to this date amounts to 7,058*l.* 9*s.* 2*d.*
2. State the description of labour which is in request in the colony?—In the large towns of Quebec, Montreal, Kingston, and Toronto, almost every description of artisan can find employment in building. Stonemasons and dressers, bricklayers, plasterers, carpenters, joiners, painters and glaziers, are in demand very generally; and the rates of wages stated in the Abstract annexed, in reference to these classes of labourers, will show that they are very fairly remunerated. Quarrymen, bricklayers, sawyers, carters, and hodmen, are furnished with support from the same source. In the erection of grist and saw mills, carding, fulling, and dressing mills for the woollen manufacture, oil-mills, paper-mills, distilleries,

distilleries, breweries, and the requisite machinery and utensils, mechanics of the same classes are required, with the addition of millwrights working both in wood and metal. It is to be remarked, however, that the climate confines building of almost every description to the summer months of the year, the winter rate of wages for the carpenters, joiners, and others who can work within doors, are very considerably reduced, while the masons, bricklayers, &c. are totally without employment in their line. Shipbuilding, which has up to the present year been a profitable direction of industry, is now almost totally at a stand throughout the province; and the wages of the ship carpenters, caulkers, and riggers have fallen to a very low standard accordingly. The failure of this branch of industry is the more sensibly felt since the lessened demand for labour occurs in the winter months. The vessels formerly in Canada were to a great extent constructed in that inclement season, which puts a stop to other building operations; and the mechanics, who would otherwise have been idle, were maintained from this source in employment throughout the year. This relief being withdrawn, the difference between the seasons must be most sensibly felt by all the classes of carpenters, joiners, sawyers, and others who have hitherto enjoyed it. Cabinet-makers, upholsterers, coopers, carriage-makers, wheelwrights, cartwrights, engineers and mechanics, blacksmiths, whitesmiths, and tin-workers, copper-smiths, plumbers, turners, chandlers, soap-makers, brewers and malsters, tailors, boot and shoe makers, tanners and curriers, butchers and bakers, may generally, without difficulty, find employment in the large towns mentioned above. In their neighbourhood, market gardeners and gardeners' assistants are in demand, in addition to the farm servants required for the agricultural districts. In the smaller towns, such as Three Rivers, William Henry, Sherbrooke, Melbourne, Bytown, Brockville, Prescott, Cobourg, Niagara, Hamilton, and in numerous villages throughout the country, there is a demand for the mechanics required in building, as also for cabinet-makers, tailors, shoemakers, blacksmiths, carriage-builders, plough, and other implement makers.

It may be made a general remark, that the highest classes of mechanics in Canada, and perhaps any new country, are not those who find themselves remunerated the most liberally; and workmen in curious branches of trade, and almost all manufacturing artisans, fail to find employment at rates of wages even equal to those they have received in Great Britain.

For the country district it is chiefly agricultural labourers who are in demand; and it may be observed, that the comparatively high wages paid by the employer in Canada form strong inducements to him to make a careful selection of his servants. A large proportion of the immigration to Canada consists in men previously unaccustomed to agricultural labour, perhaps unfitted for the employment, and that while the active, able-bodied man, acquainted with the use of the plough, the scythe, and the sickle, is sought after, and at once offered high wages, those who have been employed in factories, or in districts whose practical agricultural remains unimproved, are avoided, and often left to distress. The agricultural labourer may in almost every part of the province find ready employment; good ploughmen are always in demand, equally with mowers, reapers, waggoners, and barnsmen. For the country are required also the common blacksmith, cartwright, implement-maker, wheelwright, with the carpenter and mason.

The public works of the province, at the present moment, demand a very large supply of labourers, and afford a resource to those of the immigrants whose previous employments have failed to suit them for the general wants of the country. The extension of the various canals, and the work of opening and forming the various roads in progress, can be executed by labourers of the commonest ability; and this employment, while it furnishes him at once with means of subsistence, tends in some degree to fit him for other situations of service, or to prepare him as a settler upon lands.

It may be here remarked, that contractors of public works will invariably give the preference to labourers who have been a few years in the country over the newly arrived immigrants; and among those employed on the public works in progress this season, a very small proportion are immigrants of this year, as owing to the stoppage of public works in the United States, labourers from all quarters of the Union have flocked to this province for employment, and contractors in all cases give them the preference. The number who have thus come in are variously estimated at from 4,000 to 5,000.

3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—The annual immigration to Canada is, from the circumstances under which it takes place, crowded into the comparatively short period comprehended in the latter half of the month of May, the months of June, July, and August. The number of arrivals at Quebec between the 9th May and 31st July having been 36,328, it may be supposed that the demand for labour has been fully satisfied. The introduction of so large a number of labourers and mechanics as are comprehended in this Return, must indeed have produced a glut in the labour market, even in a much more extensive and populous country than Canada. But although a reply to the third Query must be found to convey the impression that the last quarter's immigration has fully satisfied the demand for labour, I may take the opportunity to remark, that since the supply of labour from this source will be limited to the early summer season, while the demand for labour in agricultural, and to some extent for public works, will be extended through the entire year. There can be no doubt that the country will have absorbed and employed advantageously all the immigrants of the present year before it shall be called upon to receive those of the next.

4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—In attempting a reply to the fourth

## CANADA.

Question of the series, I may take advantage of its very general tenor to notice the effects of the disposition so extensively existing throughout Great Britain to facilitate the emigration of the most distressed classes of the population. These effects cannot but prove discouraging, as well to the classes who are promised benefit by removal to Canada, or other countries, as to those whose means are employed in promoting this removal, until some system may have been established by which each emigrant on leaving his own country may be provided with such pecuniary or other sufficient aid as shall secure him from destitution at least, until he can reach his place of permanent establishment. It is true, that some instances of great liberality in landlords, parish authorities, and emigration associations may be referred to; but the means which I possess of ascertaining the particular situation, in regard to funds, of the immigrants on reaching this port, satisfy me that a very large proportion of the pauper families, whose emigration from Great Britain takes place either directly or indirectly through the assistance afforded them by their parishes in England, their landlords in Ireland, or by the working-class associations, assisted by charitable contributions, in Scotland, and who are supplied on their departure merely with the necessary stock of provisions, and a passage paid across the Atlantic, are landed at Quebec in a state of utter destitution. In by far too many instances the object of the landlords and rate-payers seems to be, not so much to benefit the emigrant, as to attain the removal of the redundant pauper labourers of a parish or district, and thereby to reduce the poor-rate, or to avoid the necessity of affording to the able-bodied poor the subsistence which they are unable to earn. Pauper emigration to Canada affords examples of the most contrary results: on the one hand may be seen many thousands of individuals, who after a few years of persevering industry, have acquired perfect independence; on the other, there are large numbers who have made no advance whatever beyond the state of extreme poverty which had been their lot in Great Britain; and although it cannot be denied that many of the former class have made their way from the lowest beginning, the failures that are observed among the latter may be in almost every case traced to the circumstances of total destitution under which the party had been landed in the province, and to the privations, hardships, and disease which were in consequence entailed upon them.

It should be carefully borne in mind by those interested in procuring the emigration of the poorer classes of their neighbours, that the season for their introduction into Canada is confined to a very few months of the year; that Quebec is practically the sole port; and that although the provincial Legislature, as well as the Imperial Government, have provided some resources for their inland transport and distribution when found to be destitute, the great body of the immigrants are necessarily thrown together in the principal towns, and must furnish a far greater supply of labour than those places can at any time require. The public works, such as canals and roads, are many of them at great distances from Quebec or Montreal, and agricultural employment cannot be readily procured unless by a search for it, extending throughout distant districts. If wholly without resources, therefore, the immigrant is necessarily in distress, whether he be at Quebec, Montreal, Kingston or Toronto; he must be himself discouraged and disappointed, while his applications for relief, directed to the neighbouring inhabitants, are burthensome to them, and considered disgraceful to the applicant. He is perhaps unwillingly idle, but cannot procure the means of seeking advantageous employment where it could be obtained; and it only requires the additional misery of disease in his family to confirm his despondency, and prevent him from ever rising beyond the condition of a daily labourer; on the other hand, the able-bodied immigrant, assisted either directly, as with a sum of money paid to him on landing, or furnished with lodgings, provisions, transport, &c., through proper agents, is enabled to afford the necessary time for a proper search for employment; can transport his family to the point at which he finds it; is never discouraged by doubt of success, still less by the dread of want; and with every progressive step in the improvement of his condition, receives increased courage to continue his exertions. He soon discovers that his future independence lies in possession of land, and whatever may have been his former state, however deficient his moral education, however degraded his habits, it may be affirmed, that a distinct perception of the practicability of the attainment of his independence in no case fails at once to improve his character, change his views, and most materially to amend his social feelings. Under a general consideration of the subject, there cannot be a doubt that it is sound policy to secure the emigrant from the probability of his remaining in Canada in a condition no better than that from which it is an object of admitted necessity to remove him at home.

It is therefore plainly the duty of those directing the arrangements of future emigrations to place the immigrants in a situation to be enabled with certainty to take advantage of the openings for industry which this new country affords, or at least to secure them from the distress which, under existing circumstances, the landing of destitute immigrants on its shores cannot fail to entail.

*A. C. Buchanan, Chief Agent.*

(No. 4.)

Answers to Queries.

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—No funds have been placed at my disposal for the relief of emigrants during the current year, except the sum of 1,500 l. currency by the Government.
2. State the description of labour which is in request in the colony?—There is no particular description of labour much in demand at present; since the opening of the navigation upwards of 26,000 emigrants have come to Canada West, and have been distributed. Consequently the demand for labour has been pretty well supplied.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—Yes.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—The immigrants of the current season have been remarkably healthy, and as they have been willing to work for low wages, they been generally successful in getting employment.

(No. 276.)

COPY of a DESPATCH from Lord *Stanley* to Governor the Right honourable  
Sir *Charles Bagot*, G. C. B.

CANADA.

No. 23.

Lord Stanley to  
Governor the  
Right hon. Sir  
Charles Bagot,  
15 Nov. 1842.

Sir,

Downing-street, 15 Nov. 1842.

I HAVE received your Despatch, No. 191, of the 20th September, forwarding the Abstract Quarterly Return of Emigrants who had arrived in Canada to the 31st July, accompanied by the remarks of the agent for emigration at Quebec.

The favourable account there given of the emigration of the season, so far as it had then gone, is highly satisfactory.

I fully concur in Mr. Buchanan's observations (to which every publicity will be given in this country) respecting the importance to their future prospects of emigrants of the poorer classes possessing, when they land in the province, sufficient funds for their subsistence while in search of employment, as well as to defray the expense of removal to the districts where labour is in demand. In the case of persons sent out by parishes under the sanction of the Poor Law Commissioners, I have always understood that that sanction is never given unless, independently of the mere outfit and expense of conveying the emigrant to the province, the sum of 1 l. for each adult, and a fit proportion for children, be entrusted to the master of the vessel, to be paid into the emigrant's hands on landing, so that they may not be destitute. I should wish to ascertain from Mr. Buchanan, whether he was aware of the existence of this landing money, and if so, to what extent he is prepared to report that it is inadequate, and what change specifically he would be disposed to recommend. If there be reason to apprehend that the landing money has often hitherto been misapplied, it may be a question whether the expenditure of it should be entrusted to Mr. Buchanan, and not to the emigrants themselves.

I have, &c.  
(signed) *Stanley*.

— No. 24. —

EXTRACT of a DESPATCH from Sir *Charles Bagot* to Lord *Stanley*, dated  
Government-house, Kingston, 26th January 1843.

No. 24.  
Sir Charles Bagot  
to Lord Stanley,  
26 January 1843.

I APPEND a copy of a Report from Mr. Buchanan upon the subject of the inquiry suggested in your Lordship's despatch of the 15th November (No. 276), relative to the adequacy and disposition of the present allowance of 1 l. for landing-money.

21st December.

From this your Lordship will perceive that the amount is hardly adequate, in ordinary cases, to carry the parties as far as Kingston, and that consequently they are obliged, unless they have other means, to depend upon relief, even to enable them to reach the places where they may hope to find employment. With regard to the disposal of the landing-money, Mr. Buchanan does not seem to anticipate much advantage from his having any power over it.

Enclosure in No. 24.

Sir,

Emigrant Office, Quebec, 21 December 1842.

I HAVE the honour to acknowledge the receipt of your letter of the 12th instant, transmitting me, by the command of his Excellency, copy of a despatch from the Right honourable the Secretary of State for the Colonies, relative to the remarks made by me in the quarterly abstract forwarded from this department, up to the 31st July last.

In reply to that part of Lord Stanley's despatch relating to the pauper emigrants sent out under the sanction of the Poor Law Commissioners, I have the honour to state, that it was not my intention to apply those observations in any way to the emigrants who are sent out yearly to this colony, under their sanction; on the contrary, I have frequently had occasion to bring under his Excellency's, and his predecessor's notice, the satisfaction I have experienced at the comfortable condition in which these emigrants landed here.

291.

The

Encl. in No. 24.

No. 276, 15th Nov.

## CANADA.

The evil which I wished to set forth, was the practical inconvenience and distress arising from the want of system which has prevailed for several years past, owing to which large parties of emigrants, more particularly from Scotland and Ireland, have with assistance from their landlords, aided by appeals to the sympathies of the public, been enabled to emigrate to this colony; but the means thus collected have been barely sufficient to pay their passage, and procure often but a scanty supply of provisions for the voyage.

In my annual Report of last year, and in my weekly reports of this season, I had occasion to allude to several parties of emigrants from Scotland and Ireland, who landed, suffering from the above causes; and I also had the honour to bring the evils of this system under the notice of his Excellency the late Lord Sydenham, in my Report on the emigration to this province for 1840, to which I would most respectfully refer.

Of 1,079 persons aided in their emigration from England during the past season, 831 emigrated under the sanction of the Poor Law Commissioners, and received 1*l.* sterling on landing here; the remaining 248 received, so far as I could learn, only partial aid from their landlords and parishes, without landing-money; the number from Ireland was 504, and from Scotland 246; all the latter, with the exception of a few families assisted by Colonel Wyndham, required and received assistance on landing here, to enable them to proceed up the country.

In reply to the wish expressed by Lord Stanley, to ascertain if I was aware of the fact of the landing-money being paid to the emigrants sent out under the sanction of the Poor Law Commissioners, and if I considered that sum inadequate, and what change specifically I would be disposed to recommend, &c., I have the honour to state, that the landing-money thus allowed to each passenger has in every instance been paid in my presence, and the master of the vessel is required to produce my certificate that the conditions under which these people embarked have been duly fulfilled; one-half of his freight being retained until such certificate is produced.

The money thus given, although a very great assistance to the emigrants on their arrival, in providing for their immediate wants, owing to the improvident habits of this class of persons, is seldom sufficient to defray their expenses to any great distance into the interior.

Owing to the mistaken ideas as to the climate of Lower Canada, few of the emigrants can be prevailed on to proceed to the settlements in this section of the province, which their means would generally enable them to do, and employment for very many of them would be procured; but in nine cases out of ten, their destination is west of Kingston or Toronto; and taking the rates of transport during the past season, which have been unusually low, the money thus paid does little more than defray their passage as far as Kingston, and in the event of their not securing employment, they are necessarily in a destitute condition, and become a charge on that agency. The transport of a family of five persons, equal to three adults, with eight days' provision to Kingston, without allowing for any unnecessary delay, is 3*l.* 2*s.* 9*d.* currency, and to Toronto, allowing 10 days, 4*l.* 8*s.* 3*d.*; the landing-money such a family would receive on arriving here, 3*l.* 10*s.* currency.

So long as the present limited assistance is allowed to pauper emigrants, I do not see that any material improvement would be effected by placing the disposal of it in my hands, unless by so doing the proper application of the money could be secured; but as the emigrant on his arrival here may have his destination fixed, and is at liberty to act or not on the advice which he may receive from me, I do not think that any material advantage would in the end be effected by placing the disposal of the landing-money in my hands; should, however, his Lordship think otherwise, it shall be my earnest endeavour to give his commands the fullest effect.

Rawson W. Rawson, Esq.  
&c. &c. &c.

I have, &c.  
(signed) A. C. Buchanan,  
Chief Agent.

*Note.*—The emigrants arrived during the past week have landed in good health, and consist of farmers, labourers, and mechanics. These vessels unfortunately all have had long passages, the average for the week being 60 days, consequently very many families were short of provisions, and obliged to buy from the master for some weeks previous to arrival, which has exhausted all their means. Over one-half are proceeding to join their relations and friends settled in different sections of the province, chiefly in Canada West; a few are proceeding to Ohio and the Western part of the State of New York, and the remainder, principally mechanics, are in search of employment. Owing to the above causes, the applications for assistance, I regret to say, have been very numerous, and I have been under the necessity of extending relief in free passages and in provisions to a very large number. In the "Catherine," from Liverpool, and "Ceres" and "Astria," from Sligo, the passengers were very poor, and I was obliged to assist upwards of 50 families from these vessels.

Passengers by the "City of Waterford" are generally in good circumstances; about 20 of them are proceeding to Ohio; one family, five in number, was sent out by their parish. Eighty passengers, per "Susan," from London, have also been sent out by their parishes; they had a long passage of 70 days, but being found by the vessel, suffered no inconvenience. They received, on landing here, two days' provision and 20s. sterling in cash, each adult, and proceeded immediately on their route to Canada West.

The passengers per "Lady Falkland," 361 in number, all landed in good health; among them are many respectable farmers, who have brought out capital with them; a large number have relations settled in the province, and they are going to settle in the Bathurst, Johnston, Home, and London districts.

Employment of all kind is now very difficult to be obtained in the neighbourhood of this city and Montreal, as also in the cities of Canada West; and it is at these points, unfortunately, all the idle, destitute, and those in search of employment will collect, and it is only by distributing them throughout the agricultural districts, where employment may be obtained for all who will take the trouble to inquire or look for it, that we can expect they will be able to provide for the themselves and families during the coming winter. This, however, is attended with expense, but it is unavoidable. The outlay thus incurred may be considered as final, and had they not been thus scattered in the early part of the season, the expense would have been much greater, and the result by no means so satisfactory. The almost certainty of an abundant harvest will, by reducing the price of all the necessaries of life, enable the poor immigrant of this season to get through the winter months with comparative comfort.

Emigrant Department, Quebec,  
5 September 1842.

A. C. Buchanan, Chief Agent.

REMARKS.

- (a) Some have proceeded to the vicinity of Bytown, Kingston, and Toronto, and the remainder to Goderich, Gore, and London district.
- (b) Proceeded in the vessel direct to Montreal, on their way to Darlington, Kingston, and London district. Three young men proceed to Cape Breton.
- (c) A few will remain in Montreal, and the remainder proceed to Toronto, where they have friends.
- (d) Two families intend going to the United States, and the remainder to Montreal and Prescott.
- (e) Proceeded in the vessels on their route to Canada West.
- (f) Went to Montreal and Township of Brock.
- (g) Proceeded to Bytown, Whitby, and Darlington; one family are going to the State of Ohio.
- (h) Some families are going to Coburg and Port Hope, and others intend to join relations in the United States.
- (i) Proceeding to Warwick, Bytown, Kingston, Toronto, and the London district; two families proceed to St. John's, New Brunswick.
- (j) Went to Hamilton, Flora, and Eldon. This vessel landed 350 passengers at Sydney.
- (k) All have proceeded to Canada West.

Note.—Emigrants arrived this week consist of labourers, farmers, and mechanics, and have landed generally in good health. The average passages of these vessels is 48 days. 378 passengers in the "Anna Hall" from Belfast, consist of farmers and labourers; they are all proceeding to Canada West, to join their friends. This vessel sailed originally on the 2d July with 450 passengers, but after being a few days at sea was obliged to return to Belfast, her crew having mutinied, when about 70 of her passengers returned to their homes; she afterwards sailed on the 14th July, and arrived here after a voyage of 55 days. Owing to their long passage and detention at Belfast, their supply of provisions run short, and they were under the necessity of purchasing from the master, and consequently many landed here very poor, and unable to pay their way up the country to their friends. I was therefore obliged to extend relief to upwards of 30 families.

Passengers per "Margaret Wilkie" from Greenock, 111 in number, are respectable farmers, and all appear to possess means; they, with the exception of three young men, who are going to Cape Breton, all proceed to Montreal in the vessel, on their route to the western section of the Province. The English emigrants from Padstow, Hull, and Plymouth, are all in good circumstances, and, with the exception of two families, going to Ohio, are proceeding to settle in Canada West, principally in the Newcastle, Home, and Gore districts. In the "Eliza" were 60 passengers sent out by their respective parishes; they were well supplied during the voyage, and received 20s. sterling on landing here. Passengers in the "Mohawk," from Glasgow, are all respectable farmers; they intend settling in the neighbourhood of Toronto and Hamilton. Fifty-nine passengers in the "Hercules," from Stornoway, are all very poor, and are proceeding to join their friends in Canada, West; this vessel landed 350 passengers at Sydney.

19 December 1842.

COPY of a DESPATCH from Governor the Right Honourable Sir *Charles Bagot* to Lord *Stanley*.

My Lord,

Government House, Kingston,  
19 December 1842.

I HAVE the honour to transmit herewith a copy of a Report from the Commissioner of Crown Lands, communicating the information desired by your Lordship's despatch of the 15th ultimo, No. 277, relative to the price of Crown lands for public sale in this province, together with a copy of a Gazette, published on the 16th instant, which contains a detailed list of the vacant Crown lands at present for sale.

I have, &amp;c.

(signed) *Charles Bagot*.

15 December 1842.

Enclosure 1, in No. 28.

Encl. 1. in No. 28.

Sir,

Crown Land Department, Kingston,  
15 December 1842.

I HAVE the honour to acknowledge the receipt of your letter of the 12th instant, transmitting the copy of a despatch from the Secretary of State, desiring certain information respecting the Crown lands for disposal in the province, and I shall, in obedience to his Excellency's commands, proceed to afford such information as will afford the Commissioners for Colonial Lands and Emigration the means of replying to the applications which may be made to them.

First, as to price: the price paid for waste lands of the Crown in the western division of the province, formerly known as Upper Canada, is 8s. currency per acre, payable in hand. In the eastern division, formerly known as Lower Canada, the lands in the county of Ottawa, and south of the River St. Lawrence, to the west of the Kennebec Road, are sold at 6s. currency per acre, and elsewhere in Canada east, at 4s. per acre, payable in hand.

As the lands in the inferior part of the province, where the soil and climate are equally unfavourable, could not be settled at the above prices, it is supposed that a reduction for the district of Gaspé and the Saguenay territory will be made, fixing the price of those lands probably at 2s. 6d.

It is to be observed, that the prices above-mentioned relate exclusively to advertised waste lands; for lands which have been formerly granted and resumed by the Crown (sometimes in a partially improved state) are subject to a special valuation, as are also the town and village lots.

CANADA.

In addition to these lands the Commissioner of Crown Lands has the disposal of Indian reserved lands, and the clergy reserves, both of which are subject to a special valuation.

The size of the lots may be stated (the exceptions being so limited) at 200 acres, but they are sold as frequently by half as whole lots.

For the convenience of the public generally, district agents are appointed under the Act for the disposal of public lands in each municipal district of the province, with full power to sell to the first applicant any of the advertised lands which by the Return, open to public inspection, may be vacant within his district.

As amongst the applications to the Commissioners for Colonial Lands and Emigration, allusion may be made to the free grants of 50 acres each, upon and in the vicinity of newly opened roads of a public character, it is necessary to mention at this time, that the only roads at present open under this regulation, are the Lambton and Kennebec, and Owen's Sound; but as it is more than probable that the greater part of these lots may be occupied before the opening of the navigation, it would be advisable to inform such applicants that no assurance can be given them of their finding any of these grants available on their arrival. The object of the grants above alluded to is to open Crown lands in the vicinity for settlement, and every hope is entertained that that object will be very rapidly attained by the sale of the waste lands thus brought within the reach of intending settlers, and every precaution is taken to prevent the possibility of these free grants being made matter of speculation, actual residence being one of the conditions insisted upon.

I have, &c.

Rawson W. Rawson, Esq.  
Chief Secretary, &c. &c. &c.

(signed) A. N. Morin,  
Commissioner of Lands.

Encl. 2, in No. 28.

Enclosure 2, in No. 28.

The Canada Gazette Extraordinary.

Crown Land Department, Kingston, 9 December 1842.

List of Vacant Crown Lands for Sale in the Province of Canada.

Canada West.—Price Eight Shillings per Acre.

Conditions of Sale.

1. The lots are to be taken at the contents in acres marked in the public documents, without guarantee as to the actual quantity contained in them.

2. No payments of purchase-money will be received by instalments, but the whole purchase-money, either in money or land scrip, must be paid at the time of sale.

3. On the payment of the purchase-money the purchaser will receive a receipt which will entitle him to enter on the land which he has purchased, and arrangements will be made for issuing to him the patent without delay.

Applications to purchase will be received at the offices of the local agents on and after the 16th day of January 1843.

Here follows a list of vacant Crown lands for sale in the province.

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot* to Lord *Stanley*.

Government House, Kingston,  
18 February 1843.

CANADA.  
No. 30.  
Sir C. Bagot to  
Lord Stanley,  
18 February 1843.

My Lord,

I HAVE the honour herewith to transmit, for the information of your Lordship, and the Land and Emigration Commissioners, a copy of a communication which I have received from the chief agent of emigration, in which are pointed out the advantages presented by the district of Gaspé, in Eastern Canada, for the settlement of emigrants, particularly of those possessing small means.

The statements herein contained are confirmed in a great measure by the opinions of the present and late Commissioner of Crown Lands, and by the enclosed extracts from a Report recently made by a Commission appointed to inquire into the state of judicature in the district in question.

I have, &c.

(signed) *Charles Bagot*.

## CANADA.

Encl. 1, in No. 30.

Enclosure 1, in No. 30.

Sir,

Emigrant Office, Quebec, 27 Jan. 1843.

Dr. G. M. Douglas, the Medical Superintendent of the Quarantine Establishment at Grosse Isle, whose observations and intelligence are not confined to the special duties of his department, but devoted to the promotion of emigration generally, has furnished me with a memorandum in relation to the advantages offered by the district of Gaspé for the settlement of many classes of the emigrants now annually resorting to the province, more especially those coming from the sea coast, and islands in the north of Scotland.

The information contained in Dr. Douglas's paper, being the result of a personal acquaintance obtained by an actual residence for some years in the district referred to, and consequently entitled to the fullest confidence, has appeared to me to promise to be interesting, if not at this moment particularly valuable; and I therefore venture to transmit it for submission to his Excellency the Governor-General.

I fully concur in the views which Dr. Douglas has taken of the capabilities of Gaspé, and I have every reason to feel assured of the success of any emigrants who may be established there, under proper arrangements for their early arrival, accommodations, and subsistence, for the period which they must employ in planting their first crop. It is doubtful, however, whether every emigrant family introduced would prove competent to clear, and bring into cultivation, between the time of their landing and the close of the planting season, such an extent of land as is necessary to furnish a year's supply of food; and it might be found requisite, in the case of an extensive introduction of settlers, through Government, or other assistance, to make previous provision of cleared land, as in any other district of the province. I must, at the same time, offer a caution against the adoption and application to Gaspé of Dr. Gesner's estimate of the capital required for effecting the establishment of a settler in New Brunswick. My knowledge of the cost of maintaining a family while their first crop is growing, satisfies me that £. 9. 12. sterling is a sum much too small for this purpose, even were there no contingencies to be provided equally with the means of subsistence. Submitting this paper to the favourable consideration of his Excellency,

Rawson W. Rawson, Esq.  
&c. &c. &c.

I have, &c.  
(signed) A. C. Buchanan, Chief Agent.

MEMORANDA, on the District of *Gaspé*, its Advantages to Poor Settlers, furnished to Mr. *Buchanan*, Chief Agent for Emigrants, by Dr. *G. M. Douglass*.

I wish to bring under your particular notice a part of this province hitherto but little known, which offers peculiar advantages to emigrants of small means, or to those sent out to this country by their parishes or landlords from Great Britain.

This country is the district of Gaspé, or that part of it more especially which fronts on the Bay de Chaleur from the Restegouche River to Percé. The want of a road to connect this valuable part of the province of Canada with the parishes on the St. Lawrence below Quebec, is one reason why it has hitherto attracted so little the attention of settlers. The appropriation of £. 15,000, made at the last Session of Parliament, to open this road, and others in the district, will remove all difficulty from want of communication.

This fine country having a front of upwards of 200 miles on the sea-coast, along which are several excellent harbours for vessels of any size, and having fine rivers flowing through it, has advantages, in point of soil and climate, equal to any part of Canada East. The forests contain pine and other timber of value; and the sea and rivers abound in fish, the taking and curing of which employs some thousand people in the summer season. The soil is generally excellent and yields good returns of wheat, potatoes, and other kinds of grain and roots. The following extract from the Report of Commissioners sent by Lord Dalhousie, when Governor-general, to report upon the agricultural capabilities of this district in 1820, says—

"The country is level, and the soil of an excellent description. The Bay of Gaspé, and particularly the Bay de Chaleurs are susceptible of the most improved agriculture. For the establishment of emigrants, no part of Canada offers such immediate resources of livelihood as may be derived from the fisheries. It is a fact worthy of notice, that in the year 1816, when the lower parts of the province were afflicted with a famine from a destruction of the harvest by frost, no such inconvenience was experienced at Paspebiac, Bay de Chaleur, nor at any other place within the tract above mentioned."

And in the evidence taken before the Commission for Crown Lands and Emigration, appended to Lord Durham's Report, it is stated by Robert Christie, esquire, M.P.P. for Gaspé, in reply to questions respecting the lands in the townships of Hamilton and Cox, in the Bay de Chaleurs—

"This country is highly susceptible of agriculture, and capable of receiving 500 poor families; the townships of Hamilton and Cox; these townships comprehend some of the finest portions of land in the whole district of Gaspé, possibly in Lower Canada; they are well

well watered, and every way adapted to immediate settlement, particularly by the poorer class of settlers, who, if located there, would find themselves in the immediate vicinity of the fisheries, which would at once afford them immediate resources of subsistence, and furnish them with a permanent and profitable market for their produce hereafter."

And in answer to the question, What are the general capabilities of the district of Gaspé for supporting an agricultural population? Mr. Christie replies—

"As great as any part of the district of Quebec; its climate is nearly the same, but its soil is generally superior; at the present time, however, its capabilities have not a fair chance of development, for want of roads: if the Kempt road from Metis, a parish on the south bank of the St. Lawrence, below Quebec, to the Restigouche, and from thence to Carleton was completely opened and made practicable for carriages, I have no doubt that the whole line would be settled in less than three years."

The roads alluded to by Mr. Christie, as I have stated above, are now in the course of completion, and will, in all probability, be finished next fall.

The peculiar advantages which this section of country offers to poor settlers are these:—

1st. The certainty of obtaining employment and a supply of food from the fisheries, while the first crop is growing.

2d. The proximity of the land upon which settlements may be formed to the port of disembarkation from Europe.

3d. The ready sale of surplus produce to those engaged in the fisheries and timber trade.

1st. The certainty of obtaining employment and food while the first crop is growing.

In most parts of the province the settler upon new land necessarily finds himself placed at a distance from employment, and from a supply of cheap food; from the nature of his location he is to a certain degree isolated, and unless provided with money to purchase provisions he is liable to much suffering, as was instanced in the case of certain Highland emigrants in the eastern townships last summer. In the district of Gaspé the settler would not be exposed to these inconveniences; the vacant Crown lands are situated at a short distance from the sea coast, along the whole extent of which there is a tolerable road, and it is fringed throughout its whole extent by settlements of Acadian French, by the descendants of American loyalists, and by emigrants from Great Britain and the Channel Islands. These people are all, more or less, actively engaged in the fisheries in the summer season, and would willingly employ the labour of a resident population, if it could be obtained at a low rate, especially during the months of July and August, being the time when the poor settler has least to do on his land. As a proof of the demand for labour, I may state that a transient population of from 3,000 to 5,000 persons are employed in the district during the summer season, who leave it again in the autumn; these people earn from six to ten dollars a month and their board.

At this season also shoals of herring, cod, and other fish arrive upon the coast, and render it an easy matter for the poor settlers to obtain a supply of wholesome food for the year at the comparative small cost of the salt.

2d. The proximity of the land upon which settlements may be formed to the port of disembarkation from Europe.

To the different harbours of Restigouche, New Richmond, Bonaventure, Paspébiac, Port Daniel, and Gaspé Basin, all in the district of Gaspé, vessels arrive every season for cargoes of timber and fish, and as these vessels invariably come out in ballast, emigrants could be brought out at as cheap or a cheaper rate than to Quebec or Montreal. From the ports above enumerated to the vacant Crown lands the distance is trifling, rarely exceeding two miles. It is well known that the expense and loss of time which the emigrant has to encounter after disembarking at Quebec or Montreal before reaching his place of ultimate destination, is great. I am convinced that the outlay of money necessary to transport a family and their luggage, and to find them food, to the western parts of Canada, would go far towards meeting the cost of building a log-house and clearing two acres of land; taking into account the saving of time and the probable exemption from sickness, to which emigrants who follow in crowds the line of the St. Lawrence and the canals are particularly exposed, in the early part of summer.

With reference to the expense of maintaining a family of emigrants until the first crop is obtained, where they cannot obtain labour or food, I beg to give the following extract from a very able Report by Dr. Gesner, Provincial Geologist of New Brunswick, to his Excellency Sir George Colebrooke, in November 1842.

After stating that the most fertile tracts of waste lands in that province are to be met with on the tributaries of the St. John and upper branches of the Restigouche rivers, which, as I have already stated, divide the district of Gaspé from New Brunswick, the Doctor says, "By obtaining a credit of the Government for 50 acres of land, any person with a family having a capital of 12*l.* currency—9*l.* 12*s.* sterling, can maintain such family until the first crop is produced, and with sobriety and industry, in six years they can pay for the land, with the interest on the first purchase, and purchase 50 acres more on credit.

"The above may be performed in less time than six years, but I have taken this period as a medium estimate."

These remarks of Dr. Gesner apply to the interior of New Brunswick, the climate and soil of which are analogous to that of the Bay of Chaleur, which divides it from Gaspé, but where the poor settlers would not have the advantages before alluded to. It is of the utmost importance however to the success of the emigrant that he arrive early in the season in this country, I would say not later than the end of May; and in no case would

## CANADA.

it be prudent for any number of emigrants to come out without arrangements having been made the year previous for their reception on arrival, by causing one or more temporary sheds to be erected in the vicinity of the land to be occupied, where protection from the weather could be obtained while log huts are being erected; the allotments of land should also be laid out the year previous, so that no time be unnecessarily lost.

3d. The ready sale of surplus produce to those engaged in the fisheries and timber trade.

It is only necessary to remark with reference to this peculiar advantage to the agricultural settler in the district of Gaspé, that the whole supply of provisions consumed by those engaged in the fisheries and timber trade of the country are brought from Canada West and the United States, and retailed at a high rate, varying from 50 to 75 per cent. upon the cost in Montreal. This country would of itself for a long time consume all the surplus produce that could be raised. It is unnecessary to dilate upon the great advantage to the settler of having a market for his produce at his door. The want of this convenience is the great evil which all new settlements labour under in Canada and the United States.

Encl. 2, in No. 30.

Enclosure 2, in No. 30.

EXTRACT from REPORT of COMMISSIONERS appointed to inquire into the Judicature of the Inferior District of *Gaspé*, dated 6 October 1842.

IN 1819, the population of the district of Gaspé, according to the best information then to be obtained, though perhaps erroneous in a great degree, was 4,023 souls. In 1825 it had increased to 6,500 souls; in 1831, to 9,255 souls; and at the present moment, according to the best information we can collect, it amounts to at least 15,000 souls; showing an increase in the first period of one-third in six years; in the second, of one-third more in six years; and in the last period of eleven years, of nearly two-thirds; a rate of increase greatly exceeding that of some of the most populous and highly cultivated parts of the district of Montreal between 1825 and 1831.

The population of Gaspé would therefore appear to double itself in 18 years; and in this statement we do not take into account the large transient population engaged in the fisheries in summer, who come from the parishes on the St. Lawrence below Quebec, and from the Channel Islands, and Lower Ports. These have been variously estimated to us at from 3,000 to 10,000, but from the best data, we believe them to average between 4,500 and 5,000.

The commerce also of the district, both provincial and foreign, has increased in a general point of view, in nearly an equal ratio with the population; and the revenue now drawn from the district through the customs alone has advanced from 1,083 *l.* in 1829, to nearly 2,000 *l.* per annum, while that derived from the sale of Crown lands and timber exceeds in some years 1,100 *l.* So that, taking into account the large amount of merchandise transhipped to the district from other parts of the province, where it has already paid duty, the contributions to the general revenue derived from the commerce and consumption of the district cannot be less than 5,000 *l.* or 6,000 *l.* per annum.

Our stay in the district was too short to allow of our collecting the requisite information to enable us to give an accurate view of the increase of its agriculture; and there having been no census since 1831, we have no exact data upon which to judge of that increase but by comparing the results of that census with those exhibited in statistical returns published in 1820, from which there appears to have been in that period of 11 years an increase in the numbers of those engaged in agriculture, and in the amount of agricultural stock, of from two to three fold, or considerably more than the increase of the general population and commerce of the district in the same period.

From personal and attentive observation in passing through the country, and from the information we received of the growth of new settlements, and the extension of cultivation in the old, we are convinced that the agriculture of the district has prospered during the last eleven years, and is prospering in at least an equal ratio to its increase in any former period. In parts of the county of Bonaventure, where, ten years ago, the native forests were still untouched, we passed through a district of flourishing farms. In the county of Gaspé, we found near Percé a small settlement of Irish, who came paupers to the country about the same period, and of whom we were told, that living independent of the fishery, except for their own consumption, "they are in debt to no one, and derive a comfortable subsistence from the tillage of the soil, and from selling its surplus produce to the fishermen." Nor was there any part of the district that we visited where we failed to see abundant evidence both of the comfortable and thriving condition of the husbandman, and of the capability of the soil to yield him, in the most useful kinds of agricultural produce, no scanty reward for patient and persevering toil.

Appendix (E).

COMPARATIVE VIEW of the POPULATION of the District of *Gaspé* in the Years 1819, 1825, 1831, and 1842.

SETTLEMENT OF	1819.	1825.	1831.	1842.	
Cape Chat - - - - -	18	26	37	50	} - - The population of these first four places is taken from an estimate by J. Le Boutillier, esq. In the census of 1825 and 1831, St. Anne's and Grand Etang are reckoned together.

AGRICULTURAL PROGRESS, 1819—1831.

The statistical returns of 1819 furnish very imperfect data on which to calculate the increase of agriculture in the district of Gaspé up to 1831. The census of 1825, as published in the journals of the House of Assembly, contains no information on this subject.

The statistical table drawn up in 1820 (for 1819) gives a column for those " deriving their subsistence from agriculture," to the number of whom may fairly be added half the number stated in the column for "servants."

The result would be for 1819:

Proprietors or tenants living by agriculture	-	-	-	-	-	577
Servants	-	-	-	-	-	250
						827

The census for 1831, as published in the journals of the Assembly, only shows the number of families and persons living by agriculture in the county of Bonaventure; but the increase in that county alone over the returns in 1819, is as follows:—

1831.—Proprietors living by agriculture	-	-	-	-	459
Farm servants	-	-	-	-	330
					789
1819.—Proprietors living by agriculture	-	-	-	-	362
Farm servants	-	-	-	-	60
					422
Increase in Bonaventure	-	-	-	-	367
or nearly two fold.					

INCREASE OF AGRICULTURAL STOCK.

						1819.	1831.
Horses	-	-	-	-	-	401	677
Horned cattle	-	-	-	-	-	2,406	5,411
Sheep	-	-	-	-	-	3,470	8,980
Hogs	-	-	-	-	-	5,017	6,409
1819.—Four grist mills.							
1831.—Six ditto ditto.							

CORRESPONDENCE RELATIVE TO EMIGRATION.

Enclosure 2, in No. 31.

Encl. 2, in No. 31.

## ANSWER to QUERY No. 2.

The description of labour which is in demand in the province, continues to be the same as represented at the close of the quarter ending on the 31st July last. The chief towns employ superior workmen, viz., cabinet-makers, saddlers, carriage builders, painters, joiners, tanners, modellers, brass and iron founders, copper and tin smiths, carpenters, masons, bricklayers, plumbers, coopers, quarrymen, shoemakers, tailors, hatters; but it is the ordinary classes of mechanics generally who meet with the readiest employment, and to these the country districts are an equally open field of labour; farm servants of all descriptions, but chiefly those of active habits and of intelligence sufficient readily to adopt the modes of labouring suitable to the country, cannot fail to meet with situations, although the rates of wages are considerably reduced. Ploughmen, and men accustomed to the care of horned cattle and horses, are always in demand. Ordinary labourers, being in great numbers, must submit to lower wages, and expend some time in rendering themselves fit for domestic employments or for undertaking the clearing of land.

## ANSWER to QUERY No. 3.

The number of immigrants arrived within the last quarter has more than met the demand for labour, and there has been, consequently, a general reduction of wages. Other circumstances affecting the country have increased this effect, and the approach of winter has closed many of the public works. It is not impossible, however, that the comparative lowness of wages may result in an extension of the sources of employment; for the abundance of provisions and the cheapness of all other necessities, place it within the power of almost every established settler to support, as far as subsistence is concerned, one or more labourers; with this advantage, the reduction in the money expense of hiring assistance may permit many who have hitherto been able to employ only their own families, to receive and maintain recently arrived immigrants. In this manner it may be anticipated that a proportion at least of the more destitute will find support. Those who have resources to any extent, cannot be subjected to distress, for the cost of subsistence has been reduced so much as to bring the support of a family within the compass of almost the poorest.

## ANSWER to QUERY No. 4.

The preceding replies have comprehended nearly all the remarks that I can offer at the present time on the subjects of immigration and labour. I may mention, however, that although wages have been materially reduced throughout the Province, the immigrants of the season are very generally in employment, at such rates as promise full means of support. A large immigration continues to enter the country by way of the United States; and as many of these people have passed some time as labourers on canals, roads, and other extensive works, and accordingly become acclimated, they are preferred by contractors as well as farmers, to the immigrants newly arrived by the direct route of Quebec. Notwithstanding these circumstances, I have not become aware of any serious distress in the rural districts. The abundance of provisions and the cheapness of every necessary of life, have facilitated settlement by the class of immigrants possessing some small resources; and the number of these seeking employment has been, consequently, small, even of the more destitute, many have found assistance from their friends or relations already established in the country.

The proportion of the year's immigration remaining, mere labourers is accordingly less than might have been anticipated; and I am encouraged to hope that no part of these will suffer to any great extent or be prevented from effecting an improvement in their condition. Among the immigrants annually arriving, however, there come out many who, without possessing the necessary property to become settlers, are unprepared for manual labour: these do not find encouragement in this country; indeed almost all meet with great distress. There is comparatively limited employment for overseers, bailiffs, clerks, accountants, &c. &c.; and these classes of persons should be by all means cautioned of the difficulties they will have to contend against in this colony should they emigrate with the intention of continuing their former pursuits.

(No. 4.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—The sum of 2,000*l.* was placed in my hands by the Government in the month of September, for immigration purposes.
2. State the description of labour which is in request in the colony.—During the year 1842 at least 50,000 emigrants have been added to the population of Canada, three-fourths of whom belonged to the labouring class. There is no demand for labour that I am aware of in any part of Canada West, the supply has rather exceeded than fallen short of the wants.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—It would exceed the demand.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful.—The emigrants, very willing to work for low wages, have generally been successful in getting employment; they have been remarkably healthy, and well-behaved.

(No. 287.)  
COPY of a DESPATCH from Lord Stanley to the Right honourable  
Sir Charles Bagot.

No. 32.  
Lord Stanley to  
the Right hon.  
Sir C. Bagot.  
28 Nov. 1842.

Sir,  
Downing-street, 28 November 1842.

I ENCLOSE herewith the copies of a correspondence which has passed between the governor of the Canada Company and one of my Under Secretaries of State, relative to a proposal made by the former, that Her Majesty's Government should employ an active agent at New York to communicate with the numerous bodies of British subjects annually arriving at that port, with the view of inducing them to settle in British North America.

Mr. Hope's letter will put you in possession of my objections to the establishment of such an agency as that contemplated by Mr. Franks; but I would suggest, for your consideration, the propriety of availing yourself of the services of Her Majesty's Consul at New York, by enabling him to furnish applicants with authentic intelligence relative to the demand for labour in Canada, price of land, &c. As soon as I am informed by you that there are no local objections to this plan, I will request the Secretary of State for Foreign Affairs to instruct the Consul to undertake the duty.

I have, &c.  
(signed) Stanley.

CANADA.

Enclosure in No. 32.

Canada House, St. Helen's Place,  
11 November 1842.

My Lord,

Encl. in No. 32.

REPRESENTATIONS having been made to the Canada Company that it would be of great importance to the British American Colonies that a resident agent should be appointed by Her Majesty's Government at New York, whose whole time should be employed in communicating with, and affording information to, emigrants from Great Britain, great numbers of whom are always at that city, both on their way from this country, and on their return, and are unable to obtain authentic information there, of the advantages offered to settlers in the British provinces, I am requested by the Directors of the Canada Company to make this communication to your Lordship.

The advantages which have arisen from the establishment of Government agents in various parts of the British provinces, to whom emigrants may always resort for advice, without being exposed to the frauds and machinations of land-jobbers and others, have been generally admitted; and if any such protection is desirable in the British territories, it is surely more essentially necessary at New York, when it is considered how many British subjects arrive at that port, a large proportion of whom would proceed to the British provinces if they were correctly informed, upon proper authority, of the advantages to be had therein.

Circumstances have lately occurred, probably well known to your Lordship, which bear forcibly on this question. For some months past, the packet ships from New York have brought back to this country a considerable number of British emigrants, sometimes 200 or 300 in a ship, who, finding no employment in the United States, have, it may be supposed, in despair returned to the home they had already thought it better to abandon, and where, therefore they can hardly hope for any improvement in their circumstances. To these persons, when at New York, the expense of a journey to the British provinces would have been trifling, compared with the charge of the voyage home; and I have every reason to suppose, from the accounts received from Canada regarding the emigration this season, from the observations in Sir Charles Bagot's speech on opening the session of the Legislature on the 8th September, and from the measures taken for proceeding with the public works in the province, that, if there had been an active British agent at New York, to whom these unfortunate people could have resorted for advice, they would, without hesitation, have proceeded to Canada, and been able to settle themselves advantageously there, instead of returning home at a useless expense.

It may, perhaps, be supposed that the British Consul at New York is the proper person to perform this duty; but it is stated to the Canada Company, that his other avocations make it impossible for him to attend to this business, which, if properly looked to, would be amply sufficient to occupy the undivided attention of any man.

The vast extent of emigration from this country to North America, which has been shown by the Parliamentary Returns for 1840 and 1841 to have amounted to 156,116 souls, whilst the number of emigrants to all other parts of the world was only 53,219, and the change which has taken place in the last few years, and particularly during the present, in the direction of the tide of emigration from the United States into Canada, makes the appointment of such an agent of peculiar importance at present in promoting the settlement of the British provinces.

Since the peace of 1815, and until within the last few years, the activity and apparent prosperity in the United States, which have arisen chiefly from the facility of borrowing British capital, and the employment afforded by its outlay in their public works, naturally induced numbers of emigrants from Great Britain to proceed to that country; many also to emigrate from the British provinces, and to proceed to the States through Canada as the cheapest route.

The management of affairs in the United States having proceeded upon speculative principles, chiefly dependent upon credit which has not been supported, the result is, that their public works remain unfinished, and this apparent prosperity is cut short. In the meantime the British provinces, especially Canada, whose soil and climate are as good or better than those of the United States, and whose geographical position and internal water communications are superior, have been making steady and safe progress, and little is necessary to secure for them a high degree of prosperity, and a vast addition to British power in North America.

These considerations render it very important to take advantage of the present moment in directing the tide of emigration to the British provinces. The appointment of an active agent at New York would greatly promote this object. His time and attention should be entirely occupied in this way; and he should be furnished with regular and frequent reports from the Government agents in the British provinces, stating the demand that exists for labourers, the expense and facility of travelling, the value of property, and all other information useful to settlers, either men possessed of capital or otherwise; so that, upon full and impartial authority, emigrants may be able to judge how best to establish themselves on the British territories without losing their time and money in search of information.

I have, &amp;c.

To the Right hon. Lord Stanley.

(signed) Charles Franks, Governor.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

67

Sir,

Downing-street, 26 November 1842.

CANADA.

I AM directed by Lord Stanley to acknowledge the receipt of your letter of the 11th instant, proposing that an active agent should be employed at New York by Her Majesty's Government to furnish information to emigrants on their arrival in that city, relative to the attractions offered to settlers by the British North American Provinces.

Lord Stanley has instructed me to acquaint you, in answer, that a full consideration of the proposal, in all its bearings, has induced him to think that the disadvantages outweigh the advantages to be anticipated from such an appointment, attended as it would be by a risk that an agent such as you contemplate would probably deem it his first duty actively to promote emigration from New York, without sufficiently advertg to the risk of overstocking the market, an effect produced by a very small excess of supply in a country, where capital is not very abundant. In addition to which, in the case of Canada, there would arise the further difficulty, that if any large number of settlers were induced to remove from New York, it would very much increase the uncertainty as to the extent to which emigration from this country could safely be encouraged. Lord Stanley, therefore, thinks that it would not be advisable to establish such an agency at New York; at the same time, however, his Lordship considers it very desirable that the authorities in Canada should keep Her Majesty's consul at New York periodically informed of the state of demand for labour in the province, the price of land, &c., in order that he may be able to communicate authentic information on those points to parties who may apply to him, and will bring the subject under the notice of the Governor-general.

I have, &amp;c.

Charles Franks, Esq.  
&c. &c. &c.

(signed) *G. W. Hope.*

— No. 33. —

(No. 28.)

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot* to  
Lord *Stanley*.

No. 33.

Right hon.  
Sir C. Bagot  
to Lord Stanley,  
22 February 1843.

Government House, Kingston,  
22 February 1843.

My Lord,

I HAVE had the honour of receiving your Lordship's despatch of the 28th November last, No. 287, enclosing copies of a correspondence which has passed between the Governor of the Canada Company and Mr. Under-secretary Hope, relative to a proposal made by the former, that Her Majesty's Government should employ an active agent at New York, for the purpose of inducing the British subjects arriving at that port from the United Kingdom, or returning thither from the United States, to settle in British North America.

As you Lordship has already, in the reply which Mr. Hope, by your directions, addressed to Mr. Franks, anticipated the main objection to this proposal, and pointed out the extent to which facilities may properly be given to British subjects at New York, by affording them the best accessible information as to the opening presented for advantageous settlement in Canada, I might have deemed it unnecessary to do more than to express my acquiescence in your Lordship's views, and to direct that such information should be periodically furnished to Her Majesty's consul at New York; but as opinions similar to those entertained by Mr. Franks, in favour of stimulating by artificial means an emigration of destitute labourers to these provinces, have been expressed in various quarters, and have even led to active measures for that purpose, I have deemed it right, after a full consideration of the subject with my council, to lay before your Lordship my opinion upon this subject, with the view of showing the extent to which it appears that the immigration of a labouring population into Canada can be prudently encouraged, and of endeavouring to avert the inconvenience and suffering which must arise from an excessive supply of destitute labourers.

One of the chief arguments in favour of using active means to induce labourers to emigrate to Canada, is founded upon the prospect of employment upon the public works; and the class of emigrants who are represented to have returned to Great Britain in such large numbers, because they could not find employment in the United States, are precisely those who, not having the means or inclination to settle upon land, would look to public works as the principal source of employment and support, if they were to come to Canada.

291.

A large

## CANADA.

A large portion, probably the largest, of emigrants from the mother country to the United States, has for some years past consisted of this class; of persons unwilling or unable to engage in any permanent occupation, and wandering from place to place as labour has happened to be in request. The public undertakings in the United States have for the last two years generally ceased, and those who were accustomed to be employed upon them, and who were a constantly accumulating number, have poured into Canada in greater numbers than could be received on the works. They have contended fiercely amongst themselves for employment, been subject to great distress, and have materially disturbed the peace of the sections of country in the neighbourhood of the public works, having, in several instances, rendered the presence of a military force necessary to prevent disorder and outrage.

The principle upon which the works in Canada are carried on is one of strict economy, and by contract, requiring the most open competition amongst the contractors, who in their turn employ such labourers as they find it for their advantage to engage; and the government has no power to prefer one class of labourers over another.

Little good has arisen from giving employment upon the public works to the labourers, or to the country, either in the United States or in this province, beyond the construction of the works and the supply of the immediate necessities of the labourers, the persons employed being generally committed to an unsettled and wandering life, indifferent as to whether they remained in the United States or in Canada, and, not having improved their circumstances by saving, they have remained as labourers, dependent for subsistence upon one source of employment, and liable to utter destitution upon its failure.

But nevertheless, in the particular direction in which they have been employed, they have advantages over the newly-arrived emigrant, in their habits, knowledge of the kind of labour, their accommodation to the climate, and even in their combinations; and the consequence is, that the principal number of labourers employed by the public contractors in Canada belong to the class formerly employed in like manner in the United States.

On the other hand, the labouring immigrants coming directly into the province from the British Isles, have generally been employed in agriculture, or have settled in the towns; or, when they originally possessed means, or afterwards acquired them, they have settled on land. In the great majority of instances they have improved in their circumstances, and have added to the strength and resources of the province by becoming a portion of its fixed population.

But the employment of agricultural labourers at wages must be limited by the amount of capital invested in agricultural pursuits. This resource has hitherto, happily, increased with the requirements upon it; so that, notwithstanding the great increase of immigration, employment has generally been found on diffusing the immigrants through the country, with some exertion on the part of the local agents, and on leaving the immigrants to their own exertions.

The conclusion, therefore, from past experience is, that a voluntary and unsolicited increase of even a labouring immigration may safely be permitted; but the government cannot begin a course of solicitation, or take other means of artificially inducing immigration, without pledging itself to provide for the increasing population, or without furnishing artificial means for that purpose; for although, as has been above remarked, the country has, naturally and without extraordinary means or material difficulty, received increased numbers of immigrants, yet, had all those who came to the United States been actively invited to come to Canada, the natural resources of employment at wages might have been surpassed, and great distress must have been the result.

Canada offers certain advantages to immigrants who bring with them sufficient money to enable them to become settlers upon land; and the numbers of this class may be increased with advantage to any possible extent. It may be said also, that the sum required would, in each instance, be small. The price put upon Crown lands in Upper Canada is, as I have apprised your Lordship in a former despatch, only 8s. an acre, and in parts of Lower Canada only 4s. an acre; yet, in the aggregate, it would far surpass any sum which could be appropriated for the purpose in Canada, or which could be furnished from England from private or public funds, independently of those possessed by the immigrants

immigrants themselves. Besides the expense of passage across the Atlantic, and transit into the interior, the settlement of 100,000 emigrants upon land given for nothing, that is to say, the furnishing such a number with provisions and other necessities until crops could be raised by the settlers, would probably not be effected for a million of pounds sterling, a sum which would be more than sufficient, if owned by the settlers themselves, and laid out with the economy attending private expenditure; and yet this sum would not be an extraordinary amount to be supposed in the possession of such a number of immigrants, none of whom were actually destitute. If the immigrants can bring such an amount with them, the country can receive them, and they can become prosperous without difficulty; but if they were to depend for their supplies upon public funds, the settling them upon land would be altogether impracticable.

If private companies, by means of subscriptions or shares, propose to purchase land, and to send emigrants to occupy them, in the expectation of repayment and of profit, it is not for the provincial government to interfere, however wild the speculation may appear.
